You too, gentlemen of the jury, must look forward to death with confidence, and fix your minds on this one belief, which is certain —that nothing can harm a good man either in life or after death, and his fortunes are not a matter of indifference to the gods. This present experience of mine has not come about mechanically. I am quite clear that the time had come when it was better for me to die and be released from my distractions. That is why my sign never turned me back. For my own part I bear no grudge at all against those who condemned me and accused me, although it was not with this kind intention that they did so, but because they thought that they were hurting me; and that is culpable of them. However, I ask them to grant me one favor. When my sons grow up, gentlemen, if you think that they are putting money or anything else before goodness, take your revenge by plaguing them as I plagued you; and if they fancy themselves for no reason, you must scold them just as I scolded you, for neglecting the important things and thinking that they are good for something when they are good for nothing. If you do this, I shall have had justice at your hands, both I myself and my children.

Now it is time that we were going, I to die and you to live, but which of us has the happier prospect is unknown to anyone but God.

# The Apology Of Socrates.

Translated by Woodhead, W. D. 1953

CHARACTERS.

Socrates; Meletus.

1

---

Socrates:: What impression, men of Athens, my accusers have made upon you, I know not: but as for me, they almost made me forget who I am, so persuasively did they speak. And yet there is practically no word of truth in what they have said. But I was particularly astonished at one of their many falsehoods—their statement that I am a clever speaker and that you must beware of being deceived by me. For what seemed to me the most brazen thing about them is this, that they are not ashamed at the prospect of being confuted at once in actual fact, when I prove myself to be in no way a clever speaker—unless, to be sure, they mean by a clever speaker one who tells the truth: if that is what they mean, I should agree that I am an orator on a very different level from them. My accusers, then, as I state, have said little or nothing that is true: but you shall hear from me the whole truth—not, gentlemen, speeches decked out like theirs with words and phrases and finely arranged, but words uttered as they occur to me in the language of every day—for I am confident in the justice of my plea—and let none of you expect otherwise. For surely it would ill become me at my age to appear before you telling stories, like a boy. There is indeed one thing, gentlemen, which I most earnestly beg and entreat of you: if you hear me making my defence in the language that I regularly employ at the counters in the market place, where many of you have heard me, and elsewhere, not to be surprised nor to interrupt me on that account. For the truth is that this is the first time I have appeared before a court, though I am seventy years old. I am therefore literally a stranger to the language of the courts. Then just as, if I had really been a stranger, you would assuredly pardon me for speaking in the dialect and the fashion of my motherland, so too now I ask this of you, a fair request, in my opinion: to ignore my manner of speech—it may be bad, it may be good—and to give this one thing your whole attention and consideration, whether or not my plea is just. For that is the virtue of a judge, as an orator's virtue is to speak the truth.

First of all then it is right for me to defend myself, gentlemen, against the first false charge levelled against me and my earlier accusers, and then against the later charges and the present accusers. For many have come forward to accuse me before you, long ago too, in fact for many years already, without uttering a word of truth: and these I fear more than Anytus and his friends, though they too are formidable. But more formidable still are those who took most of you in hand from your childhood and convinced you by their accusations against me, though they were no more true than the present charges, saying that there is one Socrates, a wise man who speculates upon things on high and has investigated all things beneath the earth, and who makes the weaker argument the stronger. These men, who have deluged me with this flood of false statement, are my dangerous accusers: for those who give ear to them believe that men engaged in such pursuits do not worship the gods either. And then these accusers are many in number and have long been attacking me; and further they spoke to you when you were of an age most likely to believe them, being some of you children or in your teens: and so they literally convicted me by default, there being none to defend me. And the most unreasonable thing of all is that I am not even in a position to know and mention their names, except in the case of the comic poets. But all who sought to convince you by misrepresentation and malice—some too persuading others because they themselves were convinced—all these, I say, are my most baffling accusers: for it is not even possible to call any of them into court or cross-examine them, but I must simply fight with shadows, as it were, in making my defence, and cross-question with none to answer. You too must allow then, as I say, that I have had two classes of accusers, the one group whom you have just heard, the other those earlier attackers of whom I am now talking: and consider that I must first defend myself against the latter: for you heard them attacking me first, and attacking with much more vigour than these later enemies.

Well then, I must offer my defence, gentlemen, and must attempt in the short time at my disposal to eradicate from your minds a prejudice you took many years to acquire. Now I could wish that this might be achieved, if so it be better both for you and for me, and that I might meet with some success in my defence: but I think it is a difficult task, and I am pretty well aware of its nature. However, let this follow the course that is pleasing to God: I must obey the law and make my defence.

Let us go back, then, to the beginning and consider what the charge is that gave rise to this prejudice against me—a prejudice upon which Meletus relied, I suppose, when he brought this indictment against me. What was said then by those who aroused this prejudice, to create it? I must read their sworn statement, as it were, just as if they were accusing me in court. 'Socrates is a busybody and is guilty of investigating things beneath the earth and in the sky above, and of making the weaker argument the stronger, and of teaching others these same things.' It runs somewhat like that. You yourselves saw these things in that comedy of Aristophanes, a certain Socrates swinging about, claiming to tread the air and talking a deal of other nonsense about matters of which I know nothing either more or less. And I speak not with any disrespect for such knowledge, if anyone is wise in these matters—may Meletus never indict me often enough to induce me to do that—but in fact, gentlemen, I have no concern whatever with such things. And once again I produce the majority of you yourselves as witnesses and entreat you to instruct and inform each other, as many of you as have ever heard me conversing-—and there are many such here present—tell each other, then, whether any one of you has ever heard me talking either briefly or at length upon such subjects: and from this you will learn that the other stories told about me by most people are equally groundless.

However, none of these things is true; and if you have heard from any source that I undertake to educate men and exact money for it, that also is untrue. Though as a matter of fact it does seem to me a fine thing if anyone could possess the gift of educating men, as is done by Gorgias of Leontini, Prodicus of Ceos, and Hippias of Elis. For, gentlemen, each one of them is able to visit any city and win over the young men, who are at liberty to associate free of charge with any fellow-citizens they choose—these young men, I say, they can persuade to abandon such associations and to associate with them instead, and to pay them a fee and feel grateful to them as well. For that matter, there is another wise man, from Paros, who, I discovered, is now in town. I happened to encounter a man who has paid to the Sophists more money that all others put together, Callias, the son of Hipponicus: and so I asked him—he has two sons—'Callias', I said, 'if your two sons had been colts or calves, we should have been able to hire an overseer who would have made them perfect in the appropriate kind of excellence; and this would have been one of the groom or farmer class. But as it is, since they are human beings, whom have you in mind to take as their overseer? Who is expert in the form of excellence proper to a man and a citizen? I expect that as a father you have considered the matter. Is there anyone I said, 'or not'? 'Certainly', he replied. 'Who', said I, 'and whence, and what his fee?' 'Evenus', he said, 'Socrates, from Paros, five minae'. And I thought Evenus a fortunate man if he really should possess this art and actually teaches it so reasonably. At least I should give myself airs and feel most superior, if I possessed such knowledge. But I do not possess it, gentlemen.

Now perhaps some of you may rejoin: 'But, Socrates, what is this occupation of yours? Whence have these prejudices arisen against you? You must surely have been doing something more unusual than most men for all this gossip and talk to have arisen: you must have been acting differently from others. Tell us what it is, then, that we may not jump to conclusions about you'. That seems to me a reasonable plea, and I will attempt to show you what it is that is responsible for this reputation and this prejudice. Listen then: and perhaps some of you will think I am not serious: but be well assured, I will tell you the whole truth. Gentlemen, I have acquired this reputation of mine through nothing else but a kind of wisdom. What kind of wisdom, you will say. The wisdom which is perhaps attainable by a man: in reality apparently this wisdom is mine. But those of whom I spoke just now must probably be endowed with a superhuman wisdom, or I know not what to call it: for I have no such knowledge, but whoever says that I have is lying and seeking to slander me. Now do not interrupt me, gentlemen, even if you think me guilty of boasting: for the words I am about to speak are not mine, but I shall refer them to a speaker in whom you may place all confidence. Of my wisdom—if indeed it be wisdom, and such as it is—I will produce as witness the god at Delphi. You know Chaerepho, I am sure. He was my comrade from his youth, and he was a partisan of your democracy and shared its exile and returned with it. And you know what manner of man he was, how impetuous in all that he undertook. Now once he went to Delphi and ventured to put this question to the oracle—and once more I ask you, gentlemen, not to interrupt: he actually asked if there was any man wiser than I: and the Pythian priestess replied there was none. For the truth of this his brother will vouch, since Chaerepho himself is dead.

And now consider why I tell you this: for I am about to explain whence this prejudice against me arose. When I heard the story, I began to ponder: 'What does the god mean, and what is this riddle of his? I am conscious that I have no knowledge of whatever degree. What does he mean, then, by saying I am the wisest? For surely he is not uttering a falsehood: that is not permissible for him'. And for a long time I was at a loss as to his meaning: and then with the utmost reluctance I set out to investigate in the manner I now describe. I went to a man with a reputation for wisdom, thinking that there, if anywhere, I might prove the response mistaken and say to the oracle: This man is wiser than I, but you said I was the wisest of men'. In my examination of him (and I need not mention him by name, but it was a politician with whom I had this experience) and in my conversation with him, I discovered that he was considered to be wise by many people, and above all by himself, but was not. And then I endeavored to prove to him that he thought himself wise, but that he was not. The result was that I made an enemy of him and of many who were present. But as I departed, I reflected to myself: 'I am at least wiser than he is: for in all probability neither of us knows anything good, but he fancies that he does, though he does not, whereas I, even as I have no knowledge, do not think that I have. Apparently then I am his superior in wisdom to this small extent at least, that what I know not I do not imagine that I know’. I went next to another man, one reputed to be even wiser than he, and I formed the same impression; and there too I made enemies of him and many others.

After this I went around to one after another, perceiving with grief and anxiety that I was making enemies, but none the less I thought it necessary to consider the god’s mission of the utmost moment. And so in searching out the oracle’s meaning onward I must go to all who enjoyed a name for knowledge. And, by the dog, gentlemen, this is what actually happened—for I must tell you the truth: those whose reputation stood highest seemed to me almost the most deficient, as I investigated at the god’s bidding: and others, of inferior repute, seemed to be their superiors in good sense. I must needs describe to you my wanderings, as of one engaged in the labours of Hercules, only to prove after all that the oracle was irrefutable. For after the politicians I approached the poets, tragic, dithyrambic, and others, intending there to prove on the spot my inferiority in knowledge. I took up then those of their poems which seemed to me to have cost them most trouble, and asked them what they meant, hoping at the same time to receive some instruction from them. Now I am ashamed, gentlemen, to tell you the truth: but nevertheless it must out. Practically all present could have given a better account of what the poets had written than the poets themselves. And so with the poets too in their turn I quickly discovered that it was not through wisdom that they composed their works, but by a natural endowment and inspiration, like prophets and givers of oracles: for these say many fine things but understand nothing of what they say. Such seemed also to be the plight of the poets; and at the same time I perceived that on account of their poetry they thought they were the wisest of men in other fields, in which they were not. And so I left them also, thinking that I was their superior in the same way, in which I surpassed the politicians.

Finally then I approached the craftsmen: for I was aware that I knew practically nothing, but that I should find them possessed of much fine knowledge. And herein I was not disappointed: they knew much that I did not, and in this respect were my superiors in wisdom. But, gentlemen, our worthy craftsmen, it seemed to me, made the same error as the poets. Each one, because of his excellent craftsmanship, claimed to be wisest in other matters of the utmost moment, and this presumption threw their wisdom into the shade. So I asked myself on the oracle's behalf whether I would prefer to be as I am, neither wise with their wisdom nor ignorant with their ignorance, or to possess both these qualities of theirs. And I made reply to myself and to the oracle that it was to my advantage to remain as I am.

As a result of this investigation, gentlemen, I have incurred many enmities of the most bitter and grievous kind, and from them many slanders have arisen, and I am called by the name of 'wise'. For those who are present on each occasion think that I am wise in any matters in which I confute others. Whereas, gentlemen, in actual truth it seems to me that the god only is wise and that in this oracle he says that human wisdom is of little or no worth. And apparently he speaks of Socrates here and takes me as an example by using my name, just as if he should say: 'that man among human beings is most wise who like

Socrates has learnt that in reality his wisdom is nothing worth'. So that is why I go around even now searching and examining, at the god's command, any man, whether citizen or stranger, whom I think to be wise: and whenever he does not appear so to me, I come to the god's assistance and point out that the man is not wise. And as a result of this activity I have no leisure to pay any attention worth speaking of either to the city's affairs or to my own, but am in the depths of poverty owing to my service to the god.

And further, the young men who follow me uninvited—the sons of the wealthy, who have most leisure—enjoy hearing people cross-examined, and they often of their own accord imitate me and attempt to cross-examine others: and then I suppose they find a plentiful abundance of men who think they possess knowledge but know little or nothing. And consequently their victims are angry with me instead of with themselves, and they say that Socrates is a most pestilent fellow who corrupts the youth: and when asked by what action or teaching, they have nothing to say, for they do not know: but to avoid appearing at a loss, they utter the stock charges brought against all philosophers, about 'things in the sky and beneath the earth and 'not worshipping the gods and 'making the weaker argument the stronger'. For, I suppose, they would not be willing to admit the truth, that they are detected pretending to knowledge, when they know nothing. And so, I imagine, because they are zealous and vehement and numerous and speak vigorously and convincingly about me, they have long filled your ears with their violent slanders. It is on the strength of this that Meletus and Anytus and Lycon have attacked me, Meletus the indignant champion of the poets, Anytus of the craftsmen and politicians, Lycon of the orators: and so, as I remarked at the outset, I should be surprised if I could in so short a time rid you of a prejudice which has grown so strong. There, gentlemen, you have the truth, and I speak to you without any concealments or suppressions great or small. And yet I am pretty well aware that it is by these very methods that I make enemies: but this is proof that my words are true and that the prejudice and the causes of it are as I describe them. And whether you investigate the matter now or later, you will find that it is so.

This should be sufficient defence before you against the charges brought by my first accusers. I shall next attempt to offer my defence against Meletus, that true man and patriot, as he styles himself, and the later accusers. Once more then, as if they were a second group of assailants, let us take up their sworn statement in turn. It runs like this: ‘Socrates,’ it states, ‘is guilty of corrupting the youth and of not worshipping the gods recognised by the city but following strange religious practices’.

Such is the charge against me: and now let us examine each element in it.

Meletus says that I am guilty of corrupting the young. But I say, gentlemen, that Meletus is the guilty man, because he jests on a serious matter and light-heartedly brings people to trial, pretending to be zealous and concerned about matters which have never interested him in the least. And that this is so I shall now endeavor to prove to you also.

Come now, Meletus, tell me: do you not consider it of the utmost importance that our young men should be as good as possible?

Meletus:: I do.

Socrates:: Go on then and tell the court who it is that makes them better: for obviously you know, since you are so interested. You have, you say, discovered in me their corrupter and you bring me to court and accuse me: come then, tell these gentlemen who improves them and reveal his name ... You see, Meletus, that you are tongue-tied and unable to tell. And yet do you not think this is disgraceful and sufficient evidence of exactly what I say, namely that you have never felt the slightest concern in the matter?

But tell us, my good sir, who makes them better?

Meletus:: The laws.

Socrates:: That is not what I am asking, my worthy friend, but what man, who of course to begin with must know the laws.

Meletus:: These judges here, Socrates.

Socrates:: What is that, Meletus? Are they able to educate our youth and improve them?

Meletus:: Certainly.

Socrates:: All of them, or can some do so and others not?

Meletus:: All of them.

Socrates:: That is good news indeed—an abundant crop of benefactors. And what about the listeners (in court)? Do they improve the young or not?

Meletus:: They also do.

Socrates:: And the councilors?

Meletus:: The councilors too.

Socrates:: But, Meletus, do the members of the assembly corrupt the young? Or do they too all improve them?

Meletus:: They too.

Socrates:: Then all the Athenians, it seems, make them good except myself: and I alone corrupt them: is that what you mean?

Meletus:: Most emphatically, I do.

Socrates:: It is a great misfortune you lay to my charge. And now answer this: do you hold that the same thing is true with horses, that but one man does them harm, and all others improve them? Or, quite the contrary, that one man or very few can improve them, namely the trainers, but most people injure them if they have anything to do with them or use them? Is it not so, Meletus, in the case of horses and of all other animals? Of course it is, whether you and Anytus accept or deny it: we should have abundant reason to be happy about our young men, if it is really true that one man alone corrupts them, and all others do them good. However, Meletus, you prove conclusively that you have never given any thought to our youth, and clearly display your own indifference and lack of concern about the matters for which you prosecute me.

But in heaven's name, Meletus, answer this further question: is it better to live among good or evil citizens? Answer, my friend: for it is not a difficult question. Do not evil men do harm to those who at any time are their neighbours, and good men do good?

Meletus:: Certainly.

Socrates:: Is there any man who prefers to be harmed rather than benefited by his associates? Answer, my good sir: for the law bids you answer. Is there anyone who prefers to be harmed?

Meletus:: Certainly not.

Socrates:: And now, do you bring me to court for corrupting the young and making them worse men voluntarily or involuntarily?

Meletus:: Voluntarily, I say.

Socrates:: Why, Meletus, are you at your age so much wiser than I at mine, as to have realised that evil men always do evil to those who are closest to them, and the good some good, whereas I am sunk in such a depth of ignorance as to be unaware that, if I make any of my associates a knave, I am likely to suffer some harm from him, and yet, according to you, I commit this evil intentionally? Oh, no, Meletus, you cannot convince me of that nor, I should think, convince any other man either. But either I do not corrupt the young or, if I do, it is unintentional: so that in either event you are lying. And if I corrupt them involuntarily, for such involuntary errors the law does not bid you bring me to court, but rather to take me in private and instruct and admonish me: for manifestly, if I am instructed, I shall cease to do what in any case I am doing involuntarily. But you avoided my company and refused to instruct me, and you bring me here instead, where the law bids you bring those who need, not instruction, but punishment.

However, gentlemen, what I was saying is now quite evident, that Meletus has never concerned himself to any degree whatever with these matters. Nevertheless, tell us, Meletus, in what way you say that I corrupt the young. Or is it evident, by the terms of the indictment you have brought against me, that it is by teaching them not to acknowledge the gods observed by the city but to practise strange religious rites? Is it not by such teachings that you say I corrupt the youth?

Meletus:: Yes, most emphatically I do say so.

Socrates:: Then in the name of those very gods who are now under discussion, Meletus, explain this still more definitely to me and to the court. For I cannot understand whether you say that I teach men to believe that certain gods exist, not those recognised by the city, but different gods (in which event I myself do believe in the existence of gods and am not an out-and-out atheist and am not guilty in that way) and your charge against me is that they are different; or whether you insist that I do not believe in gods at all and teach this atheism to others.

Meletus:: That is what I mean, that you do not recognise gods at all.

Socrates:: You strange fellow, Meletus, why do you say this? Do I not then believe, like other men, that the sun and moon are gods?

Meletus:: No indeed, judges, he does not: for he says that the sun is a stone and the moon earth.

Socrates:: Do you imagine, my dear Meletus, that you are accusing Anaxagoras? And do you so disdain these gentlemen and think them so illiterate as not to know that the books of Anaxagoras of Clazomenae are full of these theories? And do the young men actually learn from me doctrines which they may purchase for a drachma at the most at the Orchestra and then laugh Socrates to scorn if he claims them to be his own, especially when they are so outlandish? In heaven's name, is that what you think of me? Do I not believe in any gods?

Meletus:: No indeed, in none whatever.

Socrates:: What you say is unconvincing, Meletus, even to yourself, I believe. It seems to me, gentlemen, that my opponent is thoroughly insolent and uncontrolled, and that he has laid this charge literally in a spirit of insolence and wantonness and youthful bravado. He is like a man trying an experiment by composing a riddle: 'Will Socrates, that paragon of wisdom, detect that I am trifling and contradicting myself, or shall I deceive him and all who hear me?' Yes, he seems to be contradicting himself in the indictment, as though he should say: 'Socrates is guilty of not recognising gods, but of recognising gods'. Yet this is the behaviour of a trifler.

And now consider along with me, gentlemen, what makes me think this is his meaning. Do you answer me, Meletus: and, as I entreated you at the outset, remember, gentlemen, not to interrupt if I converse in my usual fashion.

Is there any man, Meletus, who believes in the existence of human affairs but not of human beings? Let him answer, gentlemen, and not engage in one interruption after another. Is there anyone who believes in horsemanship, but not in horses? or in flute-playing, but not in flutists? There is not, my good sir: if you refuse to answer, I will tell you and all others here. But this next question you must answer. Is there anybody who believes in things divine, but not in divine beings?

Meletus:: There is not.

Socrates:: How obliging of you to answer—though reluctantly and compelled by the court. You assert then that I acknowledge and teach belief in things divine, whether old or new: at any rate, by your account, I recognise things divine, and to this you have sworn in your deposition. But if I recognise things divine, surely there is every necessity that I must recognise divine beings. Is it not so? I take it that you agree, since you do not answer. But do we not consider divine beings to be either gods or the children of gods? Yes or no?

Meletus:: Certainly.

Socrates:: If I believe in divine beings, as you say, then, if these divine beings are a kind of gods, that would be the riddling jest of which I accuse you—your assertion that though I do not believe in the gods, yet once more I do believe in them, since I believe in divine beings. But if on the other hand these divine beings are the illegitimate offspring of gods, whether by nymphs or by any other mothers whose children they are said to be—what man is there who would believe that the children of gods exist, but not gods? It would be just as ridiculous as if one believed that the offspring of horses and asses exist, namely mules, but not horses and asses. But beyond all doubt, Meletus, you lodged this indictment against me either as an experiment or because you were at a loss to discover any real guilt wherewith to charge me. There is no means whereby you can persuade anyone with the slightest intelligence that it is not to be expected of the same man that he will believe both in things divine and in what concerns the gods, and again that the same man will not believe in divinities and gods and heroes.

Well, gentlemen, that I am not guilty of the offences charged by Meletus does not, I think, need much proof, but what I have said is sufficient. But you may be well assured of the truth of what I said before, that many have come to hate me bitterly. And this it is that will convict me, not Meletus nor Anytus, but the prejudice and malice of the many. These things have already convicted many other good men, and are likely to do so again. There is no fear that it will end with me.

Now, perhaps someone may say: ‘Are you not ashamed, Socrates, of having engaged in an occupation which now exposes you to the danger of death?’ To him I could reply with justice: ‘You are mistaken, my friend, if you think that a man of even the slightest merit ought to calculate risks of life and death, but ought not rather in every action to consider whether it is right or wrong, the act of a good man or an evil. For by your account all the demigods who died at Troy would be slight, unmeritable men, the son of Thetis included, who despised death in comparison with dishonour. For when in his thirst to slay Hector, his mother, a goddess, spoke to him in some such words as follow, I believe: “My son, if you insist upon avenging the death of your friend Patroclus and killing Hector, you yourself will die—for”, said she, “straightway after Hector’s death your fate is ready”—he made light of danger and death when he heard this, and fearing far more to live a coward and fail to avenge his friend, “let me die at once”, he said, “when once I have punished the guilty, that I may not remain to be laughed to scorn, e a mere burden on the earth beside the curved ships”’ Do you think that he took any account of death and danger?

The truth is, gentlemen, that wherever a man posts himself, because he thinks it best, or is posted by his commander, there, in my opinion, he ought to remain and face the danger, taking no account of death or of anything else, except disgrace. When the officers whom you chose to command me, gentlemen, set me at my post at Potidaea and Amphipolis and Delium, I remained at my station like anyone else and faced the risk of death: it would be strange behaviour if through fear of death or of any other fate I were to leave my post, when the god, as I thought and understood, assigned me my duty—to live the life of a philosopher examining myself and others. Yes, that would be strange, and then I might in very truth rightly be brought to trial for not believing in the existence of the gods and disobeying the oracle and fearing death and thinking myself wise when I am not. For to fear death, gentlemen, is nothing else but to think oneself wise when one is not: it is to fancy that we know what we know not. No one knows whether death may not be the greatest of all blessings to man, but men fear it as if they knew well that it was the greatest of evils. And yet surely this is ignorance of the most reprehensible kind—that of thinking one knows what one does not. As for me, here too perhaps I differ from the majority of men to this extent, and if I should claim in any respect to be wiser than any other man, it would be in this, that as I have no definite knowledge about the other world, so too I do not think that I know: but I do know that it is shameful and evil to do injury and to disobey one's betters, whether god or man. In preference then to those evils which I recognise as such, I shall never fear or avoid what for all I know may be good. And so, even if you acquit me now and pay no heed to Anytus, who says that either I should never have been brought to trial at all or, since I have, it is impossible to avoid putting me to death, insisting that if I should now escape, your sons will all be utterly ruined by practising the teachings of Socrates—if you should say in answer to this: 'Socrates, we will not be persuaded by Anytus this time, we will acquit you, but only on condition that you no longer spend your time in these investigations nor pursue philosophy: if you are caught continuing such practices, you shall die'—if then as I said, you would release me on those terms, I should say to you: 'Men of Athens, I love and esteem you, but I will obey the god rather than you; and as long as I breathe and have the power, I shall never abandon philosophy nor cease to admonish you and reveal the truth to any one of you I may meet from time to time, saying in my wonted fashion: "My good friend, you are a citizen of Athens, a great city and highly renowned for its power and wisdom: are you not ashamed then of seeking to acquire as much money as you can, and reputation and honour, but caring nothing and taking no thought for wisdom and truth and the perfection of your soul?"' And if anyone of you should dispute this and say that he does care, I shall not at once release him and go my way, but I shall question him and examine and convict him and if I make up my mind that he does not possess goodness but merely claims to, I shall reproach him for making light of the most important things and treasuring what is of lesser value. This I shall do for the benefit of both young and old, whomsoever I encounter, both citizen and stranger; but more especially for you citizens, inasmuch as you are closer akin to me. For I assure you, this is the god's bidding: and I consider that the city has enjoyed no greater boon than my service to the god. For I go around engaged in the one activity of persuading you, young and old alike, not to care first and foremost for your bodies or for wealth, but rather for the improvement of your souls, saying: 'goodness does not come from money, but it is goodness that makes money and all other things in public or in private good for men.' If then by such discourses I corrupt the young, it must be harmful: but if anyone accuses me of saying anything else than this, he talks nonsense. 'Now then, gentlemen', I shall say, 'you may believe Anytus or not, you may acquit me or not: but I will not behave otherwise, even if I have to die many a death.'

Do not interrupt, gentlemen, but abide by my request not to interrupt but to listen: for I believe you will profit by listening. I am about to say something else at which you will perhaps exclaim aloud but do not by any means do that. You may be assured that if you put to death such a man as I describe myself to be, you will do yourselves more harm than me. Meletus and Anytus will do me no harm—that would be impossible. For it is not permitted, I believe, for a better man to be harmed by a worse. He might be killed or exiled or disfranchised: and Meletus and others perhaps consider these things to be great evils. But I do not: it is a far greater evil, in my opinion, to do what Meletus is now doing, endeavoring unjustly to put a man to death. Now therefore, gentlemen, I am not making this defence on my own behalf, as you might suppose. Far from it. It is on your behalf, that you may make no error about the god’s gift to you by condemning me. For if you put me to death, you will not easily find such another, one who, ridiculous as it may sound, has literally been attached by the god to the city as though to a horse that is thoroughbred and large but owing to its very size somewhat sluggish and constantly needs to be awakened by a gadfly. That is the guise, I think, in which the god has attached me to the city—a kind of creature that never ceases to awaken you and persuade and reproach you, besetting you one and all the whole day long from every quarter. You will not readily find such another, gentlemen, but if you will take my advice, you will spare me. But perhaps in your vexation, like sleepy people suddenly awakened, you will thoughtlessly kill me with a single blow, as Anytus suggests, and then pass the rest of your lives in slumber, unless the god in his care for you should send you another such visitant. But that I am actually a kind of gift from the god to the city you may realise from this fact: it does not look like mere human behaviour that I should have ignored all my own affairs and put up with their neglect for so many years now, ever engaging in your interests, approaching each one of you singly as though I were a father or elder brother and persuading you to care for goodness. And if I reaped any profit from this conduct or received a fee for my exhortations, it would be explicable. But as it is you can see for yourselves that my accusers, shameless though they have been in every other respect, have not had the effrontery to produce witnesses and assert that I ever exacted or asked payment from any man. For I think that my poverty is sufficient evidence that I am telling the truth.

Now perhaps it may seem strange that I go around giving my advice in private and busy myself with the concerns of others, but that I do not venture to appear before your assembly and give advice to the state. The reason for this is something you have often heard me speak about and in many places—something supernatural and divine which visits me—the very thing, of course, at which Meletus poked fun in his indictment. This is something that began with me in childhood, a kind of voice which on each occasion when it comes to me deters me from what I am about to do, but never encourages me to action. This it is that opposes my engaging in politics, and a very good thing it is, in my opinion, that it does oppose. For you may be certain, gentlemen, that if I had long since attempted to enter public life, I should have perished long ago without benefiting you or myself. And do not be angry with me if I speak frankly. There is no man who can save himself alive, if he genuinely opposes you or any other democracy and prevents many evil and lawless actions from taking place in the city: but it is essential that the man who is really to fight the battle for justice, if he is to remain alive even for a short while, should act in a private, not a public station.

For this I will offer you good evidence, not words, but what you respect more highly, deeds. Listen to what happened to me; then you may realise that so far from yielding to any man whatever to do wrong through fear of death, I would even be ready to meet my death for not yielding. The proofs I shall offer are mere tiresome commonplaces of the law-courts, but none the less true.

I have never held any office in the city, gentlemen, but once I was a member of the Council: and my tribe, Antiochis, happened to be presiding when you passed your resolution to try in a body the ten generals who failed to recover the dead after the sea-battle—an illegal action on your part, as you all afterwards agreed. On that occasion I alone of the presiding committee opposed your taking any action contrary to the laws and voted against you. And though the orators were ready to impeach and arrest me, and though you clamoured and hounded them on, I thought it my duty to face the danger to the end on the side of law and justice rather than, through fear of imprisonment or death, to side with you in your unjust decree.

This took place when the state was still a democracy. And when the oligarchy had gained power, the Thirty summoned me with four others to the rotunda and ordered us to bring Leon of Salamis from his home to be put to death. They gave many such orders to others also, being anxious to secure as many accomplices as possible in their guilt. But then once more I proved by action, not by word, that for death, if I may speak somewhat bluntly, I cared not a straw, but that my whole concern was that I should perform no wrongful or impious act. That government, for all its power, did not terrify me into doing anything wrong: but when we left the rotunda, the four departed to Salamis and brought Leon over, but I took my way home. And perhaps I might have met my death for this, had not that government soon been overthrown. And there are many who will confirm the truth of this to you.

Do you imagine that I could have survived for so many years if I had entered public life and had acted like a good man and true in aiding the cause of justice and, as is right, had considered this of paramount importance? Far from it, gentlemen: no other man would have either. But throughout my life, both in any public action and in private, you will find that I have been immutably the same, one who never made any base submission to any man whatever, and I include those whom they slanderously describe as my disciples. I have never been any man's teacher: but if anyone wished to hear me speaking and engaging in my mission, whether old or young, I grudged nobody: nor is it true that I converse when paid a fee but refuse to otherwise; but I offer myself to rich and poor alike for questioning and if any wish to hear what I have to say in reply. And whether any of these men turn out good or not I cannot rightly be held accountable, since I never promised or gave any of them any instruction. And if anyone says that he has ever heard or learnt from me in private anything that was not open to all others, I assure you that he is not speaking the truth.

But why do certain people enjoy spending much time with me? You have heard already, gentlemen, I have told you the whole truth. It is because they enjoy hearing the cross-examination of those who think themselves wise when they are not: and it really is diverting. But, as I tell you, this task has been enjoined upon me by the god in oracles and dreams and in every way in which a divine dispensation has ever enjoined upon any man any act whatever. That, gentlemen, is the truth, and it may easily be tested. If I have already corrupted some of our youth and am now corrupting others, then surely some of them, on recognising as they grow older that I had given them evil advice in their youth, should have made their appearance in court to accuse and punish me: or if they themselves were unwilling, their kinsfolk, fathers, brothers, and other relatives, should now have remembered and punished it, if those near and dear to them had suffered any harm at my hands. In any case many of them I can see here in court, first of all Crito, who is of my own age and parish, the father of Critobulus yonder; and then Lysanias of Sphettus, whose son Aeschines is present, and Antiphon of Cephisus also, the father of Epigenes; and others too, whose brothers spent their time in this manner, Nicostratus, son of Theozotides and brother of Theodotus—and Theodotus is dead and so could not dissuade him—and Paralus, son of

Demodocus, whose brother was Theages: and yonder is Adeimantus, son of Ariston, whose brother is Plato here, and Aeantodorus, whose brother is Apollodorus yonder. And there are many others I could mention to you, some of whom Meletus ought to have brought forward to give evidence, preferably during his own speech; but if he forgot then, let him do so now—I will stand aside—and let him say if he has any such witness. But, quite on the contrary', you will find, gentlemen, many who are ready to help me, the corrupting influence, the man who harms their relatives according to Meletus and Anytus. It would be reasonable of course to expect the victims of corruption themselves to help me: but those who are not corrupted, their kinsmen who are now older men—what other reason can they have for helping me than the true and just reason, that they know Meletus is lying and I am speaking the truth?

Well, gentlemen, this is pretty much what I have to offer in my defence, this and other similar evidence, I suppose. Now perhaps some one of you may be indignant when he recalls his own case—how, though involved in a far less critical trial than this, he begged and implored the judges with many a tear, bringing his small children and others of his family and many friends into court, in order to win the utmost sympathy, whereas I, it seems, intend to do none of these things, even though exposed, by all appearances, to the extremes of peril. Perhaps then in taking note of this he may harden his heart against me and being angered at this conduct of mine may give his vote in anger. If any one of you is so affected—and I do not expect it of you, but if so—I think I should make a reasonable plea if I said to him: ‘My good friend, I too have kinsfolk: for, in Homer’s words, “I am not sprung from oak-tree or from rock”, but from human parents: and so I too have kinsmen, and sons also, gentlemen, three of them, one in his teens and the other two still children. Nevertheless I shall not bring any of them into court and implore you to acquit me.' Why then will I do none of these things? Not through stubborn pride, gentlemen, nor in disrespect towards you. Whether I am confident or not when death is in question is another matter: but where honour is in question, mine and yours and that of the whole city, it does not seem good to me to act in such a way at my age and with my reputation: for whether that reputation be deserved or not, it seems generally believed at any rate that Socrates is in some way distinguished from the majority of men. If then those of you who are considered superior in wisdom or courage or any other virtue are going to behave in such a fashion, it would be a shameful affair. I have often observed the conduct of such men when on trial, men of some reputation too, but conducting themselves in the most extraordinary way, as though they thought they would suffer some terrible fate if put to death, as though indeed they would be exempt from death if you did not remove them. These men, in my opinion, attach discredit to the city, so that even a stranger might conceive that those of the Athenians who excel in worth, those whom the people select as their magistrates and other officers, are in no way superior to women. Any among you who enjoy any reputation at all should not act in this way, nor should you put up with it if we do: but you should make it plain that you are far more likely to condemn the man who puts on these dismal dramas and makes the city ridiculous, than the man who holds his peace.

And quite apart from reputation, gentlemen, I do not consider it right to implore the judge and secure acquittal by entreaty, but rather to inform and convince him. For the judge does not sit to dispense justice by favour but to render judgment. And he has taken oath, not to favour whomsoever he pleases, but to judge according to the laws. We should not then form in you the habit of perjury, nor should you acquire it: for neither of us would be acting with piety. Do not expect me then, gentlemen, to act towards you in a way which I consider neither honourable nor right nor pious, especially and above all when it is for impiety that Meletus here is prosecuting me. For if I should persuade you and do violence to your oath by entreaties, I should plainly be teaching you not to believe that the gods exist, and my very defence would literally convict me of not fearing the gods. But this is far from being true. I do fear them, gentlemen, as do none of my accusers; and I leave it to you and to the god to come to whatever decision is likely to be best both for me and for you.

## 2

If I am not vexed, gentlemen, at your verdict of condemnation, there are many factors that contribute to my attitude: and among others, that the event was not unexpected by me. But I am much more surprised at the number of votes on either side. For I did not expect that the margin would be so narrow, but a considerable one. As it is, apparently, if only thirty votes had been cast the other way, I should have been acquitted. As far as Meletus is concerned, in my opinion I am already acquitted: and not only that, but it is perfectly evident to everybody that if Anytus and Lycon had not joined him in the accusation, he would have suffered a fine of a thousand drachms for not having obtained the fifth part of the votes.

And so, he proposes the penalty of death. Well, what alternative penalty shall I suggest, gentlemen? Plainly what I deserve. And what punishment or fine do I deserve for refusing throughout my life to hold my peace? I neglected what most men love, money-making and the management of property, military commands and political leaderships, and all the factions and cabals that prevail in your city, thinking myself in fact too good a man to be suffered to live if I took that direction. And so I did not follow a road by pursuing which I was likely to be of no use either to you or to myself, but I chose a different path, that of visiting each one of you in private and doing you, so I claim, the greatest of benefits. I strove to persuade each one of you not to concern himself with his external possessions rather than with his self and the perfection of that self in goodness and wisdom; and not to concern himself with the trappings of the state rather than with the state itself, and in all other matters also to display a similar concern. Then what requital do I deserve for such conduct? Something good, gentlemen, if I am to assess my true deserts; and some good thing too that would be appropriate for me. What reward then is appropriate for a poor man and a benefactor, who needs leisure to give you counsel? There is nothing so appropriate, gentlemen, as that such a man should enjoy free maintenance at the Prytaneum—far more so indeed than if one of you has won a victory at the Olympic games with a horse or a pair or a four-horse chariot. For he but gives you the semblance of happiness, I the reality: and he has no need of maintenance, but I have. If then I must assess the penalty I justly deserve, I propose free maintenance at the Prytaneum.

But perhaps some of you will think that in speaking thus, just as in what I said about prayers and entreaties for pity, I am behaving with stubborn pride. That is not so, gentlemen, but the truth is rather this. I am convinced that I do no intentional harm to any man, but of this I cannot convince you. For we have spoken but a short time together. Whereas, in my opinion, if you had a law such as is found elsewhere, that capital trials should last, not one, but many days, you would have been convinced. But now it is not easy to dispel such deep-rooted prejudices in a short time. Being convinced then that I do wrong to nobody, I am but little likely to wrong myself by stating that I deserve to suffer some evil and naming such a penalty against myself. What fear should so impel me? The fear of suffering this penalty which Meletus suggests, when I tell you that I know not whether it be good or evil? Am I to choose as an alternative and propose for myself something I well know to be evil? Shall it be imprisonment? And why should I live on in prison, a constant slave to your successive magistrates? Shall it be a fine, and imprisonment until it is paid? But that is what I told you just now. I have no money wherewith to pay it. Shall I choose exile then? For perhaps you would accept that choice. I should indeed be devoted to life if I were so irrational as not to be able to reason thus with myself: you, my fellow-citizens, could not endure my words and discourses: they became too tiresome and odious to you, and you now seek to be quit of them: will others then cheerfully put up with them? Most unlikely, gentlemen. A fine life mine would be if I left Athens at my age and lived like a hunted thing, constantly changing from city to city. For I am well aware that, wherever I go, the young men will listen to me as they do here: and if I repel them, they will of their own accord persuade their elders and drive me forth: and if I do not repel them, their fathers and kinsmen will drive me out for their sakes.

Now perhaps some of you may say: c Can you not leave us, Socrates, and live in peace and quiet abroad’? This is the most difficult thing of all to bring home to you. For if I say that such behaviour is disobedience to the god and that for this reason it is impossible for me to keep silent, you will regard me as insincere and will refuse to believe: but you will be still less ready to believe me if I say that the greatest good that can befall a man is to discourse every day about goodness and those other subjects about which you hear me conversing and examining myself and others, and that the life unexamined is not worth living. Yet the truth is as I say, gentlemen, difficult though it be to persuade you. Moreover I am not in the habit of considering myself deserving of any evil. If I had money, I would have proposed a fine such as I had some prospect of paying: for that would not have harmed me. But as it is I have none—unless you are willing to accept as a fine such a sum as I could afford. And perhaps I could afford one mina. That, then, is the sum I propose.... But Plato here, gentlemen, and Crito and Critobulus and Apollodorus bid me propose 30 minae, and offer themselves as surety. That then is the sum I propose: and you will find them sufficient sureties for the money.

### 3

For lack of but a little patience, gentlemen, you will acquire, from those who wish to malign the city, the evil name of having put to death Socrates, a wise man—for those who wish to reproach you will call me wise, even if I am not. At any rate, if you had waited but a little while, this would have happened in the natural course of events: for you see that I am well stricken in years and near to death. I am now speaking, not to all of you, but to those who voted for my condemnation. And to these same people I have this further to say. Perhaps, gentlemen, you think that I was convicted through lack of words which might have persuaded you, if I had thought it right to leave nothing unsaid or undone to secure my acquittal: but that is far from true. I have indeed been convicted through a lack, not a lack of words, however, but a lack of effrontery and shamelessness and of readiness to say the kind of thing you would most have delighted to hear from me—

weeping and lamentations and many other deeds and words which I claim to be unworthy of me—the kind of thing you are accustomed to hear from others. But neither at the time did I think that I ought to do anything common or mean because of the danger, nor do I now regret having so defended myself: but I would much rather die after such a defence than live on after a defence like theirs. For neither in court nor on the battlefield should I or any other contrive to escape death at any cost. In battle it often becomes evident that death may be avoided if a man flings away his weapons and goes on his knees to his pursuers: and in dangers of every kind there are many means of escaping death, if a man ventures to leave nothing unsaid or undone. But perhaps it is not difficult to escape death, gentlemen, but a far more difficult thing to escape the stain of evil: for it flies faster than fate. And now I who am an old man and slow have been overtaken by the slower, and my accusers, who are quick and clever, by the faster, the taint of evil. And now I depart condemned to death by you, and they, convicted of evil and wrong-doing by Truth herself. And I abide, as they do, by the decision. Perhaps these things had so to happen, and I think it is well.

And now I wish to prophesy to you, all you who have condemned me: for I have reached the time at which men are most gifted with prophecy, the hour when death is near. And I say to you, my slayers, that immediately after my death a punishment will come upon you far more bitter than this death sentence of yours. You have now done this, thinking you will be released from submitting an account of your lives, but it will turn out completely the reverse, I tell you. Those who cross-examine you will be more numerous—men whom I have held back, though you never knew it: and they will be more troublesome, inasmuch as they are younger: and you will be far more vexed with them. For if you think that by putting men to death you will restrain any from reproaching you for your evil lives, you are quite mistaken. Such a method of escape is scarcely possible nor is it honourable: but the noblest and easiest is, not to repress others, but to see to it that each one of you is as perfect as possible. With this prophecy to those who condemned me, I bid you good-bye.

And now I should be glad to converse about what has happened with those who voted to acquit me, while the officials are busy and before I depart to the scene of my death. Remain with me, my friends, for just so long: for there is nothing to prevent us from talking together while yet we may. You are my friends, and to you I am ready to reveal the meaning of what has now befallen me. A strange thing has happened to me, justices—for I can properly give you that name. The customary divine, prophetic monitor has on all previous occasions been most persistent, opposing me in quite trivial matters if I were going to do something amiss. And now, as you see for yourselves, something has come to pass which might be considered, and actually is considered, the greatest of evils. But this sign from God offered no opposition, either when I left my home this morning or when I made my way to court, or when I was on the point of saying anything in my speech. Yet during other discourses it has often checked me in the very act of speaking. But nowhere in this present affair has it offered any objection to what I said or did. I will explain to you what I conceive to be the reason for this. The fate that has befallen me must be good, and all who believe that death is an evil must be wrong in their opinion. I have good evidence of this: for beyond question the accustomed sign would have opposed me, if I had not been going in some way to fare well.

Let us reflect in this way too that there is every hope death is a boon. For death is one or other of two things. It is either complete annihilation, when the dead man has no sensation of anything; or, as we are told, a change of life and migration of the soul from one world to another. And if death means complete unconsciousness, like a sleep in which the slumbering man sees not even a dream, then it would be a marvellous gain. For if a man had to choose that night in which he slept so soundly as not even to dream, and after comparing with it all the other nights and days of his life had after due deliberation to say how many days and nights in his life he had spent more pleasantly and happily than this, I think that not only a private person, but even the Great King himself would find such nights easy to count in comparison with the other nights and days. If then death is like this, I count it a gain: for thus reckoned all eternity seems no longer than a single night. But if on the other hand death is like making a journey to another land, and there is truth in the stories that all the dead dwell there, what greater boon could there be, my judges, than this? For if on reaching the other world, released from those who claim to be judges here, a man is to discover the true judges who are said to give sentence there—Minos and Rhadamanthys and Aeacus and Triptolemus and other demi-gods who lived righteously in their life here—would such a journey be a trivial matter? Or again, to associate with Orpheus and Musaeus, and Hesiod and Homer—what would not any one of you pay for that? For my part, I am willing to die many deaths if these stories are true. Life there, in my opinion, would be a wonderful thing, when I could meet Palamedes and Ajax son of Telamon and any others of the men of old who were put to death through an unjust verdict, and compare my experiences with theirs—this, I think, would be a real pleasure—and, greatest pleasure of all, to spend my time there, as here, questioning and cross-examining to discover which of them is wise, and which thinks himself wise when he is not. What price, my judges, would not a man pay to examine the leader of the great expedition to Troy, or Odysseus, or Sisyphus or countless others, both men and women, whom one might mention? It would be bliss unspeakable to converse with them and live with them and question them. In any case they do not in that world put men to death for doing this: for not only are the dwellers in that world happier in general than are we, but for all time to come they are immortal, if what we are told is true.

But you too, my judges, must face death with good hope, and remember this one truth, that a good man cannot suffer any evil either in life or after death, and that the gods do not neglect his fortunes. What has happened to me also is not mere chance, but I am sure that it was better for me to die now and be rid of my troubles. That is why the sign nowhere restrained me, and I am not so very vexed with those who accused and condemned me. And yet it was not with this intention that they accused and condemned, but thinking to harm me. For this they deserve to be reproached. But this much I entreat of them. When my sons reach manhood, gentlemen, punish them by vexing them in the same way in which I vexed you, if you think they concern themselves with money or anything else in preference to goodness: and if they consider themselves to be something when they are of no account, reproach them as I reproach you for not caring for what they should and for thinking they are of some account when they are worthless. And if you do this, both I and my sons will have received just treatment from you. But now the time has come for us to go our different paths, for me to die, for you to live. And which of us is going to the better fate is unknown to all save only to God.

### Introduction to The Sophist.

There are two works which come before the Sophist which are of special interest; *Parmenides*, which factually is an examination of *One*, as a subject, and its predicates *A Unit*. Parmenides is an exercise to clarify and understand the principles of predication and the relationships between the perceptible and the intelligible. Our body informs us of boundaries and relative differences. All we can do is name them. Through each system we do not know a thing, we know of an element of a thing. Thus the expression, *we can never know the thing in of itself* which expression is aimed at the perceptible. Our knowledge of things is intelligible. Our body takes things apart and delivers those parts to a mind which must now create indexing systems for them. One part of that is the intelligible operation of combining these two elements, a *Conjugate Binary Pair*, into some one thing.

*Theaetetus* is the awakening of a mind that asks a question, what is correct linguistic processing? What is the science of grammar? Every grammar is effected by complete induction and deduction of a unit. If you do not know what a unit is, then you have not comprehended *Parmenides*.

In the *Sophist*, one is going to learn what *rational explanation* is. A definition equates a *Subject Naming Convention*, derived from the paradigm of a container, or limit, or boundary, as the name of a group of abstractions, one a boundary and another a relative difference, i.e. a unit. These names are the *Predicate Naming Convention*. What one has done is by recursion of a container, a limit, constructed a class, or One. From this container, one then divides it in accordance with the correlatives one has available to them.

Imagine a mind as a truck, which one takes out on trash day, picking up things out of the garbage. When one takes it all home, one starts examining the wealth they have acquired. The examination is what is meant by the examined life. There is no mystery about it. It is just curious examination into our own mind.

Given any unit is divisible into correlatives. A segment has two, each end of it, which we can name, and a circle has two, one of which is a single name, but the other a function which provides relative distinctions between units. In short, each of our senses and combinations of them, form a complex unit through memory. Memory is the universe of our information. One has to look at their experiences with reality as a unit comprised of one thing whose relative is actually a collection of relatives, which you divide one at a time to establish the rational explanation of a unit which is defined. This is also called, definition by division. One can then see, just like in geometry, one takes a unit, a segment, and learns how to divide it using a compass, that compass is one's own experience.

It is also called class mechanics.

Correlatives for geographical location can be up, down, left, right, etc, but it can also be land, sea, and air. Etc.

So all one is doing, is going through one's list of names, to name the correlative distinctions in any particular object. This will be limited by one's own effort in learning them.

All a grammar is, is a symbolic system of indexing analog information.

Thus, if one understands symbolic processing, then they understand why geometry, is actually Basic Analog Grammar and it provides a mind with a single working paradigm for Logics. Personally, one has to see some rather pathetic humor in those who claim to write on Set Theory and Class Mechanics using Logic, especially when it was done long ago by early dialecticians using Basic Analog Grammar, aka, Geometry. They, unlike modern genius's took mapping the mind not only seriously, but rationally.

### nonbeing

The Sophist is also one of the dialogs which more clearly displays a fault in a few of Plato's dialogs. Words, names, are the standards of behavior towards abstractions. Although it is clear, or almost clear, in the mind that one cannot assign two different names in regard to the same element to a single perceptual abstraction, this same criteria applies also to conceptual abstractions one of which is towards the process, often called the operands or operations upon those words. Take for example assertion and denial; nonbeing is simply a conjunction of is and not, which produces notis along with isnot; a fault which Aristotle took to more extremes than Plato. Is and not refer to the assignment of names, a process of operation, not to any perceptible abstraction. We cannot assign contradictory operations at the same time, in reference to a single operation. Thus, when one finds those who string together, not not not, etc, the simply provide numerical recursion of an operation which resolve to a metaphor of odd and even.

We should get into the habit of realizing we are not, in the assignment of names, grammars, asserting anything of abstractions but are displaying our virtue in regard to the application of names, binary recursion. As, in of themselves, names have no meaning, they cannot, in anywise, assert anything of the data. We can map correctly or not.

# The Sophist.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Theodorus, Socrates, a Guest from Elea, Theaetetus.

Theodorus:: According to our agreement yesterday, both we ourselves are come, Socrates, in due order, and we bring this our guest, an Elean by birth, and a friend of Parmenides and Zeno, and a great philosopher.

Socrates:: Are you not, Theodorus, unconsciously bringing not a guest but some god, according to the language of Homer, who says in behalf of such mortals, as have a portion of due respect, both other gods, and especially the deity who presides over guests, become a follower and survey the insolent and the equitable conduct of men. So that perhaps he, who now follows you, may be one of the better beings about to survey and confute us, when ill-conducting ourselves in a strife of words, through his being a kind of a disproving god.

Theodorus:: Such is not the manner of this stranger, Socrates; but he is more moderate than those that are studious of contention; and the man appears to me, not to be a deity, but divine: for such I denominate all philosophers.

Socrates:: And you do well, my friend. Although I fear this race of philosophers is scarcely more easy to distinguish, I may say, than that of the divinity. For they, who are philosophers, not made up, but in reality, appear, through the ignorance of others, to be of a multiform kind, while they wander about cities, and behold from on high the life of those below them; and to some they seem to be worthy of no honor, but to others of all; and now they appear to be politicians; and now sophists; and sometimes there are those, to whom they give the idea that they are altogether mad. I would, however, gladly hear from this our guest, if it is agreeable to him, what the people about the place there think of these things, and how they denominate them.

Theodorus:: What things?

Socrates:: the sophist, statesman, and philosopher.

Theodorus:: What, and of what kind, is the doubt about them, respecting which you have it in your mind to make an inquiry?

Socrates:: It is this. Whether they consider all these as one or two? Or as there are three names, whether they distribute them into three kinds likewise, and attach to each singly a name?

Theodorus:: He will not, I think, grudge to go through them. Or how shall we say, guest?

Stranger:: Thus, Theodorus. For I do not grudge, nor is it difficult to say, that they think them three kinds. But to define clearly what each of them is, is not a small nor an easy task.

Theodorus:: You have by accident, Socrates, laid hold of questions similar to those, which we were asking this our guest, before we came hither. But he then made the same pretence to us, as he just now did to you: since he says that he had sufficiently heard, and did not forget.

Socrates:: Do not then, stranger, deny us the first favor we ask. But tell us thus much; whether you are wont more readily to go through by yourself and to state in a long discourse whatever you wish to show forth, or by interrogations? such as I once heard Parmenides employing, and at the same time going through very beautiful arguments, when I was a young man and he very old at that time.

Stranger:: With him who converses by answers, Socrates, without pain, and as it were with a light rein, it is more easy thus with another; but if not, by oneself.

Socrates:: You are at liberty then to select whom you please of those present here: for we shall all of us readily obey you. You will however, if you take my advice, select some of the young men, either Theætetus here, or any of the rest, if such is your mind.

Stranger:: A kind of shame has come upon me, Socrates, in that, conversing with you now for the first time, I have not carried on the intercourse in detail, word for word, but by drawing out a discourse to a great extent, either by myself or to another, I have as it were made a display. For in reality, that which is now said is not such as a person would expect it to be, when interrogated about it; for it requires a very long discussion. But on the other hand, not to gratify you and these, especially since you have spoken as you have spoken, would, as it appears to me, be unlike a guest and boorish; since, from what I have before said, and from what you now urge me, I receive Theætetus here to be the respondent.

Theaetetus:: Will you then, stranger, as Socrates said, gratify us all?

Stranger:: It nearly appears then, Theætetus, that nothing further must be said on this point. And as it seems, the discourse must hereafter be addressed to you. But if, wearied by the length of the discourse, you shall be somewhat annoyed, blame not me, but these your companions, as the cause.

Theaetetus:: But I think I shall not faint in this way for the present. If, however, such a thing should take place, then I will take to myself as an ally Socrates, the namesake of Socrates here, who is of the same age with me, and my associate in gymnastic exercises, and not unaccustomed to labor in many things with me.

Stranger:: You say well. Deliberate then about these things by yourself, as the discourse proceeds. But now you must consider in common with me, beginning in the first place, as it appears to me, from the Sophist; and searching out and showing forth by a reason, what thing he is. For now both you and I have only the name in common respecting this thing; but as regards the thing by what name we call it, perhaps each of us have one peculiar to ourselves. But it is always requisite respecting every thing, to agree rather through reasons as to the thing itself, than to the name alone without a reason. However, with respect to the tribe which we now have it in our mind to investigate, it is not the easiest of all things to comprehend what a sophist is. But whatever things of moment ought to be well and thoroughly labored at, respecting these it has been decreed by all of old that we must practice them first in small and more easy matters, previous to those in the greatest. Now then, Theætetus, I too recommend, since we conceive the genus of a sophist is difficult to hunt out, that we should in like manner practice the method in something more easy; unless you are able to show some other and easier road.

Theaetetus:: But I am not able.

Stranger:: Are you willing then to go after something of little value, and to endeavor to put it as the pattern of a greater?

Theaetetus:: Yes.

Stranger:: What then if we propose a thing well known, and of trifling value, but possessing a subject for discourse not less than things greater? as, for instance, a fisherman. Is not this thing known to every one, and worthy of not very great and serious thought?

Theaetetus:: It is so.

Stranger:: And I suspect it has a method and reasoning not unsuited for us.

Theaetetus:: It would then answer well.

Stranger:: Come then, let us begin from it thus; and tell me, whether we shall put down a fisherman as skilled in some art, or unskilled in some art, but possessing another power.

Theaetetus:: By no means as unskilled in some art.

Stranger:: But of all arts there are nearly two species.

Theaetetus:: How so?

Stranger:: Agriculture, and the care respecting every thing mortal, and that relating to the putting together and molding what we call an utensil, and the imitative power, all these may be justly called by one name.

Theaetetus:: How so? and by what name?

Stranger:: When any one leads subsequently into existence that which was previously not in existence, then we say that he who leads, makes, and that the thing led, is made.

Theaetetus:: Right.

Stranger:: But all which we just now mentioned are wont to possess their own power suited to this.

Theaetetus:: They do.

Stranger:: This then let us summarily call the making power.

Theaetetus:: Be it so.

Stranger:: After this the whole species of discipline and knowledge, and the species relating to money-making, and contending, and hunting, may be said to be clearly a certain acquiring power, through all their details; since not one of these makes any thing, but gets hold of some things, which are and have been, through words and deeds, and does not give up to others who attempt to get hold of them.

Theaetetus:: Truly so; for it would be proper.

Stranger:: Since then all arts consist either in acquiring or in making, in which of these, Theætetus, shall we place the art of fishing?

Theaetetus:: Doubtless in the art of acquiring.

Stranger:: But are there not two species of the art of acquiring? the one being an interchange between those that are willing, through the medium of gifts, wages, and purchase? but the other would be a getting hold, effected entirely either by deeds or words.

Theaetetus:: So it appears from what has been said.

Stranger:: But must not the getting hold likewise receive a two-fold division?

Theaetetus:: In what way?

Stranger:: The one being openly done, and wholly from a contest; but the other secretly, and consisting wholly in hunting.

Theaetetus:: Yes.

Stranger:: It is likewise irrational not to give hunting a two-fold division.

Theaetetus:: Say how.

Stranger:: By making one relate to a race inanimate, and the other to an animated one.

Theaetetus:: How not? if there are both these.

Stranger:: How should there not be? But we may pass by the hunting of inanimate things as being without a name, except as regards some portions of the art of diving, and other trifling things of this kind; but call the other part, relating to the hunting of an animated race, animal-hunting.

Theaetetus:: Be it so.

Stranger:: But is it not justly said, that of animal-hunting there is a twofold kind? one being the hunting of walking animals, which is distinguished by many species and names, but the other of swimming animals, and which is hunting in a liquid.

Theaetetus:: Entirely so.

Stranger:: But of the swimming division, we see that one kind is winged and the other aquatic.

Theaetetus:: Undoubtedly.

Stranger:: But all the hunting of the winged tribe is called bird-catching.

Theaetetus:: It is so called.

Stranger:: But that of nearly all the aquatic, sea-fishing.

Theaetetus:: Yes.

Stranger:: But shall we not divide this hunting into two chief parts?

Theaetetus:: What are they?

Stranger:: According as the one makes for itself a catch with nets, the other by a blow.

Theaetetus:: How say you? And how do you divide each?

Stranger:: Whatever by enclosing on all sides restrains any thing for the sake of an hindrance, it is reasonable to call a net.

Theaetetus:: Entirely so.

Stranger:: But do you call a net of twigs, of twine, of reeds, and a casting-net, any thing else than nets?

Theaetetus:: Nothing else.

Stranger:: We must therefore say that this hunting with nets is a part of fishing, or something of this kind.

Theaetetus:: Yes.

Stranger:: But that which takes place with hooks and three-forked harpoons, by a blow, and which is different from the other kind, it will be requisite for us now to call by one word, by-a-blow-hunting. Or what would any one, Theætetus, say better?

Theaetetus:: Let us disregard the name; for this is sufficient.

Stranger:: Of by-a-blow-hunting then one kind is, I think, at night effected by the light of fire; and it happens to be called the fire-kind by those engaged in the hunting.

Theaetetus:: Entirely so.

Stranger:: But the other kind is by day, and is effected with rods and harpoons, having hooks at their extremities, and is wholly hook-fishing.

Theaetetus:: It is so called.

Stranger:: Of hook-fishing, and by a blow, that which takes place by darting downwards the harpoons from on high, is I think called harpoon-fishing, on account of persons using the harpoons in that way.

Theaetetus:: So some persons say.

Stranger:: There remains then only one kind, so to say.

Theaetetus:: What is that?

Stranger:: That which is with a blow contrary to this, and effected with a hook, but not striking, as it may happen, upon any part of the body of fishes, as in the case of harpoons, but about the head and mouth of the fish caught on each occasion, and drawing it from below to the contrary up by rods and reeds; to which fishing what name, Theætetus, shall we say ought to be given?

Theaetetus:: That of hook-fishing with rods; and we now appear to have arrived at the end of that, which we proposed as being necessary to find out.

Stranger:: Now then, you and I have not only agreed about a name for the fishing art, but we have likewise sufficiently accepted the reason respecting the thing itself. For of the whole art, a half was in the acquiring; and of the acquiring, a half was in the getting hold; and of the getting hold, a half was in the hunting; and of the hunting, a half was in the animal-hunting; and of the animal-hunting, a half was in the hunting in a liquid; and of the hunting in a liquid, the downward division was wholly sea-fishing; and of the sea-fishing, a half was the fishing by a blow; and of the fishing by a blow, a half was by a hook; and of this a half was about the blow drawing from below upwards; and that from the act itself to which the name has been made to resemble the fisherman's art, having been now discovered, is called by that appellation.

Theaetetus:: This, then, has been shown in every respect sufficiently.

Stranger:: Come then, let us endeavor according to this example to discover what a sophist is.

Theaetetus:: By all means.

Stranger:: Now this was the first search in the pattern just adduced, whether we must put down a fisherman as an untaught individual, or as possessing some art.

Theaetetus:: It was.

Stranger:: And now, Theætetus, shall we put down this person as an untaught individual, or as truly a sophist in all things?

Theaetetus:: By no means as an untaught individual. For I understand what you mean, that he who possesses the name, ought to be such. But we must put him down as possessing some art.

Stranger:: What is then the art? By the gods, are we ignorant that one of these men is a relation of the other?

Theaetetus:: Whom of whom?

Stranger:: The fisherman of the Sophist.

Theaetetus:: In what way?

Stranger:: Both of them appear to me to be hunters.

Theaetetus:: Of what prey is this the hunter? for we have spoken of the other.

Stranger:: We divided the whole of hunting into the swimming and the walking.

Theaetetus:: We did.

Stranger:: And we went through such a portion as related to the swimming part of the aquatic kind? but we left the walking undivided, having said that it was multiform.

Theaetetus:: Entirely so.

Stranger:: Thus far then the Sophist and the fisherman equally proceed from the art of acquiring.

Theaetetus:: They appear so.

Stranger:: But they turn themselves from the animal hunting, one to the sea, and rivers, and lakes, and he catches animals in these.

Theaetetus:: Undoubtedly.

Stranger:: But another turns himself to the land, and some other rivers, as if they were meadows of wealth and youth without stint, with the view of getting hold of the animals nourished in them.

Theaetetus:: How say you?

Stranger:: Of the hunting on foot, there are two chief parts.

Theaetetus:: Of what kind is each?

Stranger:: One is the hunting of tame animals, and the other of wild.

Theaetetus:: Is there any hunting then of tame animals?

Stranger:: If indeed man is a tame animal. But lay down in whatsoever way you like, either that no animal is tame, or that some other is tame, but that man is a wild one; or you say that man indeed is a tame animal, but you think that there is no hunting of men. Whichever of these suppositions you deem it agreeable to you to be stated, this do you define.

Theaetetus:: I think, stranger, we are a tame animal, and I say that there is a hunting of men.

Stranger:: Let us say then that tame-animal hunting is of two kinds.

Theaetetus:: Speaking according to what manner?

Stranger:: By defining the hunting by robbers, and that which makes slaves, and that by tyrants, to be one and all a hunting by force.

Theaetetus:: Very well.

Stranger:: But by calling that which pertains to law-courts, popular assemblies, and private discourse, one and all a certain single persuasive art.

Theaetetus:: Right.

Stranger:: Now of this persuasive art let us say there are two kinds.

Theaetetus:: What are they?

Stranger:: One is private, and the other public.

Theaetetus:: There are then these two species.

Stranger:: Again, with respect to private hunting, one kind is connected with wages, and the other with gifts.

Theaetetus:: I do not understand.

Stranger:: It seems you have never given your mind to the hunting of lovers.

Theaetetus:: Why say you so?

Stranger:: Because persons bestow even gifts in addition upon the caught.

Theaetetus:: You speak most truly.

Stranger:: Let this then be a kind of the amatory art.

Theaetetus:: By all means.

Stranger:: But as regards that connected with wages, that part of it which keeps up an intercourse through favor, and has in every way made a bait through pleasure, and bargains for food for itself as its wages, this, I think, we should all of us call adulation, or a certain pleasure-giving art.

Theaetetus:: Undoubtedly.

Stranger:: But the other part of it, which professes to keep up an intercourse for the sake of virtue, and bargains for coin as its wages, is it not worthy to call by another name?

Theaetetus:: How not?

Stranger:: But with what name? Try to tell me.

Theaetetus:: It is evident. For we appear to me to have found the Sophist; and thus calling him, I think I should call him by a fitting name.

Stranger:: According to the present reasoning, it seems, Theætetus, the art of a sophist must be called domestic hold-getting, acquiring, hunting, animal-hunting, land-hunting, on land, tame-animal-hunting, man-hunting, by persuasion-hunting, individual-hunting, wages-hunting, coin-selling, and ensnaring rich and noble young men, through a false reputation for erudition, as the present reasoning now goes with us.

Theaetetus:: Entirely so.

Stranger:: Let us consider further still in this way. For the object of our present search does not participate in some contemptible art, but in a very clever one. For from what has been before stated, an idea presents itself that it is not that kind of art, which we just now said, but some other kind.

Theaetetus:: How so?

Stranger:: Of the art of acquiring, there was a two-fold kind, one consisting in the catching, and the other in the exchanging.

Theaetetus:: There was.

Stranger:: Let us say then, that of the exchanging there are two kinds, the one consisting in giving, and the other in selling.

Theaetetus:: Let it be so said.

Stranger:: And again, we will say that the selling must have a two-fold division.

Theaetetus:: In what way?

Stranger:: He who exposes his own works for sale is called a seller of his own property; but he who sells the works of others, an exchanger.

Theaetetus:: Entirely so.

Stranger:: But is not the exchange, which takes place in the same city, and which is nearly a half of the whole of the trade, called capelic?

Theaetetus:: Yes.

Stranger:: And is not that which effects an exchange from one city to another, by buying and selling, called emporic?

Theaetetus:: How not?

Stranger:: And do we not perceive, in the case of the emporic, that the sale of the articles by which the body and soul are nourished, and which they use respectively, becomes barter by means of coin?

Theaetetus:: How say you this?

Stranger:: Of that part, which relates to the soul, we are perhaps ignorant: but the other we understand.

Theaetetus:: We do.

Stranger:: Let us say then as regards music in general, which is constantly purchased at one place, and, carried from city to city, is sold at another; and as regards painting, wonder-working, and other things pertaining to the soul, which are imported and sold, some for the sake of amusement, others for graver pursuits, that the person, who imports and sells them, would give a handle to be called a merchant no less than by the sale of meats and drinks.

Theaetetus:: You speak most true.

Stranger:: Will you not, then, call by the same name him who goes about from city to city to buy learning for money?

Theaetetus:: Certainly.

Stranger:: But of this soul-trafficking, would not one part be most justly called an exhibition; but the other part, although no less ridiculous than the former, still as being a selling of learning, there is a necessity to call it by a name the brother to the act.

Theaetetus:: Certainly.

Stranger:: But in this learning-selling, the trade which relates to other arts must be called by one name, and that which relates to virtue by another.

Theaetetus:: How not?

Stranger:: For as regards the others, the name "art-seller" would be fitting; but as regards this, do you consider what name to call it.

Theaetetus:: And what other name, except that sought out now for the Sophistic race, could one mention without an error?

Stranger:: No other. Now then let us collect it together, by saying that by a second search, the Sophistic art appeared to consist in the acquiring, exchanging, buying, trafficking, soul-trafficking respecting discourses, and the selling the learning of virtue.

Theaetetus:: Just so.

Stranger:: By a third search, I think that you will call by no other name, than we have done just now, the person who, being settled in a city, partly buys and partly fabricates himself learning respecting these very same subjects, and by selling determines for himself to live by such a plan.

Theaetetus:: Why, indeed, should I not?

Stranger:: And that part too of the acquiring art, which consists in exchanging, purchasing, and selling in both ways, either one's own inventions, or those of others, you will ever call, as you seem, a sophistic kind, whatever may be the learning-selling respecting such things.

Theaetetus:: Necessarily so. For it is necessary to be the follower of reason.

Stranger:: Let us still further consider, whether the kind, which has been now pursued, is similar to some such thing as this.

Theaetetus:: To what?

Stranger:: Of the art of acquiring a certain part consisted in contesting.

Theaetetus:: It did.

Stranger:: It will not then be from the purpose to divide it into two.

Theaetetus:: Say into what parts?

Stranger:: By laying down one part as a contest of friends, and the other as the fight of foes.

Theaetetus:: It is so.

Stranger:: Of the fighting part then, when a body comes in conflict with a body, it is nearly reasonable and becoming for persons, laying down a name, to pronounce it, as it were, violent.

Theaetetus:: It may.

Stranger:: But in the case of reasons coming in conflict with reasons, what else, Theætetus, would any one call it but contention?

Theaetetus:: Nothing else.

Stranger:: But as to contentions, we must lay down a twofold division.

Theaetetus:: In what way?

Stranger:: So far as contention takes place through prolix arguments against prolix arguments and about things just and unjust in a public matter it is judicial.

Theaetetus:: It is.

Stranger:: But when it takes place in a private one, and is broken to minute parts, by questions to answers, are we accustomed to call it any thing else than contradiction.

Theaetetus:: Nothing else.

Stranger:: But of contradiction, that part which respects private contracts is made the subject of dispute, and is carried on carelessly and without art, we must place as a separate kind; since reason distinguishes it as being something different; but it has neither obtained an appellation from any of those of a former period, nor does it deserve to obtain one now from us.

Theaetetus:: True, for it is divided into parts extremely small and very various.

Stranger:: But that which is according to art, and disputes about things just and unjust, in the abstract, and universally about other matters, we are accustomed to call contentious.

Theaetetus:: How not?

*Stranger::* But of the contentious, one part destroys wealth, and the other makes it.

Theaetetus:: Entirely so.

Stranger:: Let us then endeavor to state by what name it is needful to call each of these.

Theaetetus:: It is proper to do so.

Stranger:: I think then that the neglect of private affairs, which takes place through the delight in the practice of contention, and through the telling to the majority of listeners what is not heard with pleasure, may be called, according to my notion, something not different from babbling.

Theaetetus:: It is indeed called so.

Stranger:: But do you now in your turn endeavor to tell the contrary name of him, who makes money through private quarrels.

Theaetetus:: Would not any one err, in calling him by any other name than that of the wonderful sophist, who, after being pursued by us, has now come again for the fourth time in our view?

Stranger:: the Sophist then, as it seems, is nothing else but that money-making genus, which is a part of the arts of quarrelling, contradiction, controversy, hostile fighting, friendly contest, and acquisition, as our reasoning has pointed out.

Theaetetus:: He is altogether so.

Stranger:: You see, then, it is truly said, that this wild beast is a various animal, and that, according to the proverb, he is not to be caught with the left hand.

Theaetetus:: It is necessary then to use both hands.

Stranger:: It is necessary; and we must to the utmost of our power do something of this kind, by running after its footmarks. But tell me, have we not words relating to household affairs?

Theaetetus:: Yes, many. But about which of the many are you inquiring?

Stranger:: Such as when we say to pass through a colander, to bolt through a bag, to pass through a sieve, to separate.

Theaetetus:: How not?

Stranger:: And besides these, we know the words, to card wool, to draw it down, to weave it, and ten thousand others of a like kind existing in the arts. Do we not?

Theaetetus:: What being desirous to point out respecting them, and to bring forward as a pattern, have you made this inquiry in general terms?

Stranger:: All the names that have been mentioned, are in a certain respect divisive.

Theaetetus:: They are.

Stranger:: According to my reasoning then we will think worthy of one name the art, which as regards them is one in them all.

Theaetetus:: What name calling it?

Stranger:: Discriminative.

Theaetetus:: Be it so.

Stranger:: Consider again, whether we are able to perceive two kinds of it?

Theaetetus:: You are imposing, for a person like me, a rapid consideration.

Stranger:: In the discriminations mentioned above it was our business to separate the worse from the better, and the similar from the similar.

Theaetetus:: It appears that it was nearly so said.

Stranger:: Of the latter discrimination I cannot tell the name; but I can of that which leaves the better and rejects the worse.

Theaetetus:: Inform me what it is.

Stranger:: The whole of this discrimination, as I understand it, is called by all men a certain purification.

Theaetetus:: It is so called.

Stranger:: Would not then every one see that the purification is in kind twofold?

Theaetetus:: Yes, looking at it at leisure perhaps; but I do not see it at present.

Stranger:: It is proper then to comprehend in one name the many kinds of purifications appertaining to the body.

Theaetetus:: What are they? and by what name do you call them?

Stranger:: Whatever within the bodies of living animals is, after being properly separated by the arts of exercise and of medicine, purified, and whatever the bath-art supplies, relating to things outside the body very vile to mention, and the things relating to inanimate bodies, of which the fuller's art, and the whole art of adorning the body, have the care in trifling matters, possess many and seemingly ridiculous names.

Theaetetus:: Very much so.

Stranger:: Entirely so, Theætetus. But the method of reasoning cares not either much or little about the art of wiping with a sponge or the drinking a medicine, whether the one benefits us little and the other much, by a purification. Since for the sake of the mind possessing something correctly, science endeavors to understand what is allied and what is not allied to all arts, and it honors all equally on this account; and does not consider that some things are more ridiculous than others as regards their similitude; nor has it held that he, who exhibits the hunting art in the character of a general, is at all more respectable than he who does so in that of a louse-catcher, but is for the most part more vain. And now, indeed, which was what you asked, by what name shall we speak of all the powers together which are allotted for the purifying a body either animate or inanimate? But it makes no difference what name may appear to be more becoming. Let it be only separate from the purgation of the soul, and include in itself all such things as purify any thing else. For the method of reasoning has just now endeavored to separate the intellect from the rest of things, if we understand what it means.

Theaetetus:: But I do understand, and I grant that there are two species of purification; one species respecting the soul, and separate from that respecting the body.

Stranger:: You speak in the most beautiful manner. Listen then to me in what follows, and endeavor to give a two-fold division to what has been said.

Theaetetus:: Wherever you may lead, I will endeavor to make a division with you.

Stranger:: We say, then, that depravity in the soul is something different from virtue.

Theaetetus:: How not?

Stranger:: And that to leave the one, and to cast out as far as may be the bad, was a purification.

Theaetetus:: It was so.

Stranger:: Of the soul then, as far as we can discover a taking away of depravity, we shall, in calling it a purification, speak harmoniously.

Theaetetus:: Yes, very much so.

Stranger:: As regards the soul, then, we must speak of two kinds of depravity.

Theaetetus:: What are they?

Stranger:: The one is like a disease in the body, but the other is like an inherent baseness.

Theaetetus:: I do not understand.

Stranger:: Perhaps you have not thought that disease is the same with sedition.

Theaetetus:: Nor, again, have I what I ought to answer to this.

Stranger:: Whether do you think sedition is any thing else than the difference from a natural alliance through a certain corruption.

Theaetetus:: It is nothing else.

Stranger:: And is baseness any thing else than that kind of dissonance which exists every where disagreeable?

Theaetetus:: It is nothing else.

Stranger:: What then, have we not perceived in the soul of those who conduct themselves ill, opinions at variance with desires, anger with pleasures, reason with pain, and all these with each other?

Theaetetus:: And very much so.

Stranger:: And yet all these are necessarily allied to each other.

Theaetetus:: How not?

Stranger:: In calling then depravity a sedition and disease of the soul, we shall speak correctly.

Theaetetus:: Most correctly.

Stranger:: But when such things as participate of motion, and propose to themselves a certain end, are, in attempting to reach it, carried according to each impulse beside it, and miss it, shall we say that they are affected thus through a congruity towards each other, or, on the contrary, through an incongruity?

Theaetetus:: It is evident through an incongruity.

Stranger:: But we know that every soul is involuntarily ignorant of any thing.

Theaetetus:: Very much so.

Stranger:: But ignorance is nothing else than a delirium of the soul, which, while it is impelled to truth, is carried away from a correct perception.

Theaetetus:: Entirely so.

Stranger:: We must consider, therefore, a soul without intelligence as base and incongruous.

Theaetetus:: So it appears.

Stranger:: It seems then there are these two kinds of evil in the soul; one, which is called by the multitude depravity, and is most evidently its disease—

Theaetetus:: It is.

Stranger:: But the other the multitude call ignorance; but they are unwilling to confess that it alone is a vice in the soul.

Theaetetus:: It must be readily granted, what, when you just now spoke of it, I doubted, that there are two kinds of vice in the soul; and that we ought to consider cowardice, intemperance, injustice, all taken together as a disease in us; but we must lay down the accident of ignorance great and of various kinds as a baseness.

Stranger:: In the body then are there not two arts relating to these two accidents?

Theaetetus:: What are they?

Stranger:: Relating to baseness, the gymnastic; but to disease, the medical.

Theaetetus:: They seem so.

Stranger:: As regards insolence, injustice, and cowardice, is not the chastising justice naturally the most fitting of all arts?

Theaetetus:: It is likely, as I may say, according to human opinion.

Stranger:: But can any one say that there is a more proper remedy for all ignorance than the teaching art.

Theaetetus:: There is none.

Stranger:: Come then, must we say there is only one kind of the teaching art, or more? But take notice, that there are two greatest kinds of it.

Theaetetus:: I do take notice.

Stranger:: And it appears to me that we shall very quickly discover this.

Theaetetus:: In what way?

Stranger:: By perceiving whether ignorance has a division in the middle of it. For being twofold, it is evident that it compels the teaching art to have two parts, one for each one of its own.

Theaetetus:: What then? Has the thing sought become visible?

Stranger:: I seem to see set apart a great and difficult kind of ignorance, which outweighs all its other parts.

Theaetetus:: Of what kind is it?

Stranger:: When he, who does not know a thing, thinks he knows it; through which it nearly happens that all those things, in which we are deceived by the imagination, take their rise in the case of all persons.

Theaetetus:: True.

Stranger:: And I think that to this division of ignorance alone the name of non-erudition should be given.

Theaetetus:: Entirely so.

Stranger:: By what name then is to be mentioned that part of the teaching art which frees a person from this ignorance?

Theaetetus:: I think, Guest, that the other part is called handicraft teaching, but that this is called here through us discipline.

Stranger:: It is so called, Theætetus, by nearly all the Greeks. But this also must be considered by us, whether the whole of this is indivisible, or possesses a certain division worthy a name.

Theaetetus:: It is requisite to consider this.

Stranger:: It appears then to me, that this may in some way be still further divided.

Theaetetus:: In what?

Stranger:: Of the teaching art relating to discourses, one way appears to be more rough, but another part of it more smooth.

Theaetetus:: Of what kind shall we call each of these?

Stranger:: One, the old-fashioned, paternal, which persons formerly adopted, especially towards their children, and many use even now, when children do wrong, partly by severely reproving, and partly by mildly admonishing them. Now the whole of this one may call most correctly admonition.

Theaetetus:: It is so.

Stranger:: But the other—since some seem, after giving themselves to reflection, to hold that all ignorance is involuntary, and that no one, who thinks himself wise, is willing to learn those things in which he considers himself skilled, and that the admonitory kind of instruction, even with great labor, effects but little.

Theaetetus:: And they think right.

Stranger:: They therefore direct their course to an outlet for their opinion by another mode.

Theaetetus:: By what mode?

Stranger:: They inquire into those matters, about which a man thinks he says something to the purpose, when he is saying nothing. They then easily examine the opinions of persons as if they were in error, and bringing them together by a reasoning process to the same point, they place them by the side of each other; and by so placing, they show that the opinions are at one and the same time contrary to themselves, about the same things, with reference to the same circumstances, and according to the same premises. And they seeing are indignant with themselves, and become milder towards others; and in this way are liberated from strong and harsh opinions; a liberation of all others the most pleasant to hear, and the most firm to the party suffering. For they, my dear boy, who purify these, think as physicians do with respect to the body—that the body cannot enjoy food, which is brought to it, until some one casts out the impediments in it; and in like manner the others think that the soul can derive no advantage from the learning brought to it, until some one, by confuting, places the party confuted in a state of shame, and by taking away the opinions, which are the impediments to learning, exhibits him purified, and thinking that he knows those things alone which he does know, and nothing more.

Theaetetus:: This is the best and the most temperate of habits.

Stranger:: For all these reasons then, Theætetus, we must say, that confutation is the greatest and chiefest of purifications; and we must think that he who is not confuted, even though he should be the great king himself, would be unpurified to the greatest degree, and become uninstructed and ugly with respect to those things, in which it is fit that he should be most pure and beautiful, who is to be in reality happy.

Theaetetus:: Entirely so.

Stranger:: But whom shall we say employ this art? For I fear to say the sophists.

Theaetetus:: Why so?

Stranger:: Lest we should place on them a greater honor than is fitting.

Theaetetus:: But yet what has been just now said appears to be suited to some such character.

Stranger:: So does a wolf resemble a dog, a most savage animal one the most mild. But he who wishes to be most of all free from stumbling, ought to keep ever a guard on similitudes; for it is a most slippery race. Let them however stand, for I think there will not be a dispute about trifling definitions, at a time when persons are watching them sufficiently.

Theaetetus:: It is not likely at least.

Stranger:: Let then there be of the separating art one portion, the purifying; of the purifying, let the part relating to the soul be divided off; and of this let a part be the teaching art; and of the teaching art, let instruction be a part; and of instruction, let that confutation, which takes place respecting a vain opinion of wisdom, be called, through the reason now exhibited, nothing else than the Sophistic art of a noble race.

Theaetetus:: Let it be so called. But in consequence of so many things having just now presented themselves, I am doubtful what, as speaking the truth and urging it strenuously, I ought to say the Sophist really is.

Stranger:: You are very properly in doubt. And indeed one ought to think, that even a sophist himself will now very much doubt by what means he shall slip through the argument. For the proverb rightly says, It is not easy to avoid all traps. Now therefore let us attack him with all our might.

Theaetetus:: You speak well.

Stranger:: But, in the first place, let us stand and as it were take breath; and while stopping let us reason among ourselves. Come then, in how many forms has the Sophist appeared? For I think, he was found at first a hunter for wages of the youthful and rich.

Theaetetus:: He was.

Stranger:: Secondly, a certain trafficker in the learning of the soul.

Theaetetus:: Entirely so.

Stranger:: Thirdly, did he not appear as a Chapman in the very same articles?

Theaetetus:: He did. And fourthly, he was the seller of his own inventions.

Stranger:: You have properly reminded me of this; and of the fifth form I will endeavor to remind you. For he was a combatant in the contests of words, having been so defined from the art of contention.

Theaetetus:: He was so.

Stranger:: The sixth form is indeed ambiguous; but nevertheless we laid it down and conceded to him, that a sophist is a purifier, as regards the soul, of such opinions as are an impediment to learning.

Theaetetus:: Entirely so.

Stranger:: Do you then perceive, that, when any one seems to know many things, and is called by the name of one art, this it is not a healthful seeming; but that he, who is thus affected with respect to any art, evidently cannot see that part of it to which all this learning tends? and hence he calls the person possessing them by many names, instead of one.

Theaetetus:: This almost appears to be very natural.

Stranger:: Let us not then suffer the same thing in this search through indolence; but let us in the first place take up again one of the things stated of the Sophist; for one of them appeared to me especially to indicate him.

Theaetetus:: Which of them?

Stranger:: We said that he was in a certain respect a contradictor.

Theaetetus:: We did.

Stranger:: And does he not also become a teacher of this to others?

Theaetetus:: How not?

Stranger:: Let us then consider about what such persons say they make contradictions. And let our consideration be from the beginning in this way. With respect to divine things, which are non-apparent to the many, do sophists make them able to do this, viz. to contradict?

Theaetetus:: This is indeed asserted of them.

Stranger:: But with respect to the apparent things of earth and heaven, and what pertains to these?

Theaetetus:: Why not?

Stranger:: In private meetings at least, when any thing is asserted of generation and existence in general, we are conscious that the sophists are powerful in contradicting, and that they make others as powerful as themselves.

Theaetetus:: Entirely so.

Stranger:: But with respect to laws, and all political matters, do they not also promise to make men contentious in these?

Theaetetus:: Not one, as I may say, would discourse with them unless they promised this.

Stranger:: But writings relating to all the arts, and to each art singly, are made public and deposited by him, who wishes to learn what he ought to say against each handicraftsman.

Theaetetus:: You appear to me to speak of the writings of Protagoras about wrestling and the other arts.

Stranger:: And to the writings of many others, O blessed man. But does not the art of contradicting seem to be a power sufficient for controversy about all things, to speak summarily?

Theaetetus:: It appears that scarcely not a thing would be wanting.

Stranger:: But by the gods, O boy, do you think this is possible? For perhaps you young men see more acutely, but we more dully, this thing.

Theaetetus:: What thing? and at what are you particularly talking? For I do not understand at all the present question.

Stranger:: Consider, if it be possible for any one man to know all things.

Theaetetus:: If it were possible our race, O guest, would indeed be blessed.

Stranger:: How then can any one without knowledge himself be able to urge any thing sound against him who possesses knowledge?

Theaetetus:: Not at all.

Stranger:: What then would be the wonder in the Sophistic power?

Theaetetus:: About what?

Stranger:: The manner by which sophists are able to get up an opinion amongst the young, that they are the wisest of all men in all things. For it is evident that, if they neither contradicted rightly, nor appeared to the young to do so, and, when appearing to do so, unless they seemed to be more wise through their contentions, no one would, as far as your business is concerned, even at leisure, give them money, or be willing to become their scholar.

Theaetetus:: Not even at leisure indeed.

Stranger:: But now persons are willing.

Theaetetus:: And very much so.

Stranger:: For the sophists appear I think to have a knowledge themselves of that against which they speak.

Theaetetus:: How should they not?

Stranger:: But do they act so in all things? Say we it?

Theaetetus:: Yes.

Stranger:: They appear, then, to their disciples to be wise in all things.

Theaetetus:: How not?

Stranger:: But not being so in reality; for this appeared to be impossible.

Theaetetus:: For how is it not impossible?

Stranger:: the Sophist, then, has been shown to us to possess a certain kind of a reputation for knowledge about all things, but not according to the truth.

Theaetetus:: Entirely so. And what has been now said respecting sophists seems very nearly to be most rightly said.

Stranger:: Let us therefore take a clearer pattern respecting them.

Theaetetus:: What is that?

Stranger:: This. But endeavor to answer by giving your mind very closely to what I am saying.

Theaetetus:: Of what kind is the pattern?

Stranger:: As if any one should say, that he knows not the art of asserting and contradicting, but of making and causing all things by one art.

Theaetetus:: How said you all?

Stranger:: Of the commencement of the discourse you are straightway ignorant; for, as it seems, you do not understand the “all.”

Theaetetus:: I do not.

Stranger:: I say then that you and I are in the number of all things, and besides us, there are other animals and trees.

Theaetetus:: How say you?

Stranger:: If any one should assert that he would make you and me, and all the rest of productions—

Theaetetus:: Of what making do you speak? For you are not speaking of a husbandman; because you mentioned him as a maker of animals.

Stranger:: I say, moreover, that he is the maker of the sea, the earth, the heavens, the gods, and all other things; and rapidly making each of these, he sells them for a small sum.

Theaetetus:: You are speaking in jest.

Stranger:: What! must we not consider that as a jest, when a man asserts that he knows all things, and can teach another all things, for a small sum of money, and in a short time?

Theaetetus:: Entirely so.

Stranger:: But have you any kind of jesting more artificial or agreeable than the imitative?

Theaetetus:: I have not. For you have mentioned a very large kind, and comprehended all things in one, and that one nearly the most varied.

Stranger:: Do we not then know that he who undertakes to be able to make all things by one art, will, by fabricating imitations and homonyms of things, through the art of painting, be able, by showing the pictures at a distance, to lie concealed from the stupid amongst young men and boys, as being a person most competent to do whatever he pleased?

Theaetetus:: How not?

*Stranger::* But as to discourses, do we not expect that there is such another art? or is it not possible to bewitch the young men, and those still standing far off from the truth of things, through words spoken in their ears, and by showing them images, as they are called, of every thing, so as to cause them to be said to seem true, and for the speaker to be the wisest of all men in all things?

Theaetetus:: Why should there not be another such art?

Stranger:: Is it not then necessary, Theætetus, that the majority of those, who were then hearing, should, after a sufficient time has passed and they have themselves arrived at manhood, come near to things as they are, and be compelled through accidental circumstances to handle realities clearly, and to change their former opinions, so that things once great appear small, those once difficult, easy, and all the mere appearances produced by discourses, are entirely overthrown through works which occur in practice?

Theaetetus:: It appears so to me, as far as my age is capable of judging; for I think that I too am one of those who are far distant from the truth.

Stranger:: All we then, who are present, will endeavor, and let us now endeavor, free from all accidental circumstances, to bring you as near as possible to the truth. With respect to a sophist then tell me this. Is it clear, that he is one of enchanters, as being an imitator of things? or do we yet doubt, whether in the matters, respecting which he appears able to contradict, he possesses in reality the requisite science?

Theaetetus:: But how, Guest, can we doubt of this? For it is nearly evident from what has been said, that he is one of those who take a part in jesting.

Stranger:: We must put him down then as some enchanter and mimic.

Theaetetus:: How must we not so put him?

Stranger:: Come then, it is now our business not to let go the wild beast, for we have now nearly enclosed the Sophist in a casting net, one of the instruments used in discourses about things of this kind, so that he cannot any longer escape from this.

Theaetetus:: From what?

Stranger:: That he is one of the wonder-workers.

Theaetetus:: This also is my opinion respecting him.

Stranger:: It is decreed then, that we divide as quickly as possible the image-producing art, and, going down against it, seize upon the Sophist, should he forthwith wait for us, according to the royal mandate, and, delivering him up, exhibit our prey to him the king. But if he creeps into the parts of the imitative art, we are to follow him, always dividing the part which receives him, until he is caught. For neither will he, nor any other genus, ever boast to escape the method of those, who are able to follow thus the points singly and universally.

Theaetetus:: You speak well. And in this manner, therefore, we must act.

Stranger:: According to the preceding method of division, I now seem to see two kinds of the imitative art; but in which of these happens to be the idea of which we are in search, I do not now seem to be able to perceive.

Theaetetus:: But first tell me, and divide the two kinds of which you are speaking.

Stranger:: I see that one is the assimilative art. And this especially takes place, when any one according to the proportions of the original, in length, breadth, and depth, and moreover by adding fitting colors, works out the production of an imitation.

Theaetetus:: What then, do not all imitators endeavor to do this?

Stranger:: Not such as mould or paint any great work. For, if they would give the true proportion of beautiful things, you know that the upper parts would appear smaller than is fitting, and the lower parts larger, through the former being seen by us at a distance, and the latter close at hand.

Theaetetus:: Entirely so.

Stranger:: Do not then the artists, bidding farewell to truth, now work out not real proportions, but such as will seem to be beautiful in their representations?

Theaetetus:: Entirely so.

Stranger:: Is it not then just, as being at least probable, to call one an image?

Theaetetus:: Yes.

Stranger:: And we must call the part of the imitative art, subsequent to this, as we said above, assimilative.

Theaetetus:: We must so call it.

Stranger:: But what shall we call that, which appears indeed similar to the beautiful, through the view taken from a favorable point, but which, when seen by him who has the power to look on such things sufficiently, is not like that to which it professes to be like? Must we not call it an appearance, since it appears to be, but is not like?

Theaetetus:: Undoubtedly.

Stranger:: Is not this part to be found abundantly in painting, and in the whole of the imitative art?

Theaetetus:: How not?

Stranger:: But may we not most correctly call that art, which produces an appearance, but not an image, fantastic?

Theaetetus:: Very much so.

Stranger:: Now I have already said that these were the two kinds of the image-producing art, the assimilative and fantastic.

Theaetetus:: Correctly so.

Stranger:: But that of which I doubted then, viz. in which of these kinds we must put the Sophist, I am not at all able even now to see clearly. For the man is truly wonderful; and it is extremely difficult to get a view of him; since even now, very well and cleverly, he has fled into a species, where it is hard to track him out.

Theaetetus:: So it seems.

Stranger:: Do you then assent to this through understanding it? or has a certain rush of reasoning carried you away to giving a rapid assent according to custom?

Theaetetus:: How and for what do you say this?

Stranger:: We are, O blessed man, truly engaged in a speculation thoroughly difficult. For that this thing should appear both to seem to be, and yet not be; and that a man should assert certain things, and yet not true,—all these things were always full of difficulty formerly, and are now. For he, who thus speaks, must either say or think that false things truly exist; and thus speaking, Theætetus, it is extremely difficult for him not to be hampered by a self-contradiction.

Theaetetus:: Why so?

Stranger:: Because such a mode of speaking dares to suggest that a nonentity exists; for otherwise there would not be a falsehood, which exists. And the great Parmenides, O boy, while we were yet boys, did from the first to the last testify to this. For, both in prose and verse, he on every occasion thus speaks, “You must not think,” says he, “non-entities exist; but keep thy thoughts when searching from this road.” This then is both testified by him, and this discourse will the most of all point it out, if examined with moderation. Let us then, if it makes no difference to you, consider this in the first place.

Theaetetus:: Put my business where you like. But in what way the discourse will best proceed, do you consider yourself, and lead me along in that path.

Stranger:: It will be proper so to do. Tell me, then. Dare we pronounce that which in no respect is?

Theaetetus:: How not?

Stranger:: If then, not for the sake of contention nor of jesting, but in seriousness, it were necessary for any of the hearers to join with us in considering and stating to what point one ought to carry the word “non-entity,” for what thing and of what kind do we think he would be able to use it himself, and to show its use to a person inquiring?

Theaetetus:: You ask a difficult question, and to a person like myself utterly insurmountable.

Stranger:: This however is evident, that to any one of entities the expression of non-entity cannot be referred.

Theaetetus:: For how could it?

Stranger:: Since then it cannot be referred to an entity, one cannot rightly refer it to any thing.

Theaetetus:: How could he?

Stranger:: And this too is evident to us, that we pronounce on each occasion this word “something” respecting an entity. For it is impossible to pronounce it alone, as if it were naked and placed in a desert from all entities.

Theaetetus:: It is impossible.

Stranger:: Thus considering, do you then agree with me, that he who pronounces the word “something,” must necessarily mean some one thing?

Theaetetus:: Yes.

Stranger:: For you will say, that the word “something” is a sign of one thing, and that “somethings” is a sign of many things.

Theaetetus:: How not?

Stranger:: But it is most necessary, as it appears, that he who speaks of that, which is not something, must speak entirely of nothing.

Theaetetus:: This is most necessary.

Stranger:: Is not then this to be granted, that such a person speaks indeed, but speaks of nothing? But neither must we say that he speaks, who endeavors to enunciate non-entity?

Theaetetus:: The discourse would have then an end of doubt.

Stranger:: Do not as yet speak any big word. For, O blessed man, the greatest and first of doubts still remain as regards these things: for it happens to be about the very commencement of it the discourse.

Theaetetus:: How say you? Speak, and do not hesitate.

Stranger:: To that, which is, something else may be added of things that are.

Theaetetus:: How not?

Stranger:: But to that, which is not, shall we say that something can be added of things that are?

Theaetetus:: How so?

Stranger:: Now we place number universally among things that are.

Theaetetus:: If indeed any thing else is to be placed as a thing that is.

Stranger:: Let us then not attempt to attribute "the many," nor "the one," to a non-entity.

Theaetetus:: We cannot it seems with propriety attempt it, as reason says.

Stranger:: How then can any one enunciate by the mouth, or comprehend at all by intellect, non-entities, or a non-entity, apart from number?

Theaetetus:: Tell me why not.

Stranger:: When we speak of non-entities, do we not endeavor to add "the many" of number?

Theaetetus:: How not?

Stranger:: And when we speak of a non-entity, do we not endeavor to adjoin "the one" of number?

Theaetetus:: Yes, most clearly.

Stranger:: And yet we say, that it is neither just nor right to endeavor to add an entity to a non-entity.

Theaetetus:: You speak most truly.

Stranger:: You perceive then, that it is not possible correctly to enunciate, or speak of, or think of, a non-entity itself by itself; but that it is incomprehensible, unspeakable, unpronounceable, and irrational?

Theaetetus:: Entirely so.

Stranger:: Did I, then, just now speak falsely, when I said, that I would tell of the greatest doubt respecting it?

Theaetetus:: What then, can we mention any doubt greater than this?

Stranger:: Do you not see, O wonderful youth, from what has been said, that non-entity leads him, who confutes it, into such a perplexity, that in the very attempt to confute it, he is compelled to contradict himself?

Theaetetus:: How say you? Speak yet clearer.

Stranger:: For me there is no occasion to consider any thing clearer. For, when I laid down the proposition, that non-entity ought to participate neither of "the one" nor of "the many," both a little before and now, I said "the one" abstractedly. For I was speaking of a non-entity; you perceived this?

Theaetetus:: Yes.

Stranger:: And again, a little before, I said that a non-entity was unspeakable, ineffable, and irrational. Do you follow me?

Theaetetus:: I do follow in a certain way.

Stranger:: When, therefore, I endeavored to fit entity to nonentity, did I not say what is contrary to former assertions?

Theaetetus:: You appear so.

Stranger:: What then, did I not, when attributing this to it, speak to it as to one thing?

Theaetetus:: Yes.

Stranger:: And yet, while calling it irrational, ineffable, and unspeakable, did I not make the assertion as pertaining to one thing?

Theaetetus:: How not?

Stranger:: For we say, that if any one correctly speaks of nonentity, he ought to define it neither as one, nor many, nor give it any appellation whatever; for it would be called already one thing, according to this appellation.

Theaetetus:: Entirely so.

Stranger:: What then will some one say of me? For, both formerly and now, he will find me overthrown respecting the proof of a non-entity. So that, as I have already said, let us not think, in my speaking at least, of logical precision respecting a non-entity. But come, let us now consider this affair in your speaking.

Theaetetus:: How say you?

Stranger:: Come, endeavor in a becoming and noble manner, as being a young man, and exerting yourself with all your might, pronounce something about non-entity, conformable to right reason, without adding to it either existence, or the one or the many of number.

Theaetetus:: The readiness of my attempt would be vastly absurd, were I, after seeing you suffer thus, to make it.

Stranger:: But, if it seems good, let us dismiss both you and myself with a farewell; and until we meet with some one who is able to do this, let us say that the Sophist has, with a knavery greater than all, let himself down into a place from which there is no outlet.

Theaetetus:: So indeed it appears.

Stranger:: If then we should say that he possessed a certain fancy-effecting art, he would, from his use of words, easily lay hold of us, and turn the discourse to the very contrary point. For when we call him a maker of images, he will immediately ask us, What do we assert an image to be universally. It is meet then, Theætetus, to consider what answer to this question should one give to the young man.

Theaetetus:: It is evident that we shall say that things seen in water and mirrors are images, and moreover such things as are painted and fashioned and the rest of other things of this kind.

Stranger:: It is evident, Theætetus, that you have never seen a sophist.

Theaetetus:: Why so?

Stranger:: He will appear to you to wink, or to have no eyes at all.

Theaetetus:: How so?

Stranger:: When you give him this answer, should you speak of any thing seen in mirrors or moldings, he will laugh at your reasons; when you speak to him as being able to see, he will pretend that he knows nothing of mirrors, or water, or of sight at all, but will ask you of that, which depends on reason alone.

Theaetetus:: What is that?

Stranger:: That, which in all those things you have mentioned, you, speaking of as many, think fit to call by one name, pronouncing the word image as being in them all one thing. Speak then and defend yourself, and yield nothing to the man.

Theaetetus:: What then, O guest, can we say an image is, except that it is made to resemble the truth, being another thing the counterpart?

Stranger:: Do you say that such other thing is truly so, or to what do you apply the expression, such other?

Theaetetus:: It is by no means truly a such other, but only seems to be.

Stranger:: Do you then call a truth a real entity?

Theaetetus:: I do.

Stranger:: But is not that, which is not true, contrary to truth?

Theaetetus:: How not?

Stranger:: You say then that the seeming is not an entity, if you assert that it is not a truth. It is however an entity.

Theaetetus:: How so?

Stranger:: Do you not say then truly?

Theaetetus:: Certainly not, except a likeness in reality.

Stranger:: That then which is not really a non-entity, is really that which we call a likeness.

Theaetetus:: It nearly appears that non-entity is entwined by a certain connection of this kind with entity; and it is very strange.

Stranger:: How is it possible it should not be strange? You now therefore perceive that through this alternation, the many-headed sophist compels us unwillingly to confess that non-entity does somehow exist.

Theaetetus:: I see it, and very much so.

Stranger:: How, then, shall we define his art, and yet be able to be consistent with ourselves?

Theaetetus:: Why do you speak thus, and of what are you afraid?

Stranger:: When we say that he is a deceiver about an appearance, and that his is a certain deceptive art, whether shall we say that our soul then has a false opinion, through his art? or what shall we say?

Theaetetus:: This very thing. For what else can we say?

Stranger:: But will false opinion be fancying things contrary to those that are?

Theaetetus:: Contrary.

Stranger:: You say then that false opinion fancies things that are not.

Theaetetus:: It does so of necessity.

Stranger:: Whether does it fancy that non-entities do not exist, or that non-entities do exist in a certain way?

Theaetetus:: If any one is ever deceived even a little, he must fancy that non-entities do exist in a certain way.

Stranger:: And will not entities entirely be likewise fancied not to exist at all?

Theaetetus:: Yes.

Stranger:: And this too falsely?

Theaetetus:: Yes, this too.

Stranger:: And false reasoning will, I think, be deemed, in the same way, to assert that entities do not exist, and non-entities do exist.

Theaetetus:: For how can it otherwise become such viz. false?

Stranger:: Nearly not at all. But the Sophist will not say so. Or what device is there for any one of a sound mind to concede; when the things that have been granted before these have been admitted to be unspeakable, ineffable, irrational, and incomprehensible? Do we understand what the Sophist says, Theætetus?

Theaetetus:: How is it possible we should not? For he will assert that we are saying things contrary to the present, in having dared to assert that falsehoods exist in opinions and reasons; for that having been often compelled to unite entity to non-entity, we have just now acknowledged, that this is somehow the most impossible of all things.

Stranger:: You have rightly recalled me to the argument. But it is now time to consult about what we ought to do respecting the Sophist. For, if we should attempt to search him out, by placing him in the art of falsehood-workers and enchanters, you see that his counter-graspings will be easy and our difficulties many.

Theaetetus:: Very.

Stranger:: We have then gone through only a small part of them; since they are, as I may say, boundless.

Theaetetus:: If such is the case, it would be impossible, it seems, to catch the Sophist.

Stranger:: What then, shall we now stand cowardly aloof?

Theaetetus:: I say we ought not, if we are able by ever so little to lay hold in some way of the man.

Stranger:: You will then grant me pardon, and, as you just now said, be satisfied, if we can draw by some means even a little for ourselves out of such powerful reasoning.

Theaetetus:: How shall I not?

Stranger:: This too I beg of you still further.

Theaetetus:: What?

Stranger:: That you do not think I am become, as it were, a parricide.

Theaetetus:: Why so?

Stranger:: Because it will be necessary for us, in self-defense, to put to the torture the reasoning of my father Parmenides, and to compel a nonentity to exist in some way, and again an entity in some way not to exist.

Theaetetus:: It appears that we must battle in our reasonings for a thing of this kind.

Stranger:: For how should this not be evident, as it is said, even to a blind man? For, while these things are neither confuted nor confessed, any one will be able to speak at leisure about false assertions, or opinions respecting resemblances, or images, or imitations, or appearances, or of the arts conversant with these, without being ridiculous through his being compelled to contradict himself.

Theaetetus:: Most true.

Stranger:: Hence we must dare to oppose my father’s reasoning, or we must dismiss it altogether, if any sluggishness restrains us from doing so viz. opposing it.

Theaetetus:: But let nothing by any means restrain us.

Stranger:: I will now beg of you still a third and trifling request.

Theaetetus:: Only mention it.

Stranger:: I just now stated that I was always faint-hearted about the confutation of these points, and so I am now.

Theaetetus:: You did say so.

Stranger:: I fear as regards what has been said, lest I seem to you to be insane, through my changing myself on the instant, up and down. For we will throw ourselves on the confutation of the reasoning, for your sake, if indeed we happen to confute it.

Theaetetus:: As you will not then by any means appear to me to act improperly by advancing to the confutation and demonstration, on this account at least advance boldly.

Stranger:: Come then, what beginning shall we make to this very danger-bringing discourse? Now it appears, O boy, to be most necessary for us to turn to this road.

Theaetetus:: What?

Stranger:: To consider first those things which now seem to be clear, lest we become flurried about them; and that we without difficulty assent to each other, as if we were in a position to judge correctly.

Theaetetus:: State more clearly what you mean.

Stranger:: Both Parmenides and whoever else has rushed forward to the trial respecting the defining the quantity and quality of entities, seems to me to have discussed the question loosely.

Theaetetus:: How so?

Stranger:: Each seem to me to have told a tale to us, as if we were boys. One of them said that the entities are three; but that some of them at one time are at war with each other in some manner; and at another, becoming friends, are married, bring forth, and furnish food to their offspring. But another said that the entities are only two, the moist and the dry, or the hot and the cold; and these he unites in one house and gives them in marriage to each other. But the Eleatic sect among us, which derives its origin from Xenophanes, and from others still prior to him, details in fables that what is called the all is really one. But the Ionian, and subsequently some Sicilian muses have thought it more safe to connect these with each other, and to say that entity is both many and one, but held together by enmity and friendship. For that, which is separated, always comes together, say the more energetic of the Muses. But the more gentle relax the doctrine by saying that this takes place always as regards the whole, but that the whole is in turn now one, and friendly to itself, through Venus; and now many, and hostile to itself, through a certain strife. But whether any one has asserted all this truly or not, it is difficult and wrong to bring so great a reproach upon illustrious and ancient men. This, however, I may without envy show forth.

Theaetetus:: What?

Stranger:: That they greatly looked down upon, and held in little esteem, us the many. For each of them finish their own work, without caring at all whether we follow them when speaking, or desert them.

Theaetetus:: How say you?

Stranger:: When any one of them asserts in his speech that—many, or one or two, exist, or have been, or are in the course of production, and that the hot is mingled with the cold, and elsewhere lays down somehow discretions and concretions,—by the gods, Theætetus, do you understand what they are on each occasion asserting? Indeed, when I was younger, I thought that when any one spoke of a non-entity I accurately understood that, which is now doubtful; but now you see where we are in a difficulty respecting it.

Theaetetus:: I do see.

Stranger:: Perhaps then, receiving in no less a degree the same feeling in our soul respecting an entity, we say we can easily understand it, when it is enunciated by any one; but not so, as regards the other, though similarly affected with respect to both.

Theaetetus:: Perhaps so.

Stranger:: And let this very same thing be said by us respecting the other things before mentioned.

Theaetetus:: Entirely so.

Stranger:: We will speculate then, after this, about the many things, if it seems good; but let us now speculate about the greatest and first leading thing.

Theaetetus:: Of what are you speaking? Or is it plain that you assert that we ought in the first place to search after entity, and see what they, who speak of it, think they show.

Stranger:: You understand me, Theætetus, on the instant. For I say that we ought to adopt the same method, as if we were inquiring of them here present in this way. Come, ye who assert that the hot and the cold, or any two such things, are the whole, what is it you affirm to subsist in both of these, when you say that both and each exist? What are we to understand by this term of yours “to exist”? Is it a third thing different from those two, and are we to lay down three things as the whole, and no longer two things, according to you? For, while you call one of the two an entity, you cannot surely say that both are similarly an entity. For in both ways there would nearly be one thing, and not two.

Theaetetus:: You speak the truth.

Stranger:: Are you then willing to call both of them an entity?

Theaetetus:: Perhaps so.

Stranger:: But, O friends, we shall say, you would thus most clearly call even the two things one.

Theaetetus:: You speak most correctly.

Stranger:: Since then we are thus in doubt, do you sufficiently explain to us what you wish to signify, when you pronounce the word entity? For it is evident that you are conversant with these things long ago; and we formerly thought we knew them, but now we are in doubt. Instruct us then, first in this very thing, that we may not fancy we understand what is asserted by you, when what is entirely contrary to this is taking place. In speaking in this manner, and making this request, both to these, and to such others as assert that the all is more than one thing, shall we, O boy, do any wrong?

Theaetetus:: By no means.

Stranger:: But ought we not to inquire, to the utmost of our power, of those who assert that the all is one, what they call entity?

Theaetetus:: How not?

Stranger:: To this question then let them answer, Do you assert there is one thing alone? They will say. We do assert it. Will they not?

Theaetetus:: Yes.

Stranger:: What then, do you call entity a thing?

Theaetetus:: Yes.

Stranger:: Do you say, it is that which the one is, employing two names respecting the same thing? or how?

Theaetetus:: What answer will they have after this, O stranger?

Stranger:: It is evident, Theætetus, that to him who lays down this hypothesis, it will not be the easiest thing of all to give an answer respecting the present question, or any other whatever.

Theaetetus:: How so?

Stranger:: To acknowledge that there are two names, while laying down that there is not but one thing, is surely ridiculous.

Theaetetus:: How not?

Stranger:: And to receive the assertion altogether from him, who says that a name is a thing possessing no value—

Theaetetus:: In what manner?

Stranger:: He who lays down a name as different from a thing, speaks of two certain things.

Theaetetus:: He does.

Stranger:: And yet, if he lays down that the name is the same with the thing, he will be compelled to say, it is the name of nothing; or, if he says it is the name of something, it will result that a name is only the name of a name, but of nothing else.

Theaetetus:: It is so.

Stranger:: And the one must be one entity alone of one, and not itself the entity of a name.

Theaetetus:: It is necessary.

Stranger:: But do they say that the whole is different from the one entity, or the same with it?

Theaetetus:: How will they not say it, and do say it?

*Stranger::* If, then, a whole is, as Parmenides says, "Like the bulk of a sphere that is a perfect circle on all sides, and possessing equal powers on every part from the middle; for there must needs be nothing greater or less on this side or on that it is necessary for entity, being of such a kind, to have a middle and extremities; and having these, there is every necessity for it to have parts. Or how shall we say?

Theaetetus:: Just so.

Stranger:: But nothing prevents the divided from having in all its parts the accident of the one; and in this way every entity and a whole would be one.

Theaetetus:: How not?

Stranger:: But is it not impossible that what suffers such accidents should itself be the very one?

Theaetetus:: How so?

*Stranger::* Surely according to right reason, that, which is truly the one, must be said to be entirely without parts.

Theaetetus:: It must indeed.

Stranger:: But such a thing as consists of many parts would not harmonize with the one.

Theaetetus:: I understand you.

Stranger:: But whether will entity, having the accident of the one, be thus one, and whole? or must we by no means say that entity is a whole?

Theaetetus:: You have proposed a difficult choice.

Stranger:: You speak however most truly. For entity having the accident to be in some way one, it does not appear to be the same as the one; and the all will be more than one. Is it not so?

Theaetetus:: Yes.

Stranger:: But yet if entity is not a whole, on account of its being subject to the accident belonging to the whole, and yet is the whole itself, it follows that entity is in want of itself.

Theaetetus:: Entirely so.

Stranger:: And entity, according to this reasoning, being deprived of itself, will be a non-entity.

Theaetetus:: Just so.

Stranger:: And thus again the all becomes more than one; since both entity and the whole have obtained each their proper nature, apart from the other.

Theaetetus:: True.

Stranger:: And if the whole has not an existence at all, the very same things will take place with respect to entity; and in addition to its not having an existence, it would at no time have been produced.

Theaetetus:: Why so?

Stranger:: Whatever is produced is always produced as a whole. So that he, who does not place amongst entities the one or the whole, ought to speak neither of existence or production as an entity.

Theaetetus:: It appears that such is wholly the case.

Stranger:: Moreover, that, which is not a whole, must not have the accident of any quantity whatever. For, while it has the accident of quantity, whatever that may be, it must necessarily be a whole.

Theaetetus:: Entirely so.

Stranger:: Each view then will appear to have taken up ten thousand other endless doubts for him, who says that entity is either two or only one.

Theaetetus:: The light which is just now breaking almost shows this. For one thing is linked with another and brings with it a wandering of the mind greater and more dangerous respecting what has been from time to time asserted before.

Stranger:: But we have not yet gone through the whole of those, who have accurately discoursed about entity and nonentity. Let, however, this suffice. And let us consider again those who speak inaccurately on these subjects, that we may perceive from all quarters, that it is in no respect more easy to say what entity is, than what non-entity is.

Theaetetus:: We must therefore march against them.

Stranger:: Now, in truth, there appears to be among them, as it were, a kind of giants' war, through their conflicts with each other respecting existence.

Theaetetus:: How so?

Stranger:: Some of them draw down to earth all things from heaven and the unseen region, unskillfully laying hold for this purpose of rocks and oaks. For through their touching all such things as these, they strenuously contend that that alone exists, which affords impact and touch; and they define body and existence to be the same. But if any one says that of other things some have not a body, they thoroughly despise the assertion, and are unwilling to hear another word.

Theaetetus:: You have spoken of terrible men. For I also have met with many such.

Stranger:: Wherefore the opponents of these men very carefully defend themselves from on high, from the invisible region, and compel certain intelligible and incorporeal forms to be the true existence; and breaking into small pieces the bodies of the others, and that, which is called by them truth, they do in their own discourses, instead of existence, talk of some production carried on. But between these, Theætetus, an immense contest has always existed respecting these matters.

Theaetetus:: True.

Stranger:: Let us now, therefore, receive from both these races an account in detail of the existence which they lay down.

Theaetetus:: But how shall we receive it?

Stranger:: From those that place existence in forms we may easily receive it; for they are more mild; but from those who violently draw all things to body, with more difficulty. And perhaps it will be nearly impossible. It appears to me, however, that we ought to act with respect to them in this way.

Theaetetus:: In what?

Stranger:: Most of all to render them, if possible, better in deed; but if we make no progress in this, let us render them so in word, by supposing them to answer more equitably than at present they would be willing to do. For that, which is assented to by better persons, possesses more authority than that which is assented to by worse. However, we pay no attention to these things, but are seeking out the truth.

Theaetetus:: Most right.

Stranger:: Order therefore those that have become better to answer you, and to interpret what they assert.

Theaetetus:: Be it so.

Stranger:: Let them say then whether they call a mortal animal a thing?

Theaetetus:: How not?

Stranger:: And do they not acknowledge that this is an animated body?

Theaetetus:: Certainly.

Stranger:: Laying down that the soul is one of the things that exist.

Theaetetus:: Yes.

Stranger:: But do they not say that one soul is just, and another unjust; and one prudent, and another imprudent?

Theaetetus:: How not?

Stranger:: But does not each soul become such through the habit and presence of justice, and the contrary through the habit and presence of the contraries?

Theaetetus:: Yes; to this likewise they assent.

Stranger:: But will they say that what is able to be present to, and absent from, any thing, is something?

Theaetetus:: They say it.

Stranger:: Since then justice and prudence, and the other virtues, and their contraries, together with the soul in which they are implanted, exist, whether will they say that each of these is invisible and tangible, or that all of them are invisible?

Theaetetus:: They will assert that nearly not one of them is visible.

Stranger:: But what? Do they say that any one of such things has a body?

Theaetetus:: They do not give the same answer to the whole of this question; but that the soul itself appears to them to possess a certain body; but with respect to prudence, and each of the other things about which you just now inquired, they are ashamed to dare either to confess that they are not one of existing things, or to strenuously assert that all of them are bodies.

Stranger:: The men, Theætetus, have clearly become better. For such of them as are seed-sown, or earth-sprung, would not be ashamed to assert one of these points, but would contend that whatever they cannot squeeze together with their hands, is altogether nothing.

Theaetetus:: You state very nearly what they think.

Stranger:: Let us then again ask them. For, if they are willing to grant that even any trifling thing is incorporeal, it is sufficient. For they must say, with respect to these incorporeal and those corporeal, which have a body born with them, what it is they look to, when they assert that both exist.

Theaetetus:: Perhaps, however, they would be in a difficulty.

Stranger:: But if they suffer any thing of this kind, consider whether, on our proposing the question, they would be willing to admit and confess that existence is a thing of this kind.

Theaetetus:: Of what kind? Speak, and we shall quickly know.

Stranger:: I say then, that what possesses any power soever, whether of doing any thing naturally to another, or of suffering even the least thing from the vilest thing, although only once,—every thing of this kind does really exist. For I lay down a definition by defining that existences are nothing else but power.

Theaetetus:: But since they cannot at present say any thing better than this, they receive it.

Stranger:: It is well; for perhaps hereafter both to us and them something different will appear. Let this then here remain acknowledged by us on their account.

Theaetetus:: It shall remain.

Stranger:: Let us now proceed to the others, the friends of forms. And do you interpret to us what is said by them.

Theaetetus:: It shall be so.

Stranger:: Do you then say that generation is one thing, and existence another, separating them in some way?

Theaetetus:: We do.

Stranger:: And that by body we communicate with generation, through sensation, but through reason by our soul with real existence, which you say is found for ever under the same circumstance in a similar manner, but that generation exists differently at different times?

Theaetetus:: We do.

Stranger:: But, ye best of men, what shall we say you mean by the communion between both? Is it not that which we just now mentioned?

Theaetetus:: What was that?

Stranger:: Passion or action arising from a certain power, from the concurrence of things with each other. Perhaps, Theætetus, you have not heard their answer to this question; but I have, through my familiarity with them.

Theaetetus:: What answer then do they give?

Stranger:: They do not admit with us, what was just now said against the earth-born respecting existence.

Theaetetus:: What was that?

*Stranger::* We laid down as a sufficient definition of existence, that it is when the power is present to any thing, either of suffering or doing in the smallest point.

Theaetetus:: We did.

Stranger:: To this they say, that a power of doing and suffering has a share with generation; but that neither of these powers is adapted to existence.

Theaetetus:: Do they then not speak to the purpose?

Stranger:: To this we must say that we require to hear from them still more clearly, whether they acknowledge that the soul knows, and that existence is known.

Theaetetus:: They certainly say this.

Stranger:: But do you say that to know, or to be known, is action, or passion, or both? Or that passion is one thing, and action another? Or that neither of these has a share in any respect with the other?

Theaetetus:: It is evident that neither has a share with the other. For, if they admitted this, they would contradict what they before asserted.

Stranger:: I understand this at least, that if to know were to do something, it would necessarily happen that what is known would become passive. And according to this reasoning, existence being known by knowledge, would, as far as it is known, be, through becoming passive, moved; which we say cannot take place about the act of resting.

Theaetetus:: Rightly so.

Stranger:: What then, by Zeus, shall we be easily persuaded that motion, life, soul, and prudence, are not truly present to that which is existing in perfection, and that it neither lives, nor thinks, but stands immovable, not possessing an intellect as an object of respect and holy?

Theaetetus:: It would be a dreadful thing, O guest, to admit this.

Stranger:: Shall we say then that it possesses intellect, but not life?

Theaetetus:: And how?

Stranger:: But say we that both these reside in it, but shall we say that it does not possess these in soul at least?

Theaetetus:: But after what other manner can it possess?

Stranger:: That it possesses then at least intellect, life, and soul; but that, though animated, it abides perfectly immovable?

Theaetetus:: All this appears to me at least to be irrational.

Stranger:: We must therefore grant that both the moved and motion are existences.

Theaetetus:: How not?

Stranger:: It follows then, Theætetus, that intellect is never on any account in any way present to any one of things immovable.

Theaetetus:: It follows easily.

Stranger:: And yet, if we grant that all things are borne along and moved, we shall by such an assertion take away this sameness from existences.

Theaetetus:: How so?

Stranger:: Does it appear to you that what exists according to the same, and in a similar manner, and about the same, can ever exist without a standing?

Theaetetus:: By no means.

Stranger:: But do you perceive that intellect ever is or would be without these?

Theaetetus:: Least of all.

Stranger:: And truly we should contend with every argument against him, who, causing science, or prudence, or intellect to disappear, strenuously insists in behalf of any thing in any way whatever.

Theaetetus:: And very much so.

Stranger:: But there is every necessity, as it appears, for the philosopher, and him who honors these things the most on this account, not to listen at all to those, who, asserting that there is either one or many forms, admit that the whole stands still; nor on the other hand, to those who are putting existence into motion by every means; but to say, according to the prayer of boys, whatever are immovable, and have been moved, are both the being and the all.

Theaetetus:: Most true.

Stranger:: Do we not then appear to have now reasonably in our discourse comprehended existence?

Theaetetus:: Entirely so.

Stranger:: Ho! ho! Theætetus, how do we now seem about to know the difficulty of the inquiry about it.

Theaetetus:: How so? and why do you assert this?

Stranger:: Do you not perceive, O blessed man, that we are at present in the greatest ignorance respecting it? And yet we appear to ourselves to say something about it.

Theaetetus:: To myself at least. But I do not very well understand how we are unconsciously in this state.

Stranger:: Consider more clearly, whether, by assenting to this, we should not be justly asked, as we have asked them, who said that the whole consisted of the hot and the cold.

Theaetetus:: Remind me what these questions were.

Stranger:: By all means: and I will endeavor to do this by asking you this, as I then asked them, that we may make some progress together.

Theaetetus:: Rightly so.

Stranger:: Be it so. Do you not say then, that motion and standing are contrary to each other?

Theaetetus:: How not?

Stranger:: And you surely say that both and each of them exist equally.

Theaetetus:: I do.

Stranger:: Do you then say that both and each are moved, when you admit that they exist?

Theaetetus:: By no means.

Stranger:: But do you mean that they stand, when you say that both exist?

Theaetetus:: How can I?

Stranger:: Placing then existence, as a third thing, alongside these in your soul, and considering it as comprehending under itself standing and motion, and looking to their communion with existence, you have asserted that both of them exist.

Theaetetus:: We seem nearly to prophesy very truly that existence is a certain third thing, when we say that motion and standing exist.

Stranger:: Existence then is not both motion and standing, but something different from them.

Theaetetus:: It appears so.

Stranger:: Hence existence, according to its own nature, neither stands nor is moved.

Theaetetus:: It is nearly so.

Stranger:: Whither then ought he to turn his thoughts, who wishes to fix in himself any clear conceptions respecting existence?

Theaetetus:: Whither?

Stranger:: To no point do I think it is yet easy for him to turn. For, if existence is not moved, why has it not stood still? Or on the other hand, why is that, which in no respect stands still, not moved? But existence has just now appeared to us to be apart from both of these. Is this, however, possible?

Theaetetus:: It is the most impossible of all things.

Stranger:: In the next place, then, it will be just to call to mind this.

Theaetetus:: What?

Stranger:: That being asked what name non-entity ought to bear, we were hampered by the greatest difficulty. Do you remember?

Theaetetus:: How not?

Stranger:: Are we then in a less difficulty now respecting entity?

Theaetetus:: We appear to be, O guest, if it be impossible to say so, in a greater.

Stranger:: Let then this question of difficulty lie here. But since both entity and non-entity have equally a share of difficulty, there is now a hope that, if one of them shall appear more obscure, or more clear, the other will appear such likewise; and on the other hand, if we should not be able to see either of them, the other also will be in a similar state.

And thus we shall pursue, in the most becoming manner we can, the discourse respecting both of them together.

Theaetetus:: Very well.

Stranger:: Let us state then after what manner we call on each occasion this same thing by many names.

Theaetetus:: Such as what? Give an example.

Stranger:: In speaking of man we give him various appellations, and attribute to him color, figure, magnitude, vices, and virtues; in all which, and ten thousand other particulars, we not only say that he is a man, but that he is good, and an infinity of other things: and in the same manner we lay down other things, each as one, and we again call it many things, and by many names.

Theaetetus:: True.

Stranger:: Whence, I think, we have prepared a feast to young men, and to those old men who learn late in life. For it is easy for every one immediately to lay hold of the doctrine, that it is impossible for the many to be one, and the one many. Hence they exult forsooth, not suffering us to say that a man is good, but that the good is a good, and the man a man. For I think, Theætetus, you have often met with those, who seriously apply themselves to things of this kind, and sometimes even with rather elderly persons, who, through the poverty of their possessions with respect to wisdom, admire such things as these, and think they have discovered the very-wise thing itself.

Theaetetus:: Entirely so.

Stranger:: That our discourse then may extend to all who have ever conversed at all respecting existence, let what will be now said in the way of interrogation, be for those and for the rest with whom we have before conversed.

Theaetetus:: What is this?

Stranger:: Whether we should neither join existence to motion and standing, nor any thing else to any thing else; but as if things were unmixed, and impossible to take a part with each other, we should place them thus separate in our discourse? Or whether we should bring all things to the same, as if they were able to take a part with each other? Or only some, and some not? Which of these, Theætetus, shall we say they would prefer?

Theaetetus:: I indeed have nothing to answer to this on their behalf. Why do you not, by answering each question, consider what follows from each?

Stranger:: You say well; and let us suppose them, if you please, to say, in the first place, that nothing has any power of communion with any thing for any thing. Will not then motion and standing in no respect take a part of existence?

Theaetetus:: They will not.

Stranger:: But will either of them exist, not having a communion with existence?

Theaetetus:: It will not.

Stranger:: By this admission, all the doctrines, it seems, have become rapidly subverted, as well of those, who put all things in motion, as of those, who make all things stand like one, and of those, who assert that entities, according to forms, subsist ever under the same circumstances and in a similar manner. For all these join existence at least with their doctrines, some asserting that things are really moved, and others that they really stand.

Theaetetus:: Entirely so.

Stranger:: Moreover, such as at one time unite all things, and at another separate them, whether dividing them into one and from one into infinite, or into finite elements, and composing from these, and whether they consider this as partially, or as always taking place,—in all these cases they will say nothing to the purpose, if there is in no respect a commingling.

Theaetetus:: Right.

Stranger:: Further still, they will have gone through their discourse the most ridiculously of all men, who permitting nothing to the communion of the accident of “different,” have thought proper to use the appellation, “the other.”

Theaetetus:: How so?

Stranger:: They are compelled somehow to employ about all things, “to be,” and “apart,” and “others,” and “by itself,” and ten thousand other expressions, from which being unable to abstain, and not to insert them in their discourses, they do not require others to confute them, but walk about, having, as the saying is, an enemy and an adversary at home, vociferating within, and always carrying, as it were, the absurd Eurycles with them.

Theaetetus:: You really say what is similar and true.

Stranger:: But what if we permit all things to have the power of alternate communion with each other?

Theaetetus:: This I myself am able to refute.

Stranger:: How?

Theaetetus:: Because motion itself would entirely stand still, and on the other hand, standing itself would be moved, if they were alternately mingled with each other.

Stranger:: But this indeed is impossible from the greatest necessity, for motion to stand still, and standing to be moved.

Theaetetus:: How not?

Stranger:: The third thing therefore alone remains.

Theaetetus:: Yes.

Stranger:: For one of these things is necessary; either that all things should be commingled, or nothing; or that some things should be willing to be commingled, and others not.

Theaetetus:: How not?

Stranger:: Now it has been found that two cannot be commingled.

Theaetetus:: Just so.

Stranger:: Every one therefore who wishes to answer rightly, will adopt that which remains of the three.

Theaetetus:: Very much so.

Stranger:: But since some things are willing to do so, be mingled, and others not, they will be affected nearly in the same manner as letters. For some of these do not fit with each other, but others do fit.

Theaetetus:: How not?

Stranger:: For vowels being pre-eminently the bond, as it were, of the other letters, it has come to pass, that without some one of them, it is impossible for any of the rest to fit one with the other.

Theaetetus:: And very much so.

Stranger:: Does then every one know what letters will unite with what? or is there a need of art to him, who is about to do this sufficiently?

Theaetetus:: Of art.

Stranger:: What kind of art?

Theaetetus:: The grammatical.

Stranger:: What then, with respect to sharp and flat sounds, is not he, who has the art to know the sounds that are combined or not, a musician, but he who does not know, not a musician?

Theaetetus:: It is so.

Stranger:: And in other things of skill, and want of skill, we shall find other circumstances of such a kind.

Theaetetus:: How not?

Stranger:: Since then we have acknowledged, that the genera of things have a mingling with each other, after the same manner, is it not necessary for him to proceed in his discourse with some science, who is about to show what kind of genera accord with what kind, and what do not receive each other? Likewise, whether these genera so hold together through all things as to be capable of being mutually mingled? And again in their divisions, whether there are other causes of division through wholes?

Theaetetus:: How is there not a need of science, and, perhaps, of nearly the greatest?

Stranger:: What then, Theætetus, shall we call this science? Or, by Jupiter, have we ignorantly fallen upon the science of freemen? And do we nearly appear, while searching after a sophist, to have found previously a philosopher?

Theaetetus:: How say you?

Stranger:: Shall we not say, that to divide according to genera, and neither to think the same species different, nor a different species the same, is the business of the dialectic science?

Theaetetus:: Yes, we will say so.

Stranger:: He then who is able to do this, perceives sufficiently one idea every way extended through many things, of which each one lies apart, and many different from one another, externally comprehended under one; and on the other hand, one idea through many wholes conjoined in one, and many ideas, every way separated from each other. This is to know how to distinguish according to genus, in what point each can have a communion, and where they cannot.

Theaetetus:: Entirely so.

Stranger:: But you will not, I think, assign the dialectic art to any other than one, who philosophizes purely and justly.

Theaetetus:: For how should any one assign it to any other?

Stranger:: If we seek indeed, we shall find, both now and hereafter, a philosopher in a place of this kind, though difficult to see him clearly; but the difficulty in the case of a sophist and that of a philosopher is of a different kind.

Theaetetus:: How so?

Stranger:: The one flying into the darkness of non-entity, and by rubbing touching it, is through the obscurity of the place hard to be perceived. Is it not so?

Theaetetus:: So it seems.

Stranger:: But the philosopher, always lying, through reasoning, near the idea of entity, is, through the splendor of the region, by no means easily discerned. For the eyes of the soul of the many are unable to endure the looking upon what is divine.

Theaetetus:: And this too it is likely is the case, no less than that.

Stranger:: On this point, therefore, we shall shortly reflect more clearly, if it be permitted to us wishing it. But with respect to the Sophist, it is evident that we must not dismiss him, before we have sufficiently surveyed him.

Theaetetus:: You speak well.

Stranger:: Since then it is acknowledged by us, that some genera have a communion with each other, and some have not, and that nothing prevents some from having a communion with a few, others with many, and others through all and with all,—let us, in the next place, follow the reasoning, and in this way speculate, not about all species, lest we be confounded by their multitude,—but, selecting some of those called the greatest, let us first consider the qualities of each, and then what power of communion they possess with each other, in order that, although we may not be able to comprehend entity and non-entity with all clearness, we may at least not want for reasons respecting them, as far as the manner of the present speculation admits, if perchance it be permitted us, when we assert that non-entity is in reality a non-entity, to escape unscathed.

Theaetetus:: So must we do.

Stranger:: Now the greatest of all the genera, which we have now mentioned, are, entity itself, standing, and motion.

Theaetetus:: Very much so.

Stranger:: And we have said that the two latter are unmixed with each other.

Theaetetus:: Very much so.

Stranger:: But entity is mixed with both; for both do somehow exist.

Theaetetus:: How not?

Stranger:: These things then become three.

Theaetetus:: Certainly.

Stranger:: Is not then each of these different from the other two, but the same with itself?

Theaetetus:: It is.

Stranger:: What then have we now said of sameness and difference? Must we say that, as there are two genera different from the other three, but yet always mingled with them from necessity, we have to consider about five, and not three genera only? Or have we unconsciously denominated the same and the different, as something belonging to them?

Theaetetus:: Perhaps so.

Stranger:: But surely motion and standing are neither the different nor the same?

Theaetetus:: How so?

Stranger:: That which we in common call motion and standing can be neither of these.

Theaetetus:: Why?

Stranger:: Because motion would be standing, and standing be motion. For, with respect to both, either one becoming the other, would compel that other to change into the contrary to its nature, as participating in the contrary.

Theaetetus:: Very much so.

Stranger:: But yet both participate of the same and the different.

Theaetetus:: They do.

Stranger:: Let us then not assert that motion is either the same or the different, nor on the other hand assert this, of standing.

Theaetetus:: Let us not.

Stranger:: But must entity and the same be considered by us as one?

Theaetetus:: Perhaps so.

Stranger:: But if entity and the same signify that which is in no respect different, when we again say that motion and standing both exist, we shall thus assert that they are the same, as things existing.

Theaetetus:: But this is surely impossible.

Stranger:: It is impossible then for the same and entity to be one.

Theaetetus:: Nearly so.

Stranger:: We must place then the same as a fourth species, in addition to the former three.

Theaetetus:: Entirely so.

Stranger:: But must we say that the different is a fifth species? Or must we conceive that this and entity are some two names belonging to one genus?

Theaetetus:: Perhaps so.

Stranger:: But I think you will grant, that of existences, some always subsist themselves by themselves, but others in relation to each other.

Theaetetus:: Why not?

Stranger:: But the different is always referred to the different. Is it not?

Theaetetus:: It is.

Stranger:: But this would not be, unless entity and the different widely differed from each other. But if the different participated of both species, as entity does, there would be something even of the different not different with reference to the different. But now it happens from necessity that, whatever is really different, is so from its relation to that which is different.

Theaetetus:: You say, as the fact is.

Stranger:: We must say then, that the nature of the different must be added as a fifth to the species, of which we have already spoken.

Theaetetus:: Yes.

Stranger:: And we will say that it pervades through all these. For each one is different from the others, not through its own nature, but through participating in the idea of the different.

Theaetetus:: And very much so.

Stranger:: Let us say thus of the five genera, taking each singly.

Theaetetus:: How?

Stranger:: In the first place, that motion is entirely different from standing. Or how shall we say?

Theaetetus:: Thus.

Stranger:: It is not then standing.

Theaetetus:: By no means.

Stranger:: But it exists through its participating in entity.

Theaetetus:: It does.

Stranger:: Again, motion is different from the same.

Theaetetus:: Nearly so.

Stranger:: It is not therefore the same.

Theaetetus:: It is not.

Stranger:: And yet it was the same, through its participating on the other hand in the same.

Theaetetus:: And very much so.

Stranger:: It must be confessed then that motion is both the same and not the same; nor must we be indignant at this. For, when we say that it is both the same, and not the same, we do not speak of it in a similar manner; but when we say it is the same, we call it so, through the participation of the same with respect to itself; but when we say it is not the same, we call it so through its communion with the different; through which, being separated from the same, it becomes not the same, but the different; so that it is again rightly said to be not the same.

Theaetetus:: Entirely so.

Stranger:: If, then, motion itself has in any respect participated in standing, there would be no absurdity in calling it stable.

Theaetetus:: Most truly, if we should acknowledge that some of the genera are willing to be mixed with each other, but others not.

Stranger:: And yet we arrived at the proof of this prior to the present remarks, by showing that it exists in this manner naturally.

Theaetetus:: How not?

Stranger:: Let us then say again that motion is a thing different from the different, just as it was from the same and standing.

Theaetetus:: It must be so.

Stranger:: It is then, in a certain respect, not different and different, according to the present reasoning.

Theaetetus:: True.

Stranger:: What then follows? Shall we say it is different from the three genera, but not from the fourth? acknowledging that there are five, about which, and in which, we propose to speculate?

Theaetetus:: And how so? for it is impossible to grant that the number is less than it now appears.

Stranger:: We may, therefore, fearlessly contend that motion is different from entity.

Theaetetus:: We may most fearlessly.

Stranger:: Clearly then motion is really a non-entity and an entity, since it participates of entity.

Theaetetus:: Most clearly.

Stranger:: It is then of necessity that non-entity exists with respect to motion, and as regards all the genera. For as regards all, the nature of the different, rendering them different from entity, makes each to be a non-entity. Hence we rightly say, that all of them are, as regards the same, non-entities; and again, because they participate in entity, that they exist and are entities.

Theaetetus:: It appears so.

Stranger:: About each of the species then, the entity is many, but the non-entity is in multitude endless.

Theaetetus:: It appears so.

Stranger:: Must not then entity itself be said to be different from the others?

Theaetetus:: Of necessity.

Stranger:: Entity then does not exist according to so many in number as the others; for entity, being one itself, is not them; but the others, being infinite in number, are not entity.

Theaetetus:: This is nearly the case.

Stranger:: We ought not then to be indignant at this, since the nature of the genera have a communion with each other. But if some one does not admit this, let him, having persuaded our former reasoning, in like manner persuade the subsequent assertions.

Theaetetus:: You speak most justly.

Stranger:: Let us look at this likewise.

Theaetetus:: What?

Stranger:: When we say non-entity, we do not, as it appears, speak of any thing contrary to entity, but only as something different from it.

Theaetetus:: How so?

Stranger:: Just as when we say a thing is not great, do we then appear to you to point out by this word what is small rather than what is equal?

Theaetetus:: How could you?

Stranger:: We must therefore admit that the contrary to a thing is not signified, when negation is spoken of; but thus much only, that the prohibitive “not,” and the negative “no,” when prefixed, signify something relating to the words that follow, or rather to the things, respecting which are placed the words of the negation afterwards enunciated.

Theaetetus:: Entirely so.

Stranger:: This also let us consider, if it seems good to you.

Theaetetus:: What is that?

Stranger:: The nature of the different appears to me to have been cut into fractional parts, in the same manner as science.

Theaetetus:: How?

Stranger:: The nature is one; but the portion of it that is attached to any thing does, when separated, possess individually its peculiar appellation; on which account arts and sciences are said to be many.

Theaetetus:: Entirely so.

Stranger:: Have not then the parts of the nature of the different, which is itself one thing, been affected in the very same way?

Theaetetus:: Perhaps so. But let us tell how this takes place.

Stranger:: Is there any part of the different opposed to the beautiful?

Theaetetus:: There is.

Stranger:: Shall we say it is nameless, or that it has some appellation?

Theaetetus:: That it has. For that which we call on each occasion not-beautiful, is not different from any thing else but the nature of the beautiful.

Stranger:: Come, then, tell me this.

Theaetetus:: What?

Stranger:: When any thing is separated from some kind of existences, and is again opposed to some kind of existences, does it happen that thus it is not beautiful?

Theaetetus:: It does.

Stranger:: But the opposition of entity to entity happens, as it seems, to be not-beautiful.

Theaetetus:: Most right.

Stranger:: What then, according to this reasoning does the beautiful belong more to entities, and the non-beautiful, less?

Theaetetus:: Not at all.

Stranger:: We must say then, that the not-great and the great exist similarly.

Theaetetus:: Similarly.

Stranger:: Hence too we must lay down respecting the just, in the same manner as of the not-just, that the one in no respect exists more than the other.

Theaetetus:: How not?

Stranger:: And we will speak of other things in this way; since the nature of the different appears to be one of entities; and as it exists, it is necessary for us to lay down the parts of it, as no less existing.

Theaetetus:: How not?

Stranger:: The opposition then, it seems, of a part of the nature of the different, and of entity opposed to each other, are no less existence, if it be lawful to say so, than existence itself; nor do they signify what is contrary to existence, but only so much, what is different from it.

Theaetetus:: It is most clear.

Stranger:: What then, shall we call it the antithesis?

Theaetetus:: It is evident that non-entity, which we have been seeking on account of the Sophist, is this very thing.

Stranger:: Whether then, as you have said, is it no more deficient of existence than the others? And ought we now boldly to say, that non-entity possesses its own nature firmly, in the same manner as the great was found to be great, and the beautiful beautiful, and the not-great to be not-great, and the not-beautiful not-beautiful? and that thus too nonentity was and is non-entity, as being one species numbered amongst the many existing? Or must we still, Theætetus, have with regard to this some want of faith?

Theaetetus:: None at all.

Stranger:: Do you perceive then, how we have been with some prolixity disobedient to the prohibition of Parmenides?

Theaetetus:: In what respect?

Stranger:: We have farther than he ordained us to inquire, exhibited ourselves, still exploring onwards.

Theaetetus:: How?

Stranger:: Because he says some where,—“Non-beings never and by no means are. And from this path thy searching thought restrain.”

Theaetetus:: And so he does say.

Stranger:: But we have not only shown that non-entities exist, but we have demonstrated what kind of thing a non-entity is. For, having proved that the nature of the different has an existence, and that it is cut up into fractions, distributed mutually through all things, we then dared to say, that each part of it, which is opposed to entity, is itself truly a nonentity.

Theaetetus:: And to me, O guest, we appear to have spoken with the greatest truth.

Stranger:: Let no one then say, that we, having proved that non-entity is contrary to entity, dare to assert that it exists. For we some time since did to something, contrary to it, bid a farewell, whether it exists or not, and possesses a certain reason, or is entirely irrational. But, with respect to that which we now call non-entity, either let some one persuade us by showing that we speak not well; or, as long as he is unable to do this, he must also say, as we say, that the genera are mixed with each other, and that entity and the different pervading through all things, and through each other, the different, partaking of entity, does through this participation exist, not being that of which it participates, but something else; and being different from entity, it clearly follows that it is necessarily non-entity. And on the other hand entity, having partaken of the different, will be different from the other genera; but being different from all of them, it is not any one of them, nor all the others, nor any thing besides itself. So that incontestably entity is not ten thousand things in ten thousand things: and thus the rest taken singly and together exist in many forms, but do not exist in many forms.

Theaetetus:: True.

Stranger:: Now if any one either does not believe in these contrarieties, let him reflect and produce something better than has been stated now; or if, perceiving this to be a difficult speculation, he is pleased at drawing out his arguments now on this side and now on that, he is engaged, as our present reasoning shows, in a pursuit not deserving very serious attention. For this is neither a clever thing nor difficult to discover; but that is at one and the same time difficult and honorable.

Theaetetus:: What?

Stranger:: That which has been stated before; so that, omitting these as possible, we may be able, by following up what has been said, each by itself, to confute a person, when he says that what is different is same, and what is the same different, in the way and according to the circumstance by which he says either is affected. For, to show that the same is different, and the different same, and the great small, and the similar dissimilar, and to be pleased in thus introducing contrarieties in discourse, is not a true confutation, but one evidently newly born of some one, who has recently laid hold of entities.

Theaetetus:: Very much so.

Stranger:: For, my good friend, to endeavor to separate every thing from every thing, is inelegant in other respects, and the part too of one untaught and unphilosophical.

Theaetetus:: Why so?

Stranger:: To loosen each thing from all things, is the most perfect abolition of all discourse. For discourse subsists through the conjunction of species with each other.

Theaetetus:: True.

Stranger:: Consider then, how opportunely we have now contended with men of this kind, and compelled them to permit one thing to be mixed with another.

Theaetetus:: With a view to what?

Stranger:: To this, that discourse may be one certain thing belonging to the genera of existences. For, if we are deprived of this, we shall, for the most part, be deprived of philosophy. And farther still, it is requisite at present that we agree about discourse what it is. But if we take it away entirely from us, so as not to exist at all, we can no longer speak about any thing. And we should take it away, if we admit that there is no mixing of any thing for any thing.

Theaetetus:: This is said quite rightly. But I do not understand why we should agree about discourse.

Stranger:: But, perhaps, you will most easily understand by following me in this way.

Theaetetus:: In what way?

Stranger:: Non-entity has appeared to us to be one of the rest of genera, and to be dispersed through all existences.

Theaetetus:: It has so.

Stranger:: After this, therefore, we must consider whether it is mixed with opinion and discourse.

Theaetetus:: On what account?

Stranger:: Because, if it is not mixed with these, it must necessarily follow that all things are true; but, if it is mixed with these, false opinion and false discourse is produced. For to fancy or speak of non-entities, is a falsehood existing in the mind and in discourse.

Theaetetus:: It is so.

Stranger:: But, being falsehood, it is deception.

Theaetetus:: It is.

Stranger:: And deception existing, all things must necessarily be full of resemblances, images, and fancies.

Theaetetus:: How not?

Stranger:: But we have said that the sophist flew to and stayed in this place, while he denies that there is any such thing as falsehood; for he says that no one can either think or speak of a non-entity; because it in no respect partakes of existence.

Theaetetus:: It was so said.

Stranger:: But now it has appeared to partake of entity; so that in this respect perhaps he will no longer oppose us. Perhaps, however, he will say, that of species some partake of non-entity, and others not; and that discourse and opinion are amongst those things that do not partake of it. So that he will again contend with us, that the image-making and fancy-producing art, in which we have said he is concealed, exists not at all; since opinion and discourse have no communion with non-entity; for that falsehood does not exist at all, if this communion of things takes place no where. Hence we must search out discourse, opinion, and fancy, what they are, in order that we may perceive after their appearance their communion with non-entity; and having perceived this, we may prove that falsehood exists; and having proved this, we may put the Sophist into bonds, if he is guilty; or, setting him free, search for him in some other genus.

Theaetetus:: What was said, O guest, at first about the Sophist, appears to be very true—that he is a genus difficult to hunt out. For he appears to be full of fences; of which when he throws up one, it is necessary to take it by storm, before you can reach him himself. And even now we have scarcely passed over the obstacle he had raised, that a nonentity does not exist, when he immediately throws up another. Hence it is requisite to show that falsehood does exist, both in discourse and opinion; and after this perhaps something else, and another thing after that; and, as it seems, no end will ever appear.

Stranger:: He, Theætetus, should be bold, who is able to proceed, though only a little, continually onwards. For what will he be able to do in other things who is faint-hearted in these, and is either effecting nothing in these, or is driven back again? Such a person will scarcely, according to the proverb, ever take a city. But now, O good man, since this, as you say, has been passed through, the greatest wall will have been taken by us, and the rest will be more easy and of small account.

Theaetetus:: You say well.

Stranger:: Let us then now in the first place take up, as we said, discourse and opinion, that we may more clearly calculate, whether non-being touches upon these, or whether both these are in every respect true, and neither of them at any time false.

Theaetetus:: Right.

Stranger:: Come then, let us again speculate about nouns, in the same manner as we did about species and letters. For the present inquiry appears somehow to lie in this road.

Theaetetus:: What then is to be heard forsooth about nouns?

Stranger:: Whether all of them fit together, or not; or some are wont to do so, but others not.

Theaetetus:: This is evident, that some are wont and others not.

Stranger:: Perhaps you mean some such thing as this; that some being spoken in order and signifying something, do fit together; but that such as in continuity signify nothing, do not fit together.

Theaetetus:: Why, and how say you this?

Stranger:: What I thought you would understand and acknowledge. For there is a twofold kind of significations by the voice respecting existence.

Theaetetus:: How?

Stranger:: One called nouns, and the other verbs.

Theaetetus:: Speak of each.

Stranger:: That which has a signification in the case of actions, is called a verb.

Theaetetus:: It is.

Stranger:: But a sign of the voice, applied to the doers themselves of those actions, we call a noun.

Theaetetus:: Certainly.

Stranger:: From nouns then alone, spoken in succession, there is not a discourse; nor, on the other hand, from verbs spoken without nouns.

Theaetetus:: I have not learned this.

Stranger:: Yet it is plain that you just now acknowledged this, when looking to something else. For this very thing I meant to say, that when these are spoken in succession, there is not a discourse.

Theaetetus:: How so?

Stranger:: As for instance, should any one say in succession "walks," "runs," "sleeps," and such other words as signify actions, he would not form a discourse at all.

Theaetetus:: For how could he?

Stranger:: Again then, when any one says, "lion," "stag," "horse," and such other nouns, as are named after those doing acts, no discourse is composed by such a continuity. For the words spoken do not, either in this way or that, signify action, or non-action, or the existence of a thing which is or is not, until one mixes verbs with nouns; and then they fit with each other, and a discourse is produced immediately, and their first connection is nearly the first and shortest discourse.

Theaetetus:: How say you this?

Stranger:: When any one says, “Man learns,” would you not say that this is the shortest and first discourse?

Theaetetus:: I should.

Stranger:: For he then points out something respecting things which exist, or are in the course of existing, or have been, or will be; nor does he name a thing merely, but completes something by connecting verbs with nouns. Hence we say that he speaks, and does not merely name a thing; and through this connection we pronounce the noun “discourse.”

Theaetetus:: Right.

Stranger:: Thus too in the case of things, some did fit with each other, and others did not; so likewise with respect to the signs of the voice, some do not fit, but others of them by fitting produce discourse.

Theaetetus:: Entirely so.

Stranger:: There is still this trifling thing.

Theaetetus:: What?

Stranger:: It is necessary for a discourse, when it takes place, to be a discourse about something; for it is impossible to be about nothing.

Theaetetus:: It must.

Stranger:: Ought it not then to be of some particular kind?

Theaetetus:: How not?

Stranger:: Let us then pay attention to ourselves.

Theaetetus:: For it is requisite.

Stranger:: I will then pronounce you a discourse, having united a thing with an action, through a noun and a verb; and do you tell me of what it is the discourse.

Theaetetus:: This shall be as far as I am able.

Stranger:: Theætetus sits.—This is not a long discourse.

Theaetetus:: No; a moderate one.

Stranger:: It is now your business to say about whom is the discourse, and whose it is.

Theaetetus:: It is evident that it is about me and mine.

Stranger:: But what again is this?

Theaetetus:: What?

Stranger:: Theætetus, with whom I am now conversing, flies.

Theaetetus:: Respecting this also, no one can say but that it is mine, and of me.

Stranger:: But we said it was necessary that every sentence should be of some particular kind.

Theaetetus:: Yes.

Stranger:: But of what kind must each of the sentences just now mentioned be?

Theaetetus:: One must be false and the other true.

Stranger:: But of them the one which is true asserts things respecting you, as they are.

Theaetetus:: How not?

Stranger:: But the one which is false asserts things respecting you, different from what they are.

Theaetetus:: It does.

Stranger:: It speaks then of things which are not, as if they were.

Theaetetus:: Nearly so.

Stranger:: And it speaks of things about you different from the existing. For we said that about each thing there are many things which exist, and many which do not.

Theaetetus:: Certainly.

Stranger:: The discourse then which I last spoke about you, should, from what we have defined a discourse to be, of necessity be, in the first place, one of the shortest.

Theaetetus:: This we have just now acknowledged.

Stranger:: In the next place, it is a discourse of some one.

Theaetetus:: It is so.

Stranger:: But if it is not yours, it is not of any one else.

Theaetetus:: For how should it?

Stranger:: And if it is not about some thing, it cannot be a discourse at all. For we have shown that it is one of things impossible, for a discourse to exist about nothing.

Theaetetus:: Most correctly.

Stranger:: When therefore the different is asserted of you as if it were the same, and things not existing as if existing, such an arrangement of verbs and nouns altogether becomes, as it appears, a really and truly false discourse.

Theaetetus:: Most true.

Stranger:: But what, is it not now evident, that all these genera, both false and true, such as thought, opinion, and fancy, are produced in our souls?

Theaetetus:: How?

Stranger:: You will more easily understand it thus, if you first take, what each of them is, and in what they differ each from the other.

Theaetetus:: Only give.

Stranger:: Are not then thought and discourse the same, except that the former being within the soul a voiceless dialogue with itself, is called by us by the name of thought?

Theaetetus:: Entirely so.

Stranger:: But the stream of thought passing through the mouth with a sound is called discourse.

Theaetetus:: True.

Stranger:: We know of this too in discourse.

Theaetetus:: What?

Stranger:: Affirmation and negation.

Theaetetus:: We do.

Stranger:: When therefore this is generated in the soul according to thought, accompanied with silence, can you call it any thing else than opinion?

Theaetetus:: How can I?

Stranger:: But when, again, some circumstance of this kind is present to any one, not according to itself, but through sensation, is it possible to call it correctly any thing else than fancy?

Theaetetus:: Nothing else.

Stranger:: Since then discourse is both true and false, and it appears that thought is a dialogue of the soul with itself, but opinion the termination of thought, and what we mean by "it appears" is the mixture of sensation and opinion, it is necessary, that of these, being allied to discourse, some should be false and sometimes.

Theaetetus:: How not?

Stranger:: Do you perceive then, that opinion and discourse have been previously found to be false more easily, than according to our expectation? For just now we were afraid, lest by searching into this matter we should throw ourselves upon a work perfectly impracticable.

Theaetetus:: I do perceive.

Stranger:: Let us not then be faint-hearted as to what remains. For since these have been made to appear, let us recall to our memory the previous divisions according to species.

Theaetetus:: Of what kind were they?

Stranger:: We divided image-making into two species; the one assimilative, and the other fanciful.

Theaetetus:: We did.

Stranger:: And we said we were dubious in which of these we should place the Sophist.

Theaetetus:: It was so said.

Stranger:: And while we were doubting of this, a still greater dizziness was shed around us, through the assertion appearing a matter of doubt to all men, that there cannot be at all either a resemblance, or an image, or fancy; because no falsehood exists by any means at any time or in any place.

Theaetetus:: You speak the truth.

Stranger:: But now since discourse has made its appearance, and false opinion likewise, it is conceded that there are imitations of things existing; and that from this disposition of things the art of deceiving is produced.

Theaetetus:: It is agreed.

Stranger:: And yet was it not also acknowledged by us above, that the sophist is one of these?

Theaetetus:: It was.

Stranger:: Let us then again endeavor, by always bisecting the proposed genus, to proceed along the right hand of the section, and attend to its communion with the sophist, until, having cut off all his common properties, we leave the nature peculiar to himself, and exhibit it to ourselves especially, and afterwards to those also, who are naturally the nearest of kin to this method.

Theaetetus:: Right.

Stranger:: Did we not then begin by dividing the making art and the acquiring art?

Theaetetus:: Yes.

Stranger:: And the acquiring art presented itself to us in hunting, contests, traffic, and in some such-like species.

Theaetetus:: Entirely so.

Stranger:: But now, since the imitative art comprehends the Sophist, it is evident that the making art must first receive a twofold division. For imitation is a certain kind of making. We said, indeed, it was the making of images, and not of each themselves. Did we not?

Theaetetus:: Entirely so.

Stranger:: But, in the first place, let there be two parts of the making art.

Theaetetus:: What are they?

Stranger:: One divine, the other human.

Theaetetus:: I do not understand you.

Stranger:: The making art, if we remember what was said at first, we asserted to be every power, which might be the cause of things being produced subsequently, that did not previously exist.

Theaetetus:: We do remember.

Stranger:: But, with respect to all living animals, and plants, which are produced in the earth from seeds and roots, together with such inanimate bodies as subsist on the earth, able to be liquefied or not, can we say that not existing previously they were subsequently produced by any other than some fabricating god? Or making use of the opinion and assertion of the many—

Theaetetus:: What is that?

Stranger:: That nature generates these from some self-acting fortuitous cause, and without a generating intellect;

or is it with reason and divine science, originating from a god?

Theaetetus:: I, perhaps, through my age, am often changing my opinions to both sides. But at present looking to you, and apprehending that you think these things are produced according to the will of a deity, I think so too.

Stranger:: It is well, Theætetus. And if we thought that you would be one of those, who at a future time would think differently, we should now endeavor to make you acknowledge this by the force of reason, in conjunction with the persuasion of necessity. But since I know your nature to be such, that, without any arguments from us, it will of itself arrive at that conclusion to which you say you are now drawn, I will leave the subject; for the time would be superfluous. But I will lay this down, that the things, which are said to be made by nature, are made by divine art; but that the things, which are composed from these by men, are produced by human art: and that, according to this assertion, there are two kinds of the making art, one human, and the other divine.

Theaetetus:: Right.

Stranger:: But, since there are two kinds, bisect each of them.

Theaetetus:: How?

Stranger:: Just as the whole of the making art was then divided, according to breadth, so now divide it according to length.

Theaetetus:: Let it be so divided.

Stranger:: And thus all its parts will become four; two of which, with reference to us, will be human; and two again, with reference to the gods, divine.

Theaetetus:: They will.

Stranger:: But with respect to these, as being again divided in a different manner, one part of each division is self-making, but the remaining parts may be nearly called image-making; and in this way again, the making art is divided into two parts.

Theaetetus:: Tell me again how each is to be divided.

Stranger:: With respect to ourselves and other animals, and the things from which they naturally consist, fire and water, and the sisters of these, we know that all these productions are individually the offspring of a deity. Or how?

Theaetetus:: Thus.

Stranger:: And that the images of each of these, and not the things themselves, follow, and these too produced by the artifice of some dæmon-like power.

Theaetetus:: Of what kind are these?

Stranger:: Fancies, which occur in dreams, and such as appear in the day, are called self-produced; as, for instance, a shadow, when darkness is generated in fire: but this is twofold, when its own and foreign light meeting in one about shining and smooth bodies, effects by these means a species, producing a sensation of seeing contrary to accustomed vision.

Theaetetus:: These works then of divine making are two, the things themselves, and the image which follows each.

Stranger:: But what of our art? Shall we not say that it does, by the art of house-building, make a dwelling, and has made by painting another dwelling, which is, as it were, a dream made by man to persons awake?

Theaetetus:: Entirely so.

Stranger:: In this way then are the rest. Divided into two parts are the works of our making power; that which relates to the thing itself we call thing-itself-making, but that which relates to the image, image-making.

Theaetetus:: I now understand you better; and I lay down in two parts two kinds of the making art, the divine and human, according to one section; and, according to the other, one a production from themselves, and the other of certain resemblances.

Stranger:: Let us then recollect, that of the image-producing art we said, one kind was about to be a likeness-producing, and the other a fancy-producing, if it should appear that falsehood is in reality a falsehood, and one of things existing.

Theaetetus:: It was so.

Stranger:: There have then appeared, and we shall on this account enumerate ourselves, incontestably two species.

Theaetetus:: Yes.

Stranger:: Let us then again divide into two the fancy-producing species.

Theaetetus:: In what way?

Stranger:: One produced through instruments, but the other, when he, who causes the fancied appearance, exhibits himself as the instrument of the thing.

Theaetetus:: How say you?

Stranger:: I think, when any one employing his own body, causes your figure to appear similar to his own, or voice to voice, this is especially called an imitation belonging to the fancy-producing species.

Theaetetus:: It is.

Stranger:: Calling this then imitative, we will divide it; but let us, now reduced to a jelly, dismiss all the rest, and we will permit some other person to collect the facts into one, and to give them a proper appellation.

Theaetetus:: Let one then be divided, and the other dismissed.

Stranger:: And yet, Theætetus, it is fit to think that this also is twofold; but take notice on what account.

Theaetetus:: Say on.

Stranger:: Of those who imitate, some knowing what they imitate, do this, but others not knowing. And yet what division can we make greater than that of ignorance and knowledge?

Theaetetus:: Not one.

Stranger:: Will not then that, which was just now mentioned, be an imitation by those, that are endued with knowledge? For a man by knowing you, would imitate your figure likewise.

Theaetetus:: How not?

Stranger:: But what shall we say respecting the figure of justice, and, in short, of the whole of virtue? Do not many, though ignorant, yet fancying they know it, vehemently endeavor to make it appear that, what seems to be justice in them, is inherent in them, and that they are particularly desirous of it, by imitating it in deeds and words.

Theaetetus:: Very many indeed.

Stranger:: Do not then all fail in seeming to be just, by their not being just at all? Or does the contrary of this take place wholly?

Theaetetus:: Wholly.

Stranger:: I think then we must say that the imitator, who is ignorant, is different from the other who knows.

Theaetetus:: Yes.

Stranger:: Whence, then, can any one of them obtain a name adapted to each? Or is it evident that it is difficult; because a certain ancient cause of the division of genera into species was unknown to our ancestors, so that none of them attempted even to divide; and on this account there was a necessity for them not to be very ready at names. But at the same time, although it may be rather bold to be asserted, for the sake of distinction, let us call the imitation which subsists with opinion, the "opinion-mimicking," but that which subsists in conjunction with science, a certain scientific imitation.

Theaetetus:: Be it so.

Stranger:: We must therefore make use of the other: for a sophist was not among the scientific but the imitators.

Theaetetus:: And very much so.

Stranger:: Let us then look into this opinion-mimic, as if he were a piece of iron, and see whether he is sound and whole, or contains in himself some layer doubled over.

Theaetetus:: Let us consider.

Stranger:: He has it indeed very thick. For, of sophists, one is a simpleton, and thinks he knows what he merely fancies. But the figure of another, through his tossing about in his discourse, carries with it much of suspicion and fear, that he is ignorant of what before others he pretends to know.

Theaetetus:: There are both these kinds of sophists, of whom you have spoken.

Stranger:: We will therefore place one as a simple imitator, but the other as an ironical one.

Theaetetus:: It is proper to do so.

Stranger:: And again, shall we say that the genus of this is one or two?

Theaetetus:: Do you look to it.

Stranger:: I do consider; and some two imitators appear before me. One I behold able to employ irony in public, and in lengthened speeches before the masses; but the other in private, and in short discourses, compelling the person who converses with him to contradict himself.

Theaetetus:: You speak most correctly.

Stranger:: What then may we show the imitator to be, who employs lengthened discourses? A statesman, or a mob-orator?

Theaetetus:: A mob-orator.

Stranger:: But what shall we call the other? a wise man, or wise-man-like?

Theaetetus:: To call him a wise man is impossible, since we have placed him as one who is ignorant; but as he is an imitator of a wise man, it is plain he must receive some similar appellation; and I now nearly understand, that we ought truly to call this person the perfectly real sophist.

Stranger:: Shall we not then bind together his name, as we did before, connecting every thing from the end to the beginning?

Theaetetus:: Entirely so.

Stranger:: He, then, who is a portion of the art that makes a discourse to contradict itself, and a part of the ironic species, and of the opinion-mimicking, and of the fancy-producing, and of that proceeding from the image-making, and separated from the making, not as a god but man, and in discourses is the wonder-working portion, whoever shall say that he is “of this race and blood” a real sophist, such a person will, as it appears, speak with the greatest truth.

Theaetetus:: Entirely so.

# Sophist.

Translated by F. M. Cornford.

Socrates, Stranger, Theodorus, Theaetetus

Theodorus:: Here we are, Socrates, faithful to our appointment of yesterday, and, what is more, we have brought a guest with us. Our friend here is a native of Elea; he belongs to the school of Parmenides and Zeno, and is devoted to philosophy.

Socrates:: Perhaps, Theodorus, it is no ordinary guest but some god that you have brought us unawares. Homer tells us that gods attend upon the goings of men of mercy and justice, and not least among them the god of strangers comes to mark the orderly or lawless doings of mankind. Your companion may be one of those higher powers, who intends to observe and expose our weakness in philosophical discourse, like a very spirit of refutation.

Theodorus:: That is not our friend's way, Socrates; he is more reasonable than the devotees of verbal dispute. I should not call him a god by any means, but there is something divine about him. I would say that of any philosopher.

Socrates:: And rightly, my friend, but one might almost say that the type you mention is hardly easier to discern than the god. Such men—the genuine, not the sham philosophers—as they go from city to city surveying from a height the life beneath them, appear, owing to the world's blindness, to wear all sorts of shapes. To some they seem of no account, to others above all worth; now they wear the guise of statesmen, now of Sophists, and sometimes they may give the impression of simply being mad. But if our guest will allow me, I should like to ask him what his countrymen thought and how they used these names.

Theodorus:: What names?

Socrates:: Sophist, statesman, philosopher.

Theodorus:: What is your question exactly? What sort of difficulty about these names have you in mind?

Socrates:: This. Did they think of all these as a single type, or as two, or did they distinguish three types and attach one of the three corresponding names to each?

Theodorus:: I imagine you are quite welcome to the information. Is not that so, sir?

Stranger:: Yes, Theodorus, perfectly welcome, and the answer is not difficult. They thought of them as three different types, but it is not so short and easy a task to define each one of them clearly.

Theodorus:: As luck would have it, Socrates, you have hit upon a subject closely allied to one on which we were pressing him with questions before we came here. He tried to put us off with the same excuse he has just made to you, though he admits he has been thoroughly instructed and has not forgotten what he heard.

Socrates:: Do not deny us, then, the first favor we ask. Tell us this much. Which do you commonly prefer—to discourse at length by yourself on any matter you wish to make clear, or to use the method of asking questions, as Parmenides himself did on one occasion in developing some magnificent arguments in my presence, when I was young and he quite an elderly man?

Stranger:: When the other party to the conversation is tractable and gives no trouble, to address him is the easier course; otherwise, to speak by oneself.

Socrates:: Then you may choose any of the company you will; they will all follow you and respond amenably. But if you take my advice, you will choose one of the younger men—Theaetetus here or any other you may prefer.

Stranger:: I feel some shyness, Socrates, at the notion that, at my first meeting with you and your friends, instead of exchanging our ideas in the give-and-take of ordinary conversation, I should spin out a long discourse by myself or even address it to another, as if I were giving a display of eloquence. For indeed the question you have just raised is not so easy a matter as one might suppose, on hearing it so simply put, but it calls for a very long discussion. On the other hand, to refuse you and your friends a request, especially one put to me in such terms as you have used, strikes me as a breach of civility in a guest. That Theaetetus should be the other party to our conversation is a proposal which my earlier talk with him, as well as your recommendation, makes exceedingly welcome.

Theaetetus:: Then do as you say, sir; you will, as Socrates said, be conferring a favor on us all.

Stranger:: On that point, Theaetetus, no more need be said; the discussion from now onward must, it seems, be carried on with you. But if the long task should after all weigh heavy on you, your friends here, not I, must bear the blame.

Theaetetus:: I do not feel at this moment as if I should sink under it, but should something of that sort happen, we will call in Socrates' namesake here, who is of my own age and shares my pursuits. He is quite used to working out most questions with me.

Stranger:: A good suggestion. That shall be for you to consider as our conversation goes forward. What now concerns us both is our joint inquiry. We had better, I think, begin by studying the Sophist and try to bring his nature to light in a clear formula. At present, you see, all that you and I possess in common is the name. The thing to which each of us gives that name we may perhaps have privately before our minds, but it is always desirable to have reached an agreement about the thing itself by means of explicit statements, rather than be content to use the same word without formulating what it means. It is not so easy to comprehend this group we intend to examine or to say what it means to be a Sophist. However, when some great task is to be properly carried through, everyone has long since found it a good rule to take something comparatively small and easy and practice on that, before attempting the big thing itself. That is the course I recommend for us now, Theaetetus. Judging the Sophist to be a very troublesome sort of creature to hunt down, let us first practice the method of tracking him on some easier quarry—unless you have some readier means to suggest?

Theaetetus:: No, I have none.

Stranger:: Then suppose that we work out some lesser example, which will be a pattern of the greater?

Theaetetus:: Good.

Stranger:: What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

Theaetetus:: He is not.

Stranger:: Yet I suspect that he will furnish us with the sort of definition and line of inquiry which we want.

Theaetetus:: Very good.

Stranger:: Let us begin by asking whether he is a man having art or not having art, but some other power.

Theaetetus:: He is clearly a man of art.

Stranger:: And of arts there are two kinds?

Theaetetus:: What are they?

Stranger:: There is agriculture, and the tending of mortal creatures, and the art of constructing or molding vessels, and there is the art of imitation—all these may be appropriately called by a single name.

Theaetetus:: What do you mean? And what is the name?

Stranger:: He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

Theaetetus:: True.

Stranger:: And all the arts which were just now mentioned are characterized by this power of producing?

Theaetetus:: They are.

Stranger:: Then let us sum them up under the name of productive or creative art.

Theaetetus:: Very good.

Stranger:: Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced—in each and all of these branches there appears to be an art which may be called acquisitive.

Theaetetus:: Yes, that is the proper name.

Stranger:: Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

Theaetetus:: Clearly in the acquisitive class.

Stranger:: And the acquisitive may be subdivided into two parts. There is exchange, which is voluntary and is effected by gifts, hire, purchase, and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

Theaetetus:: That is implied in what has been said.

Stranger:: And may not conquest be again subdivided?

Theaetetus:: How?

Stranger:: Open force may be called fighting, and secret force may have the general name of hunting?

Theaetetus:: Yes.

Stranger:: And there is no reason why the art of hunting should not be further divided.

Theaetetus:: How would you make the division?

Stranger:: Into the hunting of living and of lifeless prey.

Theaetetus:: Yes, if both kinds exist.

Stranger:: Of course they exist, but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

Theaetetus:: Yes.

Stranger:: And animal hunting may be truly said to have two divisions, land animal hunting, which has many kinds and names, and water animal hunting, or the hunting after animals who swim?

Theaetetus:: True.

Stranger:: And of swimming animals, one class lives on the wing and the other in the water?

Theaetetus:: Certainly.

Stranger:: Fowling is the general term under which the hunting of all birds is included.

Theaetetus:: True.

Stranger:: The hunting of animals who live in the water has the general name of fishing.

Theaetetus:: Yes.

Stranger:: And this sort of hunting may be further divided also into two principal kinds?

Theaetetus:: What are they?

Stranger:: There is one kind which takes them in nets, another which takes them by a blow.

Theaetetus:: What do you mean, and how do you distinguish them?

Stranger:: As to the first kind—all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

Theaetetus:: Very true.

Stranger:: For which reason twig baskets, casting nets, nooses, creels, and the like may all be termed ‘enclosures'?

Theaetetus:: True.

Stranger:: And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

Theaetetus:: Yes.

Stranger:: The other kind, which is practiced by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

Theaetetus:: Never mind the name—what you suggest will do very well.

Stranger:: There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

Theaetetus:: True.

Stranger:: And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

Theaetetus:: Yes, that is the term.

Stranger:: Of this barb fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

Theaetetus:: Yes, it is often called so.

Stranger:: Then now there is only one kind remaining.

Theaetetus:: What is that?

Stranger:: When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upward with reeds and rods—what is the right name of that mode of fishing, Theaetetus?

Theaetetus:: I suspect that we have now discovered the object of our search.

Stranger:: Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition of the thing itself. One half of all art was acquisitive—half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting was hunting animals; half of this was hunting water animals; of this again, the under half was fishing;

half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws the fish from below upward, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (ἀσπαλιευτική), ἀνασπάσθαι).

Theaetetus:: The result has been quite satisfactorily brought out.

Stranger:: And now, following this pattern, let us endeavor to find out what a Sophist is.

Theaetetus:: By all means.

Stranger:: The first question about the angler was, whether he was a skilled artist or unskilled?

Theaetetus:: True.

Stranger:: And shall we call our new friend unskilled, or a thorough master of his craft?

Theaetetus:: Certainly not unskilled, for his name, as, indeed, you imply, must surely express his nature.

Stranger:: Then he must be supposed to have some art.

Theaetetus:: What art?

Stranger:: By heaven, they are cousins! It never occurred to us.

Theaetetus:: Who are cousins?

Stranger:: The angler and the Sophist.

Theaetetus:: In what way are they related?

Stranger:: They both appear to me to be hunters.

Theaetetus:: How the Sophist? Of the other we have spoken.

Stranger:: You remember our division of hunting, into hunting after swimming animals and land animals?

Theaetetus:: Yes.

Stranger:: And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

Theaetetus:: Certainly.

Stranger:: Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

Theaetetus:: So it would appear.

Stranger:: Their paths diverge when they reach the art of animal hunting—the one going to the seashore, and to the rivers, and to the lakes, and angling for the animals which are in them.

Theaetetus:: Very true.

Stranger:: While the other goes to land and water of another sort—rivers of wealth and broad meadowlands of generous youth, and he also is intending to take the animals which are in them.

Theaetetus:: What do you mean?

Stranger:: Of hunting on land there are two principal divisions.

Theaetetus:: What are they?

Stranger:: One is the hunting of tame, and the other of wild animals.

Theaetetus:: But are tame animals ever hunted?

Stranger:: Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them, or you may say that man is a tame animal but is not hunted—you shall decide which of these alternatives you prefer.

Theaetetus:: I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

Stranger:: Then let us divide the hunting of tame animals into two parts.

Theaetetus:: How shall we make the division?

Stranger:: Let us define piracy, man-stealing, tyranny, the whole military art, by one name, as hunting with violence.

Theaetetus:: Very good.

Stranger:: But the art of the lawyer, of the popular orator and the art of conversation may be called in one word the art of persuasion.

Theaetetus:: True.

Stranger:: And of persuasion, there may be said to be two kinds?

Theaetetus:: What are they?

Stranger:: One is private, and the other public.

Theaetetus:: Yes, each of them forms a class.

Stranger:: And of private hunting, one sort receives hire, and the other brings gifts.

Theaetetus:: I do not understand you.

Stranger:: You seem never to have observed the manner in which lovers hunt.

Theaetetus:: To what do you refer?

Stranger:: I mean that they lavish gifts on those whom they hunt in addition to other inducements.

Theaetetus:: Most true.

Stranger:: Let us admit this, then, to be the amatory art.

Theaetetus:: Certainly.

Stranger:: But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant.

Theaetetus:: Certainly.

Stranger:: And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

Theaetetus:: To be sure.

Stranger:: And what is the name? Will you tell me?

Theaetetus:: It is obvious enough, for I believe that we have discovered the Sophist—which is, as I conceive, the proper name for the class described.

Stranger:: Then now, Theaetetus, his art may be traced as a branch of the appropriative, acquisitive family—which hunts animals, living, land, tame animals—which hunts man, privately, for hire, taking money in exchange, having the semblance of education—and this is termed Sophistry, and is a hunt after young men of wealth and rank—such is the conclusion.

Theaetetus:: Just So.

Stranger:: Let us take another branch of his genealogy, for he is a professor of a great and many-sided art. And if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

Theaetetus:: In what respect?

Stranger:: There were two sorts of acquisitive art—the one concerned with hunting, the other with exchange.

Theaetetus:: There were.

Stranger:: And of the art of exchange there are two divisions, the one of giving, and the other of selling.

Theaetetus:: Let us assume that.

Stranger:: Next, we will suppose the art of selling to be divided into two parts.

Theaetetus:: How?

Stranger:: There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

Theaetetus:: Certainly.

Stranger:: And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

Theaetetus:: Yes.

Stranger:: And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

Theaetetus:: To be sure.

Stranger:: And you are aware that this exchange of the merchant is of two kinds; it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

Theaetetus:: What do you mean?

Stranger:: You want to know what is the meaning of food for the soul; the other kind you surely understand.

Theaetetus:: Yes.

Stranger:: Take music in general, and painting and marionette playing, and many other things, which are purchased in one city, and carried away and sold in another—wares of the soul which are hawked about either for the sake of instruction or amusement. May not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

Theaetetus:: To be sure he may.

Stranger:: And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

Theaetetus:: Certainly I should.

Stranger:: Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

Theaetetus:: Certainly.

Stranger:: The latter should have two names—one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

Theaetetus:: Of course.

Stranger:: The name of art seller corresponds well enough to the latter, but you must try and tell me the name of the other.

Theaetetus:: He must be the Sophist, whom we are seeking; no other name can possibly be right.

Stranger:: No other, and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

Theaetetus:: Quite true.

Stranger:: And there may be a third reappearance of him—for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

Theaetetus:: Certainly.

Stranger:: Then that part of acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

Theaetetus:: I must, if I am to keep pace with the argument.

Stranger:: Let us consider once more whether there may not be yet another aspect of Sophistry.

Theaetetus:: What is it?

Stranger:: In the acquisitive there was a subdivision of the combative or fighting art.

Theaetetus:: There was.

Stranger:: Perhaps we had better divide it.

Theaetetus:: What shall be the divisions?

Stranger:: There shall be one division of the competitive, and another of the pugnacious.

Theaetetus:: Very good.

Stranger:: That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

Theaetetus:: True.

Stranger:: And when the war is one of words, it may be termed controversy?

Theaetetus:: Yes.

Stranger:: And controversy may be of two kinds?

Theaetetus:: What are they?

Stranger:: When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

Theaetetus:: Yes.

Stranger:: And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

Theaetetus:: Yes, that is the name.

Stranger:: And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

Theaetetus:: No, for the different sorts of it are too minute and heterogeneous.

Stranger:: But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation [eristic]?

Theaetetus:: Certainly.

Stranger:: And of argumentation, one sort wastes money, and the other makes money.

Theaetetus:: Very true.

Stranger:: Suppose we try and give to each of these two classes a name.

Theaetetus:: Let us do so.

Stranger:: I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity. Such is my opinion.

Theaetetus:: That is the common name for it.

Stranger:: But now who the other is, who makes money out of private disputation, it is your turn to say.

Theaetetus:: There is only one true answer. He is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

Stranger:: Yes, and with a fresh pedigree, for he is the moneymaking species of the eristic, disputatious, controversial, pugnacious, combative, acquisitive family, the argument has already proved.

Theaetetus:: Certainly.

Stranger:: How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

Theaetetus:: Then you must catch him with two.

Stranger:: Yes, we must, if we can. And therefore let us try another track in our pursuit of him. You are aware that there are certain menial occupations which have names among servants?

Theaetetus:: Yes, there are many such. Which of them do you mean?

Stranger:: I mean such as sifting, straining, winnowing, threshing.

Theaetetus:: Certainly.

Stranger:: And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof, and thousands of similar expressions are used in the arts.

Theaetetus:: Of what are they to be patterns, and what are we going to do with them all?

Stranger:: I think that in all of these there is implied a notion of division.

Theaetetus:: Yes.

Stranger:: Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

Theaetetus:: And what is the name of the art?

Stranger:: The art of discerning or discriminating.

Theaetetus:: Very good.

Stranger:: Think whether you cannot divide this.

Theaetetus:: I should have to think a long while.

Stranger:: In all the previously named processes either like has been separated from like or the better from the worse.

Theaetetus:: I see now what you mean.

Stranger:: There is no name for the first kind of separation; of the second, which throws away the worse and preserves the better, I do know a name.

Theaetetus:: What Is it?

Stranger:: Every discernment or discrimination of that kind, as I have observed, is called a purification.

Theaetetus:: Yes, that is the usual expression.

Stranger:: And anyone may see that purification is of two kinds.

Theaetetus:: Perhaps so, if he were allowed time to think, but I do not see at this moment.

Stranger:: There are many purifications of bodies which may with propriety be comprehended under a single name.

Theaetetus:: What are they, and what is their name?

Stranger:: There is the purification of living bodies in their inward and in their outward parts, of which the former is duly effected by medicine and gymnastics, the latter by the not very dignified art of the bathman, and there is the purification of inanimate substances—to this the arts of fulling and furbishing in general attend in a number of minute particulars, having a variety of names which are thought ridiculous.

Theaetetus:: Very true.

Stranger:: There can be no doubt that they are thought ridiculous, Theaetetus, but then the dialectic art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has not more interest in the one than in the other. Her endeavor is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence, and having this in view, she honors them all alike. And when she makes comparisons, she counts one of them not a whit more ridiculous than another, nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin destroyer, but only as the greater pretender of the two. And as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

Theaetetus:: Yes, I understand, and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

Stranger:: Excellent, and now listen to what I am going to say, and try to divide further the first of the two.

Theaetetus:: Whatever line of division you suggest, I will endeavor to assist you.

Stranger:: Do we admit that virtue is distinct from vice in the soul?

Theaetetus:: Certainly.

Stranger:: And purification was to leave the good and to cast out whatever is bad?

Theaetetus:: True.

Stranger:: Then any taking away of evil from the soul may be properly called purification?

Theaetetus:: Yes.

Stranger:: And in the soul there are two kinds of evil.

Theaetetus:: What are they?

Stranger:: The one may be compared to disease in the body, the other to deformity.

Theaetetus:: I do not understand.

Stranger:: Perhaps you have never reflected that disease and discord are the same.

Theaetetus:: To this, again, I know not what I should reply.

Stranger:: Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

Theaetetus:: Just that.

Stranger:: And is deformity anything but the want of measure, which is always unsightly?

Theaetetus:: Exactly.

Stranger:: And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

Theaetetus:: Certainly.

Stranger:: And yet they must all be akin?

Theaetetus:: Of course.

Stranger:: Then we shall be right in calling vice a discord and disease of the soul?

Theaetetus:: Most true.

Stranger:: And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

Theaetetus:: Clearly of the want of symmetry.

Stranger:: But surely we know that no soul is voluntarily ignorant of anything?

Theaetetus:: Certainly not.

Stranger:: And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

Theaetetus:: True.

Stranger:: Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

Theaetetus:: Very true.

Stranger:: Then there are these two kinds of evil in the soul—the one which is generally called vice, and is obviously a disease of the soul...

Theaetetus:: Yes.

Stranger:: And there is the other, which they call ignorance, and which, because existing only in the soul, they will not allow to be vice.

Theaetetus:: I certainly admit what I at first disputed—that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be all alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

Stranger:: And in the case of the body are there not two arts which have to do with the two bodily states?

Theaetetus:: What are they?

Stranger:: There is gymnastics, which has to do with deformity, and medicine, which has to do with disease.

Theaetetus:: True.

Stranger:: And where there are insolence and injustice and cowardice, is not the chastisement the art that is most required?

Theaetetus:: That certainly appears to be the opinion of mankind.

Stranger:: Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

Theaetetus:: True.

Stranger:: And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

Theaetetus:: I Will.

Stranger:: I believe that I can see how we shall soonest arrive at the answer to this question.

Theaetetus:: How?

Stranger:: If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also twofold, answering to the two divisions of ignorance.

Theaetetus:: Well, and do you see what you are looking for?

Stranger:: I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

Theaetetus:: What is it?

Stranger:: When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

Theaetetus:: True.

Stranger:: And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

Theaetetus:: True.

Stranger:: What name, then, shall be given to the sort of instruction which gets rid of this?

Theaetetus:: The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part of the world.

Stranger:: Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division deserving a name.

Theaetetus:: We have.

Stranger:: I think that there is a point at which such a division is possible.

Theaetetus:: Where?

Stranger:: Of education, one method appears to be rougher, and another smoother.

Theaetetus:: How are we to distinguish the two?

Stranger:: There is the time-honored mode which our fathers commonly practiced toward their sons, and which is still adopted by many—either of roughly reproving their errors, or of gently advising them—which varieties may be correctly included under the general term of admonition.

Theaetetus:: True.

Stranger:: But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of education gives much trouble and does little good—

Theaetetus:: There they are quite right.

Stranger:: Accordingly, they set to work to eradicate the spirit of conceit in another way.

Theaetetus:: In what way?

Stranger:: They cross-examine a man's words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectic process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle toward others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

Theaetetus:: That is certainly the best and wisest state of mind.

Stranger:: For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

Theaetetus:: Very true.

Stranger:: Well, what name shall we give to the practitioners of this art? For my part I shrink from calling them Sophists.

Theaetetus:: Why so?

Stranger:: For fear of ascribing to them too high a function.

Theaetetus:: And yet your description has some resemblance to that type [the Sophist].

Stranger:: So has the dog to the wolf—the fiercest of animals to the tamest. But a cautious man should above all be on his guard against resemblances; they are a very slippery sort of thing. However, be it so [i.e., let them pass for Sophists], for should they ever set up an adequate defense of their confines, the boundary in dispute will be of no small importance.

Theaetetus:: That is likely enough.

Stranger:: Let us take it, then, that under the art of separation there is a method of purification, that we have distinguished that kind of purification which is concerned with the soul, and under that, instruction, and under that again, education. Within the art of education, the examination which confutes the vain conceit of wisdom we will allow to pass, in the argument which has now come in by a side wind, by no other name than the sophistry that is of noble lineage (ἡ γένει γενναία σοφιστική).

Theaetetus:: Let it pass by that name. But by this time the Sophist has appeared in so many guises that for my part I am puzzled to see what description one is to maintain as truly expressing his real nature.

Stranger:: You may well be puzzled. But we may suppose that by now the Sophist too is very much puzzled to see how he is once more to slip through the meshes of our argument, for it is a true saying that you cannot easily evade all the wrestler's grips. So now is the moment of all others to set upon him.

Theaetetus:: Well and good.

Stranger:: First, then, let us stand and take breath, and while a we are resting let us reckon up between ourselves in how many guises the Sophist has appeared. First, I think, he was found as the hired hunter of rich young men.

Theaetetus:: Yes.

Stranger:: And secondly as a sort of merchant of learning as nourishment for the soul.

Theaetetus:: Certainly.

Stranger:: Thirdly, he showed himself as a retail dealer in the same wares, did he not?

Theaetetus:: Yes, and fourthly as selling the products of his own manufacture.

Stranger:: Your memory serves you well. His fifth appearance I will myself try to recall. He was an athlete in debate, appropriating that subdivision of contention which consists in the art of eristic.

Theaetetus:: He was.

Stranger:: His sixth appearance was open to doubt; however, we conceded his claim to be described as a purifier of the soul from conceits that block the way to understanding.

Theaetetus:: Quite so.

Stranger:: Now does it strike you that when one who is known by the name of a single art appears to be master of many, there is something wrong with this appearance? If one has that impression of any art, plainly it is because one cannot see clearly that feature of it in which all these forms of skill converge, and so one calls their possessor by many names instead of one.

Theaetetus:: I dare say that is the gist of the situation.

Stranger:: If so, we must not be so lazy as to let that happen to us in our inquiry. Let us begin by going back to one among the characteristics we attributed to the Sophist. There was one that struck me particularly as revealing his character.

Theaetetus:: What was that?

Stranger:: We said, I believe, that he was a controversialist.

Theaetetus:: Yes.

Stranger:: And further that he figures as an instructor of others in controversy.

Theaetetus:: Certainly.

Stranger:: Let us consider, then, in what field these people profess to turn out controversialists. Let us go to the root of the matter and set about it in this way. Tell me, does their pupils' competence extend to divine things that are hidden from common eyes?

Theaetetus:: So it is said of them, at any rate.

Stranger:: And also to all that is visible in sky and earth and everything of that sort.

Theaetetus:: Surely.

Stranger:: And in private circles, whenever any general statement is made about becoming or reality, we are aware how cleverly they can controvert it and make others able to do the same.

Theaetetus:: Certainly.

Stranger:: And then again where laws are in question or any political matter, do they not promise to produce debaters?

Theaetetus:: If they did not hold out that promise, hardly anyone would take part in their discussions.

Stranger:: And about the crafts in general and each particular craft, the arguments to be used in controversy with any actual craftsman have been published broadcast for all who choose to learn.

Theaetetus:: I take it you mean what Protagoras wrote on wrestling and the other arts.

Stranger:: Yes, and on many other things. In fact, the pretensions of this art of controversy amount, it seems, to a capacity for disputation on any subject whatsoever.

Theaetetus:: It certainly seems that nothing worth speaking of is beyond its scope.

Stranger:: Do you, then, my young friend, really think that possible? You young people may perhaps see more clearly; my eyes are too dim.

Theaetetus:: Is what possible? What am I meant to see? I don't clearly understand what you are asking me.

Stranger:: Whether it is possible for any human being to know everything.

Theaetetus:: Mankind would indeed be happy, if it were so.

Stranger:: Then if a man who has no knowledge controverts one who does know, how can there be any sound sense in what he says?

Theaetetus:: There cannot be.

Stranger:: Then what can be the secret of this magical power of sophistry?

Theaetetus:: In what respect?

Stranger:: I mean, how they can ever create a belief in the minds of young men that they are the wisest of men on all subjects? For clearly if they were not in the right in their controversies or did not appear to be so in the young men's eyes, and if that appearance did not enhance the belief that they are wise because they can dispute, then, to quote your own remark, it is hard to see why anyone should want to pay their fees and be taught this art of disputation.

Theaetetus:: Hard indeed.

Stranger:: But in actual fact there is a demand.

Theaetetus:: Quite a brisk one.

Stranger:: No doubt because the Sophists are believed to possess a knowledge of their own in the subjects they dispute about.

Theaetetus:: No doubt.

Stranger:: And, we say, there is no subject they do not dispute about.

Theaetetus:: Yes.

Stranger:: So they appear to their pupils to be wise on all subjects.

Theaetetus:: Certainly.

Stranger:: Although they are not really wise, for that, we saw, is impossible.

Theaetetus:: It must be impossible.

Stranger:: The upshot is, then, that the Sophist possesses a sort of reputed and apparent knowledge on all subjects, but not the reality.

Theaetetus:: I quite agree, and perhaps this is the truest thing that has yet been said about them.

Stranger:: Let us, then, take an analogy that will throw more light on their position.

Theaetetus:: What is that?

Stranger:: It is this. Try to give me your closest attention in answering.

Theaetetus:: What is your question?

Stranger:: Suppose a man professed to know, not how to speak or dispute about everything, but how to produce all things in actual fact by a single form of skill.

Theaetetus:: What do you mean by ‘all things'?

Stranger:: My meaning is beyond your comprehension at the very outset. It seems you do not understand what is meant by ‘all things.'

Theaetetus:: No.

Stranger:: Well, ‘all things' is meant to include you and me and, besides ourselves, all other animals and plants.

Theaetetus:: How do you mean?

Stranger:: Suppose a man should undertake to produce you and me and all creatures.

Theaetetus:: What sort of production do you mean? You cannot mean some sort of farmer, for you spoke of him as producing animals as well.

Stranger:: Yes, and besides that, sea and sky and earth and gods and everything else there is. What is more, after producing any one of them with a turn of the hand he sells them for quite a moderate sum.

Theaetetus:: You mean in some kind of play?

Stranger:: Well, a man who says he knows everything and could teach it to another for a small fee in a short time can hardly be taken in earnest.

Theaetetus:: Assuredly not.

Stranger:: And of all forms of play, could you think of any more skillful and amusing than imitation?

Theaetetus:: No. When you take that one form with all that it embraces, it covers a very large variety.

Stranger:: Well, we know this about the man who professes to be able, by a single form of skill, to produce all things, that when he creates with his pencil representations bearing the same name as real things, he will be able to deceive the innocent minds of children, if he shows them his drawings at a distance, into thinking that he is capable of creating, in full reality, anything he chooses to make.

Theaetetus:: Of course.

Stranger:: Then must we not expect to find a corresponding form of skill in the region of discourse, making it possible to impose upon the young who are still far removed from the reality of things, by means of words that cheat the ear, exhibiting images of all things in a shadow play of discourse, so as to make them believe that they are hearing the truth and that the speaker is in all matters the wisest of men?

Theaetetus:: There may well be such an art as you describe.

Stranger:: And is it not inevitable that, after a long enough time, as these young hearers advance in age and, coming into closer touch with realities, are forced by experience to apprehend things clearly as they are, most of them should abandon those former beliefs, so that what seemed important will now appear trifling and what seemed easy, difficult, and all the illusions created in discourse will be completely overturned by the realities which encounter them in the actual conduct of life?

Theaetetus:: Yes, so far as I can judge at my age, but I suppose I am one of those who are still at a distance.

Stranger:: That is why all of us here must try, as we are in fact trying, to bring you as close as possible to the realities and spare you the experience.

But about the Sophist, tell me, is it now clear that he is a sort of wizard, an imitator of real things—or are we still uncertain whether he may not possess genuine knowledge of all the things he seems capable of disputing about?

Theaetetus:: He cannot, sir. It is clear enough from what has been said that he is one of those whose province is play.

Stranger:: Then we may class him as a wizard and an imitator of some sort.

Theaetetus:: Certainly.

Stranger:: Come then, it is now for us to see that we do not again relax the pursuit of our quarry. We may say that we have him enveloped in such a net as argument provides for hunting of this sort. He cannot shuffle out of this.

Theaetetus:: Out of what?

Stranger:: Out of being somewhere within the class of illusionists.

Theaetetus:: So far I quite agree with you.

Stranger:: Agreed then that we should at once quarter the ground by dividing the art of image making, and if, as soon as we descend into that enclosure, we meet with the Sophist at bay, we should arrest him on the royal warrant of reason, report the capture, and hand him over to the sovereign. But if he should find some lurking place among the subdivisions of this art of imitation, we must follow hard upon him, constantly dividing the part that gives him shelter, until he is caught. In any event there is no fear that he or any other kind shall ever boast of having eluded a process of investigation so minute and so comprehensive.

Theaetetus:: Good, that is the way to go to work.

Stranger:: Following, then, the same method of division as before, I seem once more to make out two forms of imitation, but as yet I do not feel able to discover in which of the two the type we are seeking is to be found.

Theaetetus:: Make your division first, at any rate, and tell us what two forms you mean.

Stranger:: One art that I see contained in it is the making of likenesses (εἰκαστική). The perfect example of this consists in creating a copy that conforms to the proportions of the original in all three dimensions and giving moreover the proper color to every part.

Theaetetus:: Why, is not that what all imitators try to do?

Stranger:: Not those sculptors or painters whose works are of colossal size. If they were to reproduce the true proportions of a well-made figure, as you know, the upper parts would look too small, and the lower too large, because we see the one at a distance, the other close at hand.

Theaetetus:: That is true.

Stranger:: So artists, leaving the truth to take care of itself, do in fact put into the images they make, not the real proportions, but those that will appear beautiful.

Theaetetus:: Quite so.

Stranger:: The first kind of image, then, being like the original, may fairly be called a likeness (εἰκόν).

Theaetetus:: Yes.

Stranger:: And the corresponding subdivision of the art of imitation may be called by the name we used just now—likeness making.

Theaetetus:: It May.

Stranger:: Now, what are we to call the kind which only appears to be a likeness of a well-made figure because it is not seen from a satisfactory point of view, but to a spectator with eyes that could fully take in so large an object would not be even like the original it professes to resemble? Since it seems to be a likeness, but is not really so, may we not call it a semblance (φάντασμα)?

Theaetetus:: By all means.

Stranger:: And this is a very extensive class, in painting and in imitation of all sorts.

Theaetetus:: True.

Stranger:: So the best name for the art which creates, not a likeness, but a semblance will be semblance making (φάντασtική).

Theaetetus:: Quite so.

Stranger:: These, then, are the two forms of image making I meant—the making of likenesses and the making of semblances.

Theaetetus:: Good.

Stranger:: Yes, but even now I cannot see clearly how to settle the doubt I then expressed—under which of the two arts [likeness making and semblance making] we must place the Sophist. It is really surprising how hard it is to get a clear view of the man. At this very moment he has, with admirable cleverness, taken refuge in a class which baffles investigation.

Theaetetus:: So it seems.

Stranger:: You assent, but do you recognize the class I mean, or has the current of the argument carried you along to agree so readily from force of habit?

Theaetetus:: How? What are you referring to?

Stranger:: The truth is, my friend, that we are faced with an extremely difficult question. This ‘appearing' or ‘seeming' without really ‘being,' and the saying of something which yet is not true—all these expressions have always been and still are deeply involved in perplexity. It is extremely hard, Theaetetus, to find correct terms in which one may say or think that falsehoods have a real existence, without being caught in a contradiction by the mere utterance of such words.

Theaetetus:: Why?

Stranger:: The audacity of the statement lies in its implication that ‘what is not' has being, for in no other way could a falsehood come to have being. But, my young friend, when we were of your age the great Parmenides from beginning to end testified against this, constantly telling us what he also says in his poem, ‘Never shall this be proved—that things that are not are, but do thou, in thy inquiry, hold back thy thought from this way.'

So we have the great man's testimony, and the best way to obtain a confession of the truth may be to put the statement itself to a mild degree of torture. So, if it makes no difference to you, let us begin by studying it on its own merits.

Theaetetus:: I am at your disposal. As for the argument, you must consider the way that will best lead to a conclusion, and take me with you along it.

Stranger:: It shall be done. Now tell me, we do not hesitate to utter the phrase ‘that which has no sort of being'?

Theaetetus:: Surely not.

Stranger:: Then setting aside disputation for its own sake and playing with words, suppose one of this company were seriously required to concentrate his mind and tell us to what this name can be applied—'that which is not.' Of what thing or of what sort of thing should we expect him to use it himself, and what would he indicate by it to the inquirer?

Theaetetus:: That is a hard question. It is scarcely for a person like me to find an answer at all.

Stranger:: Well, this much is clear at any rate, that the term ‘what is not' must not be applied to anything that exists.

Theaetetus:: Certainly not.

Stranger:: And since it cannot be applied to what exists, neither can it properly be applied to ‘something.'

Theaetetus:: How so?

Stranger:: Surely we can see that this expression ‘something' is always used of a thing that exists. We cannot use it just by itself in naked isolation from everything that exists, can we?

Theaetetus:: No.

Stranger:: Is your assent due to the reflection that to speak of ‘something' is to speak of ‘some *one* thing'?

Theaetetus:: Yes.

Stranger:: Because you will admit that ‘something' stands for one thing, as ‘some things' stands for two or more.

Theaetetus:: Certainly.

Stranger:: So it seems to follow necessarily that to speak of what is not ‘something' is to speak of no thing at all.

Theaetetus:: Necessarily.

Stranger:: Must we not even refuse to allow that in such a case a person is *saying* something, though he may be speaking of nothing? Must we not assert that he is not even saying anything when he sets about uttering the sounds ‘a thing that is not'?

Theaetetus:: That would certainly end our bewilderment.

Stranger:: ‘No time for boasting yet.' There is more to come, in fact the chief of all the difficulties and the first, for it goes to the very root of the matter.

Theaetetus:: How do you mean? Do not hesitate to state it.

Stranger:: When a thing exists, I suppose something else that exists may be attributed to it.

Theaetetus:: Certainly.

Stranger:: But can we say it is possible for something that exists to be attributed to what has no existence?

Theaetetus:: How could it be?

Stranger:: Well, among things that exist we include number in general.

Theaetetus:: Yes, number must exist, if anything does.

Stranger:: We must not, then, so much as attempt to attach either plurality or unity in number to the nonexistent.

Theaetetus:: That would certainly seem to be wrong, according to our argument.

Stranger:: How then can anyone utter the words ‘things which are not,' or ‘that which is not,' or even conceive such things in his mind at all, apart from number?

Theaetetus:: How do you mean?

Stranger:: When we speak of *‘things* that are not,' are we not undertaking to attribute plurality to them?

Theaetetus:: Yes.

Stranger:: And unity, when we speak of *‘that* which is not'?

Theaetetus:: Clearly.

Stranger:: And yet we admit that it is not justifiable or correct to set about attaching something that exists to the nonexistent.

Theaetetus:: Quite true.

Stranger:: You see the inference then. One cannot legitimately utter the words, or speak or think of that which just simply is not : it is unthinkable, not to be spoken of or uttered or expressed.

Theaetetus:: Quite true.

Stranger:: Perhaps then I was mistaken in saying just now that I was going to state the greatest difficulty it presents, whereas there is a worse one still that we can formulate.

Theaetetus:: What is that?

Stranger:: I am surprised you do not see from the very phrases I have just used that the nonexistent reduces even one who is refuting its claims to such straits that, as soon as he sets about doing so, he is forced to contradict himself.

Theaetetus:: How? Explain more clearly.

Stranger:: You must not look to me for illumination. I who laid it down that the nonexistent could have neither unity nor plurality, have not only just now but at this very moment spoken of it as one thing, for I am saying *‘the* nonexistent.' You see what I mean?

Theaetetus:: Yes.

Stranger:: And again a little while ago I was speaking of its *being* a thing not to be uttered or spoken of or expressed. Do you follow?

Theaetetus:: Yes, of course.

Stranger:: Well, then, in trying to apply that term ‘being' to it, was I not contradicting what I said before?

Theaetetus:: Evidently.

Stranger:: And again in applying the term ‘the,' was I not addressing it as singular?

Theaetetus:: Yes.

Stranger:: And again in speaking of it as ‘a thing not to be expressed or spoken of or uttered,' I was using language as if referring to a single thing.

Theaetetus:: Certainly.

Stranger:: Whereas we are admitting that, if we are to speak strictly, we ought not to specify it as either one thing or many or even to call it ‘it' at all, for even that appellation means ascribing to it the character of singleness.

Theaetetus:: Quite so.

Stranger:: In that case there is nothing to be said for me. I shall be found to have had the worst of it, now and all along, in my criticism of the nonexistent. Accordingly, as I said, we must not look to anything I have to say for the correct way of describing the nonexistent; we must turn to you for that. Come along now.

Theaetetus:: What do you mean?

Stranger:: Come, you are young; show your spirit and make the best effort you can. Try, without attributing being or unity or plurality to the nonexistent, to find some form of words describing it correctly.

Theaetetus:: I should need an extraordinary zeal for such an enterprise in face of what has happened to you.

Stranger:: Well, if you agree, we will leave ourselves out of account, and until we meet with someone who can perform this feat, let us say that the Sophist with extreme cunning has found an impenetrable lurking place.

Theaetetus:: It certainly seems so.

Stranger:: Accordingly, if we are going to say he possesses an art of creating ‘semblances,' he will readily take advantage of our handling our arguments in this way to grapple with us and turn them against ourselves. When we call him a maker of images, he will ask what on earth we mean in speaking of an ‘image' at all. So we must consider, Theaetetus, how this truculent person's question is to be answered.

Theaetetus:: Clearly we shall say we mean images in water or in mirrors, and again images made by the draftsman or the sculptor, and any other things of that sort.

Stranger:: It is plain, Theaetetus, that you have never seen a Sophist.

Theaetetus:: Why?

Stranger:: He will make as though his eyes were shut or he had no eyes at all.

Theaetetus:: How so?

Stranger:: When you offer him your answer in such terms, if you speak of something to be found in mirrors or in sculpture, he will laugh at your words, as implying that he can see. He will profess to know nothing about mirrors or water or even eyesight, and will confine his question to what can be gathered from discourse.

Theaetetus:: Namely?

Stranger:: The common character in all these things you mentioned and thought fit to call by a single name when you used the expression ‘image' as one term covering them all. State it, then, and hold your ground against the man without yielding an inch.

Theaetetus:: Well, sir, what could we say an image was, if not another thing of the same sort, copied from the real thing?

Stranger:: ‘Of the same sort'? Do you mean another real thing, or what does ‘of the same sort' signify?

Theaetetus:: Certainly not real, but like it.

Stranger:: Meaning by ‘real' a thing that really exists.

Theaetetus:: Yes.

Stranger:: And by ‘not real' the opposite of real?

Theaetetus:: Of course.

Stranger:: Then by what is ‘like' you mean what has not real existence, if you are going to call it ‘not real.'

Theaetetus:: But it has some sort of existence.

Stranger:: Only not real existence, according to you.

Theaetetus:: No, except that it is really a likeness.

Stranger:: So, not having real existence, it really is what we call a likeness?

Theaetetus:: Real and unreal do seem to be combined in that perplexing way, and very queer it is.

Stranger:: Queer indeed. You see that now again by dovetailing them together in this way our Hydra-headed Sophist has forced us against our will to admit that ‘what is not' has some sort of being.

Theaetetus:: Yes, I do.

Stranger:: And what now? How can we define his art without contradicting ourselves?

Theaetetus:: How do you mean? What sort of contradiction do you fear?

Stranger:: When we say that he deceives with that semblance we spoke of and that his art is a practice of deception, shall we be saying that, as the effect of his art, our mind thinks what is false, or what shall we mean?

Theaetetus:: Just that. What else could we mean?

Stranger:: And false thinking, again, will be thinking things contrary to the things that are?

Theaetetus:: Yes.

Stranger:: You mean, then, by false thinking, thinking things that are not?

Theaetetus:: Necessarily.

Stranger:: Does that mean thinking that things that are not, are not, or that things that are not in any way, in some way are?

Theaetetus:: It must at least mean thinking that things that are not, are in some way, if anyone is ever to be in error even to the smallest extent.

Stranger:: And also surely thinking that things which certainly are, are not in any way at all?

Theaetetus:: Yes.

Stranger:: That also is error?

Theaetetus:: Yes, that also.

Stranger:: And a false statement, I suppose, is to be regarded in the same light, as stating that things that are, are not, and that things that are not, are.

Theaetetus:: Yes. How else could it be false?

Stranger:: Hardly in any other way. But the Sophist will deny that. How could a sensible man agree, when the admissions we made earlier are set beside this one? We understand, Theaetetus, what he is referring to?

Theaetetus:: Of course we understand. He will say that we are contradicting what was said just now, when we have the face to say that falsehoods exist in thoughts and in statements, for we are constantly being obliged to attribute what has being to what is not, after agreeing just now that this was altogether impossible.

Stranger:: Your recollection is correct. But you must now consider what we are to do about the Sophist, for if we pursue our search for him by ranking him under the art of the illusionists and creators of error, you see what an easy opening we offer to many perplexities and counterattacks.

Theaetetus:: I do.

Stranger:: They are almost without number and we have stated only a small fraction of them.

Theaetetus:: If that is so, it looks as if it were impossible to catch the Sophist.

Stranger:: What then? Are we to lose heart and give up now?

Theaetetus:: I don't think we ought to, if we have the least chance of being able to lay hands on him somehow.

Stranger:: Then I may count on your indulgence, and, as you now say, you will be content if we can by some twist free ourselves, even to the least extent, from the grip of so powerful an argument?

Theaetetus:: By all means.

Stranger:: Then I have another still more pressing request.

Theaetetus:: What is that?

Stranger:: That you will not think I am turning into a sort of parricide.

Theaetetus:: In what way?

Stranger:: We shall find it necessary in self-defense to put to the question that pronouncement of father Parmenides, and establish by main force that what is not, in some respect has being, and conversely that what is, in a way is not.

Theaetetus:: It is plain that the course of the argument requires us to maintain that at all costs.

Stranger:: Plain enough for the blind to see, as they say. Unless these propositions are either refuted or accepted, anyone who talks of false statements or false judgment as being images or likenesses or copies or semblances, or of any of the arts concerned with such things, can hardly escape becoming a laughingstock by being forced to contradict himself.

Theaetetus:: Quite true.

Stranger:: That is why we must now dare to lay unfilial hands on that pronouncement, or else, if some scruple holds us back, drop the matter entirely.

Theaetetus:: As for that, we must let no scruple hinder us.

Stranger:: In that case, for the third time, I have a small favor to ask.

Theaetetus:: You have only to mention it.

Stranger:: I believe I confessed just now that on this point the task of refutation has always proved too much for my powers, and still does so.

Theaetetus:: You did say that.

Stranger:: Well, that confession, I am afraid, may make you think me scatterbrained when at every turn I shift my position to and fro. It is for your satisfaction that we shall attempt to refute the pronouncement, if we can refute it.

Theaetetus:: Then you may take it that I shall never think you are overstepping the limits by entering on your refutation and proof. So far as that goes, you may proceed with an easy mind.

Stranger:: Come then, where is one to make a start on so hazardous a theme? I think I see the path we must inevitably follow.

Theaetetus:: And that is?

Stranger:: To take first things that are now supposed to be quite clear and see whether we are not in some confusion about them and too easily reaching conclusions on the assumption that we understand them well enough.

Theaetetus:: Tell me more plainly what you mean.

Stranger:: It strikes me that Parmenides and everyone else who has set out to determine how many real things there are and what they are like, have discoursed to us in rather an offhand fashion.

Theaetetus:: How so?

Stranger:: They each and all seem to treat us as children to whom they are telling a story. According to one there are three real things, some of which now carry on a sort of warfare with one another, and then make friends and set about marrying and begetting and bringing up their children. Another tells us that there are two—moist and dry, or hot and cold—whom he marries off, and makes them set up house together. In our part of the world the Eleatic set, who hark back to Xenophanes or even earlier, unfold their tale on the assumption that what we call ‘all things' are only one thing. Later, certain muses in Ionia and Sicily perceived that safety lay rather in combining both accounts and saying that the real is both many and one and is held together by enmity and friendship. ‘In parting asunder it is always being drawn together' say the stricter of these muses. The milder relax the rule that this should always be so and tell us of alternate states, in which the universe is now one and at peace through the power of love, and now many and at war with itself owing to some sort of strife.

In all this, whether any one of them has told the truth or not is a hard question, and it is in bad taste to find fault so grossly with men of long-established fame. But one observation may be made without offense.

Theaetetus:: And that is?

Stranger:: That they have shown too little consideration for ordinary people like ourselves in talking over our heads. Each school pursues its own argument to the conclusion without caring whether we follow what they say or get left behind.

Theaetetus:: How do you mean?

Stranger:: When one or another of them in his discourse uses these expressions ‘there really are' or ‘have come to be' or ‘are coming to be' ‘many things' or ‘one thing' or ‘two,' or again another speaks of ‘hot being mixed with cold,' assuming ‘combinations' and ‘separations,' do you, Theaetetus, understand a single word he says? Speaking for myself, when I was younger I thought I understood quite clearly when someone spoke of this thing that is now puzzling us—'the unreal.' But now you see how completely perplexed we are about that.

Theaetetus:: I do.

Stranger:: Possibly, then, our minds are in the same state of confusion about reality. We profess to be quite at our ease about the real and to understand the word when it is spoken, though we may not understand the unreal, when perhaps we are equally in the dark about both.

Theaetetus:: Perhaps.

Stranger:: And we may take it that the same is true of the other expressions I have just mentioned.

Theaetetus:: Certainly.

Stranger:: The general run of these expressions we will consider later, if we so decide. We must begin now with the chief and most important of them all.

Theaetetus:: Which is that? Of course you mean we ought to begin by studying ‘reality' and finding out what those who use the word think it stands for.

Stranger:: You have hit my meaning precisely, Theaetetus; I do mean that we must take this line. Imagine them here before us, and let us put this question, ‘You who say that hot and cold or some such pair *really are* all things, what exactly does this expression convey that you apply to both when you say that they both are “real” or each of them is “real”? How are we to understand this “reality” you speak of? Are we to suppose it is a third thing alongside the other two and that the all is no longer, as you say, two things, but three? For surely you do not give the name “reality” to one of the two and then say that both alike are real, for then there will be only one thing, whichever of the two it may be, and not two.'

Theaetetus:: True.

Stranger:: ‘Well then, do you intend to give the name “reality” to the pair of them?'

Theaetetus:: Perhaps.

Stranger:: But that again,' we shall object, ‘will clearly be speaking of your two things as one.'

Theaetetus:: You are quite right.

Stranger:: ‘We are completely puzzled, then, and you must clear up the question for us, what you do intend to signify when you use the word “real.” Obviously you must be quite familiar with what you mean, whereas we, who formerly imagined we knew, are now at a loss. First, then, enlighten us on just this point, so that we may not fancy we understand what you have to tell us, when in fact we are as far as possible from understanding.'

If we put our case in that way to these people and to any others who say that the all is more than one thing, will there be anything unwarrantable in our request?

Theaetetus:: Not at all.

Stranger:: Again, there are those who say that the all is one thing. Must we not do our best to find out what they mean by 'reality'?

Theaetetus:: Surely.

Stranger:: Let them answer this question, then, 'You say, we understand, that there is only one thing?' 'We do,' they will reply, won't they?

Theaetetus:: Yes.

Stranger:: 'And there is something to which you give the name *real?'*

*Theaetetus::* Yes.

Stranger:: 'Is it the same thing as that to which you give the name *one?* Are you applying two names to the same thing, or what do you mean?'

Theaetetus:: What will their next answer be?

Stranger:: Obviously, Theaetetus, it is not so very easy for one who has laid down their fundamental assertion to answer this question or any other.

Theaetetus:: How so?

Stranger:: In the first place, it is surely absurd for him to admit the existence of *two* names, when he has laid down that there is no more than one thing.

Theaetetus:: Of course.

Stranger:: And further, it is equally absurd to allow anyone to assert that a name can have any existence, when that would be inexplicable.

Theaetetus:: How is it inexplicable?

Stranger:: If, on the one hand, he assumes that the name is different from the thing, he is surely speaking of *two* things.

Theaetetus:: Yes.

Stranger:: Whereas, if he assumes that the name is the same as the thing, either he will have to say it is not the name of anything, or if he says it is the name of something, it will follow that the name is merely a name of a name and of nothing else whatsoever.

Theaetetus:: That is so.

Stranger::—

Theaetetus:: Necessarily.

Stranger:: And what of ‘the whole'? Will they say that this is other than their ‘one real thing' or the same?

Theaetetus:: Certainly that it is the same. In fact they do say so.

Stranger:: Then if it is a whole—as indeed Parmenides says, ‘Every way like the mass of a well-rounded sphere, evenly balanced from the midst in every direction, for there must not be something more nor something less here than there'—if the real is like that, it has a middle and extremities, and consequently it must have parts, must it not?

Theaetetus:: It must.

Stranger:: Well. if a thing is divided into parts, there is nothing against its having the property of unity as applied to the aggregate of all the parts and being in that way one, as being a sum or whole.

Theaetetus:: Of course.

Stranger:: On the other hand, the thing which has these properties cannot be just unity itself, can it?

Theaetetus:: Why not?

Stranger:: Surely unity in the true sense and rightly defined must be altogether without parts.

Theaetetus:: Yes, it must.

Stranger:: Whereas a thing such as we described, consisting of several parts, will not answer to that definition.

Theaetetus:: I see.

Stranger:: Then, (*a*) is the real one and a whole in the sense that it has the property of unity, or (*b*) are we to say that the real is not a whole at all?

Theaetetus:: That is a hard choice.

Stranger:: Quite true. For if (*a*) the real has the property of being in a sense one, it will evidently not be the same thing as unity, and so all things will be more than one.

Theaetetus:: Yes.

Stranger:: And again (*b*) if the real is not a whole by virtue of having this property of unity, while (*a*) at the same time wholeness itself is real, it follows that the real falls short of itself.

Theaetetus:: Certainly.

Stranger:: So, on this line of argument too, the real will be deprived of reality and will not be a thing that is.

Theaetetus:: Yes.

Stranger:: And further, once more all things will be more than one, since reality on the one side and wholeness on the other have now each a distinct nature.

Theaetetus:: Yes.

Stranger:: But if, (β) on the other hand, there is no such thing as wholeness at all, not only are the same things true of the real, but also that, besides not being a thing that really is, it could never even become such.

Theaetetus:: Why not?

Stranger:: Whenever a thing comes into being. at that moment it has come to be as a whole; accordingly, if you do not reckon unity or wholeness among real things, you have no right to speak of either being or coming-into-being as having any existence.

Theaetetus:: That seems perfectly true.

Stranger: And further, what is not a whole cannot have any definite number either, for if a thing has a definite number, it must amount to that number, whatever it may be, as a whole.

Theaetetus:: Assuredly.

Stranger:: And countless other difficulties, each involved in measureless perplexity, will arise, if you say that the real is either two things or only one.

Theaetetus:: That is plain enough from those we have had a glimpse of now. One leads to another, and each carries us further into a wilderness of doubt about every theory as it is mentioned.

Stranger:: So much, then, for those who give an exact account of what is real or unreal. We have not gone through them all, but let this suffice. Now we must turn to look at those who put the matter in a different way, so that, from a complete review of all, we may see that reality is just as hard to define as unreality.

Theaetetus:: We had better go on, then, to their position.

Stranger:: What we shall see is something like a battle of gods and giants going on between them over their quarrel about reality.

Theaetetus:: How so?

Stranger:: One party is trying to drag everything down to earth out of heaven and the unseen, literally grasping rocks and trees in their hands, for they lay hold upon every stock and stone and strenuously affirm that real existence belongs only to that which can be handled and offers resistance to the touch. They define reality as the same thing as body, and as soon as one of the opposite party asserts that anything without a body is real, they are utterly contemptuous and will not listen to another word.

Theaetetus:: The people you describe are certainly a formidable crew. I have met quite a number of them before now.

Stranger:: Yes, and accordingly their adversaries are very wary in defending their position somewhere in the heights of the unseen, maintaining with all their force that true reality consists in certain intelligible and bodiless forms. In the clash of argument they shatter and pulverize those bodies which their opponents wield, and what those others allege to be true reality they call, not real being, but a sort of moving process of becoming. On this issue an interminable battle is always going on between the two camps.

Theaetetus:: True.

Stranger:: Suppose, then, we challenge each party in turn to render an account of the reality they assert.

Theaetetus:: How shall we do so?

Stranger:: It will be easier to obtain from those who place reality in forms, because they are more civilized—harder, from those whose violence would drag everything down to the level of body perhaps, all but impossible. However, I think I see the right way to deal with them.

Theaetetus:: What is that?

Stranger:: Best of all, if it were anyhow possible, would be to bring about a real change of heart, but if that is beyond our power, to imagine them reformed and assume them willing to moderate their present lawlessness in answering our questions. The better a man's character is, the more force there will be in any agreement you make with him. However, we are not concerned with them so much as with our search for the truth.

Theaetetus:: You are quite right.

Stranger:: Well then, call upon these reformed characters to oblige you with an answer, and you shall act as their spokesman.

Theaetetus:: I will.

Stranger:: Let them tell us, then, whether they admit that there is such a thing as a mortal living creature.

Theaetetus:: Of course they do.

Stranger:: And they will agree that it is a body animated by a soul?

Theaetetus:: Certainly.

Stranger:: Taking a soul to be something real?

Theaetetus:: Yes.

Stranger:: Again, they allow that one soul may be just, another unjust, or one wise, another foolish?

Theaetetus:: Naturally.

Stranger:: And that any soul comes to be just or the reverse by possessing justice or the reverse, which is present in it?

Theaetetus:: Yes, they agree to that too.

Stranger:: But surely they will admit that whatever can come to be present in a thing or absent from it is certainly a real thing.

Theaetetus:: Yes.

Stranger:: Granted, then, that justice or wisdom or any other sort of goodness or badness is real, and moreover that a soul in which they come to exist is real, do they maintain that any one of these things is visible and tangible, or are they all invisible?

Theaetetus:: They can hardly say that any one of them is visible.

Stranger:: And do they really assert that something that is not visible has a body?

Theaetetus:: That question they do not answer as a whole without a distinction. The soul itself, they think, does possess a sort of body, but when it comes to wisdom or any of the other things you asked about, they have not the face either to accept the inference that they have no place among real things or to persist in maintaining that they are all bodies.

Stranger:: That shows, Theaetetus, that they are genuinely reformed characters. The giants among them, of the true earthborn breed, would not stick at any point; they would hold out to the end, that whatever they cannot squeeze between their hands is just nothing at all.

Theaetetus:: I dare say that describes their state of mind.

Stranger:: Let us question them further, then, for it is quite enough for our purpose if they consent to admit that even a small part of reality is bodiless. They must now tell us this. When they say that these bodiless things and the other things which have body are alike ‘real,' what common character that emerges as covering both sets of things have they in view? It is possible they may be at a loss for an answer. If that is their state of mind, you must consider whether they would accept at our suggestion a description of the real and agree to it.

Theaetetus:: What description? Perhaps we can tell, if you will state it.

Stranger:: I suggest that anything has real being that is so constituted as to possess any sort of power either to affect anything else or to be affected, in however small a degree, by the most insignificant agent, though it be only once. I am proposing as a mark to distinguish real things that they are nothing but power.

Theaetetus:: Well, they accept that, having for the moment no better suggestion of their own to offer.

Stranger:: That will do, for later on both they and we perhaps may change our minds. For the present, then, let us take it that this agreement stands between us and the one party.

Theaetetus:: It does.

Stranger:: Let us turn, then, to the opposite party, the friends of forms. Once more you shall act as their spokesman.

Theaetetus:: I will.

Stranger:: We understand that you make a distinction between ‘becoming' and ‘real being' and speak of them as separate. Is that so?

Theaetetus:: Yes.

Stranger:: And you say that we have intercourse with becoming by means of the body through sense, whereas we have intercourse with real being by means of the soul through reflection. And real being, you say, is always in the same unchanging state, whereas becoming is variable.

Theaetetus:: We do.

Stranger:: Admirable. But now what are we to take you as meaning by this expression ‘intercourse' which you apply to both? Don't you mean what we described a moment ago?

Theaetetus:: What was that?

Stranger:: The experiencing an effect or the production of one, arising, as the result of some power, from things that encounter one another. Perhaps, Theaetetus, you may not be able to catch their answer to this, but I, who am familiar with them, may be more successful.

Theaetetus:: What have they to say, then?

Stranger:: They do not agree to the proposition we put just now to the earthborn giants about reality.

Theaetetus:: You mean—?

Stranger:: We proposed as a sufficient mark of real things the presence in a thing of the power of being acted upon or of acting in relation to however insignificant a thing.

Theaetetus:: Yes.

Stranger:: Well, to that they reply that a power of acting and being acted upon belongs to becoming, but neither of these powers is compatible with real being.

Theaetetus:: And there is something in that answer?

Stranger:: Something to which we must reply by a request for more enlightenment. Do they acknowledge further that the soul knows and real being is known?

Theaetetus:: Certainly they agree to that.

Stranger:: Well, do you agree that knowing or being known is an action, or is it experiencing an effect, or both? Or is one of them experiencing an effect, the other an action? Or does neither of them come under either of these heads at all?

Theaetetus:: Evidently neither; otherwise our friends would be contradicting what they said earlier.

Stranger:: I see what you mean. They would have to say this. If knowing is to be acting on something, it follows that what is known must be acted upon by it, and so, on this showing, reality when it is being known by the act of knowledge must, in so far as it is known, be changed owing to being so acted upon—and that, we say, cannot happen to the changeless.

Theaetetus:: Exactly.

Stranger:: But tell me, in heaven's name, are we really to be so easily convinced that change, life, soul, understanding have no place in that which is perfectly real—that it has neither life nor thought, but stands immutable in solemn aloofness, devoid of intelligence?

Theaetetus:: That, sir, would be a strange doctrine to accept.

Stranger:: But can we say it has intelligence without having life?

Theaetetus:: Surely not.

Stranger:: But if we say it contains both, can we deny that it has soul in which they reside?

Theaetetus:: How else could it possess them?

Stranger:: But then. if it has intelligence, life, and soul, can we say that a living thing remains at rest in complete changelessness?

Theaetetus:: All that seems to me unreasonable.

Stranger:: In that case we must admit that what changes and change itself are real things.

Theaetetus:: Certainly.

Stranger:: From this, however, it follows, Theaetetus, first, that if all things are unchangeable, no intelligence can really exist anywhere in anything with regard to any object.

Theaetetus:: Quite so.

Stranger:: And, on the other hand, if we allow that all things are moving and changing, on that view equally we shall be excluding intelligence from the class of real things.

Theaetetus:: How so?

Stranger:: Do you think that, without rest, there could ever be anything that abides constant in the same condition and in the same respects?

Theaetetus:: Certainly not.

Stranger:: And without such objects can you make out that intelligence exists or could ever exist anywhere?

Theaetetus:: It would be quite impossible.

Stranger:: Well then, all the force of reasoning must be enlisted to oppose anyone who tries to maintain any assertion about anything at the same time that he suppresses knowledge or understanding or intelligence.

Theaetetus:: Most certainly.

Stranger:: On these grounds, then, it seems that only one course is open to the philosopher who values knowledge and the rest above all else. He must refuse to accept from the champions either of the one or of the many forms the doctrine that all reality is changeless, and he must turn a deaf ear to the other party who represent reality as everywhere changing. Like a child begging for 'both,' he must declare that reality or the sum of things is both at once—all that is unchangeable and all that is in change.

Theaetetus:: Perfectly true.

Stranger:: Well then, does it not look now as if we had fairly caught reality within the compass of our description?

Theaetetus:: Certainly it does.

Stranger:: And yet—oh dear, Theaetetus, what if I say after all that I think it is just at this point that we shall come to see how baffling this question of reality is?

Theaetetus:: How so? Why do you say that?

Stranger:: My good friend, don't you see that now we are wholly in the dark about it, though we fancy we are talking good sense?

Theaetetus:: I certainly thought so, and I don't at all understand how we can be deceived about our condition.

Stranger:: Then consider these last conclusions of ours more carefully, and whether, when we agree to them, we might not fairly be posed with the same question we put earlier to those who said that the sum of things 'really is' hot and cold.

Theaetetus:: You must remind me what that question was.

Stranger:: By all means, and I will try to do it by questioning you in the same way as I questioned them, so that we may get a little further at the same time.

Theaetetus:: Very good.

Stranger:: Come along then. When you speak of movement and rest, these are things completely opposed to one another, aren't they?

Theaetetus:: Of course.

Stranger:: At the same time you say of both and of each severally, that they are real?

Theaetetus:: I do.

Stranger:: And when you admit that they are real, do you mean that either or both are in movement?

Theaetetus:: Certainly not.

Stranger:: Then, perhaps, by saying both are real you mean they are both at rest?

Theaetetus:: No, how could I?

Stranger:: So, then, you conceive of reality [realness] as a third thing over and above these two, and when you speak of both as being real, you mean that you are taking both movement and rest together as embraced by reality and fixing your attention on their common association with reality?

Theaetetus:: It does seem as if we discerned reality as a third thing, when we say that movement and rest are real.

Stranger:: So reality is not motion and rest ‘both at once,' but something distinct from them.

Theaetetus:: Apparently.

Stranger:: In virtue of its own nature, then, reality is neither at rest nor in movement.

Theaetetus:: I suppose so.

Stranger:: If so, where is the mind to turn for help if one wants to reach any clear and certain conclusion about reality?

Theaetetus:: Where indeed?

Stranger:: It seems hard to find help in any quarter. If a thing is not in movement, how can it not be at rest? Or how can what is not in any way at rest fail to be in movement? Yet reality is now revealed to us as outside both alternatives. Is that possible?

Theaetetus:: As impossible as anything could be.

Stranger:: Then there is one thing that ought to be remembered at this point.

Theaetetus:: And that is?

Stranger:: That we were completely puzzled when we were asked to what the name ‘unreal' should be applied. You remember?

Theaetetus:: Of course.

Stranger:: And now we are in no less perplexity about reality?

Theaetetus:: In even greater, I should say, sir, if that be possible.

Stranger:: Let us take it, then, that our difficulty is now completely stated. But since reality and unreality are equally puzzling, there is henceforward some hope that any light, whether dim or bright, thrown upon the one will illuminate the other to an equal degree, and if, on the other hand, we cannot get sight of either, at any rate we will make the best we can of it under these conditions and force a passage through the argument with both elbows at once.

Theaetetus:: Very good.

Stranger:: Let us explain, then, how it is that we call the same thing—whatever is in question at the moment—by several names.

Theaetetus:: For instance? Give me an example.

Stranger:: Well, when we speak of a man we give him many additional names—we attribute to him colors and shapes and sizes and defects and good qualities, and in all these and countless other statements we say he is not merely a ‘man' but also ‘good' and any number of other things. And so with everything else. We take any given thing as one and yet speak of it as many and by many names.

Theaetetus:: True.

Stranger:: And thereby, I fancy, we have provided a magnificent entertainment for the young and for some of their elders who have taken to learning late in life. Anyone can take a hand in the game and at once object that many things cannot be one, nor one thing many; indeed, they delight in forbidding us to speak of a man as ‘good'—we must only speak of a good as good, and of the man as man. I imagine, Theaetetus, you often meet with these enthusiasts, sometimes elderly men who, being poorly endowed with intelligence, gape with wonder at these discoveries and fancy they have lighted here on the very treasure of complete wisdom.

Theaetetus:: I have indeed.

Stranger:: Well then, we want our argument to be addressed to all alike who have ever had anything to say about existence; so let us take it that the questions we shall put now are intended not only for these people but for all those others whom we have been conversing with earlier.

Theaetetus:: And what are the questions?

Stranger:: Are we not to attach existence to motion and rest, nor anything else to anything else, but rather to treat them in our discourse as incapable of any blending or participation in one another? Or are we to lump them all together as capable of association with one another? Or shall we say that this is true of some and not of others? Which of these possibilities shall we say they prefer, Theaetetus?

Theaetetus:: I am not prepared to answer that on their behalf.

Stranger:: Then why not answer the questions one at a time and see what are the consequences in each case?

Theaetetus:: Very good.

Stranger:: And first, if you like, let us suppose them to say that nothing has any capacity for combination with anything else for any purpose. Then movement and rest will have no part in existence.

Theaetetus:: No.

Stranger:: Well then, will either of them exist, if it has no association with existence?

Theaetetus:: No, it will not exist.

Stranger:: That admission seems to make short work of all theories; it upsets at one blow those who have a universe in motion, and those who make it a motionless unity, and all who say their realities exist in forms that are always the same in all respects, for they all attribute existence to things, some saying they really *are* in movement, some that they really *are* at rest.

Theaetetus:: Quite so.

Stranger:: And further, those who make all things come together at one time and separate at another, whether they bring innumerable things into a unity and out of a unity, or divide things into and combine them out of a limited set of elements—no matter whether they suppose this to happen in alternation or to be going on all the time—however it may be, all this would be meaningless if there is no blending at all.

Theaetetus:: True.

Stranger:: Moreover, the greatest absurdity of all results from pursuing the theory of those very people who will not allow one thing to share in the quality of another and so be called by its name.

Theaetetus:: How so?

Stranger:: Why, in referring to anything they cannot help using the words ‘being' and ‘apart' and ‘from the others' and ‘by itself' and any number more. They cannot refrain from these expressions or from connecting them in their statements, and so need not wait for others to refute them; the foe is in their own household, as the saying goes, and, like that queer fellow Eurycles, they carry about with them wherever they go a voice in their own bellies to contradict them.

Theaetetus:: True, your comparison is very much to the purpose.

Stranger:: Well, suppose we allow that all are capable of combining with one another.

Theaetetus:: Even I can dispose of that suggestion.

Stranger:: How?

Theaetetus:: Because then movement itself would come to a complete standstill, and again rest itself would be in movement, if each were to supervene upon the other.

Stranger:: And that is to the last degree impossible—that movement should come to be at rest and rest be in motion?

Theaetetus:: Surely.

Stranger:: Then only the third choice is left.

Theaetetus:: Yes.

Stranger:: And observe that one of these alternatives must be true—either all will blend, or none, or some will and some will not.

Theaetetus:: Certainly.

Stranger:: And two of the three have been found impossible.

Theaetetus:: Yes.

Stranger:: Whoever, then, wishes to give a right answer will assert the remaining one.

Theaetetus:: Quite So.

Stranger:: Then since some will blend, some not, they might be said to be in the same case with the letters of the alphabet. Some of these cannot be conjoined; others will fit together.

Theaetetus:: Of course.

Stranger:: And the vowels are specially good at combination—a sort of bond pervading them all, so that without a vowel the others cannot be fitted together.

Theaetetus:: That is so.

Stranger:: And does everyone know which can combine with which, or does one need an art to do it rightly?

Theaetetus:: It needs art.

Stranger:: And that art is?

Theaetetus:: Grammar.

Stranger:: Again, is it not the same with sounds of high or low pitch? To possess the art of recognizing the sounds that can or cannot be blended is to be a musician; if one doesn't understand that, one is unmusical.

Theaetetus:: True.

Stranger:: And we shall find differences of the same sort between competence and incompetence in any other art.

Theaetetus:: Of course.

Stranger:: Well, now that we have agreed that the kinds stand toward one another in the same way as regards blending, is not some science needed as a guide on the voyage of discourse, if one is to succeed in pointing out which kinds are consonant, and which are incompatible with one another—also, whether there are certain kinds that pervade them all and connect them so that they can blend, and again, where there are divisions [separations], whether there are certain others that traverse wholes and are responsible for the division?

Theaetetus:: Surely some science is needed—perhaps the most important of all.

Stranger:: And what name shall we give to this science? Or—good gracious, Theaetetus, have we stumbled unawares upon the free man's knowledge and, in seeking for the Sophist, chanced to find the philosopher first?

Theaetetus:: How do you mean?

Stranger:: Dividing according to kinds, not taking the same form for a different one or a different one for the same—is not that the business of the science of dialectic?

Theaetetus:: Yes.

Stranger:: And the man who can do that discerns clearly *one* form everywhere extended throughout many, where each one lies apart, and *many* forms, different from one another, embraced from without by one form, and again *one* form connected in a unity through many wholes, and *many* forms, entirely marked off apart. That means knowing how to distinguish, kind by kind, in what ways the several kinds can or cannot combine.

Theaetetus:: Most certainly.

Stranger:: And the only person, I imagine, to whom you would allow this mastery of dialectic is the pure and rightful lover of wisdom.

Theaetetus:: To whom else could it be allowed?

Stranger:: It is, then, in some such region as this that we shall find the philosopher now or later, if we should look for him. He too may be difficult to see clearly, but the difficulty in his case is not the same as in the Sophist's.

Theaetetus:: What is the difference?

Stranger:: The Sophist takes refuge in the darkness of not-being, where he is at home and has the knack of feeling his way, and it is the darkness of the place that makes him so hard to perceive.

Theaetetus:: That may well be.

Stranger:: Whereas the philosopher, whose thoughts constantly dwell upon the nature of reality, is difficult to see because his region is so bright, for the eye of the vulgar soul cannot endure to keep its gaze fixed on the divine.

Theaetetus:: That may well be no less true.

Stranger:: Then we will look more closely at the philosopher presently, if we are still in the mind to do so; meanwhile clearly we must not loosen our grip on the Sophist until we have studied him thoroughly.

Theaetetus:: I entirely agree.

Stranger:: Now that we are agreed, then, that some of the kinds will combine with one another and some will not, and that some combine to a small extent, others with a large number, while some pervade all and there is nothing against their being combined with everything, let us next follow up the argument in this way. We will not take all the forms, for fear of getting confused in such a multitude, but choose out some of those that are recognized as most [*or* very] important, and consider first their several natures and then how they stand in respect of being capable of combination with one another. In this way, though we may not be able to conceive being and not-being with perfect clearness, we may at least give as satisfactory an account of them as we can under the conditions of our present inquiry, and see if there is any opening allowing us to assert that what is not, *really is* what is not, and to escape unscathed.

Theaetetus:: Yes, we had better do that.

Stranger:: Now, among the kinds, those we were just now discussing—existence itself and rest and motion—are very important.

Theaetetus:: Quite so.

Stranger:: And observe, we say that two of the three will not blend with one another.

Theaetetus:: Certainly.

Stranger:: Whereas existence can be blended with both, for surely they both exist.

Theaetetus:: Of course.

Stranger:: So they make three in all. And each one of them [existence, motion, rest] is *different* from the other two, and the *same* as itself.

Theaetetus:: That is so.

Stranger:: But what do we mean by these words we have just used—'same' and ‘different'? Are they a pair of kinds distinct from those three, though always necessarily blending with them, so that we must consider the forms as five in all, not three? Or, when we say ‘same' or ‘different,' are we unconsciously using a name that belongs to one or another of those three kinds?

Theaetetus:: Possibly.

Stranger:: Well, motion and rest at any rate cannot be [identical with] difference or sameness.

Theaetetus:: Why not?

Stranger:: Neither motion nor rest can be [identical with] anything that we say of both of them in common.

Theaetetus:: Why?

Stranger:: Because motion would then be at rest, and rest in motion, for whichever of the two [motion or rest] becomes applicable to both [by being identified with either sameness or difference, which *are* applicable to both] will force the other [rest or motion] to change to the contrary of its own nature, as thus coming to partake of its contrary.

Theaetetus:: Quite so.

Stranger:: But both do partake of sameness and difference.

Theaetetus:: Yes.

Stranger:: Then we must not say that sameness or difference is [identical with] motion, nor yet with rest.

Theaetetus:: No.

Stranger:: Are we, however, to think of existence and sameness as a single thing?

Theaetetus:: Perhaps.

Stranger:: But if ‘existence' and ‘sameness' have no difference in meaning, once more, when we say that motion and rest both ‘exist,' we shall thereby be speaking of them as being ‘the same.'

Theaetetus:: But that is impossible.

Stranger:: Then sameness and existence cannot be one thing.

Theaetetus:: Hardly.

Stranger:: We may, then, set down sameness as a fourth form, additional to our three.

Theaetetus:: Certainly.

Stranger:: And are we to call difference a fifth? Or must we think of difference and existence as two names for a single kind?

Theaetetus:: Perhaps.

Stranger:: But I suppose you admit that, among things that exist, some are always spoken of as being what they are just in themselves, others as being what they are with reference to other things.

Theaetetus:: Of course.

Stranger:: And what is different is always so called with reference to another thing, isn't it?

Theaetetus:: That is so.

Stranger:: It would not be so, if existence and difference were not very different things. If difference partook of both characters as existence does, there would sometimes be, within the class of different things, something that was different not with reference to another thing. But in fact we undoubtedly find that whatever is different, as a necessary consequence, is what it is with reference to another.

Theaetetus:: It is as you say.

Stranger:: Then we must call the nature of difference a fifth among the forms we are singling out.

Theaetetus:: Yes.

Stranger:: And moreover we shall say that this nature pervades all the forms, for each one is different from the rest, not by virtue of its own nature, but because it partakes of the character of difference.

Theaetetus:: Quite so.

Stranger:: Now, then, taking our five kinds one by one, let us make some statements about them.

Theaetetus:: What statements?

Stranger:: First about motion, let us say that motion is altogether different from rest. Or is that not so?

Theaetetus:: It is so.

Stranger:: So motion is not rest.

Theaetetus:: Not in any sense.

Stranger:: But motion *is* [exists], by virtue of partaking of existence.

Theaetetus:: Yes.

Stranger:: And once more motion is different from the same [sameness].

Theaetetus:: No doubt.

Stranger:: So motion is not the same [sameness].

Theaetetus:: No.

Stranger:: But on the other hand, motion, we said, is the same as itself, because everything partakes of the same [sameness].

Theaetetus:: Certainly.

Stranger:: Motion, then, is both the same and not the same; we must admit that without boggling at it. For when we say it is ‘the same' and ‘not the same' we are not using the expression in the same sense; we call it ‘the same' on account of its participation in the same with reference to itself, but we call it ‘not the same' because of its combination with difference, a combination that separates it off from the same [sameness] and makes it not the same but different, so that we have the right to say this time that it is ‘not the same.'

Theaetetus:: Certainly.

Stranger:: So too, supposing motion itself did in any way participate in rest, there would be nothing outrageous in speaking of it as stationary. But it does not in fact participate in rest at all.

Theaetetus:: No, it does not.

Stranger:: Whereas it does participate both in sameness and in difference, so that it is correct to speak of it as both the same and not the same.

Theaetetus:: Perfectly correct, provided that we are to agree that some of the kinds will blend with one another, some will not.

Stranger:: Well, that is a conclusion we proved at an earlier stage, when we showed that such was indeed their nature.

Theaetetus:: Of course.

Stranger:: To go back to our statements, then, is motion different from different [difference], just as it was other than the same [sameness] and other than rest?

Theaetetus:: Necessarily.

Stranger:: Motion, then, in a sense is not different, and also is different, in accordance with the argument we stated just now.

Theaetetus:: True.

Stranger:: What, then, of the next point? Are we to say that motion is different from three of the four, but not from the fourth, when we have agreed that there were five kinds in the field we set before us for examination?

Theaetetus:: How can we? We cannot allow that their number is less than it was shown to be.

Stranger:: So we may fearlessly contend that motion is different from existence.

Theaetetus:: Without the smallest fear.

Stranger:: In fact, it is clear that motion really is a thing that is not [existence] and a thing that is, since it partakes of existence.

Theaetetus:: Perfectly clear.

Stranger:: It must, then, be possible for ‘that which is not' [i.e., is different from existence] to be [to exist], not only in the case of motion but of all the other kinds. For in the case of them all the nature of difference makes each one of them different from existence and so makes it a thing that ‘is not,' and hence we shall be right to speak of them all on the same principle as things that in this sense *‘are not,'* and again, because they partake of existence, to say that they *‘are'* [exist] and call them things that have being [existence].

Theaetetus:: No doubt.

Stranger:: So, in the case of every one of the forms there is much that it *is* and an indefinite number of things that it *is not.*

*Theaetetus::* So it appears.

Stranger:: And, moreover, existence itself must be called different from the rest.

Theaetetus:: Necessarily.

Stranger:: We find, then, that existence likewise ‘is not' in as many respects as there are other things, for, not being those others, while it *is* its single self, it *is not* all that indefinite number of other things.

Theaetetus:: That is so.

Stranger:: Then we must not boggle even at that conclusion, granted that kinds are of a nature to admit combination with one another. If anyone denies that, he must win over our earlier arguments to his side before he tries to win over their consequences.

Theaetetus:: That is a fair demand.

Stranger:: Now let us mark this.

Theaetetus:: Yes?

Stranger:: When we speak of 'that which is not,' it seems that we do not mean something contrary to what exists but only something that is different.

Theaetetus:: How?

Stranger:: In the same way that when, for example, we speak of something as 'not tall,' we may just as well mean by that phrase 'what is equal' as 'what is short,' mayn't we?

Theaetetus:: Certainly.

Stranger:: So, when it is asserted that a negative signifies a contrary, we shall not agree, but admit no more than this—that the prefix 'not' indicates something different from the words that follow, or rather from the things designated by the words pronounced after the negative.

Theaetetus:: Exactly.

Stranger:: And here, if you agree, is a point for us to consider.

Theaetetus:: Namely?

Stranger:: The nature of the different [difference] appears to be parceled out, in the same way as knowledge.

Theaetetus:: How so?

Stranger:: Knowledge also is surely one, but each part of it that commands a certain field is marked off and given a special name proper to itself. Hence language recognizes many arts and forms of knowledge.

Theaetetus:: Certainly.

Stranger:: And the same thing is true of the parts of the single nature of the different.

Theaetetus:: Perhaps, but shall we explain how?

Stranger:: There exists a part of the different that is set in contrast to the beautiful?

Theaetetus:: Yes.

Stranger:: Are we to say it is nameless, or has it a special name?

Theaetetus:: It has. Whenever we use the expression ‘not beautiful,' the thing we mean is precisely that which is different from the nature of the beautiful.

Stranger:: Then tell me this.

Theaetetus:: What?

Stranger:: May we not say that the *existence* of the not-beautiful is constituted by its being marked off from a single definite kind among existing things and again set in contrast with something that exists?

Theaetetus:: Yes.

Stranger:: So it appears that the not-beautiful is an instance of something that exists being set in contrast to something that exists.

Theaetetus:: Perfectly.

Stranger:: What then? On this showing has the not-beautiful any less claim than the beautiful to be a thing that exists?

Theaetetus:: None whatever.

Stranger:: And so the not-tall must be said to exist just as much as the tall itself.

Theaetetus:: Just as much.

Stranger:: And we must also put the not-just on the same footing as the just with respect to the fact that the one exists no less than the other.

Theaetetus:: Certainly.

Stranger:: And we shall say the same of all the rest, since we have seen that the nature of the different is to be ranked among things that exist, and, once it exists, its parts also must be considered as existing just as much as anything else.

Theaetetus:: Of course.

Stranger:: So, it seems, when a part of the nature of the different and a part of the nature of the existent [existence] are set in contrast to one another, the contrast is, if it be permissible to say so, as much a reality as existence itself : it does not mean what is contrary to ‘existent,' but only what is different from that existent.

Theaetetus:: That is quite clear.

Stranger:: What name are we to give it, then?

Theaetetus:: Obviously this is just that ‘what-is-not' which we were seeking for the sake of the Sophist.

Stranger:: Has it then, as you say, an existence inferior to none of the rest in reality? May we now be bold to say that ‘that is not' unquestionably *is* a thing that has a nature of its own—just as the tall was tall and the beautiful was beautiful, so too with the not-tall and the not-beautiful—and in that sense ‘that which is not' also, on the same principle, both was and *is* ‘what is not,' a single form to be reckoned among the many realities? Or have we any further doubts with regard to it, Theaetetus?

Theaetetus:: None at all.

Stranger:: You see, then, that in our disobedience to Parmenides we have trespassed far beyond the limits of his prohibition.

Theaetetus:: In what way?

Stranger:: In pushing forward on our quest, we have shown him results in a field which he forbade us even to explore.

Theaetetus:: How?

Stranger:: He says, you remember, 'Never shall this be proved, that things that are not, are, but keep back thy thought from this way of inquiry.'

Theaetetus:: Yes, he does say that.

Stranger:: Whereas we have not merely shown that things that are not, are, but we have brought to light the real character of 'not-being.' We have shown that the nature of the different has existence and is parceled out over the whole field of existent things with reference to one another, and of every part of it that is set in contrast to 'that which is' we have dared to say that precisely that *is really* 'that which is not.'

Theaetetus:: Yes, sir, and I think what we have said is perfectly true.

Stranger:: Then let no one say that it is the contrary of the existent that we mean by 'what is not,' when we make bold to say that 'what is not' exists. So far as any contrary of the existent is concerned, we have long ago said good-by to the question whether there is such a thing or not and whether any account can be given of it or none whatsoever.

But with respect to the 'what-is-not' that we have now asserted to exist, an opponent must either convince us that our account is wrong by refuting it, or, so long as he proves unable to do that, he must accept our statements (*a*) that the kinds blend with one another, (*b*) that existence and difference pervade them all, and pervade one another, (*c*) that difference [*or* the different], by partaking of existence, *is* by virtue of that participation, but on the other hand *is not* that existence of which it partakes, but is different, and since it is different from existence [*or* an existent], quite clearly it must be possible that it should *be* a thing that *is not,* (*d*) and again, existence, having a part in difference, will be different from all the rest of the kinds, and, because it is different from them all, it *is not* any one of them nor yet all the others put together, but is only itself, with the consequence, again indisputable, that existence *is not* myriads upon myriads of things, and that all the other kinds in the same way, whether taken severally or all together, in many respects *are* and in many respects *are not.*

*Theaetetus::* True.

Stranger:: And if anyone mistrusts these apparent contradictions, he should study the question and produce some better explanation than we have now given, whereas if he imagines he has discovered an embarrassing puzzle and takes delight in reducing argument to a tug of war, he is wasting his pains on a triviality, as our present argument declares. There is nothing clever in such a discovery, nor is it hard to make; what is hard and at the same time worth the pains is something different.

Theaetetus:: And that is?

Stranger:: What I said before—leaving such quibbling alone as leading nowhere, to be able to follow our statements step by step and, in criticizing the assertion that a different thing is the same or the same thing is different in a certain sense, to take account of the precise sense and the precise respect in which they are said to be one or the other. Merely to show that in some unspecified way the same is different or the different is the same, the tall short, the like unlike, and to take pleasure in perpetually parading such contradictions in argument—

that is not genuine criticism, but may be recognized as the callow offspring of a too recent contact with reality.

Theaetetus:: I quite agree.

Stranger:: Yes, my friend, and the attempt to separate every thing from every other thing not only strikes a discordant note but amounts to a crude defiance of the philosophical Muse.

Theaetetus:: Why?

Stranger:: This isolation of everything from everything else means a complete abolition of all discourse, for any discourse we can have owes its existence to the weaving together of forms.

Theaetetus:: True.

Stranger:: Observe, then, how opportune was our struggle with those separatists, when we forced them to allow one form to blend with another.

Theaetetus:: In what respect?

Stranger:: In respect of securing the position of discourse as one of the kinds of things that exist. To rob us of discourse would be to rob us of philosophy. That would be the most serious consequence, but, besides that, we need at the present moment to come to an agreement about the nature of discourse, and if its very existence had been taken from us, we should naturally not be able to discourse any further. And that would have happened, if we had yielded the point that there is no blending of any one form with another.

Theaetetus:: That is certainly true. But I do not understand why we need an agreement about discourse at the present moment.

Stranger:: I may be able to suggest a line of thought that will help you to understand.

Theaetetus:: What is that?

Stranger:: We saw that ‘not-being' is a single kind among the rest, dispersed over the whole field of realities.

Theaetetus:: Yes.

Stranger:: We have next to consider whether it blends with thinking and discourse.

Theaetetus:: Why that?

Stranger:: If it does not blend with them, everything must be true, but if it does, we shall have false thinking and discourse, for thinking or saying ‘what is not' comes, I suppose, to the same thing as falsity in thought and speech.

Theaetetus:: Yes.

Stranger:: And if falsity exists, deception is possible.

Theaetetus:: Yes.

Stranger:: And once deception exists, images and likenesses and appearance will be everywhere rampant.

Theaetetus:: Of course.

Stranger:: And the Sophist, we said, had taken refuge some-where in that region, but then he had denied the very existence of falsity; no one could either think or say ‘what is not,' because what is not never has any sort of being.

Theaetetus:: So he said.

Stranger:: But now that ‘what is not' has been found to have its share in existence, perhaps he will not fight with us further on that point.

On the other hand, he may perhaps say that some things partake of not-being, some do not, and that speech and thinking are among those that do not, and so once more he might contend that the art of creating images and semblances, where we say he is to be found, has no existence at all, since thought and speech have no share in not-being, and without that combination there is no such thing as falsity. That is why we must begin by investigating the nature of discourse and thinking and appearance, in order that we may then make out their combination with not-being and so prove that falsity exists, and by that proof pin down the Sophist there, if he is amenable to capture, or else let him go and pursue our search in some other kind.

Theaetetus:: Certainly, sir, what we said at the outset about the Sophist seems true—that he is a hard sort of beast to hunt down. Evidently he possesses a whole armory of problems, and every time that he puts one forward to shield him, we have to fight our way through it before we can get at him. So now, hardly have we got the better of his defense that ‘what is not' cannot exist, when another obstacle is raised in our path. We must, it seems, prove that falsity exists both in speech and thought, and after that perhaps something else, and so on. It looks as if the end would never be in sight.

Stranger:: A man should be of good courage, Theaetetus, if he can make only a little headway at each step. If he loses heart then, what will he do in another case where he cannot advance at all or even perhaps loses ground? No city, as they say, will surrender to so faint a summons. And now that we have surmounted the barrier you speak of, we may have already taken the highest wall and the rest may be easier to capture.

Theaetetus:: That is encouraging.

Stranger:: Then, as I said, let us take first statement and judgment, so as to establish clearly whether not-being has any point of contact with them, or both are altogether true and there is never falsity in either.

Theaetetus:: Very good.

Stranger:: Now, remembering what we said about forms and letters, let us consider words in the same way. The solution of our present problem promises to lie in that quarter.

Theaetetus:: What are you going to ask me about words?

Stranger:: Whether they all fit together, or none of them, or some will and some will not.

Theaetetus:: That is plain enough. Some will, some will not.

Stranger:: You mean perhaps something like this. Words which, when spoken in succession, signify something, do fit together, while those which mean nothing when they are strung together, do not.

Theaetetus:: What do you mean?

Stranger:: What I supposed you had in your mind when you gave your assent. The signs we use in speech to signify being are surely of two kinds.

Theaetetus:: How?

Stranger:: One kind called ‘names,' the other ‘verbs.'

Theaetetus:: Give me a description of each.

Stranger:: By ‘verb' we mean an expression which is applied to actions.

Theaetetus:: Yes.

Stranger:: And by a ‘name' the spoken sign applied to what performs these actions.

Theaetetus:: Quite so.

Stranger:: Now a statement never consists solely of names spoken in succession, nor yet of verbs apart from names.

Theaetetus:: I don't follow that.

Stranger:: Evidently you had something else in mind when you agreed with me just now, because what I meant was just this—that these words spoken in a string in this way do not make a statement.

Theaetetus:: In what way?

Stranger:: For example, 'walks runs sleeps,' and so on with all the other verbs signifying actions—you may utter them all one after another, but that does not make a statement.

Theaetetus:: Naturally.

Stranger:: And again, if you say 'lion stag horse' and any other names given to things that perform actions, such a string never makes up a statement. Neither in this example nor in the other do the sounds uttered signify any action performed or not performed or nature of anything that exists or does not exist, until you combine verbs with names. The moment you do that, they fit together and the simplest combination becomes a statement of what might be called the simplest and briefest kind.

Theaetetus:: Then how do you make a statement of that kind?

Stranger:: When one says, 'A man understands,' do you agree that this is a statement of the simplest and shortest possible kind?

Theaetetus:: Yes.

Stranger:: Because now it gives information about facts or events in the present or past or future; it does not merely name something but gets you somewhere by weaving together verbs with names. Hence we say it 'states' something, not merely 'names' something, and in fact it is this complex that we mean by the word 'statement.'

Theaetetus:: True.

Stranger:: And so, just as some things fit together, some do not, so with the signs of speech; some do not fit, but those that do fit make a statement.

Theaetetus:: Quite so.

Stranger: Now another small point.

Theaetetus:: Yes?

Stranger:: Whenever there is a statement, it must be about something; it cannot be about nothing.

Theaetetus:: That is so.

Stranger:: And must it not have a certain character?

Theaetetus:: Of course.

Stranger:: Now let us fix our attention on ourselves.

Theaetetus:: We will.

Stranger:: I will make a statement to you, then, putting together a thing with an action by means of a name and a verb. You are to tell me what the statement is about.

Theaetetus:: I will do my best.

Stranger:: 'Theaetetus sits'—not a lengthy statement, is it?

Theaetetus:: No, of very modest length.

Stranger:: Now it is for you to say what it is about—to whom it belongs.

Theaetetus:: Clearly about me. It belongs to me.

Stranger:: Now take another.

Theaetetus:: Namely?

Stranger:: Theaetetus, whom I am talking to at this moment, flies.'

Theaetetus:: That too can only be described as belonging to me and about me.

Stranger:: And moreover we agree that any statement must have a certain character.

Theaetetus:: Yes.

Stranger:: Then what sort of character can we assign to each of these?

Theaetetus:: One is false, the other true.

Stranger:: And the true one states about you the things that are [or the facts] as they are.

Theaetetus:: Certainly.

Stranger:: Whereas the false statement states about you things *different* from the things that are.

Theaetetus:: Yes.

Stranger:: And accordingly states *things that are not* as being.

Theaetetus:: No doubt.

Stranger:: Yes, but things that *exist,* different from things that *exist* in your case. For we said that in the case of everything there are many things that are and also many that are not.

Theaetetus:: Quite so.

Stranger:: So the second statement I made about you, in the first place, according to our definition of the nature of a statement, must itself necessarily be one of the shortest possible.

Theaetetus:: So we agreed just now.

Stranger:: And secondly it must be about something.

Theaetetus:: Yes.

Stranger:: And if it is not about you, it is not about anything else.

Theaetetus:: Certainly.

Stranger:: And if it were about nothing, it would not be a statement at all, for we pointed out that there could not be a statement that was a statement about nothing.

Theaetetus:: Quite true.

Stranger:: So what is stated about you, but so that what is different is stated as the same or what is not as what is—a combination of verbs and names answering to that description finally seems to be really and truly a false statement.

Theaetetus:: Perfectly true.

Stranger:: And next, what of thinking and judgment and appearing? Is it not now clear that all these things occur in our minds both as false and as true?

Theaetetus:: How so?

Stranger:: You will see more easily if you begin by letting me give you an account of their nature and how each differs from the others.

Theaetetus:: Let me have it.

Stranger:: Well, thinking and discourse are the same thing, except that what we call thinking is, precisely, the inward dialogue carried on by the mind with itself without spoken sound.

Theaetetus:: Certainly.

Stranger:: Whereas the stream which flows from the mind through the lips with sound is called discourse.

Theaetetus:: True.

Stranger:: And further there is a thing which we know occurs in discourse.

Theaetetus:: Namely?

Stranger:: Assertion and denial.

Theaetetus:: Yes.

Stranger:: Then when this occurs in the mind in the course of silent thinking, can you call it anything but judgment?

Theaetetus:: No.

Stranger:: And suppose judgment occurs, not independently, but by means of perception; the only right name for such a state of mind is ‘appearing.'

Theaetetus:: Yes.

Stranger:: Well then, since we have seen that there is true and false statement, and of these mental processes we have found thinking to be a dialogue of the mind with itself, and judgment to be the conclusion of thinking, and what we mean by ‘it appears' a blend of perception and judgment, it follows that these also, being of the same nature as statement, must be, some of them and on some occasions, false.

Theaetetus:: Of course.

Stranger:: You see, then, that we have discovered the nature of false judgment and false statement sooner than we expected just now when we feared there would be no end to the task we were setting ourselves in the search for them.

Theaetetus:: I do.

Stranger:: Then let us not lose courage for what remains to be done. Now that these matters are cleared up, let us recall our earlier divisions by forms.

Theaetetus:: Which do you mean?

Stranger:: We distinguished two forms of image making—the making of likenesses and the making of semblances.

Theaetetus:: Yes.

Stranger:: And we said we were puzzled to tell under which of these two we should place the Sophist.

Theaetetus:: We did.

Stranger:: And to increase our perplexity we were plunged in a whirl of confusion by the apparition of an argument that called in question all these terms and disputed the very existence of any copy or image or semblance, on the ground that falsity never has any sort of existence anywhere.

Theaetetus:: True.

Stranger:: But now that we have brought to light the existence of false statement and of false judgment, it is possible that there should be imitations of real things and that this condition of mind [false judgment] should account for the existence of an art of deception.

Theaetetus:: Yes, it is.

Stranger:: And we agreed earlier that the Sophist does come under one or other of the two kinds mentioned.

Theaetetus:: Yes.

Stranger:: Now, then, let us set to work again and, as we divide the kind proposed in two, keep to the right-hand section at each stage. Holding fast to the characters of which the Sophist partakes until we have stripped off all that he has in common with others and left only the nature that is peculiar to him, let us so make that nature plain, in the first place to ourselves, and secondly to others whose temperament finds a procedure of this sort congenial.

Theaetetus:: Very good.

Stranger:: Well, we began by dividing art into productive and acquisitive.

Theaetetus:: Yes.

Stranger:: And under the head of the acquisitive we had glimpses of the Sophist in the arts of hunting, contention, trafficking, and other kinds of that sort.

Theaetetus:: Certainly.

Stranger:: But now that he has been included under an art of imitation, clearly we must start by dividing into two the productive branch of art. For imitation is surely a kind of production, though it be only a production of images, as we say, not of originals of every sort. Is that not so?

Theaetetus:: Assuredly.

Stranger:: Let us begin, then, by recognizing two kinds of production.

Theaetetus:: What are they?

Stranger:: The one divine, the other human.

Theaetetus:: I don't understand yet.

Stranger:: Production—to recall what we said at the outset—we defined as any power that can bring into existence what did not exist before.

Theaetetus:: I remember.

Stranger:: Now take all mortal animals and also all things that grow—plants that grow above the earth from seeds and roots, and lifeless bodies compacted beneath the earth, whether fusible or not fusible. Must we not attribute the coming-into-being of these things out of not-being to divine craftsmanship and nothing else? Or are we to fall in with the belief that is commonly expressed?

Theaetetus:: What belief do you mean?

Stranger:: That nature gives birth to them as a result of some spontaneous cause that generates without intelligence. Or shall we say that they come from a cause which, working with reason and art, is divine and proceeds from divinity?

Theaetetus:: Perhaps because I am young, I often shift from one belief to the other, but at this moment, looking at your face and believing you to hold that these things have a divine origin, I too am convinced.

Stranger:: Well said, Theaetetus. If I thought you were the sort of person that might believe otherwise in the future, I should now try by force of persuasion to make you accept that account. But I can see clearly that, without any arguments of mine, your nature will come of itself to the conclusion which you tell me attracts you at this moment. So I will let that pass; I should be wasting time. I will only lay it down that the products of nature, as they are called, are works of divine art, as things made out of them by man are works of human art. Accordingly there will be two kinds of production, one human, the other divine.

Theaetetus:: Good.

Stranger:: Once more, then, divide each of these two into two parts.

Theaetetus:: How?

Stranger:: As you have just divided the whole extent of production horizontally, now divide it vertically.

Theaetetus:: Be it so.

Stranger:: The result is four parts in all—two on our side, human, two on the side of the gods, divine.

Theaetetus:: Yes.

Stranger:: And taking the divisions made in the first way [horizontally, divine and human], one section of each part will be the production of originals, and the remaining two sections will be best described as production of images. So we have a second division of production on that principle [originals and images].

Theaetetus:: Explain once more how each of the two parts [divine and human] is divided.

Stranger:: Ourselves, I take it, and all other living creatures and the elements of natural things—fire, water, and their kindred—are all originals, the offspring, as we are well assured, of divine workmanship. Is it not so?

Theaetetus:: Yes.

Stranger:: And every one of these products is attended by images which are not the actual thing, and which also owe their existence to divine contrivance.

Theaetetus:: You mean— ?

Stranger:: Dream images, and in daylight all those naturally produced semblances which we call ‘shadow' when dark patches interrupt the light, or a ‘reflection' when the light belonging to the eye meets and coalesces with light belonging to something else on a bright and smooth surface and produces a form yielding a perception that is the reverse of the ordinary direct view.

Theaetetus:: There are, indeed, these two products of divine workmanship—the original and the image that in every case accompanies it.

Stranger:: And what of our human art? Must we not say that in building it produces an actual house, and in painting a house of a different sort, as it were a man-made dream for waking eyes?

Theaetetus:: Certainly.

Stranger:: And so in all cases, we find once more twin products of our own productive activity in pairs—one an actual thing, the other an image.

Theaetetus:: I understand better now, and I recognize two forms of production, each of them twofold—divine and human according to one division, and according to the other a production of actual things and of some sort of likenesses.

Stranger:: Let us remind ourselves, then, that of this production of images there were to be two kinds, one producing likenesses, the other semblances, provided that falsity should be shown to be a thing that really is false and of such a nature as to have a place among existing things.

Theaetetus:: Yes, it was to be so.

Stranger:: And that has now been shown; so on that ground shall we now reckon the distinction of these two forms as beyond dispute?

Theaetetus:: Yes.

Stranger:: Once more, then, let us divide in two the kind that produces semblances.

Theaetetus:: How?

Stranger:: There is the semblance produced by means of tools, and another sort where the producer of the semblance takes his own person as an instrument.

Theaetetus:: How do you mean?

Stranger:: When someone uses his own person or voice to counterfeit your traits or speech, the proper name for creating such a semblance is, I take it, mimicry.

Theaetetus:: Yes.

Stranger:: Let us reserve that section, then, under the name of mimicry, and indulge ourselves so far as to leave all the rest for someone else to collect into a unity and give it an appropriate name.

Theaetetus:: So be it.

Stranger:: But there is still ground for thinking that mimicry is of two sorts. Let me put it before you.

Theaetetus:: Do.

Stranger:: Some mimics know the thing they are impersonating; others do not. And could we find a more important distinction than that of knowing from not knowing?

Theaetetus:: No.

Stranger:: And the mimicry we have just mentioned goes with knowledge, for to impersonate you, one must be acquainted with you and your traits.

Theaetetus:: Of course.

Stranger:: And what of the traits of justice and of virtue generally? Are there not many who, having no knowledge of virtue but only some sort of opinion about it, zealously set about making it appear that they embody virtue as they conceive it, mimicking it as effectively as they can in their words and actions?

Theaetetus:: Only too many.

Stranger:: And are they always unsuccessful in appearing to be virtuous when they are not really virtuous at all? Do they not rather succeed perfectly?

Theaetetus:: They do.

Stranger:: We must, then, distinguish the ignorant mimic from the other, who has knowledge.

Theaetetus:: Yes.

Stranger:: Where, then, must we look for a suitable name for each? No doubt it is hard to find one, because the ancients, it would seem, suffered from a certain laziness and lack of discrimination with regard to the division of kinds by forms, and not one of them even tried to make such divisions, with the result that there is a serious shortage of names. However, though the expression may seem daring, for purposes of distinction let us call mimicry guided by opinion ‘conceit mimicry,' and the sort that is guided by knowledge ‘mimicry by acquaintance.'

Theaetetus:: So be it.

Stranger:: It is the former, then, that concerns us, for the Sophist was not among those who have knowledge, but he has a place among mimics.

Theaetetus:: Certainly.

Stranger:: Then let us take this conceit mimic and see if his metal rings sound or there is still a crack in it somewhere.

Theaetetus:: Let us do so.

Stranger:: Well, there is a gaping crack. There is the simple-minded type who imagines that what he believes is knowledge, and an opposite type who is versed in discussion, so that his attitude betrays no little misgiving and suspicion that the knowledge he has the air of possessing in the eyes of the world is really ignorance.

Theaetetus:: Certainly both the types you describe exist.

Stranger:: We may, then, set down one of these mimics as sincere, the other as insincere.

Theaetetus:: So it appears.

Stranger:: And the insincere—is he of two kinds or only one?

Theaetetus:: That is for you to consider.

Stranger:: I will, and I can clearly make out a pair of them. I see one who can keep up his dissimulation publicly in long speeches to a large assembly. The other uses short arguments in private and forces others to contradict themselves in conversation.

Theaetetus:: Very true.

Stranger:: And with whom shall we identify the more longwinded type—with the statesman or with the demagogue?

Theaetetus:: The demagogue.

Stranger:: And what shall we call the other—wise man or Sophist?

Theaetetus:: We cannot surely call him wise, because we set him down as ignorant, but as a mimic of the wise man he will clearly assume a title derived from his, and I now see that here at last is the man who must be truly described as the real and genuine Sophist.

Stranger:: Shall we, then, as before collect all the elements of his description, from the end to the beginning, and draw our threads together in a knot?

Theaetetus:: By all means.

Stranger:: The art of contradiction making, descended from an insincere kind of conceited mimicry, of the semblance-making breed, derived from image making, distinguished as a portion, not divine but human, of production, that presents a shadow play of words—such are the blood and lineage which can, with perfect truth, be assigned to the authentic Sophist.

Theaetetus:: I entirely agree.

# The Sophist.

[OR ON BEING; LOGICAL]

Translated by Fowler, Harold North.

CHARACTERS.

Theodorus, Socrates,
An Elean Stranger,
Theaetetus.

Theodorus:: According to our yesterdays agreement, Socrates, we have come ourselves, as we were bound to do, and we bring also this man with us; he is a stranger from Elea, one of the followers of Parmenides and Zeno, and a real philosopher.

Socrates:: Are you not unwittingly bringing, as Homer says, some god, and no mere stranger, Theodorus? He says that the gods, and especially the god of strangers, enter into companionship with men who have a share of due reverence and that they behold the deeds, both violent and righteous, of mankind. So perhaps this companion of yours may be one of the higher powers, who comes to watch over and refute us because we are worthless in argument a kind of god of refutation.

Theodorus:: No, Socrates, that is not the strangers character; he is more reasonable than those who devote themselves to disputation. And though I do not think he is a god at all, I certainly do think he is divine, for I give that epithet to all philosophers.

Socrates:: And rightly, my friend. However, I fancy it is not much easier, if I may say so, to recognize this class, than that of the gods. For these men I mean those who are not feignedly but really philosophers appear disguised in all sorts of shapes, thanks to the ignorance of the rest of mankind, and visit the cities, beholding from above the life of those below, and they seem to some to be of no worth and to others to be worth everything. And sometimes they appear disguised as statesmen and sometimes as sophists, and sometimes they may give some people the impression that they are altogether mad. But I should like to ask our stranger here, if agreeable to him, what people in his country thought about these matters, and what names they used.

Theodorus:: What matters do you mean?

Socrates:: Sophist, statesman, philosopher.

Theodorus:: What particular difficulty and what kind of difficulty in regard to them is it about which you had in mind to ask?

Socrates:: It is this; Did they consider all these one, or two, or, as there are three names, did they divide them into three classes and ascribe to each a class, corresponding to a single name?

Theodorus:: I think he has no objection to talking about them. What do you say, stranger?

Stranger:: Just what you did, Theodorus; for I have no objection, and it is not difficult to say that they considered them three. But it is no small or easy task to define clearly the nature of each.

Theodorus:: The fact is, Socrates, that by chance you have hit upon a question very like what we happened to be asking him before we came here; and he made excuses to us then, as he does now to you; though he admits that he has heard it thoroughly discussed and remembers what he heard.

Socrates:: In that case, stranger, do not refuse us the first favor we have asked; but just tell us this; Do you generally prefer to expound in a long uninterrupted speech of your own whatever you wish to explain to anyone, or do you prefer the method of questions? I was present once when Parmenides employed the latter method and carried on a splendid discussion. I was a young man then, and he was very old.

Stranger:: The method of dialogue, Socrates, is easier with an interlocutor who is tractable and gives no trouble; but otherwise I prefer the continuous speech by one person.

Socrates:: Well, you may choose whomever you please of those present; they will all respond pleasantly to you; but if you take my advice you will choose one of the young fellows, Theaetetus here, or any of the others who suits you.

Stranger:: Socrates, this is the first time I have come among you, and I am somewhat ashamed, instead of carrying on the discussion by merely giving brief replies to your questions, to deliver an extended, long drawn out speech, either as an address of my own or in reply to another, as if I were giving an exhibition; but I must, for really the present subject is not what one might expect from the form of the question, but is a matter for very long speech. On the other hand it seems unfriendly and discourteous to refuse a favor to you and these gentlemen, especially when you have spoken as you did. As for Theaetetus I accept him most willingly as interlocutor in view of my previous conversation with him and of your present recommendation.

Theaetetus:: But, stranger, by taking this course and following Socrates’s suggestion will you please the others too?

Stranger:: I am afraid there is nothing more to be said about that, Theaetetus; but from now on, my talk will, I fancy, be addressed to you. And if you get tired and are bored by the length of the talk, do not blame me, but these friends of yours.

Theaetetus:: Oh, no, I do not think I shall get tired of it so easily, but if such a thing does happen, we will call in this Socrates, the namesake of the other Socrates; he is of my own age and my companion in the gymnasium, and is in the habit of working with me in almost everything.

Stranger:: Very well; you will follow your own devices about that as the discussion proceeds; but now you and I must investigate in common, beginning first, as it seems to me, with the sophist, and must search out and make plain by argument what he is. For as yet you and I have nothing in common about him but the name; but as to the thing to which we give the name, we may perhaps each have a conception of it in our own minds; however, we ought always in every instance to come to agreement about the thing itself by argument rather than about the mere name without argument. But the tribe which we now intend to search for, the sophist, is not the easiest thing in the world to catch and define, and everyone has agreed long ago that if investigations of great matters are to be properly worked out we ought to practice them on small and easier matters before attacking the very greatest. So now, Theaetetus, this is my advice to ourselves, since we think the family of sophists is troublesome and hard to catch, that we first practice the method of hunting in something easier, unless you perhaps have some simpler way to suggest.

Theaetetus:: I have not.

Stranger:: Then shall we take some lesser thing and try to use it as a pattern for the greater?

Theaetetus:: Yes.

Stranger:: Well, then, what example can we set before us which is well known and small, but no less capable of definition than any of the greater things? Say an angler; is he not known to all and unworthy of any great interest?

Theaetetus:: Yes.

Stranger:: But I hope he offers us a method and is capable of a definition not unsuitable to our purpose.

Theaetetus:: That would be good.

Stranger:: Come now; let us begin with him in this way; Tell me, shall we say that he is a man with an art, or one without an art, but having some other power?

Theaetetus:: Certainly not one without an art.

Stranger:: But of all arts there are, speaking generally, two kinds?

Theaetetus:: How so?

Stranger:: Agriculture and all kinds of care of any living beings, and that which has to do with things which are put together or molded (utensils we call them), and the art of imitation all these might properly be called by one name.

Theaetetus:: How so, and what is the name?

Stranger:: When anyone brings into being something which did not previously exist, we say that he who brings it into being produces it and that which is brought into being is produced.

Theaetetus:: Certainly.

Stranger:: Now all the arts which we have just mentioned direct their energy to production.

Theaetetus:: Yes, they do.

Stranger:: Let us, then, call these collectively the productive art.

Theaetetus:: Agreed.

Stranger:: And after this comes the whole class of learning and that of acquiring knowledge, and money making, and fighting, and hunting. None of these is creative, but they are all engaged in coercing, by deeds or words, things which already exist and have been produced, or in preventing others from coercing them; therefore all these divisions together might very properly be called acquisitive art.

Theaetetus:: Yes, that would be proper.

Stranger:: Then since acquisitive and productive art comprise all the arts, in which, Theaetetus, shall we place the art of angling?

Theaetetus:: In acquisitive art, clearly.

Stranger:: And are there not two classes of acquisitive art one the class of exchange between voluntary agents by means of gifts and wages and purchases, and the other, which comprises all the rest of acquisitive art, and, since it coerces either by word or deed, might be called coercive?

Theaetetus:: It appears so, at any rate, from what you have said.

Stranger:: Well then, shall we not divide coercive art into two parts?

Theaetetus:: In what way?

Stranger:: By calling all the open part of it fighting and all the secret part hunting.

Theaetetus:: Yes.

Stranger:: But it would be unreasonable not to divide hunting into two parts.

Theaetetus:: Say how it can be done.

Stranger:: By dividing it into the hunting of the lifeless and of the living.

Theaetetus:: Certainly, if both exist.

Stranger:: Of course they exist. And we must pass over the hunting of lifeless things, which has no name, with the exception of some kinds of diving and the like, which are of little importance; but the hunting of living things we will call animal-hunting.

Theaetetus:: Very well.

Stranger:: And two classes of animal-hunting might properly be made, one (and this is divided under many classes and names) the hunting of creatures that go on their feet, land-animal hunting, and the other that of swimming creatures, to be called, as a whole, water-animal hunting?

Theaetetus:: Certainly.

Stranger:: And of swimming creatures we see that one tribe is winged and the other is in the water?

Theaetetus:: Of course.

Stranger:: And the hunting of winged creatures is called, as a whole, fowling.

Theaetetus:: It is.

Stranger:: And the hunting of water creatures goes by the general name of fishing.

Theaetetus:: Yes.

Stranger:: And might I not divide this kind of hunting into two principal divisions?

Theaetetus:: What divisions?

Stranger:: The one carries on the hunt by means of enclosures merely, the other by a blow.

Theaetetus:: What do you mean, and how do you distinguish the two?

Stranger:: As regards the first, because whatever surrounds anything and encloses it so as to constrain it is properly called an enclosure.

Theaetetus:: Certainly.

Stranger:: May not, then, wicker baskets and seines and snares and nets and the like be called enclosures?

Theaetetus:: Assuredly.

Stranger:: Then we will call this division hunting by enclosures, or something of that sort.

Theaetetus:: Yes.

Stranger:: And the other, which is done with a blow, by means of hooks and three pronged spears, we must now to name it with a single word call striking; or could a better name be found, Theaetetus?

Theaetetus:: Never mind the name; that will do well enough.

Stranger:: Then the kind of striking which takes place at night by the light of a fire is, I suppose, called by the hunters themselves fire-hunting.

Theaetetus:: To be sure.

Stranger:: And that which belongs to the daytime is, as a whole, barb-hunting, since the spears, as well as the hooks, are tipped with barbs.

Theaetetus:: Yes, it is so called.

Stranger:: Then of striking which belongs to barb-hunting that part which proceeds downward from above, is called, because tridents are chiefly used in it, tridentry, I suppose.

Theaetetus:: Yes, some people, at any rate, call it so.

Stranger:: Then there still remains, I may say, only one further kind.

Theaetetus:: What is that?

Stranger:: The kind that is characterized by the opposite sort of blow, which is practiced with a hook and strikes, not any chance part of the body of the fishes, as tridents do, but only the head and mouth of the fish caught, and proceeds from below upwards, being pulled up by twigs and rods. By what name, Theaetetus, shall we say this ought to be called?

Theaetetus:: I think our search is now ended and we have found the very thing we set before us a while ago as necessary to find.

Stranger:: Now, then, you and I are not only agreed about the name of angling, but we have acquired also a satisfactory definition of the thing itself. For of art as a whole, half was acquisitive, and of the acquisitive, half was coercive, and of the coercive, half was hunting, and of hunting, half was animal hunting, and of animal hunting, half was water hunting, and, taken as a whole, of water hunting the lower part was fishing, and of fishing, half was striking, and of striking, half was barb-hunting, and of this the part in which the blow is pulled from below upwards at an angle has a name in the very likeness of the act and is called angling, which was the object of our present search.

Theaetetus:: That at all events has been made perfectly clear.

Stranger:: Come, then, let us use this as a pattern and try to find out what a sophist is.

Theaetetus:: By all means.

Stranger:: Well, then, the first question we asked was whether we must assume that the angler was just a man or was a man with an art.

Theaetetus:: Yes.

Stranger:: Now take this man of ours, Theaetetus. Shall we assume that he is just a man, or by all means really a man of wisdom?

Theaetetus:: Certainly not just a man; for I catch your meaning that he is very far from being wise, although his name implies wisdom.

Stranger:: But we must, it seems, assume that he has an art of some kind.

Theaetetus:: Well, then, what in the world is this art that he has?

Stranger:: Good gracious! Have we failed to notice that the man is akin to the other man?

Theaetetus:: Who is akin to whom?

Stranger:: The angler to the sophist.

Theaetetus:: How so?

Stranger:: They both seem clearly to me to be a sort of hunters.

Theaetetus:: What is the hunting of the second? We have spoken about the first.

Stranger:: We just now divided hunting as a whole into two classes, and made one division that of swimming creatures and the other that of land-hunting.

Theaetetus:: Yes.

Stranger:: And the one we discussed, so far as the swimming creatures that live in the water are concerned; but we left the land-hunting undivided, merely remarking that it has many forms.

Theaetetus:: Certainly.

Stranger:: Now up to that point the sophist and the angler proceed together from the starting-point of acquisitive art.

Theaetetus:: I think they do.

Stranger:: But they separate at the point of animal-hunting, where the one turns to the sea and rivers and lakes to hunt the animals in those.

Theaetetus:: To be sure.

Stranger:: But the other turns toward the land and to rivers of a different kind rivers of wealth and youth, bounteous meadows, as it were and he intends to coerce the creatures in them.

Theaetetus:: What do you mean?

Stranger:: Of land-hunting there are two chief divisions.

Theaetetus:: What are they?

Stranger:: One is the hunting of tame, the other of wild creatures.

Theaetetus:: Is there, then, a hunting of tame creatures?

Stranger:: Yes, if man is a tame animal; but make any assumption you like, that there is no tame animal, or that some other tame animal exists but man is a wild one or that man is tame but there is no hunting of man. For the purpose of our definition choose whichever of these statements you think is satisfactory to you.

Theaetetus:: Why, Stranger, I think we are a tame animal, and I agree that there is a hunting of man.

Stranger:: Let us, then, say that the hunting of tame animals is also of two kinds.

Theaetetus:: How do we justify that assertion?

Stranger:: By defining piracy, man-stealing, tyranny, and the whole art of war all collectively as hunting by force.

Theaetetus:: Excellent.

Stranger:: And by giving the art of the law courts, of the public platform, and of conversation also a single name and calling them all collectively an art of persuasion.

Theaetetus:: Correct.

Stranger:: Now let us say that there are two kinds of persuasion.

Theaetetus:: What kinds?

Stranger:: The one has to do with private persons, the other with the community.

Theaetetus:: Granted; each of them does form a class.

Stranger:: Then again of the hunting of private persons one kind receives pay, and the other brings gifts, does it not?

Theaetetus:: I do not understand.

Stranger:: Apparently you have never yet paid attention to the lovers method of hunting.

Theaetetus:: In what respect?

Stranger:: That in addition to their other efforts they give presents to those whom they hunt.

Theaetetus:: You are quite right.

Stranger:: Let us, then, call this the amatory art.

Theaetetus:: Agreed.

Stranger:: But that part of the paid kind which converses to furnish gratification and makes pleasure exclusively its bait and demands as its pay only maintenance, we might all agree, if I am not mistaken, to call the art of flattery or of making things pleasant.

Theaetetus:: Certainly.

Stranger:: But the class which proposes to carry on its conversations for the sake of virtue and demands its pay in cash does not this deserve to be called by another name?

Theaetetus:: Of course.

Stranger:: And what is that name? Try to tell.

Theaetetus:: It is obvious; for I think we have discovered the sophist. And therefore by uttering that word I think I should give him the right name.

Stranger:: Then, as it seems, according to our present reasoning, Theaetetus, the part of appropriative, coercive, hunting art which hunts animals, land animals, tame animals, man, privately, for pay, is paid in cash, claims to give education, and is a hunt after rich and promising youths, must so our present argument concludes be called sophistry.

Theaetetus:: Most assuredly.

Stranger:: But let us look at it in still another way; for the class we are now examining partakes of no mean art, but of a very many-sided one. And we must indeed do so, for in our previous talk it presents an appearance of being, not what we now say it is, but another class.

Theaetetus:: HOW SO?

Stranger:: The acquisitive art was of two sorts, the one the division of hunting, the other that of exchange.

Theaetetus:: Yes, it was.

Stranger:: Now shall we say that there are two sorts of exchange, the one by gift, the other by sale?

Theaetetus:: So be it.

Stranger:: And we shall say further that exchange by sale is divided into two parts.

Theaetetus:: How so?

Stranger:: We make this distinction calling the part which sells a mans own productions the selling of ones own, and the other, which exchanges the works of others, exchange.

Theaetetus:: Certainly.

Stranger:: Well, then, that part of exchange which is carried on in the city, amounting to about half of it, is called retailing, is it not?

Theaetetus:: Yes.

Stranger:: And that which exchanges goods from city to city by purchase and sale is called merchandising?

Theaetetus:: Certainly.

Stranger:: And have we not observed that one part of merchandising sells and exchanges for cash whatever serves the body for its support and needs, and the other whatever serves the soul?

Theaetetus:: What do you mean by that?

Stranger:: Perhaps we do not know about the part that has to do with the soul; though I fancy we do understand the other division.

Theaetetus:: Yes.

Stranger:: Take, therefore, the liberal arts in general that constantly go about from city to city, bought in one place and carried to another and sold painting, and conjuring, and the many other things that affect the soul, which are imported and sold partly for its entertainment and partly for its serious needs; we cannot deny that he who carries these about and sells them constitutes a merchant properly so called, no less than he whose business is the sale of food and drink.

Theaetetus:: Very true.

Stranger:: Then will you give the same name to him who buys up knowledge and goes about from city to city exchanging his wares for money?

Theaetetus:: Certainly.

Stranger:: One part of this soul-merchandising might very properly be called the art of display, might it not? But since the other part, though no less ridiculous than the first, is nevertheless a traffic in knowledge, must we not call it by some name akin to its business?

Theaetetus:: Certainly.

Stranger:: Now of this merchandising in knowledge the part which has to do with the knowledge of the other arts should be called by one name, and that which has to do with virtue by another.

Theaetetus:: Of course.

Stranger:: The name of art-merchant would fit the one who trades in the other arts, and now do you be so good as to tell the name of him who trades in virtue.

Theaetetus:: And what other name could one give, without making a mistake, than that which is the object of our present investigation the sophist?

Stranger:: No other. Come then, let us now summarize the matter by saying that sophistry has appeared a second time as that part of acquisitive art, art of exchange, of trafficking, of merchandising, of soul merchandising which deals in words and knowledge, and trades in virtue.

Theaetetus:: Very well.

Stranger:: But there is a third case; If a man settled down here in town and proposed to make his living by selling these same wares of knowledge, buying some of them and making others himself, you would, I fancy, not call him by any other name than that which you used a moment ago.

Theaetetus:: Certainly not.

Stranger:: Then also that part of acquisitive art which proceeds by exchange, and by sale, whether as mere retail trade or the sale of ones own productions, no matter which, so long as it is of the class of merchandising in knowledge, you will always, apparently, call sophistry.

Theaetetus:: I must do so, for I have to follow where the argument leads.

Stranger:: Let us examine further and see if the class we are now pursuing has still another aspect, of similar nature.

Theaetetus:: Of what nature?

Stranger:: We agreed that fighting was a division of acquisitive art.

Theaetetus:: Yes, we did.

Stranger:: Then it is quite fitting to divide it into two parts.

Theaetetus:: Tell what the parts are.

Stranger:: Let us call one part of it the competitive and the other the pugnacious.

Theaetetus:: Agreed.

Stranger:: Then it is reasonable and fitting to give to that part of the pugnacious which consists of bodily contests some such name as violent.

Theaetetus:: Yes.

Stranger:: And what other name than controversy shall we give to the contests of words?

Theaetetus:: No other.

Stranger:: But controversy must be divided into two kinds.

Theaetetus:: How?

Stranger:: Whenever long speeches are opposed by long speeches on questions of justice and injustice in public, that is forensic controversy.

Theaetetus:: Yes.

Stranger:: But that which is carried on among private persons and is cut up into little bits by means of questions and their answers, we are accustomed to call argumentation, are we not?

Theaetetus:: We are.

Stranger:: And that part of argumentation which deals with business contracts, in which there is controversy, to be sure, but it is carried on informally and without rules of art all that must be considered a distinct class, now that our argument has recognized it as different from the rest, but it received no name from our predecessors, nor does it now deserve to receive one from us.

Theaetetus:: True; for the divisions into which it falls are too small and too miscellaneous.

Stranger:: But that which possesses rules of art and carries on controversy about abstract justice and injustice and the rest in general terms, we are accustomed to call disputation, are we not?

Theaetetus:: Certainly.

Stranger:: Well, of disputation, one sort wastes money, the other makes money.

Theaetetus:: Certainly.

Stranger:: Then let us try to tell the name by which we must call each of these.

Theaetetus:: Yes, we must do so.

Stranger:: Presumably the kind which causes a man to neglect his own affairs for the pleasure of engaging in it, but the style of which causes no pleasure to most of his hearers, is, in my opinion, called by no other name than garrulity.

Theaetetus:: Yes, that is about what it is called.

Stranger:: Then the opposite of this, the kind which makes money from private disputes try now, for it is your turn, to give its name.

Theaetetus:: What other answer could one give without making a mistake, than that now again for the fourth time that wonderful being whom we have so long been pursuing has turned up the sophist!

Stranger:: Yes, and the sophist is nothing else, apparently, than the money-making class of the disputatious, argumentative, controversial, pugnacious, combative, acquisitive art, as our argument has now again stated.

Theaetetus:: Certainly.

Stranger:: Do you see the truth of the statement that this creature is many-sided and, as the saying is, not to be caught with one hand?

Theaetetus:: Then we must catch him with both.

Stranger:: Yes, we must, and must go at it with all our might, by following another track of his in this way. Tell me; of the expressions connected with menial occupations some are in common use, are they not?

Theaetetus:: Yes, many. But to which of the many does your question refer?

Stranger:: To such as these; we say sift and strain and winnow and separate.

Theaetetus:: Certainly.

Stranger:: And besides these there are card and comb and beat the web and countless other technical terms which we know. Is it not so?

Theaetetus:: Why do you use these as examples and ask about them all? What do you wish to show in regard to them?

Stranger:: All those that I have mentioned imply a notion of division.

Theaetetus:: Yes.

Stranger:: Then since there is, according to my reckoning, one art involved in all of these operations, let us give it one name.

Theaetetus:: What shall we call it?

Stranger:: The art of discrimination.

Theaetetus:: Very well.

Stranger:: Now see if we can discover two divisions of this.

Theaetetus:: You demand quick thinking, for a boy like me.

Stranger:: And yet, in the instance of discrimination just mentioned there was, first, the separation of worse from better, and, secondly, of like from like.

Theaetetus:: Yes, as you now express it, that is pretty clear.

Stranger:: Now I know no common name for the second kind of discrimination; but I do know the name of the kind which retains the better and throws away the worse.

Theaetetus:: What is it?

Stranger:: Every such discrimination, as I think, is universally called a sort of purification.

Theaetetus:: Yes, so it is.

Stranger:: And could not anyone see that purification is of two kinds?

Theaetetus:: Yes, perhaps, in time; but still I do not see it now.

Stranger:: Still there are many kinds of purifications of bodies, and they may all properly be included under one name.

Theaetetus:: What are they and what is the name?

Stranger:: The purification of living creatures, having to do with impurities within the body, such as are successfully discriminated by gymnastics and medicine, and with those outside of the body, not nice to speak of, such as are attended to by the bath-keepers art; and the purification of inanimate bodies, which is the special care of the fullers art and in general of the art of exterior decoration; this, with its petty subdivisions, has taken on many names which seem ridiculous.

Theaetetus:: Very.

Stranger:: Certainly they do, Theaetetus. However, the method of argument is neither more nor less concerned with the art of medicine than with that of sponging, but is indifferent if the one benefits us little, the other greatly by its purifying. It endeavors to understand what is related and what is not related in all arts, for the purpose of acquiring intelligence; and therefore it honors them all equally and does not in making comparisons think one more ridiculous than another, and does not consider him who employs, as his example of hunting, the art of generalship, any more dignified than him who employs the art of louse-catching, but only, for the most part, as more pretentious. And now as to your question, what name we shall give to all the activities whose function it is to purify the body, whether animate or inanimate, it will not matter at all to our method what name sounds finest; it cares only to unite under one name all purifications of everything else and to keep them separate from the purification of the soul. For it has in our present discussion been trying to separate this purification definitely from the rest, if we understand its desire.

Theaetetus:: But I do understand and I agree that there are two kinds of purification and that one kind is the purification of the soul, which is separate from that of the body.

Stranger:: Most excellent. Now pay attention to the next point and try again to divide the term.

Theaetetus:: In whatever way you suggest, I will try to help you in making the division.

Stranger:: Do we say that wickedness is distinct from virtue in the soul?

Theaetetus:: Of course.

Stranger:: And purification was retaining the one and throwing out whatever is bad anywhere?

Theaetetus:: Yes, it was.

Stranger:: Hence whenever we find any removal of evil from the soul, we shall be speaking properly if we call that a purification.

Theaetetus:: Very properly.

Stranger:: We must say that there are two kinds of evil in the soul.

Theaetetus:: What kinds?

Stranger:: The one is comparable to a disease in the body, the other to a deformity.

Theaetetus:: I do not understand.

Stranger:: Perhaps you have not considered that disease and discord are the same thing?

Theaetetus:: I do not know what reply I ought to make to this, either.

Stranger:: Is that because you think discord is anything else than the disagreement of the naturally related, brought about by some corruption?

Theaetetus:: No; I think it is nothing else.

Stranger:: But is deformity anything else than the presence of the quality of disproportion, which is always ugly?

Theaetetus:: Nothing else at all.

Stranger:: Well then; do we not see that in the souls of worthless men opinions are opposed to desires, anger to pleasures, reason to pain, and all such things to one another?

Theaetetus:: Yes, they are, decidedly.

Stranger:: Yet they must all be naturally related.

Theaetetus:: Of course.

Stranger:: Then we shall be right if we say that wickedness is a discord and disease of the soul.

Theaetetus:: Yes, quite right.

Stranger:: But if things which partake of motion and aim at some particular mark pass beside the mark and miss it on every occasion when they try to hit it, shall we say that this happens to them through right proportion to one another or, on the contrary, through disproportion?

Theaetetus:: Evidently through disproportion.

Stranger:: But yet we know that every soul, if ignorant of anything, is ignorant against its will.

Theaetetus:: Very much so.

Stranger:: Now being ignorant is nothing else than the aberration of a soul that aims at truth, when the understanding passes beside the mark.

Theaetetus:: Very true.

Stranger:: Then we must regard a foolish soul as deformed and ill-proportioned.

Theaetetus:: So it seems.

Stranger:: Then there are, it appears, these two kinds of evils in the soul, one, which people call wickedness, which is very clearly a disease.

Theaetetus:: Yes.

Stranger:: And the other they call ignorance, but they are not willing to acknowledge that it is vice, when it arises only in the soul.

Theaetetus:: It must certainly be admitted, though I disputed it when you said it just now, that there are two kinds of vice in the soul, and that cowardice, intemperance, and injustice must all alike be considered a disease in us, and the widespread and various condition of ignorance must be regarded as a deformity.

Stranger:: In the case of the body there are two arts which have to do with these two evil conditions, are there not?

Theaetetus:: What are they?

Stranger:: For deformity there is gymnastics, and for disease medicine.

Theaetetus:: That is clear.

Stranger:: Hence for insolence and injustice and cowardice is not the corrective art the one of all arts most closely related to Justice?

Theaetetus:: Probably it is, at least according to the judgment of mankind.

Stranger:: And for all sorts of ignorance is there any art it would be more correct to suggest than that of instruction?

Theaetetus:: No, none.

Stranger:: Come now, think. Shall we say that there is only one kind of instruction, or that there are more and that two are the most important?

Theaetetus:: I am thinking.

Stranger:: I think we can find out most quickly in this way.

Theaetetus:: In what way?

Stranger:: By seeing whether ignorance admits of being cut in two in the middle; for if ignorance turns out to be twofold, it is clear that instruction must also consist of two parts, one for each part of ignorance.

Theaetetus:: Well, can you see what you are now looking for?

Stranger:: I at any rate think I do see one large and grievous kind of ignorance, separate from the rest, and as weighty as all the other parts put together.

Theaetetus:: What is it?

Stranger:: Thinking that one knows a thing when one does not know it. Through this, I believe, all the mistakes of the mind are caused in all of us.

Theaetetus:: True.

Stranger:: And furthermore to this kind of ignorance alone the name of stupidity is given.

Theaetetus:: Certainly.

Stranger:: Now what name is to be given to that part of instruction which gets rid of this?

Theaetetus:: I think, Stranger, that the other part is called instruction in handicraft, and that this part is here at Athens through our influence called education.

Stranger:: And so it is, Theaetetus, among nearly all the Hellenes. But we must examine further and see whether it is one and indivisible or still admits of division important enough to have a name.

Theaetetus:: Yes, we must see about that.

Stranger:: I think there is still a way in which this also may be divided.

Theaetetus:: On what principle?

Stranger:: Of instruction in arguments one method seems to be rougher, and the other section smoother.

Theaetetus:: What shall we call each of these?

Stranger:: The venerable method of our fathers, which they generally employed towards their sons, and which many still employ, of sometimes showing anger at their errors and sometimes more gently exhorting them that would most properly be called as a whole admonition.

Theaetetus:: That is true.

Stranger:: On the other hand, some appear to have convinced themselves that all ignorance is involuntary, and that he who thinks himself wise would never be willing to learn any of those things in which he believes he is clever, and that the admonitory kind of education takes a deal of trouble and accomplishes little.

Theaetetus:: They are quite right.

Stranger:: So they set themselves to cast out the conceit of cleverness in another way.

Theaetetus:: In what way?

Stranger:: They question a man about the things about which he thinks he is talking sense when he is talking nonsense; then they easily discover that his opinions are like those of men who wander, and in their discussions they collect those opinions and compare them with one another, and by the comparison they show that they contradict one another about the same things, in relation to the same things and in respect to the same things. But those who see this grow angry with themselves and gentle towards others, and this is the way in which they are freed from their high and obstinate opinions about themselves. The process of freeing them, moreover, affords the greatest pleasure to the listeners and the most lasting benefit to him who is subjected to it. For just as physicians who care for the body believe that the body cannot get benefit from any food offered to it until all obstructions are removed, so, my boy, those who purge the soul believe that the soul can receive no benefit from any teachings offered to it until someone by cross-questioning reduces him who is cross-questioned to an attitude of modesty, by removing the opinions that obstruct the teachings, and thus purges him and makes him think that he knows only what he knows, and no more.

Theaetetus:: That is surely the best and most reasonable state of mind.

Stranger:: For all these reasons, Theaetetus, we must assert that cross-questioning is the greatest and most efficacious of all purifications, and that he who is not cross-questioned, even though he be the Great King, has not been purified of the greatest taints, and is therefore uneducated and deformed in those things in which he who is to be truly happy ought to be most pure and beautiful.

Theaetetus:: Perfectly true.

Stranger:: Well then, who are those who practice this art? I am afraid to say the sophists.

Theaetetus:: Why so?

Stranger:: Lest we grant them too high a meed of honor.

Theaetetus:: But the description you have just given is very like someone of that sort.

Stranger:: Yes, and a wolf is very like a dog, the wildest like the tamest of animals. But the cautious man must be especially on his guard in the matter of resemblances, for they are very slippery things. However, let us agree that they are the sophists; for I think the strife will not be about petty discriminations when people are sufficiently on their guard.

Theaetetus:: No, probably not.

Stranger:: Then let it be agreed that part of the discriminating art is purification, and as part of purification let that which is concerned with the soul be separated off, and as part of this, instruction, and as part of instruction, education; and let us agree that the cross-questioning of empty conceit of wisdom, which has come to light in our present discussion, is nothing else than the true-born art of sophistry.

Theaetetus:: Let us agree to all that; but the sophist has by this time appeared to be so many things that I am at a loss to know what in the world to say he really is, with any assurance that I am speaking the truth.

Stranger:: No wonder you are at a loss. But it is fair to suppose that by this time he is still more at a loss to know how he can any longer elude our argument; for the proverb is right which says it is not easy to escape all the wrestlers grips. So now we must attack him with redoubled vigor.

Theaetetus:: You are right.

Stranger:: First, then, let us stop to take breath and while we are resting let us count up the number of forms in which the sophist has appeared to us. First, I believe, he was found to be a paid hunter after the young and wealthy.

Theaetetus:: Yes.

Stranger:: And secondly a kind of merchant in articles of knowledge for the soul.

Theaetetus:: Certainly.

Stranger:: And thirdly did he not turn up as a retailer of these same articles of knowledge?

Theaetetus:: Yes, and fourthly we found he was a seller of his own productions of knowledge.

Stranger:: Your memory is good; but I will try to recall the fifth case myself. He was an athlete in contests of words, who had taken for his own the art of disputation.

Theaetetus:: Yes, he was.

Stranger:: The sixth case was doubtful, but nevertheless we agreed to consider him a purger of souls, who removes opinions that obstruct learning.

Theaetetus:: Very true.

Stranger:: Then do you see that when a man appears to know many things, but is called by the name of a single art, there is something wrong about this impression, and that, in fact, the person who labors under this impression in connection with any art is clearly unable to see the common principle of the art, to which all these kinds of knowledge pertain, so that he calls him who possesses them by many names instead of one?

Theaetetus:: Something like that is very likely to be the case.

Stranger:: We must not let that happen to us in our search through lack of diligence. So let us first take up again one of our statements about the sophist. For there is one of them which seemed to me to designate him most plainly.

Theaetetus:: Which was it?

Stranger:: I think we said he was a disputer.

Theaetetus:: Yes.

Stranger:: And did we not also say that he taught this same art of disputing to others?

Theaetetus:: Certainly.

Stranger:: Now let us examine and see what the subjects are about which such men say they make their pupils able to dispute. Let us begin our examination at the beginning with this question; Is it about divine things which are invisible to others that they make people able to dispute?

Theaetetus:: That is their reputation, at any rate.

Stranger:: And how about the visible things of earth and heaven and the like?

Theaetetus:: Those are included, of course.

Stranger:: And furthermore in private conversations, when the talk is about generation and being in general, we know (do we not?) that they are clever disputants themselves and impart equal ability to others.

Theaetetus:: Certainly.

Stranger:: And how about laws and public affairs in genera]? Do they not promise to make men able to argue about those?

Theaetetus:: Yes, for nobody, to speak broadly, would attend their classes if they did not make that promise.

Stranger:: However in all arts jointly and severally what the professional ought to answer to every opponent is written down somewhere and published that he who will may learn.

Theaetetus:: You seem to refer to the text-books of Protagoras on wrestling and the other arts.

Stranger:: Yes, my friend, and to those of many other authors. But is not the art of disputation, in a word, a trained ability for arguing about all things?

Theaetetus:: Well, at any rate, it does not seem to leave much out.

Stranger:: For heavens sake, my boy, do you think that is possible? For perhaps you young people may look at the matter with sharper vision than our duller sight.

Theaetetus:: What do you mean and just what do you refer to? I do not yet understand your question.

Stranger:: I ask whether it is possible for a man to know all things.

Theaetetus:: If that were possible, Stranger, ours would indeed be a blessed race.

Stranger:: How, then, can one who is himself ignorant say anything worth while in arguing with one who knows?

Theaetetus:: He cannot at all.

Stranger:: Then what in the world can the magical power of the sophistical art be?

Theaetetus:: Magical power in what respect?

Stranger:: In the way in which they are able to make young men think that they themselves are in all matters the wisest of men. For it is clear that if they neither disputed correctly nor seemed to the young men to do so, or again if they did seem to dispute rightly but were not considered wiser on that account, nobody, to quote from you, would care to pay them money to become their pupil in these subjects.

Theaetetus:: Certainly not.

Stranger:: But now people do care to do so?

Theaetetus:: Very much.

Stranger:: Yes, for they are supposed, I fancy, to have knowledge themselves of the things about which they dispute.

Theaetetus:: Of course.

Stranger:: And they do that about all things, do they not?

Theaetetus:: Yes.

Stranger:: Then they appear to their pupils to be wise in all things.

Theaetetus:: To be sure.

Stranger:: Though they are not; for that was shown to be impossible.

Theaetetus:: Of course it is impossible.

Stranger:: Then it is a sort of knowledge based upon mere opinion that the sophist has been shown to possess about all things, not true knowledge.

Theaetetus:: Certainly; and I shouldn’t be surprised if that were the most accurate statement we have made about him so far.

Stranger:: Let us then take a clearer example to explain this.

Theaetetus:: What sort of an example?

Stranger:: This one; and try to pay attention and to give a very careful answer to my question.

Theaetetus:: What is the question?

Stranger:: If anyone should say that by virtue of a single art he knew how, not to assert or dispute, but to do and make all things.

Theaetetus:: What do you mean by all things?

Stranger:: You fail to grasp the very beginning of what I said; for apparently you do not understand the word all.

Theaetetus:: No, I do not.

Stranger:: I mean you and me among the all, and the other animals besides, and the trees.

Theaetetus:: What do you mean?

Stranger:: If one should say that he would make you and me and all other created beings.

Theaetetus:: What would he mean by making? Evidently you will not say that he means a husbandman; for you said he was a maker of animals also.

Stranger:: Yes, and of sea and earth and heaven and gods and everything else besides; and, moreover, he makes them all quickly and sells them for very little.

Theaetetus:: This is some joke of yours.

Stranger:: Yes? And when a man says that he knows all things and can teach them to another for a small price in a little time, must we not consider that a joke?

Theaetetus:: Surely we must.

Stranger:: And is there any more artistic or charming kind of joke than the imitative kind?

Theaetetus:: Certainly not; for it is of very frequent occurrence and, if I may say so, most diverse. Your expression is very comprehensive.

Stranger:: And so we recognize that he who professes to be able by virtue of a single art to make all things will be able by virtue of the painters art, to make imitations which have the same names as the real things, and by showing the pictures at a distance will be able to deceive the duller ones among young children into the belief that he is perfectly able to accomplish in fact whatever he wishes to do.

Theaetetus:: Certainly.

Stranger:: Well then, may we not expect to find that there is another art which has to do with words, by virtue of which it is possible to bewitch the young through their ears with words while they are still standing at a distance from the realities of truth, by exhibiting to them spoken images of all things, so as to make it seem that they are true and that the speaker is the wisest of all men in all things?

Theaetetus:: Why should there not be such another art?

Stranger:: Now most of the hearers, Theaetetus, when they have lived longer and grown older, will perforce come closer to realities and will be forced by sad experience openly to lay hold on realities; they will have to change the opinions which they had at first accepted, so that what was great will appear small and what was easy, difficult, and all the apparent truths in arguments will be turned topsy-turvy by the facts that have come upon them in real life. Is not this true?

Theaetetus:: Yes, at least so far as one of my age can judge. But I imagine I am one of those who are still standing at a distance.

Stranger:: Therefore all of us elders here will try, and are now trying, to bring you as near as possible without the sad experience. So answer this question about the sophist; Is this now clear, that he is a kind of a juggler, an imitator of realities, or are we still uncertain whether he may not truly possess the knowledge of all the things about which he seems to be able to argue?

Theaetetus:: How could that be, my dear sir? Surely it is pretty clear by this time from what has been said that he is one of those whose business is entertainment.

Stranger:: That is to say, he must be classed as a juggler and imitator.

Theaetetus:: Of course he must.

Stranger:: Look sharp, then; it is now our business not to let the beast get away again, for we have almost got him into a kind of encircling net of the devices we employ in arguments about such subjects, so that he will not now escape the next thing.

Theaetetus:: What next thing?

Stranger:: The conclusion that he belongs to the class of conjurers.

Theaetetus:: I agree to that opinion of him, too.

Stranger:: It is decided, then, that we will as quickly as possible divide the image-making art and go down into it, and if the sophist stands his ground against us at first, we will seize him by the orders of reason, our king, then deliver him up to the king and display his capture. But if he tries to take cover in any of the various sections of the imitative art, we must follow him, always dividing the section into which he has retreated, until he is caught. For assuredly neither he nor any other creature will ever boast of having escaped from pursuers who are able to follow up the pursuit in detail and everywhere in this methodical way.

Theaetetus:: You are right. That is what we must do.

Stranger:: To return, then, to our previous method of division, I think I see this time also two classes of imitation, but I do not yet seem to be able to make out in which of them the form we are seeking is to be found.

Theaetetus:: Please first make the division and tell us what two classes you mean.

Stranger:: I see the likeness-making art as one part of imitation. This is met with, as a rule, whenever anyone produces the imitation by following the proportions of the original in length, breadth, and depth, and giving, besides, the appropriate colors to each part.

Theaetetus:: Yes, but do not all imitators try to do this?

Stranger:: Not those who produce some large work of sculpture or painting. For if they reproduced the true proportions of beautiful forms, the upper parts, you know, would seem smaller and the lower parts larger than they ought, because we see the former from a distance, the latter from near at hand.

Theaetetus:: Certainly.

Stranger:: So the artists abandon the truth and give their figures not the actual proportions but those which seem to be beautiful, do they not?

Theaetetus:: Certainly.

Stranger:: That, then, which is other, but like, we may fairly call a likeness, may we not?

Theaetetus:: Yes.

Stranger:: And the part of imitation which is concerned with such things, is to be called, as we called it before, likeness-making?

Theaetetus:: It is to be so called.

Stranger:: Now then, what shall we call that which appears, because it is seen from an unfavorable position, to be like the beautiful, but which would not even be likely to resemble that which it claims to be like, if a person were able to see such large works adequately? Shall we not call it, since it appears, but is not like, an appearance?

Theaetetus:: Certainly.

Stranger:: And this is very common in painting and in all imitation?

Theaetetus:: Of course.

Stranger:: And to the art which produces appearance, but not likeness, the most correct name we could give would be fantastic art, would it not?

Theaetetus:: By all means.

Stranger:: These, then, are the two forms of the image-making art that I meant, the likeness-making and the fantastic.

Theaetetus:: You are right.

Stranger:: But I was uncertain before in which of the two the sophist should be placed, and even now I cannot see clearly. The fellow is really wonderful and very difficult to keep in sight, for once more, in the very cleverest manner he has withdrawn into a baffling classification where it is hard to track him.

Theaetetus:: So it seems.

Stranger:: Do you assent because you recognize the fact, or did the force of habit hurry you along to a speedy assent?

Theaetetus:: What do you mean, and why did you say that?

Stranger:: We are really, my dear friend, engaged in a very difficult investigation; for the matter of appearing and seeming, but not being, and of saying things, but not true ones all this is now and always has been very perplexing. You see, Theaetetus, it is extremely difficult to understand how a man is to say or think that falsehood really exists and in saying this not be involved in contradiction.

Theaetetus:: Why?

Stranger:: This statement involves the bold assumption that not-being exists, for otherwise falsehood could not come into existence. But the great Parmenides, my boy, from the time when we were children to the end of his life, always protested against this and constantly repeated both in prose and in verse;

> Never let this thought prevail, saith he, that not-being is;
>
> But keep your mind from this way of investigation.

So that is his testimony, and a reasonable examination of the statement itself would make it most absolutely clear. Let us then consider this matter first, if its all the same to you.

Theaetetus:: Assume my consent to anything you wish. Consider only the argument, how it may best be pursued; follow your own course, and take me along with you.

Stranger:: Very well, then. Now tell me; do we venture to use the phrase absolute not-being?

Theaetetus:: Of course.

Stranger:: If, then, not merely for the sake of discussion or as a joke, but seriously, one of his pupils were asked to consider and answer the question To what is the designation not-being to be applied? how do we think he would reply to his questioner, and how would he apply the term, for what purpose, and to what object?

Theaetetus:: That is a difficult question; I may say that for a fellow like me it is unanswerable.

Stranger:: But this is clear, anyhow, that the term not-being cannot be applied to any being.

Theaetetus:: Of course not.

Stranger:: And if not to being, then it could not properly be applied to something, either.

Theaetetus:: How could it?

Stranger:: And this is plain to us, that we always use the word something of some being, for to speak of something in the abstract, naked, as it were, and disconnected from all beings is impossible, is it not?

Theaetetus:: Yes, it is.

Stranger:: You assent because you recognize that he who says something must say some one thing?

Theaetetus:: Yes.

Stranger:: And you will agree that something or some in the singular is the sign of one, in the dual of two, and in the plural of many.

Theaetetus:: Of course.

Stranger:: And he who says not something, must quite necessarily say absolutely nothing.

Theaetetus:: Quite necessarily.

Stranger:: Then we cannot even concede that such a person speaks, but says nothing? We must even declare that he who undertakes to say not-being does not speak at all?

Theaetetus:: The argument could go no further in perplexity.

Stranger:: Boast not too soon! For there still remains, my friend, the first and greatest of perplexities. It affects the very beginning of the matter.

Theaetetus:: What do you mean? Do not hesitate to speak.

Stranger:: To that which is may be added or attributed some other thing which is?

Theaetetus:: Of course.

Stranger:: But shall we assert that to that which is not anything which is can be attributed?

Theaetetus:: Certainly not.

Stranger:: Now we assume that all number is among the things which are.

Theaetetus:: Yes, if anything can be assumed to be.

Stranger:: Then let us not even undertake to attribute either the singular or the plural of number to not-being.

Theaetetus:: We should, apparently, not be right in undertaking that, as our argument shows.

Stranger:: How then could a man either utter in speech or even so much as conceive in his mind things which are not, or not-being, apart from number?

Theaetetus:: Tell me how number is involved in such conceptions.

Stranger:: When we say things which are not, do we not attribute plurality to them?

Theaetetus:: Certainly.

Stranger:: And in saying a thing which is not do we not equally attribute the singular number?

Theaetetus:: Obviously.

Stranger:: And yet we assert that it is neither right nor fair to undertake to attribute being to not-being.

Theaetetus:: Very true.

Stranger:: Do you see, then, that it is impossible rightly to utter or to say or to think of not-being without any attribute, but it is a thing inconceivable, inexpressible, unspeakable, irrational?

Theaetetus:: Absolutely.

Stranger:: Then was I mistaken just now in saying that the difficulty I was going to speak of was the greatest in our subject?

Theaetetus:: But is there a still greater one that we can mention?

Stranger:: Why, my dear fellow, don't you see, by the very arguments we have used, that not-being reduces him who would refute it to such difficulties that when he attempts to refute it he is forced to contradict himself?

Theaetetus:: What do you mean? Speak still more clearly.

Stranger:: You must not look for more clearness in me; for although I maintained that not-being could have nothing to do with either the singular or the plural number, I spoke of it just now, and am still speaking of it, as one; for I say that which is not. You understand surely?

Theaetetus:: Yes.

Stranger:: And again a little while ago I said it was inexpressible, unspeakable, irrational. Do you follow me?

Theaetetus:: Yes, of course.

Stranger:: Then when I undertook to attach the verb to be to not-being I was contradicting what I said before.

Theaetetus:: Evidently.

Stranger:: Well, then; when I attached this verb to it, did I not address it in the singular?

Theaetetus:: Yes.

Stranger:: And when I called it irrational, inexpressible, and unspeakable, I addressed my speech to it as singular.

Theaetetus:: Of course you did.

Stranger:: But we say that, if one is to speak correctly, one must not define it as either singular or plural, and must not even call it it at all; for even by this manner of referring to it one would be giving it the form of the singular.

Theaetetus:: Certainly.

Stranger:: But poor me, what can anyone say of me any longer? For you would find me now, as always before, defeated in the refutation of not-being. So, as I said before, we must not look to me for correctness of speech about not-being. But come now, let us look to you for it.

Theaetetus:: What do you mean?

Stranger:: Come, I beg of you, make a sturdy effort, young man as you are, and try with might and main to say something correctly about not-being, without attributing to it either existence or unity or plurality.

Theaetetus:: But I should be possessed of great and absurd eagerness for the attempt, if I were to undertake it with your experience before my eyes.

Stranger:: Well, if you like, let us say no more of you and me; but until we find someone who can accomplish this, let us confess that the sophist has in most rascally fashion hidden himself in a place we cannot explore.

Theaetetus:: That seems to be decidedly the case.

Stranger:: And so, if we say he has an art, as it were, of making appearances, he will easily take advantage of our poverty of terms to make a counter attack, twisting our words to the opposite meaning; when we call him an image-maker, he will ask us what we mean by image, exactly. So, Theaetetus, we must see what reply is to be made to the young mans question.

Theaetetus:: Obviously we shall reply that we mean the images in water and in mirrors, and those in paintings, too, and sculptures, and all the other things of the same sort.

Stranger:: It is evident, Theaetetus, that you never saw a sophist.

Theaetetus:: Why?

Stranger:: He will make you think his eyes are shut or he has none at all.

Theaetetus:: How so?

Stranger:: When you give this answer, if you speak of something in mirrors or works of art, he will laugh at your words, when you talk to him as if he could see. He will feign ignorance of mirrors and water and of sight altogether, and will question you only about that which is deduced from your words.

Theaetetus:: What is that?

Stranger:: That which exists throughout all these things which you say are many but which you saw fit to call by one name, when you said image of them all, as if they were all one thing. So speak and defend yourself. Do not give way to the man at all.

Theaetetus:: Why, Stranger, what can we say an image is, except another such thing fashioned in the likeness of the true one?

Stranger:: Do you mean another such true one, or in what sense did you say such?

Theaetetus:: Not a true one by any means, but only one like the true.

Stranger:: And by the true you mean that which really is?

Theaetetus:: Exactly.

Stranger:: And the not true is the opposite of the true?

Theaetetus:: Of course.

Stranger:: That which is like, then, you say does not really exist, if you say it is not true.

Theaetetus:: But it does exist, in a way.

Stranger:: But not truly, you mean.

Theaetetus:: No, except that it is really a likeness.

Stranger:: Then what we call a likeness, though not really existing, really does exist?

Theaetetus:: Not-being does seem to have got into some such entanglement with being, and it is very absurd.

Stranger:: Of course it is absurd. You see, at any rate, how by this interchange of words the many-headed sophist has once more forced us against our will to admit that not-being exists in a way.

Theaetetus:: Yes, I see that very well.

Stranger:: Well then, how can we define his art without contradicting ourselves?

Theaetetus:: Why do you say that? What are you afraid of?

Stranger:: When, in talking about appearance, we say that he deceives and that his art is an art of deception, shall we say that our mind is misled by his art to hold a false opinion, or what shall we say?

Theaetetus:: We shall say that. What else could we say?

Stranger:: But, again, false opinion will be that which thinks the opposite of reality, will it not?

Theaetetus:: Yes.

Stranger:: You mean, then, that false opinion thinks things which are not?

Theaetetus:: Necessarily.

Stranger:: Does it think that things which are not, are not, or that things which are not at all, in some sense are?

Theaetetus:: It must think that things which are not in some sense are that is, if anyone is ever to think falsely at all, even in a slight degree.

Stranger:: And does it not also think that things which certainly are, are not at all?

Theaetetus:: Yes.

Stranger:: And this too is falsehood?

Theaetetus:: Yes, it is.

Stranger:: And therefore a statement will likewise be considered false, if it declares that things which are, are not, or that things which are not, are.

Theaetetus:: In what other way could a statement be made false?

Stranger:: Virtually in no other way; but the sophist will not assent to this. Or how can any reasonable man assent to it, when the expressions we just agreed upon were previously agreed to be inexpressible, unspeakable, irrational, and inconceivable? Do we understand his meaning, Theaetetus?

Theaetetus:: Of course we understand that he will say we are contradicting our recent statements, since we dare to say that falsehood exists in opinions and words; for he will say that we are thus forced repeatedly to attribute being to not-being, although we agreed a while ago that nothing could be more impossible than that.

Stranger:: You are quite right to remind me. But I think it is high time to consider what ought to be done about the sophist; for you see how easily and repeatedly he can raise objections and difficulties, if we conduct our search by putting him in the guild of false-workers and jugglers.

Theaetetus:: Very true.

Stranger:: Yes, we have gone through only a small part of them, and they are, if I may say so, infinite.

Theaetetus:: It would, apparently, be impossible to catch the sophist, if that is the case.

Stranger:: Well, then, shall we weaken and give up the struggle now?

Theaetetus:: No, I say; we must not do that, if we can in any way get the slightest hold of the fellow.

Stranger:: Will you then pardon me, and, as your words imply, be content if I somehow withdraw just for a short distance from this strong argument of his?

Theaetetus:: Of course I will.

Stranger:: I have another still more urgent request to make of you.

Theaetetus:: What is it?

Stranger:: Do not assume that I am becoming a sort of parricide.

Theaetetus:: What do you mean?

Stranger:: In defending myself I shall have to test the theory of my father Parmenides, and contend forcibly that after a fashion not-being is and on the other hand in a sense being is not.

Theaetetus:: It is plain that some such contention is necessary.

Stranger:: Yes, plain even to a blind man, as they say; for unless these statements are either disproved or accepted, no one who speaks about false words, or false opinion whether images or likenesses or imitations or appearances or about the arts which have to do with them, can ever help being forced to contradict himself and make himself ridiculous.

Theaetetus:: Very true.

Stranger:: And so we must take courage and attack our fathers theory here and now, or else, if any scruples prevent us from doing this, we must give the whole thing up.

Theaetetus:: But nothing in the world must prevent us.

Stranger:: Then I have a third little request to make of you.

Theaetetus:: You have only to utter it.

Stranger:: I said a while ago that I always have been too faint-hearted for the refutation of this theory, and so I am now.

Theaetetus:: Yes, so you did.

Stranger:: I am afraid that on account of what I have said you will think I am mad because I have at once reversed my position. You see it is for your sake that I am going to undertake the refutation, if I succeed in it.

Theaetetus:: I certainly shall not think you are doing anything improper if you proceed to your refutation and proof; so go ahead boldly, so far as that is concerned.

Stranger:: Well, what would be a good beginning of a perilous argument? Ah, my boy, I believe the way we certainly must take is this.

Theaetetus:: What way?

Stranger:: We must first examine the points which now seem clear, lest we may have fallen into some confusion about them and may therefore carelessly agree with one another, thinking that we are judging correctly.

Theaetetus:: Express your meaning more clearly.

Stranger:: It seems to me that Parmenides and all who ever undertook a critical definition of the number and nature of realities have talked to us rather carelessly.

Theaetetus:: How so?

Stranger:: Every one of them seems to tell us a story, as if we were children. One says there are three principles, that some of them are sometimes waging a sort of war with each other, and sometimes become friends and marry and have children and bring them up; and another says there are two, wet and dry or hot and cold, which he settles together and unites in marriage. And the Eleatic sect in our region, beginning with Xenophanes and even earlier, have their story that all things, as they are called, are really one. Then some Ionian and later some Sicilian Muses reflected that it was safest to combine the two tales and to say that being is many and one, and is (or are) held together by enmity and friendship. For the more strenuous Muses say it is always simultaneously coming together and separating; but the gentler ones relaxed the strictness of the doctrine of perpetual strife; they say that the all is sometimes one and friendly, under the influence of Aphrodite, and sometimes many and at variance with itself by reason of some sort of strife. Now whether any of them spoke the truth in all this, or not, it is harsh and improper to impute to famous men of old such a great wrong as falsehood. But one assertion can be made without offence.

Theaetetus:: What is that?

Stranger:: That they paid too little attention and consideration to the mass of people like ourselves. For they go on to the end, each in his own way, without caring whether their arguments carry us along with them, or whether we are left behind.

Theaetetus:: What do you mean?

Stranger:: When one of them says in his talk that many, or one, or two are, or have become, or are becoming, and again speaks of hot mingling with cold, and in some other part of his discourse suggests separations and combinations, for heavens sake, Theaetetus, do you ever understand what they mean by any of these things? I used to think, when I was younger, that I understood perfectly whenever anyone used this term not-being, which now perplexes us. But you see what a slough of perplexity we are in about it now.

Theaetetus:: Yes, I see.

Stranger:: And perhaps our minds are in this same condition as regards being also; we may think that it is plain sailing and that we understand when the word is used, though we are in difficulties about not-being, whereas really we understand equally little of both.

Theaetetus:: Perhaps.

Stranger:: And we may say the same of all the subjects about which we have been speaking.

Theaetetus:: Certainly.

Stranger:: We will consider most of them later, if you please, but now the greatest and foremost chief of them must be considered.

Theaetetus:: What do you mean? Or, obviously, do you mean that we must first investigate the term being, and see what those who use it think it signifies?

Stranger:: You have caught ray meaning at once, Theaetetus. For I certainly do mean that this is the best method for us to use, by questioning them directly, as if they were present in person; so here goes; Come now, all you who say that hot and cold or any two such principles are the universe, what is this that you attribute to both of them when you say that both and each are? What are we to understand by this being (or are) of yours? Is this a third principle besides those two others, and shall we suppose that the universe is three, and not two any longer, according to your doctrine? For surely when you call one only of the two being you do not mean that both of them equally are; for in both cases they would pretty certainly be one and not two.

Theaetetus:: True.

Stranger:: Well, then, do you wish to call both of them together being?

Theaetetus:: Perhaps.

Stranger:: But, friends, we will say, even in that way you would very clearly be saying that the two are one.

Theaetetus:: You are perfectly right.

Stranger:: Then since we are in perplexity, do you tell us plainly what you wish to designate when you say being. For it is clear that you have known this all along, whereas we formerly thought we knew, but are now perplexed. So first give us this information, that we may not think we understand what you say, when the exact opposite is the case. If we speak in this way and make this request of them and of all who say that the universe is more than one, shall we, my boy, be doing anything improper?

Theaetetus:: Not in the least.

Stranger:: Well then, must we not, so far as we can, try to learn from those who say that the universe is one what they mean when they say being?

Theaetetus:: Of course we must.

Stranger:: Then let them answer this question; Do you say that one only is? We do, they will say; will they not?

Theaetetus:: Yes.

Stranger:: Well then, do you give the name of being to anything?

Theaetetus:: Yes.

Stranger:: Is it what you call one, using two names for the same thing, or how is this?

Theaetetus:: What is their next answer, Stranger?

Stranger:: It is plain, Theaetetus, that he who maintains their theory will not find it the easiest thing in the world to reply to our present question or to any other.

Theaetetus:: Why not?

Stranger:: It is rather ridiculous to assert that two names exist when you assert that nothing exists but unity.

Theaetetus:: Of course it is.

Stranger:: And in general there would be no sense in accepting the statement that a name has any existence.

Theaetetus:: Why?

Stranger:: Because he who asserts that the name is other than the thing, says that there are two entities.

Theaetetus:: Yes.

Stranger:: And further, if he asserts that the name is the same as the thing, he will be obliged to say that it is the name of nothing, or if he says it is the name of something, the name will turn out to be the name of a name merely and of nothing else.

Theaetetus:: True.

Stranger:: And the one will turn out to be the name of one and also the one of the name.

Theaetetus:: Necessarily.

Stranger:: And will they say that the whole is other than the one which exists or the same with it?

Theaetetus:: Of course they will and do say it is the same.

Stranger:: If then the whole is, as Parmenides says;

> On all sides like the mass of a well-rounded sphere,
> equally weighted in every direction from the middle;
> for neither greater nor less must needs be on this or that;

then being, being such as he describes it, has a centre and extremes, and, having these, must certainly have parts, must it not?

Theaetetus:: Certainly.

Stranger:: But yet nothing hinders that which has parts from possessing the attribute of unity in all its parts and being in this way one, since it is all and whole.

Theaetetus:: Very true.

Stranger:: But is it not impossible for that which is in this condition to be itself absolute unity?

Theaetetus:: Why?

Stranger:: Why surely that which is really one must, according to right reason, be affirmed to be absolutely without parts.

Theaetetus:: Yes, it must.

Stranger:: But such a unity consisting of many parts will not harmonize with reason.

Theaetetus:: I understand.

Stranger:: Then shall we agree that being is one and a whole because it has the attribute of unity, or shall we deny that being is a whole at all?

Theaetetus:: It is a hard choice that you offer me.

Stranger:: That is very true; for being, having in a way had unity imposed upon it, will evidently not be the same as unity, and the all will be more than one.

Theaetetus:: Yes.

Stranger:: And further, if being is not a whole through having had the attribute of unity imposed upon it, and the absolute whole exists, then it turns out that being lacks something of being.

Theaetetus:: Certainly.

Stranger:: And so, by this reasoning, since being is deprived of being, it will be not-being.

Theaetetus:: So it Will.

Stranger:: And again the all becomes more than the one, since being and the whole have acquired each its own nature.

Theaetetus:: Yes.

Stranger:: But if the whole does not exist at all, being is involved in the same difficulties as before, and besides not existing it could not even have ever come into existence.

Theaetetus:: What do you mean?

Stranger:: That which comes into existence always comes into existence as a whole. Therefore no one who does not reckon the whole among things that are can speak of existence or generation as being.

Theaetetus:: That certainly seems to be true.

Stranger:: And moreover, that which is not a whole cannot have any quantity at all; for if it has any quantity, whatever that quantity may be, it must necessarily be of that quantity as a whole.

Theaetetus:: Precisely.

Stranger:: And so countless other problems, each one involving infinite difficulties, will confront him who says that being is, whether it be two or only one.

Theaetetus:: The problems now in sight make that pretty clear; for each leads up to another which brings greater and more grievous wandering in connection with whatever has previously been said.

Stranger:: Now we have not discussed all those who treat accurately of being and not-being; however, let this suffice. But we must turn our eyes to those whose doctrines are less precise, that we may know from all sources that it is no easier to define the nature of being than that of not-being.

Theaetetus:: Very well, then, we must proceed towards those others also.

Stranger:: And indeed there seems to be a battle like that of the gods and the giants going on among them, because of their disagreement about existence.

Theaetetus:: How so?

Stranger:: Some of them drag down everything from heaven and the invisible to earth, actually grasping rocks and trees with their hands; for they lay their hands on all such things and maintain stoutly that that alone exists which can be touched and handled; for they define existence and body, or matter, as identical, and if anyone says that anything else, which has no body, exists, they despise him utterly, and will not listen to any other theory than their own.

Theaetetus:: Terrible men they are of whom you speak. I myself have met with many of them.

Stranger:: Therefore those who contend against them defend themselves very cautiously with weapons derived from the invisible world above, maintaining forcibly that real existence consists of certain ideas which are only conceived by the mind and have no body. But the bodies of their opponents, and that which is called by them truth, they break up into small fragments in their arguments, calling them, not existence, but a kind of generation combined with motion. There is always, Theaetetus, a tremendous battle being fought about these questions between the two parties.

Theaetetus:: True.

Stranger:: Let us, therefore, get from each party in turn a statement in defense of that which they regard as being.

Theaetetus:: How shall we get it?

Stranger:: It is comparatively easy to get it from those who say that it consists in ideas, for they are peaceful folk; but from those who violently drag down everything into matter, it is more difficult, perhaps even almost impossible, to get it. However, this is the way I think we must deal with them.

Theaetetus:: What way?

Stranger:: Our first duty would be to make them really better, if it were in any way possible; but if this cannot be done, let us pretend that they are better, by assuming that they would be willing to answer more in accordance with the rules of dialectic than they actually are. For the acknowledgement of anything by better men is more valid than if made by worse men. But it is not these men that we care about; we merely seek the truth.

Theaetetus:: Quite right.

Stranger:: Now tell them, assuming that they have become better, to answer you, and do you interpret what they say.

Theaetetus:: I will do so.

Stranger:: Let them tell whether they say there is such a thing as a mortal animal.

Theaetetus:: Of course they do.

Stranger:: And they agree that this is a body with a soul in it, do they not?

Theaetetus:: Certainly.

Stranger:: Giving to soul a place among things which exist?

Theaetetus:: Yes.

Stranger:: Well then, do they not say that one soul is just and another unjust, one wise and another foolish?

Theaetetus:: Of course.

Stranger:: And do they not say that each soul becomes just by the possession and presence of justice, and the opposite by the possession and presence of the opposite?

Theaetetus:: Yes, they agree to this also.

Stranger:: But surely they will say that that which is capable of becoming present or absent exists.

Theaetetus:: Yes, they say that.

Stranger:: Granting, then, that justice and wisdom and virtue in general and their opposites exist, and also, of course, the soul in which they become present, do they say that any of these is visible and tangible, or that they are all invisible?

Theaetetus:: That none of them is visible, or pretty nearly that.

Stranger:: Now here are some other questions. Do they say they possess any body?

Theaetetus:: They no longer answer the whole of that question in the same way. They say they believe the soul itself has a sort of body, but as to wisdom and the other several qualities about which you ask, they have not the face either to confess that they have no existence or to assert that they are all bodies.

Stranger:: It is clear, Theaetetus, that our men have grown better; for the aboriginal sons of the dragon's teeth 1 among them would not shrink from any such utterance; they would maintain that nothing which they cannot squeeze with their hands has any existence at all.

Theaetetus:: That is pretty nearly what they believe.

Stranger:: Then let us question them further; for if they are willing to admit that any existence, no matter how small, is incorporeal, that is enough. They will then have to tell what that is which is inherent in the incorporeal and the corporeal alike, and which they have in mind when they say that both exist. Perhaps they would be at a loss for an answer; and if they are in that condition, consider whether they might not accept a suggestion if we offered it, and might not agree that the nature of being is as follows.

Theaetetus:: What is it? Speak, and we shall soon know.

Stranger:: I suggest that everything which possesses any power of any kind, either to produce a change in anything of any nature or to be affected even in the least degree by the slightest cause, though it be only on one occasion, has real existence. For I set up as a definition which defines being, that it is nothing else than power.

Theaetetus:: Well, since they have at the moment nothing better of their own to offer, they accept this.

Stranger:: Good; for perhaps later something else may occur both to them and to us. As between them and us, then, let us assume that this is for the present agreed upon and settled.

Theaetetus:: It is settled.

Stranger:: Then let us go to the others, the friends of ideas; and do you interpret for us their doctrines also.

Theaetetus:: I will.

Stranger:: You distinguish in your speech between generation and being, do you not?

Theaetetus:: Yes, we do.

Stranger:: And you say that with the body, by means of perception, we participate in generation, and with the soul, by means of thought, we participate in real being, which last is always unchanged and the same, whereas generation is different at different times.

Theaetetus:: Yes, that is what we say.

Stranger:: But, most excellent men, how shall we define this participation which you attribute to both? Is it not that of which we were just speaking?

Theaetetus:: What is that?

Stranger:: A passive or active condition arising out of some power which is derived from a combination of elements. Possibly, Theaetetus, you do not hear their reply to this, but I hear it, perhaps, because I am used to them.

Theaetetus:: What is it, then, that they say?

Stranger:: They do not concede to us what we said just now to the aboriginal giants about being.

Theaetetus:: What was it?

Stranger:: We set up as a satisfactory sort of definition of being, the presence of the power to act or be acted upon in even the slightest degree.

Theaetetus:: Yes.

Stranger:: It is in reply to this that they say generation participates in the power of acting and of being acted upon, but that neither power is connected with being.

Theaetetus:: And is there not something in that?

Stranger:: Yes, something to which we must reply that we still need to learn more clearly from them whether they agree that the soul knows and that being is known.

Theaetetus:: They certainly assent to that.

Stranger:: Well then, do you say that knowing or being known is an active or passive condition, or both? Or that one is passive and the other active?

Or that neither has any share at all in either of the two?

Theaetetus:: Clearly they would say that neither has any share in either; for otherwise they would be contradicting themselves.

Stranger:: I understand; this at least is true, that if to know is active, to be known must in turn be passive. Now being, since it is, according to this theory, known by the intelligence, in so far as it is known, is moved, since it is acted upon, which we say cannot be the case with that which is in a state of rest.

Theaetetus:: Right.

Stranger:: But for heaven's sake, shall we let ourselves easily be persuaded that motion and life and soul and mind are really not present to absolute being, that it neither lives nor thinks, but awful and holy, devoid of mind, is fixed and immovable?

Theaetetus:: That would be a shocking admission to make, Stranger.

Stranger:: But shall we say that it has mind, but not life?

Theaetetus:: How can we?

Stranger:: But do we say that both of these exist in it, and yet go on to say that it does not possess them in a soul?

Theaetetus:: But how else can it possess them?

Stranger:: Then shall we say that it has mind and life and soul, but, although endowed with soul, is absolutely immovable?

Theaetetus:: All those things seem to me absurd.

Stranger:: And it must be conceded that motion and that which is moved exist.

Theaetetus:: Of course.

Stranger:: Then the result is, Theaetetus, that if there is no motion, there is no mind in anyone about anything anywhere.

Theaetetus:: Exactly.

Stranger:: And on the other hand, if we admit that all things are in flux and motion, we shall remove mind itself from the number of existing things by this theory also.

Theaetetus:: How so?

Stranger:: Do you think that sameness of quality or nature or relations could ever come into existence without the state of rest?

Theaetetus:: Not at all.

Stranger:: What then? Without these can you see how mind could exist or come into existence anywhere?

Theaetetus:: By no means.

Stranger:: And yet we certainly must contend by every argument against him who does away with knowledge or reason or mind and then makes any dogmatic assertion about anything.

Theaetetus:: Certainly.

Stranger:: Then the philosopher, who pays the highest honor to these things, must necessarily, as it seems, because of them refuse to accept the theory of those who say the universe is at rest, whether as a unity or in many forms, and must also refuse utterly to listen to those who say that being is universal motion; he must quote the children's prayer, “all things immovable and in motion,” and must say that being and the universe consist of both.

Theaetetus:: Very true.

Stranger:: Do we not, then, seem to have attained at last a pretty good definition of being?

Theaetetus:: Certainly.

Stranger:: But dear me, Theaetetus! I think we are now going to discover the difficulty of the inquiry about being.

Theaetetus:: What is this again? What do you mean?

Stranger:: My dear fellow, don't you see that we are now densely ignorant about it, but think that we are saying something worth while?

Theaetetus:: I think so, at any rate, and I do not at all understand what hidden error we have fallen into.

Stranger:: Then watch more closely and see whether, if we make these admissions, we may not justly be asked the same questions we asked a while ago of those who said the universe was hot and cold.

Theaetetus:: What questions? Remind me.

Stranger:: Certainly; and I will try to do this by questioning you, as we questioned them at the time. I hope we shall at the same time make a little progress.

Theaetetus:: That is right.

Stranger:: Very well, then; you say that motion and rest are most directly opposed to each other, do you not?

Theaetetus:: Of course.

Stranger:: And yet you say that both and each of them equally exist?

Theaetetus:: Yes, I do.

Stranger:: And in granting that they exist, do you mean to say that both and each are in motion?

Theaetetus:: By no means.

Stranger:: But do you mean that they are at rest, when you say that both exist?

Theaetetus:: Of course not.

Stranger:: Being, then, you consider to be something else in the soul, a third in addition to these two, inasmuch as you think rest and motion are embraced by it; and since you comprehend and observe that they participate in existence, you therefore said that they are. Eh?

Theaetetus:: We really do seem to have a vague vision of being as some third thing, when we say that motion and rest are.

Stranger:: Then being is not motion and rest in combination, but something else, different from them.

Theaetetus:: Apparently.

Stranger:: According to its own nature, then, being is neither at rest nor in motion.

Theaetetus:: You are about right.

Stranger:: What is there left, then, to which a man can still turn his mind who wishes to establish within himself any clear conception of being?

Theaetetus:: What indeed?

Stranger:: There is nothing left, I think, to which he can turn easily. For if a thing is not in motion, it must surely be at rest; and again, what is not at rest, must surely be in motion. But now we find that being has emerged outside of both these classes. Is that possible, then?

Theaetetus:: No, nothing could be more impossible.

Stranger:: Then there is this further thing which we ought to remember.

Theaetetus:: What is it?

Stranger:: That when we were asked to what the appellation of not-being should be applied, we were in the greatest perplexity. Do you remember?

Theaetetus:: Of course I do.

Stranger:: Well, then, are we now in any less perplexity about being?

Theaetetus:: It seems to me, stranger, that we are, if possible, in even greater.

Stranger:: This point, then, let us put down definitely as one of complete perplexity. But since being and not-being participate equally in the perplexity, there is now at last some hope that as either of them emerges more dimly or more clearly, so also will the other emerge. If, however, we are able to see neither of them, we will at any rate push our discussion through between both of them at once as creditably as we can.

Theaetetus:: Good.

Stranger:: Let us, then, explain how we come to be constantly calling this same thing by many names.

Theaetetus:: What, for instance? Please give an example.

Stranger:: We speak of man, you know, and give him many additional designations; we attribute to him colors and forms and sizes and vices and virtues, and in all these cases and countless others we say not only that he is man, but we say he is good and numberless other things. So in the same way every single thing which we supposed to be one, we treat as many and call by many names.

Theaetetus:: True.

Stranger:: And it is in this way, I fancy, that we have provided a fine feast for youngsters and for old men whose learning has come to them late in life; for example, it is easy enough for anyone to grasp the notion that the many cannot possibly be one, nor the one many, and so, apparently, they take pleasure in saying that we must not call a man good, but must call the good good, and a man man. I fancy, Theaetetus, you often run across people who take such matters seriously; sometimes they are elderly men whose poverty of intellect makes them admire such quibbles, and who think this is a perfect mine of wisdom they have discovered.

Theaetetus:: Certainly.

Stranger:: Then, to include in our discussion all those who have ever engaged in any talk whatsoever about being, let us address our present arguments to these men as well as to all those with whom we were conversing before, and let us employ the form of questions.

Theaetetus:: What are the arguments?

Stranger:: Shall we attribute neither being to rest and motion, nor any attribute to anything, but shall we in our discussions assume that they do not mingle and cannot participate in one another? Or shall we gather all things together, believing that they are capable of combining with one another? Or are some capable of it and others not? Which of these alternatives, Theaetetus, should we say is their choice?

Theaetetus:: I cannot answer these questions for them.

Stranger:: Then why did you not answer each separately and see what the result was in each case?

Theaetetus:: A good suggestion.

Stranger:: And let us, if you please, assume that they say first that nothing has any power to combine with anything else. Then motion and rest will have no share in being, will they?

Theaetetus:: No.

Stranger:: Well, then, will either of them be, if it has no share in being?

Theaetetus:: It will not.

Stranger:: See how by this admission everything is overturned at once, as it seems the doctrine of those who advocate universal motion, that of the partisans of unity and rest, and that of the men who teach that all existing things are distributed into invariable and everlasting kinds. For all of these make use of being as an attribute. One party says that the universe "is" in motion, another that it "is" at rest.

Theaetetus:: Exactly.

Stranger:: And further, all who teach that things combine at one time and separate at another, whether infinite elements combine in unity and are derived from unity or finite elements separate and then unite, regardless of whether they say that these changes take place successively or without interruption, would be talking nonsense in all these doctrines, if there is no intermingling.

Theaetetus:: Quite right.

Stranger:: Then, too, the very men who forbid us to call anything by another name because it participates in the effect produced by another, would be made most especially ridiculous by this doctrine.

Theaetetus:: How so?

Stranger:: Because they are obliged in speaking of anything to use the expressions "to be," "apart," "from the rest," "by itself," and countless others; they are powerless to keep away from them or avoid working them into their discourse; and therefore there is no need of others to refute them, but, as the saying goes, their enemy and future opponent is of their own household whom they always carry about with them as they go, giving forth speech from within them, like the wonderful Eurycles.

Theaetetus:: That is a remarkably accurate illustration.

Stranger:: But what if we ascribe to all things the power of participation in one another?

Theaetetus:: Even I can dispose of that assumption.

Stranger:: How?

Theaetetus:: Because motion itself would be wholly at rest, and rest in turn would itself be in motion, if these two could be joined with one another.

Stranger:: But surely this at least is most absolutely impossible, that motion be at rest and rest be in motion?

Theaetetus:: Of course.

Stranger:: Then only the third possibility is left.

Theaetetus:: Yes.

Stranger:: And certainly one of these three must be true; either all things will mingle with one another, or none will do so, or some will and others will not.

Theaetetus:: Of course.

Stranger:: And certainly the first two were found to be impossible.

Theaetetus:: Yes.

Stranger:: Then everybody who wishes to answer correctly will adopt the remaining one of the three possibilities.

Theaetetus:: Precisely.

Stranger:: Now since some things will commingle and others will not, they are in much the same condition as the letters of the alphabet; for some of these do not fit each other, and others do.

Theaetetus:: Of course.

Stranger:: And the vowels, to a greater degree than the others, run through them all as a bond, so that without one of the vowels the other letters cannot be joined one to another.

Theaetetus:: Certainly.

Stranger:: Now does everybody know which letters can join with which others? Or does he who is to join them properly have need of art?

Theaetetus:: He has need of art.

Stranger:: What art?

Theaetetus:: The art of grammar.

Stranger:: And is not the same true in connection with high and low sounds? Is not he who has the art to know the sounds which mingle and those which do not, musical, and he who does not know unmusical?

Theaetetus:: Yes.

Stranger:: And we shall find similar conditions, then, in all the other arts and processes which are devoid of art?

Theaetetus:: Of course.

Stranger:: Now since we have agreed that the classes or genera also commingle with one another, or do not commingle, in the same way, must not he possess some science and proceed by the processes of reason who is to show correctly which of the classes harmonize with which, and which reject one another, and also if he is to show whether there are some elements extending through all and holding them together so that they can mingle, and again, when they separate, whether there are other universal causes of separation?

Theaetetus:: Certainly he needs science, and perhaps

even the greatest of sciences.

Stranger:: Then, Theaetetus, what name shall we give to this science? Or, by Zeus, have we unwittingly stumbled upon the science that belongs to free men and perhaps found the philosopher while we were looking for the sophist?

Theaetetus:: What do you mean?

Stranger:: Shall we not say that the division of things by classes and the avoidance of the belief that the same class is another, or another the same, belongs to the science of dialectic?

Theaetetus:: Yes, we shall.

Stranger:: Then he who is able to do this has a clear perception of one form or idea extending entirely through many individuals each of which lies apart, and of many forms differing from one another but included in one greater form, and again of one form evolved by the union of many wholes, and of many forms entirely apart and separate. This is the knowledge and ability to distinguish by classes how individual things can or cannot be associated with one another.

Theaetetus:: Certainly it is.

Stranger:: But you surely, I suppose, will not grant the art of dialectic to any but the man who pursues philosophy in purity and righteousness.

Theaetetus:: How could it be granted to anyone else?

Stranger:: Then it is in some region like this that we shall always, both now and hereafter, discover the philosopher, if we look for him; he also is hard to see clearly, but the difficulty is not the same in his case and that of the sophist.

Theaetetus:: How do they differ?

Stranger:: The sophist runs away into the darkness of not-being, feeling his way in it by practice, and is hard to discern on account of the darkness of the place. Don't you think so?

Theaetetus:: It seems likely.

Stranger:: But the philosopher, always devoting himself through reason to the idea of being, is also very difficult to see on account of the brilliant light of the place; for the eyes of the soul of the multitude are not strong enough to endure the sight of the divine.

Theaetetus:: This also seems no less true than what you said about the sophist.

Stranger:: Now we will make more accurate investigations about the philosopher hereafter, if we still care to do so; but as to the sophist, it is clear that we must not relax our efforts until we have a satisfactory view of him.

Theaetetus:: You are right.

Stranger:: Since, therefore, we are agreed that some of the classes will mingle with one another, and others will not, and some will mingle with few and others with many, and that there is nothing to hinder some from mingling universally with all, let us next proceed with our discussion by investigating, not all the forms or ideas, lest we become confused among so many, but some only, selecting them from those that are considered the most important; let us first consider their several natures, then what their power of mingling with one another is, and so, if we cannot grasp being and not-being with perfect clearness, we shall at any rate not fail to reason fully about them, so far as the method of our present inquiry permits. Let us in this way see whether it is, after all, permitted us to say that not-being really is, although not being, and yet come off unscathed.

Theaetetus:: Yes; that is the proper thing for us to do.

Stranger:: The most important, surely, of the classes or genera are those which we just mentioned; being itself and rest and motion.

Theaetetus:: Yes, by far.

Stranger:: And further, two of them, we say, cannot mingle with each other.

Theaetetus:: Decidedly not.

Stranger:: But being can mingle with both of them, for they both are.

Theaetetus:: Of course.

Stranger:: Then these prove to be three.

Theaetetus:: To be sure.

Stranger:: Each of them is, then, other than the remaining two, but the same as itself.

Theaetetus:: Yes.

Stranger:: But what do we mean by these words, the same and other which we have just used? Are they two new classes, different from the other three, but always of necessity mingled with them, and must we conduct our inquiry on the assumption that there are five classes, not three, or are we unconsciously speaking of one of those three when we say the same or other?

Theaetetus:: Perhaps.

Stranger:: But certainly motion and rest are neither other nor the same.

Theaetetus:: How so?

Stranger:: Whatever term we apply to rest and motion in common cannot be either of those two.

Theaetetus:: Why not?

Stranger:: Because motion would be at rest and rest would be in motion; in respect of both, for whichever of the two became other would force the other to change its nature into that of its opposite, since it would participate in its opposite.

Theaetetus:: Exactly so.

Stranger:: Both certainly partake of the same and the other.

Theaetetus:: Yes.

Stranger:: Then we must not say that motion, or rest either, is the same or other.

Theaetetus:: No.

Stranger:: But should we conceive of being and the same as one?

Theaetetus:: Perhaps.

Stranger:: But if being and the same have no difference of meaning, then when we go on and say that both rest and motion are, we shall be saying that they are both the same, since they are.

Theaetetus:: But surely that is impossible.

Stranger:: Then it is impossible for being and the same to be one.

Theaetetus:: Pretty nearly.

Stranger:: So we shall consider the same a fourth class in addition to the other three?

Theaetetus:: Certainly.

Stranger:: Then shall we call the other a fifth class? Or must we conceive of this and being as two names for one class?

Theaetetus:: May be.

Stranger:: But I fancy you admit that among the entities some are always conceived as absolute, and some as relative.

Theaetetus:: Of course.

Stranger:: And other is always relative to other, is it not?

Theaetetus:: Yes.

Stranger:: It would not be so, if being and the other were not utterly different. If the other, like being, partook of both absolute and relative existence, there would be also among the others that exist another not in relation to any other; but as it is, we find that whatever is other is just what it is through compulsion of some other.

Theaetetus:: The facts are as you say.

Stranger:: Then we must place the nature of the other as a fifth among the classes in which we select our examples.

Theaetetus:: Yes.

Stranger:: And we shall say that it permeates them all; for each of them is other than the rest, not by reason of its own nature, but because it partakes of the idea of the other.

Theaetetus:: Exactly.

Stranger:: Let us now state our conclusions, taking up the five classes one at a time.

Theaetetus:: How?

Stranger:: Take motion first; we say that it is entirely other than rest, do we not?

Theaetetus:: We do.

Stranger:: Then it is not rest.

Theaetetus:: Not at all.

Stranger:: But it exists, by reason of its participation in being.

Theaetetus:: Yes, it exists.

Stranger:: Now motion again is other than the same.

Theaetetus:: You're about right.

Stranger:: Therefore it is not the same.

Theaetetus:: No, it is not.

Stranger:: But yet we found it was the same, because all things partake of the same.

Theaetetus:: Certainly.

Stranger:: Then we must admit that motion is the same and is not the same, and we must not be disturbed thereby; for when we say it is the same and not the same, we do not use the words alike. When we call it the same, we do so because it partakes of the same in relation to itself, and when we call it not the same, we do so on account of its participation in the other, by which it is separated from the same and becomes not that but other, so that it is correctly spoken of in turn as not the same.

Theaetetus:: Yes, certainly.

Stranger:: Then even if absolute motion partook in any way of rest, it would not be absurd to say it was at rest?

Theaetetus:: It would be perfectly right, if we are to admit that some of the classes will mingle with one another, and others will not.

Stranger:: And surely we demonstrated that before we took up our present points; we proved that it was according to nature.

Theaetetus:: Yes, of course.

Stranger:: Then let us recapitulate; Motion is other than the other, just as we found it to be other than the same and than rest. Is that true?

Theaetetus:: Inevitably.

Stranger:: Then it is in a sense not other and also other, according to our present reasoning.

Theaetetus:: True.

Stranger:: Now how about the next point? Shall we say next that motion is other than the three, but not other than the fourth, that is, if we have agreed that the classes about which and within which we undertook to carry on our inquiry are five in number?

Theaetetus:: How can we say that? For we cannot admit that the number is less than was shown just now.

Stranger:: Then we may fearlessly persist in contending that motion is other than being?

Theaetetus:: Yes, most fearlessly.

Stranger:: It is clear, then, that motion really is not, and also that it is, since it partakes of being?

Theaetetus:: That is perfectly clear.

Stranger:: In relation to motion, then, not-being is That is inevitable. And this extends to all the classes; for in all of them the nature of other so operates as to make each one other than being, and therefore not-being. So we may, from this point of view, rightly say of all of them alike that they are not; and again, since they partake of being, that they are and have being.

Theaetetus:: Yes, I suppose so.

Stranger:: And so, in relation to each of the classes, being is many, and not-being is infinite in number.

Theaetetus:: So it seems.

Stranger:: Then being itself must also be said to be other than all other things.

Theaetetus:: Yes, it must.

Stranger:: And we conclude that whatever the number of other things is, just that is the number of the things in relation to which being is not; for not being those things, it is itself one, and again, those other things are not unlimited in number.

Theaetetus:: That is not far from the truth.

Stranger:: Then we must not be disturbed by this either, since by their nature the classes have participation in one another. But if anyone refuses to accept our present results, let him reckon with our previous arguments and then proceed to reckon with the next step.

Theaetetus:: That is very fair.

Stranger:: Then here is a point to consider.

Theaetetus:: What is it?

Stranger:: When we say not-being, we speak, I think, not of something that is the opposite of being, but only of something different.

Theaetetus:: What do you mean?

Stranger:: For instance, when we speak of a thing as not great, do we seem to you to mean by the expression what is small any more than what is of middle size?

Theaetetus:: No, of course not.

Stranger:: Then when we are told that the negative signifies the opposite, we shall not admit it; we shall admit only that the particle not indicates something different from the words to which it is prefixed, or rather from the things denoted by the words that follow the negative.

Theaetetus:: Certainly.

Stranger:: Let us consider another point and see if you agree with me.

Theaetetus:: What is it?

Stranger:: It seems to me that the nature of the other is all cut up into little bits, like knowledge.

Theaetetus:: What do you mean?

Stranger:: Knowledge, like other, is one, but each separate part of it which applies to some particular subject has a name of its own; hence there are many arts, as they are called, and kinds of knowledge, or sciences.

Theaetetus:: Yes, certainly.

Stranger:: And the same is true, by their nature, of the parts of the other, though it also is one concept.

Theaetetus:: Perhaps; but let us discuss the matter and see how it comes about.

Stranger:: Is there a part of the other which is opposed to the beautiful?

Theaetetus:: There is.

Stranger:: Shall we say that this is nameless or that it has a name?

Theaetetus:: That it has one; for that which in each case we call not-beautiful is surely the other of the nature of the beautiful and of nothing else.

Stranger:: Now, then, tell me something more.

Theaetetus:: What?

Stranger:: Does it not result from this that the not-beautiful is a distinct part of some one class of being and also, again, opposed to some class of being?

Theaetetus:: Yes.

Stranger:: Then, apparently, it follows that the not-beautiful is a contrast of being with being.

Theaetetus:: Quite right.

Stranger:: Can we, then, in that case, say that the beautiful is more and the not-beautiful less a part of being?

Theaetetus:: Not at all.

Stranger:: Hence the not-great must be said to be no less truly than the great?

Theaetetus:: No less truly.

Stranger:: And so we must recognize the same relation between the just and the not-just, in so far as neither has any more being than the other?

Theaetetus:: Of course.

Stranger:: And we shall, then, say the same of other things, since the nature of the other is proved to possess real being; and if it has being, we must necessarily ascribe being in no less degree to its parts also.

Theaetetus:: Of course.

Stranger:: Then, as it seems, the opposition of the nature of a part of the other, and of the nature of being, when they are opposed to one another, is no less truly existence than is being itself, if it is not wrong for me to say so, for it signifies not the opposite of being, but only the other of being, and nothing more.

Theaetetus:: That is perfectly clear.

Stranger:: Then what shall we call this?

Theaetetus:: Evidently this is precisely not-being, which we were looking for because of the sophist.

Stranger:: And is this, as you were saying, as fully endowed with being as anything else, and shall we henceforth say with confidence that not-being has an assured existence and a nature of its own? Just as we found that the great was great and the beautiful was beautiful, the not-great was not-great and the not-beautiful was not-beautiful, shall we in the same way say that not-being was and is not-being, to be counted as one class among the many classes of being? Or have we, Theaetetus, any remaining distrust about the matter?

Theaetetus:: None whatever.

Stranger:: Do you observe, then, that we have gone farther in our distrust of Parmenides than the limit set by his prohibition?

Theaetetus:: What do you mean?

Stranger:: We have proceeded farther in our investigation and have shown him more than that which he forbade us to examine.

Theaetetus:: How so?

Stranger:: Because he says somewhere;

> Never shall this thought prevail, that not-being is;
> Nay, keep your mind from this path of investigation.

Theaetetus:: Yes, that is what he says.

Stranger:: But we have not only pointed out that things which are not exist, but we have even shown what the form or class of not-being is; for we have pointed out that the nature of the other exists and is distributed in small bits throughout all existing things in their relations to one another, and we have ventured to say that each part of the other which is contrasted with being, really is exactly not-being.

Theaetetus:: And certainly, Stranger, I think that what we have said is perfectly true.

Stranger:: Then let not anyone assert that we declare that not-being is the opposite of being, and hence are so rash as to say that not-being exists. For we long ago gave up speaking of any opposite of being, whether it exists or not and is capable or totally incapable of definition. But as for our present definition of not-being, a man must either refute us and show that we are wrong, or, so long as he cannot do that, he too must say, as we do, that the classes mingle with one another, and being and the other permeate all things, including each other, and the other, since it participates in being, is, by reason of this participation, yet is not that in which it participates, but other, and since it is other than being, must inevitably be not-being. But being, in turn, participates in the other and is therefore other than the rest of the classes, and since it is other than all of them, it is not each one of them or all the rest, but only itself; there is therefore no doubt that there are thousands and thousands of things which being is not, and just so all other things, both individually and collectively, in many relations are, and in many are not.

Theaetetus:: True.

Stranger:: And if any man has doubts about these oppositions, he must make investigations and advance better doctrines than these of ours; or if he finds pleasure in dragging words about and applying them to different things at different times, with the notion that he has invented something difficult to explain, our present argument asserts that he has taken up seriously matters which are not worth serious attention; for this process is neither clever nor difficult, whereas here now is something both difficult and beautiful.

Theaetetus:: What is it?

Stranger:: What I have spoken of before the ability to let those quibbles go as of no account and to follow and refute in detail the arguments of a man who says that other is in a sense the same, or that the same is other, and to do this from that point of view and with regard for those relations which he presupposes for either of these conditions. But to show that in some sort of fashion the same is the other, and the other the same, and the great small, and the like unlike, and to take pleasure in thus always bringing forward opposites in the argument, all that is no true refutation, but is plainly the newborn offspring of some brain that has just begun to lay hold upon the problem of realities.

Theaetetus:: Exactly so.

Stranger:: For certainly, my friend, the attempt to separate everything from everything else is not only not in good taste but also shows that a man is utterly uncultivated and unphilosophical.

Theaetetus:: Why so?

Stranger:: The complete separation of each thing from all is the utterly final obliteration of all discourse. For our power of discourse is derived from the interweaving of the classes or ideas with one another.

Theaetetus:: True.

Stranger:: Observe, then, that we have now been just in time in carrying our point against the supporters of such doctrine, and in forcing them to admit that one thing mingles with another.

Theaetetus:: What was our object?

Stranger:: Our object was to establish discourse as one of our classes of being. For if we were deprived of this, we should be deprived of philosophy, which would be the greatest calamity; moreover, we must at the present moment come to an agreement about the nature of discourse, and if we were robbed of it by its absolute non-existence, we could no longer discourse; and we should be robbed of it if we agreed that there is no mixture of anything with anything.

Theaetetus:: That is true enough; but I do not understand why we must come to an agreement about discourse just now.

Stranger:: Perhaps the easiest way for you to understand is by following this line of argument.

Theaetetus:: What line?

Stranger:: We found that not-being was one of the classes of being, permeating all being.

Theaetetus:: Yes.

Stranger:: So the next thing is to inquire whether it mingles with opinion and speech.

Theaetetus:: Why?

Stranger:: If it does not mingle with them, the necessary result is that all things are true, but if it does, then false opinion and false discourse come into being; for to think or say what is not that is, I suppose, falsehood arising in mind or in words.

Theaetetus:: So it is.

Stranger:: But if falsehood exists, deceit exists.

Theaetetus:: Yes.

Stranger:: And if deceit exists, all things must be henceforth full of images and likenesses and fancies.

Theaetetus:: Of course.

Stranger:: But we said that the sophist had taken refuge in this region and had absolutely denied the existence of falsehood; for he said that not-being could be neither conceived nor uttered, since not-being did not in any way participate in being.

Theaetetus:: Yes, so it was.

Stranger:: But now not-being has been found to partake of being, and so, perhaps, he would no longer keep up the fight in this direction; but he might say that some ideas partake of not-being and some do not, and that speech and opinion are among those which do not; and he would therefore again contend that the image-making and fantastic art, in which we placed him, has absolutely no existence, since opinion and speech have no participation in not-being; for falsehood cannot possibly exist unless such participation takes place. For this reason we must first inquire into the nature of speech and opinion and fancy, in order that when they are made clear we may perceive that they participate in not-being, and when we have perceived that, may prove the existence of falsehood, and after proving that, may imprison the sophist therein, if he can be held on that charge, and if not, may set him free and seek him in another class.

Theaetetus:: It certainly seems, Stranger, that what you said at first about the sophist that he was a hard kind of creature to catch is true; for he seems to have no end of defenses, and when he throws one of them up, his opponent has first to fight through it before he can reach the man himself; for now, you see, we have barely passed through the non-existence of being, which was his first prepared line of defense, when we find another line ready; and so we must prove that falsehood exists in relation to opinion and to speech; and after this, perhaps, there will be another line, and still another after that; and it seems no end will ever appear.

Stranger:: No one should be discouraged, Theaetetus, who can make constant progress, even though it be slow. For if a man is discouraged under these conditions, what would he do under others if he did not get ahead at all or were even pressed back? It would be a long time, as the saying is, before such a man would ever take a city. But now, my friend, since we have passed the line you speak of, the main defenses would surely be in our hands, and the rest will now be smaller and easier to take.

Theaetetus:: Good.

Stranger:: First, then, let us take up speech and opinion, as I said just now, in order to come to a clearer understanding whether not-being touches them, or they are both entirely true, and neither is ever false.

Theaetetus:: Very well.

Stranger:: Then let us now investigate names, just as we spoke a while ago about ideas and letters; for in that direction the object of our present search is coming in sight.

Theaetetus:: What do we need to understand about names?

Stranger:: Whether they all unite with one another, or none of them, or some will and some will not.

Theaetetus:: Evidently the last; some will and some will not.

Stranger:: This, perhaps, is what you mean, that those which are spoken in order and mean something do unite, but those that mean nothing in their sequence do not unite.

Theaetetus:: How so, and what do you mean by that?

Stranger:: What I supposed you had in mind when you assented; for we have two kinds of vocal indications of being.

Theaetetus:: How so?

Stranger:: One called nouns, the other verbs.

Theaetetus:: Define each of them.

Stranger:: The indication which relates to action we may call a verb.

Theaetetus:: Yes.

Stranger:: And the vocal sign applied to those who perform the actions in question we call a noun.

Theaetetus:: Exactly.

Stranger:: Hence discourse is never composed of nouns alone spoken in succession, nor of verbs spoken without nouns.

Theaetetus:: I do not understand that.

Stranger:: I see; you evidently had something else in mind when you assented just now; for what I wished to say was just this, that verbs and nouns do not make discourse if spoken successively in this way.

Theaetetus:: In what way?

Stranger:: For instance, walks, runs, sleeps and the other verbs which denote actions, even if you utter all there are of them in succession, do not make discourse for all that.

Theaetetus:: No, of course not.

Stranger:: And again, when lion, stag, horse, and all other names of those who perform these actions are uttered, such a succession of words does not yet make discourse; for in neither case do the words uttered indicate action or inaction or existence of anything that exists or does not exist, until the verbs are mingled with the nouns; then the words fit, and their first combination is a sentence, about the first and shortest form of discourse.

Theaetetus:: What do you mean by that?

Stranger:: When one says a man learns, you agree that this is the least and first of sentences, do you not?

Theaetetus:: Yes.

Stranger:: For when he says that, he makes a statement about that which is or is becoming or has become or is to be; he does not merely give names, but he reaches a conclusion by combining verbs with nouns. That is why we said that he discourses and does not merely give names, and therefore we gave to this combination the name of discourse.

Theaetetus:: That was right.

Stranger:: So, then, just as of things some fit each other and some do not, so too some vocal signs do not fit, but some of them do fit and form discourse.

Theaetetus:: Certainly.

Stranger:: Now there is another little point.

Theaetetus:: What is it?

Stranger:: A sentence, if it is to be a sentence, must have a subject; without a subject it is impossible.

Theaetetus:: True.

Stranger:: And it must also be of some quality, must it not?

Theaetetus:: Of course.

Stranger:: Now let us pay attention to each other.

Theaetetus:: Yes, at any rate we ought to do so.

Stranger:: Now, then, I will speak a sentence to you in which an action and the result of action are combined by means of a noun and a verb, and whatever the subject of the sentence is do you tell me.

Theaetetus:: I will, to the best of my ability.

Stranger:: Theaetetus sits. It isn’t a long sentence, is it?

Theaetetus:: No, it is fairly short.

Stranger:: Now it is for you to say what it is about and what its subject is.

Theaetetus:: Clearly it is about me, and I am its subject.

Stranger:: And how about this sentence?

Theaetetus:: What one?

Stranger:: Theaetetus, with whom I am now talking, flies.

Theaetetus:: Every one would agree that this also is about me and I am its subject.

Stranger:: But we agree that every sentence must have some quality.

Theaetetus:: Yes.

Stranger:: Now what quality shall be ascribed to each of these sentences?

Theaetetus:: One is false, I suppose, the other true.

Stranger:: The true one states facts as they are about you.

Theaetetus:: Certainly.

Stranger:: And the false one states things that are other than the facts.

Theaetetus:: Yes.

Stranger:: In other words, it speaks of things that are not as if they were.

Theaetetus:: Yes, that is pretty much what it does.

Stranger:: And states with reference to you that things are which are other than things which actually are; for we said, you know, that in respect to everything there are many things that are and many that are not.

Theaetetus:: To be sure.

Stranger:: Now the second of my sentences about you is in the first place by sheer necessity one of the shortest which conform to our definition of sentence.

Theaetetus:: At any rate we just now agreed on that point.

Stranger:: And secondly it has a subject.

Theaetetus:: Yes.

Stranger:: And if you are not the subject, there is none.

Theaetetus:: Certainly not.

Stranger:: And if there is no subject, it would not be a sentence at all; for we showed that a sentence without a subject is impossible.

Theaetetus:: Quite right.

Stranger:: Now when things are said about you, but things other are said as the same and things that are not as things that are, it appears that when such a combination is formed of verbs and nouns we have really and truly false discourse.

Theaetetus:: Yes, very truly.

Stranger:: Is it, then, not already plain that the three classes, thought, opinion, and fancy, all arise in our minds as both false and true?

Theaetetus:: How is it plain?

Stranger:: You will understand more easily if you first grasp their natures and the several differences between them.

Theaetetus:: Give me an opportunity.

Stranger:: Well, then, thought and speech are the same; only the former, which is a silent inner conversation of the soul with itself, has been given the special name of thought. Is not that true?

Theaetetus:: Certainly.

Stranger:: But the stream that flows from the soul in vocal utterance through the mouth has the name of speech?

Theaetetus:: True.

Stranger:: And in speech we know there is just—

Theaetetus:: What?

Stranger:: Affirmation and negation.

Theaetetus:: Yes, we know that.

Stranger:: Now when this arises in the soul silently by way of thought, can you give it any other name than opinion?

Theaetetus:: Certainly not.

Stranger:: And when such a condition is brought about in anyone, not independently, but through sensation, can it properly be called anything but seeming, or fancy?

Theaetetus:: No.

Stranger:: Then since speech, as we found, is true and false, and we saw that thought is conversation of the soul with itself, and opinion is the final result of thought, and what we mean when we say it seems is a mixture of sensation and opinion, it is inevitable that, since these are all akin to speech, some of them must sometimes be false.

Theaetetus:: Certainly.

Stranger:: Do you see, then, that false opinion and false discourse were found sooner than we expected when we feared a few moments ago that in looking for them we were undertaking an endless task?

Theaetetus:: Yes, I see.

Stranger:: Then let us not be discouraged about the rest of our search, either; for now that these points are settled, we have only to revert to our previous divisions into classes.

Theaetetus:: What divisions?

Stranger:: We made two classes of image-making, the likeness-making and the fantastic.

Theaetetus:: Yes.

Stranger:: And we said that we did not know to which of the two the sophist should be assigned.

Theaetetus:: You are right.

Stranger:: And in the midst of our perplexity about that, we were overwhelmed by a still greater dizziness when the doctrine appeared which challenges everybody and asserts that neither likeness nor image nor appearance exists at all, because falsehood never exists anywhere in any way.

Theaetetus:: True.

Stranger:: But now, since the existence of false speech and false opinion has been proved, it is possible for imitations of realities to exist and for an art of deception to arise from this condition of mind.

Theaetetus:: Yes, it is possible.

Stranger:: And we decided some time ago that the sophist was in one of those two divisions of the image-making class.

Theaetetus:: Yes.

Stranger:: Then let us try again; let us divide in two the class we have taken up for discussion, and proceed always by way of the right-hand part of the thing divided, clinging close to the company to which the sophist belongs, until, having stripped him of all common properties and left him only his own peculiar nature, we shall show him plainly first to ourselves and secondly to those who are most closely akin to the dialectic method.

Theaetetus:: Right.

Stranger:: We began by making two divisions of art, the productive and the acquisitive, did we not?

Theaetetus:: Yes.

Stranger:: And the sophist showed himself to us in the arts of hunting, contests, commerce, and the like, which were subdivisions of acquisitive art?

Theaetetus:: Certainly.

Stranger:: But now, since imitative art has taken him over, it is clear that our first step must be the division of productive art into two parts; for imitative art is a kind of production of images, however, we say, not of real things in each case. Do you agree?

Theaetetus:: By all means.

Stranger:: Then let us first assume two parts of productive art.

Theaetetus:: What are they?

Stranger:: The divine and the human.

Theaetetus:: I don’t yet understand.

Stranger:: We said, if we remember the beginning of our conversation, that every power is productive which causes things to come into being which did not exist before.

Theaetetus:: Yes, we remember.

Stranger:: There are all the animals, and all the plants that grow out of the earth from seeds and roots, and all the lifeless substances, fusible and infusible, that are formed within the earth. Shall we say that they came into being, not having been before, in any other way than through Gods workmanship? Or, accepting the commonly expressed belief?

Theaetetus:: What belief?

Stranger:: That nature brings them forth from some self-acting cause, without creative intelligence. Or shall we say that they are created by reason and by divine knowledge that comes from God?

Theaetetus:: I, perhaps because I am young, often change from one opinion to the other; but now, looking at you and considering that you think they are created by God, I also adopt that view.

Stranger:: Well said, Theaetetus; and if I thought you were one of those who would think differently by and by, I should try now, by argument and urgent persuasion, to make you agree with my opinion; but since I understand your nature and see that it of itself inclines, without any words of mine, towards that to which you say you are at present attracted, I will let that go; for it would be a waste of time. But I will assume that things which people call natural are made by divine art, and things put together by man out of those as materials are made by human art, and that there are accordingly two kinds of art, the one human and the other divine.

Theaetetus:: Quite right.

Stranger:: Now that there are two, divide each of them again.

Theaetetus:: How?

Stranger:: You divided all productive art width wise, as it were, before; now divide it lengthwise.

Theaetetus:: Assume that it is done.

Stranger:: In that way we now get four parts in all; two belong to us and are human, and two belong to the gods and are divine.

Theaetetus:: Yes.

Stranger:: And again, when the section is made the other way, one part of each half has to do with the making of real things, and the two remaining parts may very well be called image-making; and so productive art is again divided into two parts.

Theaetetus:: Tell me again how each part is distinguished.

Stranger:: We know that we and all the other animals, and fire, water, and their kindred elements, out of which natural objects are formed, are one and all the very offspring and creations of God, do we not?

Theaetetus:: Yes.

Stranger:: And corresponding to each and all of these there are images, not the things themselves, which are also made by superhuman skill.

Theaetetus:: What are they?

Stranger:: The appearances in dreams, and those that arise by day and are said to be spontaneous a shadow when a dark object interrupts the firelight, or when twofold light, from the objects themselves and from outside, meets on smooth and bright surfaces and causes upon our senses an effect the reverse of our ordinary sight, thus producing an image.

Theaetetus:: Yes, these are two works of divine creation, the thing itself and the corresponding image in each case.

Stranger:: And how about our own art? Shall we not say that we make a house by the art of building, and by the art of painting make another house, a sort of man-made dream produced for those who are awake?

Theaetetus:: Certainly.

Stranger:: And in the same way, we say, all the other works of our creative activity also are twofold and go in pairs the thing itself, produced by the art that creates real things, and the image, produced by the image-making art.

Theaetetus:: I understand better now; and I agree that there are two kinds of production, each of them twofold the divine and the human by one method of bisection, and by the other real things and the product that consists of a sort of likenesses.

Stranger:: We must remember that there were to be two parts of the image-making class, the likeness-making and the fantastic, if we should find that falsehood really existed and was in the class of real being.

Theaetetus:: Yes, there were.

Stranger:: But we found that falsehood does exist, and therefore we shall now, without any doubts, number the kinds of image-making art as two, shall we not?

Theaetetus:: Yes.

Stranger:: Let us, then, again bisect the fantastic art.

Theaetetus:: How?

Stranger:: One kind is that produced by instruments, the other that in which the producer of the appearance offers himself as the instrument.

Theaetetus:: What do you mean?

Stranger:: When anyone, by employing his own person as his instrument, makes his own figure or voice seem similar to yours, that kind of fantastic art is called mimetic.

Theaetetus:: Yes.

Stranger:: Let us, then, classify this part under the name of mimetic art; but as for all the rest, let us be so self-indulgent as to let it go and leave it for someone else to unify and name appropriately.

Theaetetus:: Very well, let us adopt that classification and let the other part go.

Stranger:: But it is surely worth while to consider, Theaetetus, that the mimetic art also has two parts; and I will tell you why.

Theaetetus:: Please do.

Stranger:: Some who imitate do so with knowledge of that which they imitate, and others without such knowledge. And yet what division can we imagine more complete than that which separates knowledge and ignorance?

Theaetetus:: None.

Stranger:: The example I just gave was of imitation by those who know, was it not? For a man who imitates you would know you and your figure.

Theaetetus:: Of course.

Stranger:: But what of the figure of justice and, in a word, of virtue in general? Are there not many who have no knowledge of it, but only a sort of opinion, and who try with the greatest eagerness to make this which they themselves think is virtue seem to exist within them, by imitating it in acts and words to the best of their ability?

Theaetetus:: Yes, there are very many such people.

Stranger:: Do all of them, then, fail in the attempt to seem to be just when they are not so at all? Or is quite the opposite the case?

Theaetetus:: Quite the opposite.

Stranger:: Then I think we must say that such an imitator is quite distinct from the other, the one who does not know from the one who knows.

Theaetetus:: Yes.

Stranger:: Where, then, can the fitting name for each of the two be found? Clearly it is not an easy task, because there was, it seems, among the earlier thinkers a long established and careless indolence in respect to the division of classes or genera into forms or species, so that nobody even tried to make such divisions; therefore there cannot be a great abundance of names. However, even though the innovation in language be a trifle bold, let us, for the sake of making a distinction, call the imitation which is based on opinion, opinion-imitation, and that which is founded on knowledge, a sort of scientific imitation.

Theaetetus:: Agreed.

Stranger:: We must therefore apply ourselves to the former, for we found that the sophist was among those who imitate but was not among those who know.

Theaetetus:: Very true.

Stranger:: Then let us examine the opinion-imitator as if he were a piece of iron, and see whether he is sound or there is still some seam in him.

Theaetetus:: Let us do so.

Stranger:: Well, there is a very marked seam. For some of these imitators are simple-minded and think they know that about which they have only opinion, but the other kind because of their experience in the rough and tumble of arguments, strongly suspect and fear that they are ignorant of the things which they pretend before the public to know.

Theaetetus:: Certainly the two classes you mention both exist.

Stranger:: Then shall we call one the simple imitator and the other the dissembling imitator?

Theaetetus:: That is reasonable, at any rate.

Stranger:: And shall we say that the latter forms one class or two again?

Theaetetus:: That is your affair.

Stranger:: I am considering, and I think I can see two classes. I see one who can dissemble in long speeches in public before a multitude, and the other who does it in private in short speeches and forces the person who converses with him to contradict himself.

Theaetetus:: You are quite right.

Stranger:: And what name shall we give to him who makes the longer speeches? Statesman or popular orator?

Theaetetus:: Popular orator.

Stranger:: And what shall we call the other? Philosopher or sophist?

Theaetetus:: We cannot very well call him philosopher, since by our hypothesis he is ignorant; but since he is an imitator of the philosopher, he will evidently have a name derived from his, and I think I am sure at last that we must truly call him the absolutely real and actual sophist.

Stranger:: Shall we then bind up his name as we did before, winding it up from the end to the beginning?

Theaetetus:: By all means.

Stranger:: The imitative kind of the dissembling part of the art of opinion which is part of the art of contradiction and belongs to the fantastic class of the image-making art, and is not divine, but human, and has been defined in arguments as the juggling part of productive activity he who says that the true sophist is of this descent and blood will, in my opinion, speak the exact truth.

Theaetetus:: Yes, he certainly will.

# Sophist.

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE.
THEODORUS. THEAETETUS. SOCRATES.

An Eleatic Stranger, whom
Theodorus and Theaetetus bring with them.
The younger Socrates, who is a silent auditor.

Theodorus:: Here we are, Socrates, true to our agreement of yesterday; and we bring with us a stranger from Elea, who is a disciple of Parmenides and Zeno, and a true philosopher.

Socrates:: Is he not rather a god, Theodorus, who comes to us in the disguise of a stranger? For Homer says that all the gods, and especially the god of strangers, are companions of the meek and just, and visit the good and evil among men. And may not your companion be one of those higher powers, a cross-examining deity, who has come to spy out our weakness in argument, and to cross-examine us?

Theodorus:: Nay, Socrates, he is not one of the disputatious sort—he is too good for that. And, in my opinion, he is not a god at all; but divine he certainly is, for this is a title which I should give to all philosophers.

Socrates:: Capital, my friend! and I may add that they are almost as hard to be discerned as the gods. For the true philosophers, and such as are not merely made up for the occasion, appear in various forms unrecognized by the ignorance of men, and they 'hover about cities,' as Homer declares, looking from above upon human life; and some think nothing of them, and others can never think enough; and sometimes they appear as statesmen, and sometimes as sophists; and then, again, to many they seem to be no better than madmen. I should like to ask our Eleatic friend, if he would tell us, what is thought about them in Italy, and to whom the terms are applied.

Theodorus:: What terms?

Socrates:: Sophist, statesman, philosopher.

Theodorus:: What is your difficulty about them, and what made you ask?

Socrates:: I want to know whether by his countrymen they are regarded as one or two; or do they, as the names are three, distinguish also three kinds, and assign one to each name?

Theodorus:: I dare say that the Stranger will not object to discuss the question. What do you say, Stranger?

Stranger:: I am far from objecting, Theodorus, nor have I any difficulty in replying that by us they are regarded as three. But to define precisely the nature of each of them is by no means a slight or easy task.

Theodorus:: You have happened to light, Socrates, almost on the very question which we were asking our friend before we came hither, and he excused himself to us, as he does now to you; although he admitted that the matter had been fully discussed, and that he remembered the answer.

Socrates:: Then do not, Stranger, deny us the first favor which we ask of you: I am sure that you will not, and therefore I shall only beg of you to say whether you like and are accustomed to make a long oration on a subject which you want to explain to another, or to proceed by the method of question and answer. I remember hearing a very noble discussion in which Parmenides employed the latter of the two methods, when I was a young man, and he was far advanced in years.

Stranger:: I prefer to talk with another when he responds pleasantly, and is light in hand; if not, I would rather have my own say.

Socrates:: Any one of the present company will respond kindly to you, and you can choose whom you like of them; I should recommend you to take a young person—Theaetetus, for example—unless you have a preference for some one else.

Stranger:: I feel ashamed, Socrates, being a new-comer into your society, instead of talking a little and hearing others talk, to be spinning out a long soliloquy or address, as if I wanted to show off. For the true answer will certainly be a very long one, a great deal longer than might be expected from such a short and simple question. At the same time, I fear that I may seem rude and ungracious if I refuse your courteous request, especially after what you have said. For I certainly cannot object to your proposal, that Theaetetus should respond, having already conversed with him myself, and being recommended by you to take him.

Theaetetus:: But are you sure, Stranger, that this will be quite so acceptable to the rest of the company as Socrates imagines?

Stranger:: You hear them applauding, Theaetetus; after that, there is nothing more to be said. Well then, I am to argue with you, and if you tire of the argument, you may complain of your friends and not of me.

Theaetetus:: I do not think that I shall tire, and if I do, I shall get my friend here, young Socrates, the namesake of the elder Socrates, to help; he is about my own age, and my partner at the gymnasium, and is constantly accustomed to work with me.

Stranger:: Very good; you can decide about that for yourself as we proceed. Meanwhile you and I will begin together and enquire into the nature of the Sophist, first of the three: I should like you to make out what he is and bring him to light in a discussion; for at present we are only agreed about the name, but of the thing to which we both apply the name possibly you have one notion and I another; whereas we ought always to come to an understanding about the thing itself in terms of a definition, and not merely about the name minus the definition. Now the tribe of Sophists which we are investigating is not easily caught or defined; and the world has long ago agreed, that if great subjects are to be adequately treated, they must be studied in the lesser and easier instances of them before we proceed to the greatest of all. And as I know that the tribe of Sophists is troublesome and hard to be caught, I should recommend that we practice beforehand the method which is to be applied to him on some simple and smaller thing, unless you can suggest a better way.

Theaetetus:: Indeed I cannot.

Stranger:: Then suppose that we work out some lesser example which will be a pattern of the greater?

Theaetetus:: Good.

Stranger:: What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

Theaetetus:: He is not.

Stranger:: Yet I suspect that he will furnish us with the sort of definition and line of enquiry which we want.

Theaetetus:: Very good.

Stranger:: Let us begin by asking whether he is a man having art or not having art, but some other power.

Theaetetus:: He is clearly a man of art.

Stranger:: And of arts there are two kinds?

Theaetetus:: What are they?

Stranger:: There is agriculture, and the tending of mortal creatures, and the art of constructing or molding vessels, and there is the art of imitation—all these may be appropriately called by a single name.

Theaetetus:: What do you mean? And what is the name?

Stranger:: He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

Theaetetus:: True.

Stranger:: And all the arts which were just now mentioned are characterized by this power of producing?

Theaetetus:: They are.

Stranger:: Then let us sum them up under the name of productive or creative art.

Theaetetus:: Very good.

Stranger:: Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced—in each and all of these branches there appears to be an art which may be called acquisitive.

Theaetetus:: Yes, that is the proper name.

Stranger:: Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

Theaetetus:: Clearly in the acquisitive class.

Stranger:: And the acquisitive may be subdivided into two parts: there is exchange, which is voluntary and is effected by gifts, hire, purchase; and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

Theaetetus:: That is implied in what has been said.

Stranger:: And may not conquest be again subdivided?

Theaetetus:: How?

Stranger:: Open force may be called fighting, and secret force may have the general name of hunting?

Theaetetus:: Yes.

Stranger:: And there is no reason why the art of hunting should not be further divided.

Theaetetus:: How would you make the division?

Stranger:: Into the hunting of living and of lifeless prey.

Theaetetus:: Yes, if both kinds exist.

Stranger:: Of course they exist; but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

Theaetetus:: Yes.

Stranger:: And animal hunting may be truly said to have two divisions, land-animal hunting, which has many kinds and names, and water-animal hunting, or the hunting after animals who swim?

Theaetetus:: True.

Stranger:: And of swimming animals, one class lives on the wing and the other in the water?

Theaetetus:: Certainly.

Stranger:: Fowling is the general term under which the hunting of all birds is included.

Theaetetus:: True.

Stranger:: The hunting of animals who live in the water has the general name of fishing.

Theaetetus:: Yes.

Stranger:: And this sort of hunting may be further divided also into two principal kinds?

Theaetetus:: What are they?

Stranger:: There is one kind which takes them in nets, another which takes them by a blow.

Theaetetus:: What do you mean, and how do you distinguish them?

Stranger:: As to the first kind—all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

Theaetetus:: Very true.

Stranger:: For which reason twig baskets, casting-nets, nooses, creels, and the like may all be termed 'enclosures'?

Theaetetus:: True.

Stranger:: And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

Theaetetus:: Yes.

Stranger:: The other kind, which is practiced by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

Theaetetus:: Never mind the name—what you suggest will do very well.

Stranger:: There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

Theaetetus:: True.

Stranger:: And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

Theaetetus:: Yes, that is the term.

Stranger:: Of this barb-fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

Theaetetus:: Yes, it is often called so.

Stranger:: Then now there is only one kind remaining.

Theaetetus:: What is that?

Stranger:: When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upwards with reeds and rods:—What is the right name of that mode of fishing, Theaetetus?

Theaetetus:: I suspect that we have now discovered the object of our search.

Stranger:: Then now you and I have come to an understanding not only about the name of the anglers art, but about the definition of the thing itself. One half of all art was acquisitive—half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting was hunting animals, half of this was hunting water animals—of this again, the under half was fishing, half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws the fish from below upwards, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (ἀσπαλιευτικὴ, ἀνασπᾶσθαι).

Theaetetus:: The result has been quite satisfactorily brought out.

Stranger:: And now, following this pattern, let us endeavor to find out what a Sophist is.

Theaetetus:: By all means.

Stranger:: The first question about the angler was, whether he was a skilled artist or unskilled?

Theaetetus:: True.

Stranger:: And shall we call our new friend unskilled, or a thorough master of his craft?

Theaetetus:: Certainly not unskilled, for his name, as, indeed, you imply, must surely express his nature.

Stranger:: Then he must be supposed to have some art.

Theaetetus:: What art?

Stranger:: By heaven, they are cousins! it never occurred to us.

Theaetetus:: Who are cousins?

Stranger:: The angler and the Sophist.

Theaetetus:: In what way are they related?

Stranger:: They both appear to me to be hunters.

Theaetetus:: How the Sophist? Of the other we have spoken.

Stranger:: You remember our division of hunting, into hunting after swimming animals and land animals?

Theaetetus:: Yes.

Stranger:: And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

Theaetetus:: Certainly.

Stranger:: Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

Theaetetus:: So it would appear.

Stranger:: Their paths diverge when they reach the art of animal hunting; the one going to the sea-shore, and to the rivers and to the lakes, and angling for the animals which are in them.

Theaetetus:: Very true.

Stranger:: While the other goes to land and water of another sort—rivers of wealth and broad meadow-lands of generous youth; and he also is intending to take the animals which are in them.

Theaetetus:: What do you mean?

Stranger:: Of hunting on land there are two principal divisions.

Theaetetus:: What are they?

Stranger:: One is the hunting of tame, and the other of wild animals.

Theaetetus:: But are tame animals ever hunted?

Stranger:: Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them; or you may say that man is a tame animal but is not hunted—you shall decide which of these alternatives you prefer.

Theaetetus:: I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

Stranger:: Then let us divide the hunting of tame animals into two parts.

Theaetetus:: How shall we make the division?

Stranger:: Let us define piracy, man-stealing, tyranny, the whole military art, by one name, as hunting with violence.

Theaetetus:: Very good.

Stranger:: But the art of the lawyer, of the popular orator, and the art of conversation may be called in one word the art of persuasion.

Theaetetus:: True.

Stranger:: And of persuasion, there may be said to be two kinds?

Theaetetus:: What are they?

Stranger:: One is private, and the other public.

Theaetetus:: Yes; each of them forms a class.

Stranger:: And of private hunting, one sort receives hire, and the other brings gifts.

Theaetetus:: I do not understand you.

Stranger:: You seem never to have observed the manner in which lovers hunt.

Theaetetus:: To what do you refer?

Stranger:: I mean that they lavish gifts on those whom they hunt in addition to other inducements.

Theaetetus:: Most true.

Stranger:: Let us admit this, then, to be the amatory art.

Theaetetus:: Certainly.

Stranger:: But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant.

Theaetetus:: Certainly.

Stranger:: And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

Theaetetus:: To be sure.

Stranger:: And what is the name? Will you tell me?

Theaetetus:: It is obvious enough; for I believe that we have discovered the *Sophist*: which is, as I conceive, the proper name for the class described.

Stranger:: Then now, Theaetetus, his art may be traced as a branch of the appropriative, acquisitive family—which hunts animals,—living—land—tame animals; which hunts man,—privately—for hire,—taking money in exchange—having the semblance of education; and this is termed Sophistry, and is a hunt after young men of wealth and rank—such is the conclusion.

Theaetetus:: Just so.

Stranger:: Let us take another branch of his genealogy; for he is a professor of a great and many-sided art; and if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

Theaetetus:: In what respect?

Stranger:: There were two sorts of acquisitive art; the one concerned with hunting, the other with exchange.

Theaetetus:: There were.

Stranger:: And of the art of exchange there are two divisions, the one of giving, and the other of selling.

Theaetetus:: Let us assume that.

Stranger:: Next, we will suppose the art of selling to be divided into two parts.

Theaetetus:: How?

Stranger:: There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

Theaetetus:: Certainly.

Stranger:: And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

Theaetetus:: Yes.

Stranger:: And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

Theaetetus:: To be sure.

Stranger:: And you are aware that this exchange of the merchant is of two kinds: it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

Theaetetus:: What do you mean?

Stranger:: You want to know what is the meaning of food for the soul; the other kind you surely understand.

Theaetetus:: Yes.

Stranger:: Take music in general and painting and marionette playing and many other things, which are purchased in one city, and carried away and sold in another—wares of the soul which are hawked about either for the sake of instruction or amusement;—may not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

Theaetetus:: To be sure he may.

Stranger:: And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

Theaetetus:: Certainly I should.

Stranger:: Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

Theaetetus:: Certainly.

Stranger:: The latter should have two names,—one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

Theaetetus:: Of course.

Stranger:: The name of art-seller corresponds well enough to the latter; but you must try and tell me the name of the other.

Theaetetus:: He must be the Sophist, whom we are seeking; no other name can possibly be right.

Stranger:: No other; and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

Theaetetus:: Quite true.

Stranger:: And there may be a third reappearance of him;—for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

Theaetetus:: Certainly.

Stranger:: Then that part of the acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

Theaetetus:: I must, if I am to keep pace with the argument.

Stranger:: Let us consider once more whether there may not be yet another aspect of sophistry.

Theaetetus:: What is it?

Stranger:: In the acquisitive there was a subdivision of the combative or fighting art.

Theaetetus:: There was.

Stranger:: Perhaps we had better divide it.

Theaetetus:: What shall be the divisions?

Stranger:: There shall be one division of the competitive, and another of the pugnacious.

Theaetetus:: Very good.

Stranger:: That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

Theaetetus:: True.

Stranger:: And when the war is one of words, it may be termed controversy?

Theaetetus:: Yes.

Stranger:: And controversy may be of two kinds.

Theaetetus:: What are they?

Stranger:: When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

Theaetetus:: Yes.

Stranger:: And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

Theaetetus:: Yes, that is the name.

Stranger:: And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

Theaetetus:: No; for the different sorts of it are too minute and heterogeneous.

Stranger:: But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation (Eristic)?

Theaetetus:: Certainly.

Stranger:: And of argumentation, one sort wastes money, and the other makes money.

Theaetetus:: Very true.

Stranger:: Suppose we try and give to each of these two classes a name.

Theaetetus:: Let us do so.

Stranger:: I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity: such is my opinion.

Theaetetus:: That is the common name for it.

Stranger:: But now who the other is, who makes money out of private disputation, it is your turn to say.

Theaetetus:: There is only one true answer: he is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

Stranger:: Yes, and with a fresh pedigree, for he is the moneymaking species of the Eristic, disputatious, controversial, pugnacious, combative, acquisitive family, as the argument has already proven.

Theaetetus:: Certainly.

Stranger:: How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

Theaetetus:: Then you must catch him with two.

Stranger:: Yes, we must, if we can. And therefore let us try another track in our pursuit of him: You are aware that there are certain menial occupations which have names among servants?

Theaetetus:: Yes, there are many such; which of them do you mean?

Stranger:: I mean such as sifting, straining, winnowing, threshing.

Theaetetus:: Certainly.

Stranger:: And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof; and thousands of similar expressions are used in the arts.

Theaetetus:: Of what are they to be patterns, and what are we going to do with them all?

Stranger:: I think that in all of these there is implied a notion of division.

Theaetetus:: Yes.

Stranger:: Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

Theaetetus:: And what is the name of the art?

Stranger:: The art of discerning or discriminating.

Theaetetus:: Very good.

Stranger:: Think whether you cannot divide this.

Theaetetus:: I should have to think a long while.

Stranger:: In all the previously named processes either like has been separated from like or the better from the worse.

Theaetetus:: I see now what you mean.

Stranger:: There is no name for the first kind of separation; of the second, which throws away the worse and preserves the better, I do know a name.

Theaetetus:: What is it?

Stranger:: Every discernment or discrimination of that kind, as I have observed, is called a purification.

Theaetetus:: Yes, that is the usual expression.

Stranger:: And any one may see that purification is of two kinds.

Theaetetus:: Perhaps so, if he were allowed time to think; but I do not see at this moment.

Stranger:: There are many purifications of bodies which may with propriety be comprehended under a single name.

Theaetetus:: What are they, and what is their name?

Stranger:: There is the purification of living bodies in their inward and in their outward parts, of which the former is duly effected by medicine and gymnastic, the latter by the not very dignified art of the bath-man; and there is the purification of inanimate substances—to this the arts of fulling and of furbishing in general attend in a number of minute particulars, having a variety of names which are thought ridiculous.

Theaetetus:: Very true.

Stranger:: There can be no doubt that they are thought ridiculous, Theaetetus; but then the dialectical art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has not more interest in the one than in the other; her endeavor is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence; and having this in view, she honors them all alike, and when she makes comparisons, she counts one of them not a whit more ridiculous than another; nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin-destroyer, but only as the greater pretender of the two. And as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

Theaetetus:: Yes, I understand; and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

Stranger:: Excellent; and now listen to what I am going to say, and try to divide further the first of the two.

Theaetetus:: Whatever line of division you suggest, I will endeavor to assist you.

Stranger:: Do we admit that virtue is distinct from vice in the soul?

Theaetetus:: Certainly.

Stranger:: And purification was to leave the good and to cast out whatever is bad?

Theaetetus:: True.

Stranger:: Then any taking away of evil from the soul may be properly called purification?

Theaetetus:: Yes.

Stranger:: And in the soul there are two kinds of evil.

Theaetetus:: What are they?

Stranger:: The one may be compared to disease in the body, the other to deformity.

Theaetetus:: I do not understand.

Stranger:: Perhaps you have never reflected that disease and discord are the same.

Theaetetus:: To this, again, I know not what I should reply.

Stranger:: Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

Theaetetus:: Just that.

Stranger:: And is deformity anything but the want of measure, which is always unsightly?

Theaetetus:: Exactly.

Stranger:: And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

Theaetetus:: Certainly.

Stranger:: And yet they must all be akin?

Theaetetus:: Of course.

Stranger:: Then we shall be right in calling vice a discord and disease of the soul?

Theaetetus:: Most true.

Stranger:: And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

Theaetetus:: Clearly of the want of symmetry.

Stranger:: But surely we know that no soul is voluntarily ignorant of anything?

Theaetetus:: Certainly not.

Stranger:: And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

Theaetetus:: True.

Stranger:: Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

Theaetetus:: Very true.

Stranger:: Then there are these two kinds of evil in the soul—the one which is generally called vice, and is obviously a disease of the soul…

Theaetetus:: Yes.

Stranger:: And there is the other, which they call ignorance, and which, because existing only in the soul, they will not allow to be vice.

Theaetetus:: I certainly admit what I at first disputed—that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be all alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

Stranger:: And in the case of the body are there not two arts which have to do with the two bodily states?

Theaetetus:: What are they?

Stranger:: There is gymnastic, which has to do with deformity, and medicine, which has to do with disease.

Theaetetus:: True.

Stranger:: And where there is insolence and injustice and cowardice, is not chastisement the art which is most required?

Theaetetus:: That certainly appears to be the opinion of mankind.

Stranger:: Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

Theaetetus:: True.

Stranger:: And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

Theaetetus:: I will.

Stranger:: I believe that I can see how we shall soonest arrive at the answer to this question.

Theaetetus:: How?

Stranger:: If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also twofold, answering to the two divisions of ignorance.

Theaetetus:: Well, and do you see what you are looking for?

Stranger:: I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

Theaetetus:: What is it?

Stranger:: When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

Theaetetus:: True.

Stranger:: And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

Theaetetus:: True.

Stranger:: What name, then, shall be given to the sort of instruction which gets rid of this?

Theaetetus:: The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part of the world.

Stranger:: Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division.

Theaetetus:: We have.

Stranger:: I think that there is a point at which such a division is possible.

Theaetetus:: Where?

Stranger:: Of education, one method appears to be rougher, and another smoother.

Theaetetus:: How are we to distinguish the two?

Stranger:: There is the time-honored mode which our fathers commonly practiced towards their sons, and which is still adopted by many—either of roughly reproving their errors, or of gently advising them; which varieties may be correctly included under the general term of admonition.

Theaetetus:: True.

Stranger:: But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of instruction gives much trouble and does little good——

Theaetetus:: There they are quite right.

Stranger:: Accordingly, they set to work to eradicate the spirit of conceit in another way.

Theaetetus:: In what way?

Stranger:: They cross-examine a man’s words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectical process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle towards others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

Theaetetus:: That is certainly the best and wisest state of mind.

Stranger:: For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

Theaetetus:: Very true.

Stranger:: And who are the ministers of this art? I am afraid to say the Sophists.

Theaetetus:: Why?

Stranger:: Lest we should assign to them too high a prerogative.

Theaetetus:: Yet the Sophist has a certain likeness to our minister of purification.

Stranger:: Yes, the same sort of likeness which a wolf, who is the fiercest of animals, has to a dog, who is the gentlest. But he who would not be found tripping, ought to be very careful in this matter of comparisons, for they are most slippery things. Nevertheless, let us assume that the Sophists are the men. I say this provisionally, for I think that the line which divides them will be marked enough if proper care is taken.

Theaetetus:: Likely enough.

Stranger:: Let us grant, then, that from the discerning art comes purification, and from purification let there be separated off a part which is concerned with the soul; of this mental purification instruction is a portion, and of instruction education, and of education, that refutation of vain conceit which has been discovered in the present argument; and let this be called by you and me the nobly-descended art of Sophistry.

Theaetetus:: Very well; and yet, considering the number of forms in which he has presented himself, I begin to doubt how I can with any truth or confidence describe the real nature of the Sophist.

Stranger:: You naturally feel perplexed; and yet I think that he must be still more perplexed in his attempt to escape us, for as the proverb says, when every way is blocked, there is no escape; now, then, is the time of all others to set upon him.

Theaetetus:: True.

Stranger:: First let us wait a moment and recover breath, and while we are resting, we may reckon up in how many forms he has appeared. In the first place, he was discovered to be a paid hunter after wealth and youth.

Theaetetus:: Yes.

Stranger:: In the second place, he was a merchant in the goods of the soul.

Theaetetus:: Certainly.

Stranger:: In the third place, he has turned out to be a retailer of the same sort of wares.

Theaetetus:: Yes; and in the fourth place, he himself manufactured the learned wares which he sold.

Stranger:: Quite right; I will try and remember the fifth myself.

He belonged to the fighting class, and was further distinguished as a hero of debate, who professed the eristic art.

Theaetetus:: True.

Stranger:: The sixth point was doubtful, and yet we at last agreed that he was a purger of souls, who cleared away notions obstructive to knowledge.

Theaetetus:: Very true.

Stranger:: Do you not see that when the professor of any art has one name and many kinds of knowledge, there must be something wrong? The multiplicity of names which is applied to him shows that the common principle to which all these branches of knowledge are tending, is not understood.

Theaetetus:: I should imagine this to be the case.

Stranger:: At any rate we will understand him, and no indolence shall prevent us. Let us begin again, then, and re-examine some of our statements concerning the Sophist; there was one thing which appeared to me especially characteristic of him.

Theaetetus:: To what are you referring?

Stranger:: We were saying of him, if I am not mistaken, that he was a disputer?

Theaetetus:: We were.

Stranger:: And does he not also teach others the art of disputation?

Theaetetus:: Certainly he does.

Stranger:: And about what does he profess that he teaches men to dispute? To begin at the beginning—Does he make them able to dispute about divine things, which are invisible to men in general?

Theaetetus:: At any rate, he is said to do so.

Stranger:: And what do you say of the visible things in heaven and earth, and the like?

Theaetetus:: Certainly he disputes, and teaches to dispute about them.

Stranger:: Then, again, in private conversation, when any universal assertion is made about generation and essence, we know that such persons are tremendous argufiers, and are able to impart their own skill to others.

Theaetetus:: Undoubtedly.

Stranger:: And do they not profess to make men able to dispute about law and about politics in general?

Theaetetus:: Why, no one would have anything to say to them, if they did not make these professions.

Stranger:: In all and every art, what the craftsman ought to say in answer to any question is written down in a popular form, and he who likes may learn.

Theaetetus:: I suppose that you are referring to the precepts of Protagoras about wrestling and the other arts?

Stranger:: Yes, my friend, and about a good many other things. In a word, is not the art of disputation a power of disputing about all things?

Theaetetus:: Certainly; there does not seem to be much which is left out.

Stranger:: But oh! my dear youth, do you suppose this possible? for perhaps your young eyes may see things which to our duller sight do not appear.

Theaetetus:: To what are you alluding? I do not think that I understand your present question.

Stranger:: I ask whether anybody can understand all things.

Theaetetus:: Happy would mankind be if such a thing were possible!

Stranger:: But how can any one who is ignorant dispute in a rational manner against him who knows?

Theaetetus:: He cannot.

Stranger:: Then why has the sophistical art such a mysterious power?

Theaetetus:: To what do you refer?

Stranger:: How do the Sophists make young men believe in their supreme and universal wisdom? For if they neither disputed nor were thought to dispute rightly, or being thought to do so were deemed no wiser for their controversial skill, then, to quote your own observation, no one would give them money or be willing to learn their art.

Theaetetus:: They certainly would not.

Stranger:: But they are willing.

Theaetetus:: Yes, they are.

Stranger:: Yes, and the reason, as I should imagine, is that they are supposed to have knowledge of those things about which they dispute?

Theaetetus:: Certainly.

Stranger:: And they dispute about all things?

Theaetetus:: True.

Stranger:: And therefore, to their disciples, they appear to be all-wise?

Theaetetus:: Certainly.

Stranger:: But they are not; for that was shown to be impossible.

Theaetetus:: Impossible, of course.

Stranger:: Then the Sophist has been shown to have a sort of conjectural or apparent knowledge only of all things, which is not the truth?

Theaetetus:: Exactly; no better description of him could be given.

Stranger:: Let us now take an illustration, which will still more clearly explain his nature.

Theaetetus:: What is it?

Stranger:: I will tell you, and you shall answer me, giving your very closest attention. Suppose that a person were to profess, not that he could speak or dispute, but that he knew how to make and do all things, by a single art.

Theaetetus:: All things?

Stranger:: I see that you do not understand the first word that I utter, for you do not understand the meaning of 'all.'

Theaetetus:: No, I do not.

Stranger:: Under all things, I include you and me, and also animals and trees.

Theaetetus:: What do you mean?

Stranger:: Suppose a person to say that he will make you and me, and all creatures.

Theaetetus:: What would he mean by ‘making’? He cannot be a husbandman;—for you said that he is a maker of animals.

Stranger:: Yes; and I say that he is also the maker of the sea, and the earth, and the heavens, and the gods, and of all other things; and, further, that he can make them in no time, and sell them for a few pence.

Theaetetus:: That must be a jest.

Stranger:: And when a man says that he knows all things, and can teach them to another at a small cost, and in a short time, is not that a jest?

Theaetetus:: Certainly.

Stranger:: And is there any more artistic or graceful form of jest than imitation?

Theaetetus:: Certainly not; and imitation is a very comprehensive term, which includes under one class the most diverse sorts of things.

Stranger:: We know, of course, that he who professes by one art to make all things is really a painter, and by the painter’s art makes resemblances of real things which have the same name with them; and he can deceive the less intelligent sort of young children, to whom he shows his pictures at a distance, into the belief that he has the absolute power of making whatever he likes.

Theaetetus:: Certainly.

Stranger:: And may there not be supposed to be an imitative art of reasoning? Is it not possible to enchant the hearts of young men by words poured through their ears, when they are still at a distance from the truth of facts, by exhibiting to them fictitious arguments, and making them think that they are true, and that the speaker is the wisest of men in all things?

Theaetetus:: Yes; why should there not be another such art ?

Stranger:: But as time goes on, and their hearers advance in years, and come into closer contact with realities, and have learnt by sad experience to see and feel the truth of things, are not the greater part of them compelled to change many opinions which they formerly entertained, so that the great appears small to them, and the easy difficult, and all their dreamy speculations are overturned by the facts of life?

Theaetetus:: That is my view, as far as I can judge, although, at my age, I may be one of those who see things at a distance only.

Stranger:: And the wish of all of us, who are your friends, is and always will be to bring you as near to the truth as we can without the sad reality. And now I should like you to tell me, whether the Sophist is not visibly a magician and imitator of true being; or are we still disposed to think that he may have a true knowledge of the various matters about which he disputes?

Theaetetus:: But how can he, Stranger? Is there any doubt, after what has been said, that he is to be located in one of the divisions of children's play?

Stranger:: Then we must place him in the class of magicians and mimics.

Theaetetus:: Certainly we must.

Stranger:: And now our business is not to let the animal out, for we have got him in a sort of dialectical net, and there is one thing which he decidedly will not escape.

Theaetetus:: What is that?

Stranger:: The inference that he is a juggler.

Theaetetus:: Precisely my own opinion of him.

Stranger:: Then, clearly, we ought as soon as possible to divide the image-making art, and go down into the net, and, if the Sophist does not run away from us, to seize him according to orders and deliver him over to reason, who is the lord of the hunt, and proclaim the capture of him; and if he creeps into the recesses of the imitative art, and secretes himself in one of them, to divide again and follow him up until in some subsection of imitation he is caught. For our method of tackling each and all is one which neither he nor any other creature will ever escape in triumph.

Theaetetus:: Well said; and let us do as you propose.

Stranger:: Well, then, pursuing the same analytic method as before, I think that I can discern two divisions of the imitative art, but I am not as yet able to see in which of them the desired form is to be found.

Theaetetus:: Will you tell me first what are the two divisions of which you are speaking?

Stranger:: One is the art of likeness-making;—generally a likeness of anything is made by producing a copy which is executed according to the proportions of the original, similar in length and breadth and depth, each thing receiving also its appropriate color.

Theaetetus:: Is not this always the aim of imitation?

Stranger:: Not always; in works either of sculpture or of painting, which are of any magnitude, there is a certain degree of deception; for if artists were to give the true proportions of their fair works, the upper part, which is farther off, would appear to be out of proportion in comparison with the lower, which is nearer; and so they give up the truth in their images and make only the proportions which appear to be beautiful, disregarding the real ones.

Theaetetus:: Quite true.

Stranger:: And that which being other is also like, may we not fairly call a likeness or image?

Theaetetus:: Yes.

Stranger:: And may we not, as I did just now, call that part of the imitative art which is concerned with making such images the art of likeness-making?

Theaetetus:: Let that be the name.

Stranger:: And what shall we call those resemblances of the beautiful, which appear such owing to the unfavorable position of the spectator, whereas if a person had the power of getting a correct view of works of such magnitude, they would appear not even like that to which they profess to be like? May we not call these 'appearances,' since they appear only and are not really like?

Theaetetus:: Certainly.

Stranger:: There is a great deal of this kind of thing in painting, and in all imitation.

Theaetetus:: Of course.

Stranger:: And may we not fairly call the sort of art, which produces an appearance and not an image, fantastic art?

Theaetetus:: Most fairly.

Stranger:: These then are the two kinds of image-making—the art of making likenesses, and fantastic or the art of making appearances?

Theaetetus:: True.

Stranger:: I was doubtful before in which of them I should place the Sophist, nor am I even now able to see clearly; verily he is a wonderful and inscrutable creature. And now in the cleverest manner he has got into an impossible place.

Theaetetus:: Yes, he has.

Stranger:: Do you speak advisedly, or are you carried away at the moment by the habit of assenting into giving a hasty answer?

Theaetetus:: May I ask to what you are referring?

Stranger:: My dear friend, we are engaged in a very difficult speculation—there can be no doubt of that; for how a thing can appear and seem, and not be, or how a man can say a thing which is not true, has always been and still remains a very perplexing question. Can any one say or think that falsehood really exists, and avoid being caught in a contradiction? Indeed, Theaetetus, the task is a difficult one.

Theaetetus:: Why?

Stranger:: He who says that falsehood exists has the audacity to assert the being of not-being; for this is implied in the possibility of falsehood. But, my boy, in the days when I was a boy, the great Parmenides protested against this doctrine, and to the end of his life he continued to inculcate the same lesson—always repeating both in verse and out of verse:

> 'Keep your mind from this way of enquiry, for never will
> you show that not-being is.'

Such is his testimony, which is confirmed by the very expression when sifted a little. Would you object to begin with the consideration of the words themselves?

Theaetetus:: Never mind about me; I am only desirous that you should carry on the argument in the best way, and that you should take me with you.

Stranger:: Very good; and now say, do we venture to utter the forbidden word 'not-being'?

Theaetetus:: Certainly we do.

Stranger:: Let us be serious then, and consider the question neither in strife nor play: suppose that one of the hearers of Parmenides was asked, ‘To what is the term “not-being" to be applied?’—do you know what sort of object he would single out in reply, and what answer he would make to the enquirer?

Theaetetus:: That is a difficult question, and one not to be answered at all by a person like myself.

Stranger:: There is at any rate no difficulty in seeing that the predicate ‘not-being’ is not applicable to any being.

Theaetetus:: None, certainly.

Stranger:: And if not to being, then not to something.

Theaetetus:: Of course not.

Stranger:: It is also plain, that in speaking of something we speak of being, for to speak of an abstract something naked and isolated from all being is impossible.

Theaetetus:: Impossible.

Stranger:: You mean by assenting to imply that he who says something must say some one thing?

Theaetetus:: Yes.

Stranger:: Some in the singular (τὶ) you would say is the sign of one, some in the dual (τινὲ) of two, some in the plural (τινὲς) of many?

Theaetetus:: Exactly.

Stranger:: Then he who says ‘not something’ must say absolutely nothing.

Theaetetus:: Most assuredly.

Stranger:: And as we cannot admit that a man speaks and says nothing, he who says ‘not-being’ does not speak at all.

Theaetetus:: The difficulty of the argument can no further go.

Stranger:: Not yet, my friend, is the time for such a word; for there still remains of all perplexities the first and greatest, touching the very foundation of the matter.

Theaetetus:: What do you mean? Do not be afraid to speak.

Stranger:: To that which is, may be attributed some other thing which is?

Theaetetus:: Certainly.

Stranger:: But can anything which is, be attributed to that which is not?

Theaetetus:: Impossible.

Stranger:: And all number is to be reckoned among things which are?

Theaetetus:: Yes, surely number, if anything, has a real existence.

Stranger:: Then we must not attempt to attribute to not-being number either in the singular or plural?

Theaetetus:: The argument implies that we should be wrong in doing so.

Stranger:: But how can a man either express in words or even conceive in thought things which are not or a thing which is not without number?

Theaetetus:: How indeed?

Stranger:: When we speak of things which are not, are we not attributing plurality to not-being?

Theaetetus:: Certainly.

Stranger:: But, on the other hand, when we say 'what is not,' do we not attribute unity?

Theaetetus:: Manifestly.

Stranger:: Nevertheless, we maintain that you may not and ought not to attribute being to not-being?

Theaetetus:: Most true.

Stranger:: Do you see, then, that not-being in itself can neither be spoken, uttered, or thought, but that it is unthinkable, unutterable, unspeakable, indescribable?

Theaetetus:: Quite true.

Stranger:: But, if so, I was wrong in telling you just now that the difficulty which was coming is the greatest of all.

Theaetetus:: What! is there a greater still behind?

Stranger:: Well, I am surprised, after what has been said already, that you do not see the difficulty in which he who would refute the notion of not-being is involved. For he is compelled to contradict himself as soon as he makes the attempt.

Theaetetus:: What do you mean? Speak more clearly.

Stranger:: Do not expect clearness from me. For I, who maintain that not-being has no part either in the one or many, just now spoke and am still speaking of not-being as one; for I say 'not-being.' Do you understand?

Theaetetus:: Yes.

Stranger:: And a little while ago I said that not-being is unutterable, unspeakable, indescribable: do you follow?

Theaetetus:: I do after a fashion.

Stranger:: When I introduced the word 'is,' did I not contradict what I said before?

Theaetetus:: Clearly.

Stranger:: And in using the singular verb, did I not speak of not-being as one?

Theaetetus:: Yes.

Stranger:: And when I spoke of not-being as indescribable and unspeakable and unutterable, in using each of these words in the singular, did I not refer to not-being as one?

Theaetetus:: Certainly.

Stranger:: And yet we say that, strictly speaking, it should not be defined either as one or many, and should not even be called ‘it,’ for the use of the word ‘it’ would imply a form of unity.

Theaetetus:: Quite true.

Stranger:: How, then, can any one put any faith in me? For now, as always, I am unequal to the refutation of not-being.

And therefore, as I was saying, do not look to me for the right way of speaking about not-being; but come, let us try the experiment with you.

Theaetetus:: What do you mean?

Stranger:: Make a noble effort, as becomes youth, and endeavor with all your might to speak of not-being in a right manner, without introducing into it either existence or unity or plurality.

Theaetetus:: It would be a strange boldness in me which would attempt the task when I see you thus discomfited.

Stranger:: Say no more of ourselves; but until we find some one or other who can speak of not-being without number, we must acknowledge that the Sophist is a clever rogue who will not be got out of his hole.

Theaetetus:: Most true.

Stranger:: And if we say to him that he professes an art of making appearances, he will grapple with us and retort our argument upon ourselves; and when we call him an image-maker he will say, ‘Pray what do you mean at all by an image?’—and I should like to know, Theaetetus, how we can possibly answer the younker’s question?

Theaetetus:: We shall doubtless tell him of the images which are reflected in water or in mirrors; also of sculptures, pictures, and other duplicates.

Stranger:: I see, Theaetetus, that you have never made the acquaintance of the Sophist.

Theaetetus:: Why do you think so?

Stranger:: He will make believe to have his eyes shut, or to have none.

Theaetetus:: What do you mean?

Stranger:: When you tell him of something existing in a mirror, or in sculpture, and address him as though he had eyes, he will laugh you to scorn, and will pretend that he knows nothing of mirrors and streams, or of sight at all; he will say that he is asking about an idea.

Theaetetus:: What can he mean?

Stranger:: The common notion pervading all these objects, which you speak of as many, and yet call by the single name of image, as though it were the unity under which they were all included. How will you maintain your ground against him?

Theaetetus:: How, Stranger, can I describe an image except as something fashioned in the likeness of the true?

Stranger:: And do you mean this something to be some other true thing, or what do you mean?

Theaetetus:: Certainly not another true thing, but only a resemblance.

Stranger:: And you mean by true that which really is?

Theaetetus:: Yes.

Stranger:: And the not true is that which is the opposite of the true?

Theaetetus:: Exactly.

Stranger:: A resemblance, then, is not really real, if, as you say, not true?

Theaetetus:: Nay, but it is in a certain sense.

Stranger:: You mean to say, not in a true sense?

Theaetetus:: Yes; it is in reality only an image.

Stranger:: Then what we call an image is in reality really unreal.

Theaetetus:: In what a strange complication of being and not-being we are involved!

Stranger:: Strange! I should think so. See how, by his reciprocation of opposites, the many-headed Sophist has compelled us, quite against our will, to admit the existence of not-being. not-being.

Theaetetus:: Yes, indeed, I see.

Stranger:: The difficulty is how to define his art without falling into a contradiction.

Theaetetus:: How do you mean? And where does the danger lie?

Stranger:: When we say that he deceives us with an illusion, and that his art is illusory, do we mean that our soul is led by his art to think falsely, or what do we mean?

Theaetetus:: There is nothing else to be said.

Stranger:: Again, false opinion is that form of opinion which thinks the opposite of the truth:—You would assent?

Theaetetus:: Certainly.

Stranger:: You mean to say that false opinion thinks what is not?

Theaetetus:: Of course.

Stranger:: Does false opinion think that things which are not are not, or that in a certain sense they are?

Theaetetus:: Things that are not must be imagined to exist in a certain sense, if any degree of falsehood is to be possible.

Stranger:: And does not false opinion also think that things which most certainly exist do not exist at all?

Theaetetus:: Yes.

Stranger:: And here, again, is falsehood?

Theaetetus:: Falsehood—yes.

Stranger:: And in like manner, a false proposition will be deemed to be one which asserts the non-existence of things which are, and the existence of things which are not.

Theaetetus:: There is no other way in which a false proposition can arise.

Stranger:: There is not; but the Sophist will deny these statements. And indeed how can any rational man assent to them, when the very expressions which we have just used were before acknowledged by us to be unutterable, unspeakable, indescribable, unthinkable? Do you see his point, Theaetetus?

Theaetetus:: Of course he will say that we are contradicting ourselves when we hazard the assertion, that falsehood exists in opinion and in words; for in maintaining this, we are compelled over and over again to assert being of not-being, which we admitted just now to be an utter impossibility.

Stranger:: How well you remember! And now it is high time to hold a consultation as to what we ought to do about the Sophist; for if we persist in looking for him in the class of false workers and magicians, you see that the handles for objection and the difficulties which will arise are very numerous and obvious.

Theaetetus:: They are indeed.

Stranger:: We have gone through but a very small portion of them, and they are really infinite.

Theaetetus:: If that is the case, we cannot possibly catch the Sophist.

Stranger:: Shall we then be so faint-hearted as to give him up?

Theaetetus:: Certainly not, I should say, if we can get the slightest hold upon him.

Stranger:: Will you then forgive me, and, as your words imply, not be altogether displeased if I flinch a little from the grasp of such a sturdy argument?

Theaetetus:: To be sure I will.

Stranger:: I have a yet more urgent request to make.

Theaetetus:: Which is—?

Stranger:: That you will promise not to regard me as a parricide.

Theaetetus:: And why?

Stranger:: Because, in self-defense, I must test the philosophy of my father Parmenides, and try to prove by main force that in a certain sense not-being is, and that being, on the other hand, is not.

Theaetetus:: Some attempt of the kind is clearly needed.

Stranger:: Yes, a blind man, as they say, might see that, and, unless these questions are decided in one way or another, no one when he speaks of false words, or false opinion, or idols, or images, or imitations, or appearances, or about the arts which are concerned with them, can avoid falling into ridiculous contradictions.

Theaetetus:: Most true.

Stranger:: And therefore I must venture to lay hands on my father's argument; for if I am to be over-scrupulous, I shall have to give the matter up.

Theaetetus:: Nothing in the world should ever induce us to do so.

Stranger:: I have a third little request which I wish to make.

Theaetetus:: What is it?

Stranger:: You heard me say what I have always felt and still feel—that I have no heart for this argument?

Theaetetus:: I did.

Stranger:: I tremble at the thought of what I have said, and expect that you will deem me mad, when you hear of my sudden changes and shiftings; let me therefore observe, that I am examining the question entirely out of regard for you.

Theaetetus:: There is no reason for you to fear that I shall impute any impropriety to you, if you attempt this refutation and proof; take heart, therefore, and proceed.

Stranger:: And where shall I begin the perilous enterprise? I think that the road which I must take is—

Theaetetus:: Which?—Let me hear.

Stranger:: I think that we had better, first of all, consider the points which at present are regarded as self-evident, lest we may have fallen into some confusion, and be too ready to assent to one another, fancying that we are quite clear about them.

Theaetetus:: Say more distinctly what you mean.

Stranger:: I think that Parmenides, and all who ever yet undertook to determine the number and nature of existences, talked to us in rather a light and easy strain.

Theaetetus:: How?

Stranger:: As if we had been children, to whom they repeated each his own mythos or story;—one said that there were three principles, and that at one time there was war between certain of them; and then again there was peace, and they were married and begat children, and brought them up; and another spoke of two principles,—a moist and a dry, or a hot and a cold, and made them marry and cohabit. The Eleatics, however, in our part of the world, say that all things are many in name, but in nature one; this is their mythos, which goes back to Xenophanes, and is even older. Then there are Ionian, and in more recent times Sicilian muses, who have arrived at the conclusion that to unite the two principles is safer, and to say that being is one and many, and that these are held together by enmity and friendship, ever parting, ever meeting, as the severer Muses assert, while the gentler ones do not insist on the perpetual strife and peace, but admit a relaxation and alternation of them; peace and unity sometimes prevailing under the sway of Aphrodite, and then again plurality and war, by reason of a principle of strife. Whether any of them spoke the truth in all this is hard to determine; besides, antiquity and famous men should have reverence, and not be liable to accusations so serious. Yet one thing may be said of them without offence—

Theaetetus:: What thing?

Stranger:: That they went on their several ways disdaining to notice people like ourselves; they did not care whether they took us with them, or left us behind them.

Theaetetus:: How do you mean?

Stranger:: I mean to say, that when they talk of one, two, or more elements, which are or have become or are becoming, or again of heat mingling with cold, assuming in some other part of their works separations and mixtures,—tell me, Theaetetus, do you understand what they mean by these expressions? When I was a younger man, I used to fancy that I understood quite well what was meant by the term ‘not-being,’ which is our present subject of dispute; and now you see in what a fix we are about it.

Theaetetus:: I see.

Stranger:: And very likely we have been getting into the same perplexity about ‘being,’ and yet may fancy that when anybody utters the word, we understand him quite easily, although we do not know about not-being. But we may be equally ignorant of both.

Theaetetus:: I dare say.

Stranger:: And the same may be said of all the terms just mentioned.

Theaetetus:: True.

Stranger:: The consideration of most of them may be deferred; but we had better now discuss the chief captain and leader of them.

Theaetetus:: Of what are you speaking? You clearly think that we must first investigate what people mean by the word ‘being.’

Stranger:: You follow close at my heels, Theaetetus. For the right method, I conceive, will be to call into our presence the dualistic philosophers and to interrogate them. ‘Come,’ we will say, ‘Ye, who affirm that hot and cold or any other two principles are the universe, what is this term which you apply to both of them, and what do you mean when you say that both and each of them “are”? How are we to understand the word “are”? Upon your view, are we to suppose that there is a third principle over and above the other two,—three in all, and not two? For clearly you cannot say that one of the two principles is being, and yet attribute being equally to both of them; for, if you did, whichever of the two is identified with being, will comprehend the other; and so they will be one and not two.’

Theaetetus:: Very true.

Stranger:: But perhaps you mean to give the name of ‘being’ to both of them together?

Theaetetus:: Quite likely.

Stranger:: ‘Then, friends,’ we shall reply to them, ‘the answer is plainly that the two will still be resolved into one.’

Theaetetus:: Most true.

Stranger:: ‘Since, then, we are in a difficulty, please to tell us what you mean, when you speak of being; for there can be no doubt that you always from the first understood your own meaning, whereas we once thought that we understood you, but now we are in a great strait. Please to begin by explaining this matter to us, and let us no longer fancy that we understand you, when we entirely misunderstand you.’ There will be no impropriety in our demanding an answer to this question, either of the dualists or of the pluralists?

Theaetetus:: Certainly not.

Stranger:: And what about the assertors of the oneness of the all—must we not endeavor to ascertain from them what they mean by ‘being’?

Theaetetus:: By all means.

Stranger:: Then let them answer this question: One, you say, alone is? ‘Yes’ they will reply.

Theaetetus:: True.

Stranger:: And there is something which you call ‘being’?

Theaetetus:: ‘Yes’

Stranger:: And is being the same as one, and do you apply two names to the same thing?

Theaetetus:: What will be their answer, Stranger?

Stranger:: It is clear, Theaetetus, that he who asserts the unity of being will find a difficulty in answering this or any other question.

Theaetetus:: Why so?

Stranger:: To admit of two names, and to affirm that there is nothing but unity, is surely ridiculous?

Theaetetus:: Certainly.

Stranger:: And equally irrational to admit that a name is anything?

Theaetetus:: How so?

Stranger:: To distinguish the name from the thing, implies duality.

Theaetetus:: Yes.

Stranger:: And yet he who identifies the name with the thing will be compelled to say that it is the name of nothing, or if he says that it is the name of something, even then the name will only be the name of a name, and of nothing else.

Theaetetus:: True.

Stranger:: And the one will turn out to be only one of one, and being absolute unity, will represent a mere name.

Theaetetus:: Certainly.

Stranger:: And would they say that the whole is other than the one that is, or the same with it?

Theaetetus:: To be sure they would, and they actually say so.

Stranger:: If being is a whole, as Parmenides sings,—

> ‘Every way like unto the fullness of a well-rounded sphere,
> Evenly balanced from the centre on every side,
> And must needs be neither greater nor less in any way,
> Neither on this side nor on that—’

then being has a centre and extremes, and, having these, must also have parts.

Theaetetus:: True.

Stranger:: Yet that which has parts may have the attribute of unity in all the parts, and in this way being all and a whole, may be one?

Theaetetus:: Certainly.

Stranger:: But that of which this is the condition cannot be absolute unity?

Theaetetus:: Why not?

Stranger:: Because, according to right reason, that which is truly one must be affirmed to be absolutely indivisible.

Theaetetus:: Certainly.

Stranger:: But this indivisible, if made up of many parts, will contradict reason.

Theaetetus:: I understand.

Stranger:: Shall we say that being is one and a whole, because it has the attribute of unity? Or shall we say that being is not a whole at all?

Theaetetus:: That is a hard alternative to offer.

Stranger:: Most true; for being, having in a certain sense the attribute of one, is yet proved not to be the same as one, and the all is therefore more than one.

Theaetetus:: Yes.

Stranger:: And yet if being be not a whole, through having the attribute of unity, and there be such a thing as an absolute whole, being lacks something of its own nature?

Theaetetus:: Certainly.

Stranger:: Upon this view, again, being, having a defect of being, will become not-being?

Theaetetus:: True.

Stranger:: And, again, the all becomes more than one, for being and the whole will each have their separate nature.

Theaetetus:: Yes.

Stranger:: But if the whole does not exist at all, all the previous difficulties remain the same, and there will be the further difficulty, that besides having no being, being can never have come into being.

Theaetetus:: Why so?

Stranger:: Because that which comes into being always comes into being as a whole, so that he who does not give whole a place among beings, cannot speak either of essence or generation as existing.

Theaetetus:: Yes, that certainly appears to be true.

Stranger:: Again; how can that which is not a whole have any quantity? For that which is of a certain quantity must necessarily be the whole of that quantity.

Theaetetus:: Exactly.

Stranger:: And there will be innumerable other points, each of them causing infinite trouble to him who says that being is either one or two.

Theaetetus:: The difficulties which are dawning upon us prove this; for one objection connects with another, and they are always involving what has preceded in a greater and worse perplexity.

Stranger:: We are far from having exhausted the more exact thinkers who treat of being and not-being. But let us be content to leave them, and proceed to view those who speak less precisely; and we shall find as the result of all, that the nature of being is quite as difficult to comprehend as that of not-being.

Theaetetus:: Then now we will go to the others.

Stranger:: There appears to be a sort of war of Giants and Gods going on amongst them; they are fighting with one another about the nature of essence.

Theaetetus:: How is that?

Stranger:: Some of them are dragging down all things from heaven and from the unseen to earth, and they literally grasp in their hands rocks and oaks; of these they lay hold, and obstinately maintain, that the things only which can be touched or handled have being or essence, because they define being and body as one, and if any one else says that what is not a body exists they altogether despise him, and will hear of nothing but body.

Theaetetus:: I have often met with such men, and terrible fellows they are.

Stranger:: And that is the reason why their opponents cautiously defend themselves from above, out of an unseen world, mightily contending that true essence consists of certain intelligible and incorporeal ideas; the bodies of the materialists, which by them are maintained to be the very truth, they break up into little bits by their arguments, and affirm them to be, not essence, but generation and motion. Between the two armies, Theaetetus, there is always an endless conflict raging concerning these matters.

Theaetetus:: True.

Stranger:: Let us ask each party in turn, to give an account of that which they call essence.

Theaetetus:: How shall we get it out of them?

Stranger:: With those who make being to consist in ideas, there will be less difficulty, for they are civil people enough; but there will be very great difficulty, or rather an absolute impossibility, in getting an opinion out of those who drag everything down to matter. Shall I tell you what we must do?

Theaetetus:: What?

Stranger:: Let us, if we can, really improve them; but if this is not possible, let us imagine them to be better than they are, and more willing to answer in accordance with the rules of argument, and then their opinion will be more worth having; for that which better men acknowledge has more weight than that which is acknowledged by inferior men. Moreover we are no respecters of persons, but seekers after truth.

Theaetetus:: Very good.

Stranger:: Then now, on the supposition that they are improved, let us ask them to state their views, and do you interpret them.

Theaetetus:: Agreed.

Stranger:: Let them say whether they would admit that there is such a thing as a mortal animal.

Theaetetus:: Of course they would.

Stranger:: And do they not acknowledge this to be a body having a soul?

Theaetetus:: Certainly they do.

Stranger:: Meaning to say that the soul is something which exists?

Theaetetus:: True.

Stranger:: And do they not say that one soul is just, and another unjust, and that one soul is wise, and another foolish?

Theaetetus:: Certainly.

Stranger:: And that the just and wise soul becomes just and wise by the possession of justice and wisdom, and the opposite under opposite circumstances?

Theaetetus:: Yes, they do.

Stranger:: But surely that which may be present or may be absent will be admitted by them to exist?

Theaetetus:: Certainly.

Stranger:: And, allowing that justice, wisdom, the other virtues, and their opposites exist, as well as a soul in which they inhere, do they affirm any of them to be visible and tangible, or are they all invisible?

Theaetetus:: They would say that hardly any of them are visible.

Stranger:: And would they say that they are corporeal?

Theaetetus:: They would distinguish: the soul would be said by them to have a body; but as to the other qualities of justice, wisdom, and the like, about which you asked, they would not venture either to deny their existence, or to maintain that they were all corporeal.

Stranger:: Verily, Theaetetus, I perceive a great improvement in them; the real aborigines, children of the dragon's teeth, would have been deterred by no shame at all, but would have obstinately asserted that nothing is which they are not able to squeeze in their hands.

Theaetetus:: That is pretty much their notion.

Stranger:: Let us push the question; for if they will admit that any, even the smallest particle of being, is incorporeal, it is enough; they must then say what that nature is which is common to both the corporeal and incorporeal, and which they have in their mind's eye when they say of both of them that they 'are.' Perhaps they may be in a difficulty; and if this is the case, there is a possibility that they may accept a notion of ours respecting the nature of being, having nothing of their own to offer.

Theaetetus:: What is the notion? Tell me, and we shall soon see.

Stranger:: My notion would be, that anything which possesses any sort of power to affect another, or to be affected by another, if only for a single moment, however trifling the cause and however slight the effect, has real existence; and I hold that the definition of being is simply power.

Theaetetus:: They accept your suggestion, having nothing better of their own to offer.

Stranger:: Very good; perhaps we, as well as they, may one day change our minds; but, for the present, this may be regarded as the understanding which is established with them.

Theaetetus:: Agreed.

Stranger:: Let us now go to the friends of ideas; of their opinions, too, you shall be the interpreter.

Theaetetus:: I will.

Stranger:: To them we say—You would distinguish essence from generation?

Theaetetus:: 'Yes,' they reply.

Stranger:: And you would allow that we participate in generation with the body, and through perception, but we participate with the soul through thought in true essence; and essence you would affirm to be always the same and immutable, whereas generation or becoming varies?

Theaetetus:: Yes; that is what we should affirm.

Stranger:: Well, fair sirs, we say to them, what is this participation, which you assert of both? Do you agree with our recent definition?

Theaetetus:: What definition?

Stranger:: We said that being was an active or passive energy, arising out of a certain power which proceeds from elements meeting with one another. Perhaps your ears, Theaetetus, may fail to catch their answer, which I recognize because I have been accustomed to hear it.

Theaetetus:: And what is their answer?

Stranger:: They deny the truth of what we were just now saying to the aborigines about existence.

Theaetetus:: What was that?

Stranger:: Any power of doing or suffering in a degree however slight was held by us to be a sufficient definition of being?

Theaetetus:: True.

Stranger:: They deny this, and say that the power of doing or suffering is confined to becoming, and that neither power is applicable to being.

Theaetetus:: And is there not some truth in what they say?

Stranger:: Yes; but our reply will be, that we want to ascertain from them more distinctly, whether they further admit that the soul knows, and that being or essence is known.

Theaetetus:: There can be no doubt that they say so.

Stranger:: And is knowing and being known doing or suffering, or both, or is the one doing and the other suffering, or has neither any share in either?

Theaetetus:: Clearly, neither has any share in either; for if they say anything else, they will contradict themselves.

Stranger:: I understand; but they will allow that if to know is active, then, of course, to be known is passive. And on this view being, in so far as it is known, is acted upon by knowledge, and is therefore in motion; for that which is in a state of rest cannot be acted upon, as we affirm.

Theaetetus:: True.

Stranger:: And, O heavens, can we ever be made to believe that motion and life and soul and mind are not present with perfect being? Can we imagine that being is devoid of life and mind, and exists in awful unmeaningness an everlasting fixture?

Theaetetus:: That would be a dreadful thing to admit, Stranger.

Stranger:: But shall we say that being has mind and not life?

Theaetetus:: How is that possible?

Stranger:: Or shall we say that both inhere in perfect being, but that it has no soul which contains them?

Theaetetus:: And in what other way can it contain them?

Stranger:: Or that being has mind and life and soul, but although endowed with soul remains absolutely unmoved?

Theaetetus:: All three suppositions appear to me to be irrational.

Stranger:: Under being, then, we must include motion, and that which is moved.

Theaetetus:: Certainly.

Stranger:: Then, Theaetetus, our inference is, that if there is no motion, neither is there any mind anywhere, or about anything or belonging to any one.

Theaetetus:: Quite true.

Stranger:: And yet this equally follows, if we grant that all things are in motion—upon this view too mind has no existence.

Theaetetus:: How so?

Stranger:: Do you think that sameness of condition and mode and subject could ever exist without a principle of rest?

Theaetetus:: Certainly not.

Stranger:: Can you see how without them mind could exist, or come into existence anywhere?

Theaetetus:: No.

Stranger:: And surely contend we must in every possible way against him who would annihilate knowledge and reason and mind, and yet ventures to speak confidently about anything.

Theaetetus:: Yes, with all our might.

Stranger:: Then the philosopher, who has the truest reverence for these qualities, cannot possibly accept the notion of those who say that the whole is at rest, either as unity or in many forms: and he will be utterly deaf to those who assert universal motion. As children say entreatingly 'Give us both' so he will include both the moveable and immoveable in his definition of being and all.

Theaetetus:: Most true.

Stranger:: And now, do we not seem to have gained a fair notion of being?

Theaetetus:: Yes truly.

Stranger:: Alas, Theaetetus, methinks that we are now only beginning to see the real difficulty of the enquiry into the nature of it.

Theaetetus:: What do you mean?

Stranger:: O my friend, do you not see that nothing can exceed our ignorance, and yet we fancy that we are saying something good?

Theaetetus:: I certainly thought that we were; and I do not at all understand how we never found out our desperate case.

Stranger:: Reflect: after having made these admissions, may we not be justly asked the same questions which we ourselves were asking of those who said that all was hot and cold?

Theaetetus:: What were they? Will you recall them to my mind?

Stranger:: To be sure I will, and I will remind you of them, by putting the same questions to you which I did to them, and then we shall get on.

Theaetetus:: True.

Stranger:: Would you not say that rest and motion are in the most entire opposition to one another?

Theaetetus:: Of course.

Stranger:: And yet you would say that both and either of them equally are?

Theaetetus:: I should.

Stranger:: And when you admit that both or either of them are, do you mean to say that both or either of them are in motion?

Theaetetus:: Certainly not.

Stranger:: Or do you wish to imply that they are both at rest, when you say that they are?

Theaetetus:: Of course not.

Stranger:: Then you conceive of being as some third and distinct nature, under which rest and motion are alike included; and, observing that they both participate in being, you declare that they are.

Theaetetus:: Truly we seem to have an intimation that being is some third thing, when we say that rest and motion are.

Stranger:: Then being is not the combination of rest and motion, but something different from them.

Theaetetus:: So it would appear.

Stranger:: Being, then, according to its own nature, is neither in motion nor at rest.

Theaetetus:: That is very much the truth.

Stranger:: Where, then, is a man to look for help who would have any clear or fixed notion of being in his mind?

Theaetetus:: Where, indeed?

Stranger:: I scarcely think that he can look anywhere; for that which is not in motion must be at rest, and again, that which is not at rest must be in motion; but being is placed outside of both these classes. Is this possible?

Theaetetus:: Utterly impossible.

Stranger:: Here, then, is another thing which we ought to bear in mind.

Theaetetus:: What?

Stranger:: When we were asked to what we were to assign the appellation of not-being, we were in the greatest difficulty:—do you remember?

Theaetetus:: To be sure.

Stranger:: And are we not now in as great a difficulty about being?

Theaetetus:: I should say, Stranger, that we are in one which is, if possible, even greater.

Stranger:: Then let us acknowledge the difficulty; and as being and not-being are involved in the same perplexity, there is hope that when the one appears more or less distinctly, the other will equally appear; and if we are able to see neither, there may still be a chance of steering our way in between them, without any great discredit.

Theaetetus:: Very good.

Stranger:: Let us enquire, then, how we come to predicate many names of the same thing.

Theaetetus:: Give an example.

Stranger:: I mean that we speak of man, for example, under many names—that we attribute to him colors and forms and magnitudes and virtues and vices, in all of which instances and in ten thousand others we not only speak of him as a man, but also as good, and having numberless other attributes; and in the same way anything else which we originally supposed to be one is described by us as many, and under many names.

Theaetetus:: That is true.

Stranger:: And thus we provide a rich feast for tyros, whether young or old; for there is nothing easier than to argue that the one cannot be many, or the many one; and great is their delight in denying that a man is good; for man, they insist, is man and good is good. I dare say that you have met with persons who take an interest in such matters—they are often elderly men, whose meager sense is thrown into amazement by these discoveries of theirs, which they believe to be the height of wisdom.

Theaetetus:: Certainly, I have.

Stranger:: Then, not to exclude any one who has ever speculated at all upon the nature of being, let us put our questions to them as well as to our former friends.

Theaetetus:: What questions?

Stranger:: Shall we refuse to attribute being to motion and rest, or anything to anything, and assume that they do not mingle, and are incapable of participating in one another? Or shall we gather all into one class of things communicable with one another? Or are some things communicable and others not?—Which of these alternatives, Theaetetus, will they prefer?

Theaetetus:: I have nothing to answer on their behalf. Suppose that you take all these hypotheses in turn, and see what are the consequences which follow from each of them.

Stranger:: Very good, and first let us assume them to say that nothing is capable of participating in anything else in any respect; in that case rest and motion cannot participate in being at all.

Theaetetus:: They cannot.

Stranger:: But would either of them be if not participating in being?

Theaetetus:: No.

Stranger:: Then by this admission everything is instantly overturned, as well the doctrine of universal motion as of universal rest, and also the doctrine of those who distribute being into immutable and everlasting kinds; for all these add on a notion of being, some affirming that things 'are' truly in motion, and others that they 'are' truly at rest.

Theaetetus:: Just so.

Stranger:: Again, those who would at one time compound, and at another resolve all things, whether making them into one and out of one creating infinity, or dividing them into finite elements, and forming compounds out of these; whether they suppose the processes of creation to be successive or continuous, would be talking nonsense in all this if there were no admixture.

Theaetetus:: True.

Stranger:: Most ridiculous of all will the men themselves be who want to carry out the argument and yet forbid us to call anything, because participating in some affection from another, by the name of that other.

Theaetetus:: Why so?

Stranger:: Why, because they are compelled to use the words ‘to be,’ ‘apart,’ ‘from others,’ ‘in itself,’ and ten thousand more, which they cannot give up, but must make the connecting links of discourse; and therefore they do not require to be refuted by others, but their enemy, as the saying is, inhabits the same house with them; they are always carrying about with them an adversary, like the wonderful ventriloquist, Eurycles, who out of their own bellies audibly contradicts them.

Theaetetus:: Precisely so; a very true and exact illustration.

Stranger:: And now, if we suppose that all things have the power of communion with one another—what will follow?

Theaetetus:: Even I can solve that riddle.

Stranger:: How?

Theaetetus:: Why, because motion itself would be at rest, and rest again in motion, if they could be attributed to one another.

Stranger:: But this is utterly impossible.

Theaetetus:: Of course.

Stranger:: Then only the third hypothesis remains.

Theaetetus:: True.

Stranger:: For, surely, either all things have communion with all; or nothing with any other thing; or some things communicate with some things and others not.

Theaetetus:: Certainly.

Stranger:: And two out of these three suppositions have been found to be impossible.

Theaetetus:: Yes.

Stranger:: Every one then, who desires to answer truly, will adopt the third and remaining hypothesis of the communion of some with some.

Theaetetus:: Quite true.

Stranger:: This communion of some with some may be illustrated by the case of letters; for some letters do not fit each other, while others do.

Theaetetus:: Of course.

Stranger:: And the vowels, especially, are a sort of bond which pervades all the other letters, so that without a vowel one consonant cannot be joined to another.

Theaetetus:: True.

Stranger:: But does every one know what letters will unite with what? Or is art required in order to do so?

Theaetetus:: Art is required.

Stranger:: What art?

Theaetetus:: The art of grammar.

Stranger:: And is not this also true of sounds high and low?—Is not he who has the art to know what sounds mingle, a musician, and he who is ignorant, not a musician?

Theaetetus:: Yes.

Stranger:: And we shall find this to be generally true of art or the absence of art.

Theaetetus:: Of course.

Stranger:: And as classes are admitted by us in like manner to be some of them capable and others incapable of intermixture, must not he who would rightly show what kinds will unite and what will not, proceed by the help of science in the path of argument? And will he not ask if the connecting links are universal, and so capable of intermixture with all things; and again, in divisions, whether there are not other universal classes, which make them possible?

Theaetetus:: To be sure he will require science, and, if I am not mistaken, the very greatest of all sciences.

Stranger:: How are we to call it? By Zeus, have we not lighted unwittingly upon our free and noble science, and in looking for the Sophist have we not entertained the philosopher unawares?

Theaetetus:: What do you mean?

Stranger:: Should we not say that the division according to classes, which neither makes the same other, nor makes other the same, is the business of the dialectical science?

Theaetetus:: That is what we should say.

Stranger:: Then, surely, he who can divide rightly is able to see clearly one form pervading a scattered multitude, and many different forms contained under one higher form; and again, one form knit together into a single whole and pervading many such wholes, and many forms, existing only in separation and isolation. This is the knowledge of classes which determines where they can have communion with one another and where not.

Theaetetus:: Quite true.

Stranger:: And the art of dialectic would be attributed by you only to the philosopher pure and true?

Theaetetus:: Who but he can be worthy?

Stranger:: In this region we shall always discover the philosopher, if we look for him; like the Sophist, he is not easily discovered, but for a different reason.

Theaetetus:: For what reason?

Stranger:: Because the Sophist runs away into the darkness of not-being, in which he has learned by habit to feel about, and cannot be discovered because of the darkness of the place. Is not that true?

Theaetetus:: It seems to be so.

Stranger:: And the philosopher, always holding converse through reason with the idea of being, is also dark from excess of light; for the souls of the many have no eye which can endure the vision of the divine.

Theaetetus:: Yes; that seems to be quite as true as the other.

Stranger:: Well, the philosopher may hereafter be more fully considered by us, if we are disposed; but the Sophist must clearly not be allowed to escape until we have had a good look at him.

Theaetetus:: Very good.

Stranger:: Since, then, we are agreed that some classes have a communion with one another, and others not, and some have communion with a few and others with many, and that there is no reason why some should not have universal communion with all, let us now pursue the enquiry, as the argument suggests, not in relation to all ideas, lest the multitude of them should confuse us, but let us select a few of those which are reckoned to be the principal ones, and consider their several natures and their capacity of communion with one another, in order that if we are not able to apprehend with perfect clearness the notions of being and not-being, we may at least not fall short in the consideration of them, so far as they come within the scope of the present enquiry, if peradventure we may be allowed to assert the reality of not-being, and yet escape unscathed.

Theaetetus:: We must do so.

Stranger:: The most important of all the genera are those which we were just now mentioning—being and rest and motion.

Theaetetus:: Yes, by far.

Stranger:: And two of these are, as we affirm, incapable of communion with one another.

Theaetetus:: Quite incapable.

Stranger:: Whereas being surely has communion with both of them, for both of them are?

Theaetetus:: Of course.

Stranger:: That makes up three of them.

Theaetetus:: To be sure.

Stranger:: And each of them is other than the remaining two, but the same with itself.

Theaetetus:: True.

Stranger:: But then, what is the meaning of these two words, 'same' and 'other'? Are they two new kinds other than the three, and yet always of necessity intermingling with them, and are we to have five kinds instead of three; or when we speak of the same and other, are we unconsciously speaking of one of the three first kinds?

Theaetetus:: Very likely we are.

Stranger:: But, surely, motion and rest are neither the other nor the same.

Theaetetus:: How is that?

Stranger:: Whatever we attribute to motion and rest in common, cannot be either of them.

Theaetetus:: Why not?

Stranger:: Because motion would be at rest and rest in motion, for either of them, being predicated of both, will compel the other to change into the opposite of its own nature, because partaking of its opposite.

Theaetetus:: Quite true.

Stranger:: Yet they surely both partake of the same and of the other?

Theaetetus:: Yes.

Stranger:: Then we must not assert that motion, any more than rest, is either the same or the other.

Theaetetus:: No; we must not.

Stranger:: But are we to conceive that being and the same are identical?

Theaetetus:: Possibly.

Stranger:: But if they are identical, then again in saying that motion and rest have being, we should also be saying that they are the same.

Theaetetus:: Which surely cannot be.

Stranger:: Then being and the same cannot be one.

Theaetetus:: Scarcely.

Stranger:: Then we may suppose the same to be a fourth class, which is now to be added to the three others.

Theaetetus:: Quite true.

Stranger:: And shall we call the other a fifth class? Or should we consider being and other to be two names of the same class?

Theaetetus:: Very likely.

Stranger:: But you would agree, if I am not mistaken, that existences are relative as well as absolute?

Theaetetus:: Certainly.

Stranger:: And the other is always relative to other?

Theaetetus:: True.

Stranger:: But this would not be the case unless being and the other entirely differed; for, if the other, like being, were absolute as well as relative, then there would have been a kind of other which was not other than other. And now we find that what is other must of necessity be what it is in relation to some other.

Theaetetus:: That is the true state of the case.

Stranger:: Then we must admit the other as the fifth of our selected classes.

Theaetetus:: Yes.

Stranger:: And the fifth class pervades all classes, for they all differ from one another, not by reason of their own nature, but because they partake of the idea of the other.

Theaetetus:: Quite true.

Stranger:: Then let us now put the case with reference to each of the five.

Theaetetus:: How?

Stranger:: First there is motion, which we affirm to be absolutely 'other' than rest: what else can we say?

Theaetetus:: It is so.

Stranger:: And therefore is not rest.

Theaetetus:: Certainly not.

Stranger:: And yet is, because partaking of being.

Theaetetus:: True.

Stranger:: Again, motion is other than the same?

Theaetetus:: Just so.

Stranger:: And is therefore not the same.

Theaetetus:: It is not.

Stranger:: Yet, surely, motion is the same, because all things partake of the same.

Theaetetus:: Very true.

Stranger:: Then we must admit, and not object to say, that motion is the same and is not the same, for we do not apply the terms 'same' and 'not the same,' in the same sense; but we call it the 'same,' in relation to itself, because partaking of the same; and not the same, because having communion with the other, it is thereby severed from the same, and has become not that but other, and is therefore rightly spoken of as 'not the same.'

Theaetetus:: To be sure.

Stranger:: And if absolute motion in any point of view partook of rest, there would be no absurdity in calling motion stationary.

Theaetetus:: Quite right,—that is, on the supposition that some classes mingle with one another, and others not.

Stranger:: That such a communion of kinds is according to nature, we had already proved before we arrived at this part of our discussion.

Theaetetus:: Certainly.

Stranger:: Let us proceed, then. May we not say that motion is other than the other, having been also proved by us to be other than the same and other than rest?

Theaetetus:: That is certain.

Stranger:: Then, according to this view, motion is other and also not other?

Theaetetus:: True.

Stranger:: What is the next step? Shall we say that motion is other than the three and not other than the fourth,—for we agreed that there are five classes about and in the sphere of which we proposed to make enquiry?

Theaetetus:: Surely we cannot admit that the number is less than it appeared to be just now.

Stranger:: Then we may without fear contend that motion is other than being?

Theaetetus:: Without the least fear.

Stranger:: The plain result is that motion, since it partakes of being, really is and also is not?

Theaetetus:: Nothing can be plainer.

Stranger:: Then not-being necessarily exists in the case of motion and of every class; for the nature of the other entering into them all, makes each of them other than being, and so non-existent; and therefore of all of them, in like manner, we may truly say that they are not; and again, inasmuch as they partake of being, that they are and are existent.

Theaetetus:: So we may assume.

Stranger:: Every class, then, has plurality of being and infinity of not-being.

Theaetetus:: So we must infer.

Stranger:: And being itself may be said to be other than the other kinds.

Theaetetus:: Certainly.

Stranger:: Then we may infer that being is not, in respect of as many other things as there are; for not being these it is itself one, and is not the other things, which are infinite in number.

Theaetetus:: That is not far from the truth.

Stranger:: And we must not quarrel with this result, since it is of the nature of classes to have communion with one another; and if any one denies our present statement [viz. that being is not, etc.], let him first argue with our former conclusion [i.e. respecting the communion of ideas], and then he may proceed to argue with what follows.

Theaetetus:: Nothing can be fairer.

Stranger:: Let me ask you to consider a further question.

Theaetetus:: What question?

Stranger:: When we speak of not-being, we speak, I suppose, not of something opposed to being, but only different.

Theaetetus:: What do you mean?

Stranger:: When we speak of something as not great, does the expression seem to you to imply what is little any more than what is equal?

Theaetetus:: Certainly not.

Stranger:: The negative particles, οὐ and μὴ when prefixed to words, do not imply opposition, but only difference from the words, or more correctly from the things represented by the words, which follow them.

Theaetetus:: Quite true.

Stranger:: There is another point to be considered, if you do not object.

Theaetetus:: What is it?

Stranger:: The nature of the other appears to me to be divided into fractions like knowledge.

Theaetetus:: How so?

Stranger:: Knowledge, like the other, is one; and yet the various parts of knowledge have each of them their own particular name, and hence there are many arts and kinds of knowledge.

Theaetetus:: Quite true.

Stranger:: And is not the case the same with the parts of the other, which is also one?

Theaetetus:: Very likely; but will you tell me how?

Stranger:: There is some part of the other which is opposed to the beautiful?

Theaetetus:: There is.

Stranger:: Shall we say that this has or has not a name?

Theaetetus:: It has; for whatever we call not-beautiful is other than the beautiful, not than something else.

Stranger:: And now tell me another thing.

Theaetetus:: What?

Stranger:: Is the not-beautiful anything but this—an existence parted off from a certain kind of existence, and again from another point of view opposed to an existing something?

Theaetetus:: True.

Stranger:: Then the not-beautiful turns out to be the opposition of being to being?

Theaetetus:: Very true.

Stranger:: But upon this view, is the beautiful a more real and the not-beautiful a less real existence?

Theaetetus:: Not at all.

Stranger:: And the not-great may be said to exist, equally with the great?

Theaetetus:: Yes.

Stranger:: And, in the same way, the just must be placed in the same category with the not-just—the one cannot be said to have any more existence than the other.

Theaetetus:: True.

Stranger:: The same may be said of other things; seeing that the nature of the other has a real existence, the parts of this nature must equally be supposed to exist.

Theaetetus:: Of course.

Stranger:: Then, as would appear, the opposition of a part of the other, and of a part of being, to one another, is, if I may venture to say so, as truly essence as being itself, and implies not the opposite of being, but only what is other than being.

Theaetetus:: Beyond question.

Stranger:: What then shall we call it?

Theaetetus:: Clearly, not-being; and this is the very nature for which the Sophist compelled us to search.

Stranger:: And has not this, as you were saying, as real an existence as any other class? May I not say with confidence that not-being has an assured existence, and a nature of its own? Just as the great was found to be great and the beautiful beautiful, and the not-great not-great, and the not-beautiful not-beautiful, in the same manner not-being has been found to be and is not-being, and is to be reckoned one among the many classes of being. Do you, Theaetetus, still feel any doubt of this?

Theaetetus:: None whatever.

Stranger:: Do you observe that our skepticism has carried us beyond the range of Parmenides' prohibition?

Theaetetus:: In what?

Stranger:: We have advanced to a further point, and shown him more than he forbad us to investigate.

Theaetetus:: How is that?

Stranger:: Why, because he says—

> 'Not-being never is, and do thou keep thy thoughts
> from this way of enquiry.'

Theaetetus:: Yes, he says so.

Stranger:: Whereas, we have not only proved that things which are not are, but we have shown what form of being not-being is; for we have shown that the nature of the other is, and is distributed over all things in their relations to one another, and whatever part of the other is contrasted with being, this is precisely what we have ventured to call not-being.

Theaetetus:: And surely, Stranger, we were quite right.

Stranger:: Let not any one say, then, that while affirming the opposition of not-being to being, we still assert the being of not-being; for as to whether there is an opposite of being, to that enquiry we have long said good-bye—it may or may not be, and may or may not be capable of definition. But as touching our present account of not-being, let a man either convince us of error, or, so long as he cannot, he too must say, as we are saying, that there is a communion of classes, and that being, and difference or other, traverse all things and mutually interpenetrate, so that the other partakes of being, and by reason of this participation is, and yet is not that of which it partakes, but other, and being other than being, it is clearly a necessity that not-being should be. And again, being, through partaking of the other, becomes a class other than the remaining classes, and being other than all of them, is not each one of them, and is not all the rest, so that undoubtedly there are thousands upon thousands of cases in which being is not, and all other things, whether regarded individually or collectively, in many respects are, and in many respects are not.

Theaetetus:: True.

Stranger:: And he who is skeptical of this contradiction, must think how he can find something better to say; or if he sees a puzzle, and his pleasure is to drag words this way and that, the argument will prove to him, that he is not making a worthy use of his faculties; for there is no charm in such puzzles, and there is no difficulty in detecting them; but we can tell him of something else the pursuit of which is noble and also difficult.

Theaetetus:: What is it?

Stranger:: A thing of which I have already spoken;—letting alone these puzzles as involving no difficulty, he should be able to follow and criticize in detail every argument, and when a man says that the same is in a manner other, or that other is the same, to understand and refute him from his own point of view, and in the same respect in which he asserts either of these affections. But to show that somehow and in some sense the same is other, or the other same, or the great small, or the like unlike; and to delight in always bringing forward such contradictions, is no real refutation, but is clearly the new-born babe of some one who is only beginning to approach the problem of being.

Theaetetus:: To be sure.

Stranger:: For certainly, my friend, the attempt to separate all existences from one another is a barbarism and utterly unworthy of an educated or philosophical mind.

Theaetetus:: Why so?

Stranger:: The attempt at universal separation is the final annihilation of all reasoning; for only by the union of conceptions with one another do we attain to discourse of reason.

Theaetetus:: True.

Stranger:: And, observe that we were only just in time in making a resistance to such separatists, and compelling them to admit that one thing mingles with another.

Theaetetus:: Why so?

Stranger:: Why, that we might be able to assert discourse to be a kind of being; for if we could not, the worst of all consequences would follow; we should have no philosophy. Moreover, the necessity for determining the nature of discourse presses upon us at this moment; if utterly deprived of it, we could no more hold discourse; and deprived of it we should be if we admitted that there was no admixture of natures at all.

Theaetetus:: Very true. But I do not understand why at this moment we must determine the nature of discourse.

Stranger:: Perhaps you will see more clearly by the help of the following explanation.

Theaetetus:: What explanation?

Stranger:: Not-being has been acknowledged by us to be one among many classes diffused over all being.

Theaetetus:: True.

Stranger:: And thence arises the question, whether not-being mingles with opinion and language.

Theaetetus:: How so?

Stranger:: If not-being has no part in the proposition, then all things must be true; but if not-being has a part, then false opinion and false speech are possible, for to think or to say what is not—is falsehood, which thus arises in the region of thought and in speech.

Theaetetus:: That is quite true.

Stranger:: And where there is falsehood surely there must be deceit.

Theaetetus:: Yes.

Stranger:: And if there is deceit, then all things must be full of idols and images and fancies.

Theaetetus:: To be sure.

Stranger:: Into that region the Sophist, as we said, made his escape, and, when he had got there, denied the very possibility of falsehood; no one, he argued, either conceived or uttered falsehood, inasmuch as not-being did not in any way partake of being.

Theaetetus:: True.

Stranger:: And now, not-being has been shown to partake of being, and therefore he will not continue fighting in this direction, but he will probably say that some ideas partake of not-being, and some not, and that language and opinion are of the non-partaking class; and he will still fight to the death against the existence of the image-making and fantastic art, in which we have placed him, because, as he will say, opinion and language do not partake of not-being, and unless this participation exists, there can be no such thing as falsehood. And, with the view of meeting this evasion, we must begin by enquiring into the nature of language, opinion, and imagination, in order that when we find them we may find also that they have communion with not-being, and, having made out the connection of them, may thus prove that falsehood exists; and therein we will imprison the Sophist, if he deserves it, or, if not, we will let him go again and look for him in another class.

Theaetetus:: Certainly, Stranger, there appears to be truth in what was said about the Sophist at first, that he was of a class not easily caught, for he seems to have abundance of defenses, which he throws up, and which must every one of them be stormed before we can reach the man himself. And even now, we have with difficulty got through his first defense, which is the not-being of not-being, and lo! here is another; for we have still to show that falsehood exists in the sphere of language and opinion, and there will be another and another line of defense without end.

Stranger:: Any one, Theaetetus, who is able to advance even a little ought to be of good cheer, for what would he who is dispirited at a little progress do, if he were making none at all, or even undergoing a repulse? Such a faint heart, as the proverb says, will never take a city: but now that we have succeeded thus far, the citadel is ours, and what remains is easier.

Theaetetus:: Very true.

Stranger:: Then, as I was saying, let us first of all obtain a conception of language and opinion, in order that we may have clearer grounds for determining, whether not-being has any concern with them, or whether they are both always true, and neither of them ever false.

Theaetetus:: True.

Stranger:: Then, now, let us speak of names, as before we were speaking of ideas and letters; for that is the direction in which the answer may be expected.

Theaetetus:: And what is the question at issue about names?

Stranger:: The question at issue is whether all names may be connected with one another, or none, or only some of them.

Theaetetus:: Clearly the last is true.

Stranger:: I understand you to say that words which have a meaning when in sequence may be connected, but that words which have no meaning when in sequence cannot be connected?

Theaetetus:: What are you saying?

Stranger:: What I thought that you intended when you gave your assent; for there are two sorts of intimation of being which are given by the voice.

Theaetetus:: What are they?

Stranger:: One of them is called nouns, and the other verbs.

Theaetetus:: Describe them.

Stranger:: That which denotes action we call a verb.

Theaetetus:: True.

Stranger:: And the other, which is an articulate mark set on those who do the actions, we call a noun.

Theaetetus:: Quite true.

Stranger:: A succession of nouns only is not a sentence, any more than of verbs without nouns.

Theaetetus:: I do not understand you.

Stranger:: I see that when you gave your assent you had something else in your mind. But what I intended to say was, that a mere succession of nouns or of verbs is not discourse.

Theaetetus:: What do you mean?

Stranger:: I mean that words like 'walks,' 'runs,' 'sleeps,' or any other words which denote action, however many of them you string together, do not make discourse.

Theaetetus:: How can they?

Stranger:: Or, again, when you say 'lion,' 'stag,' 'horse,' or any other words which denote agents—neither in this way of stringing words together do you attain to discourse; for there is no expression of action or inaction, or of the existence of existence or non-existence indicated by the sounds, until verbs are mingled with nouns; then the words fit, and the smallest combination of them forms language, and is the simplest and least form of discourse.

Theaetetus:: Again I ask, What do you mean?

Stranger:: When any one says 'A man learns,' should you not call this the simplest and least of sentences?

Theaetetus:: Yes.

Stranger:: Yes, for he now arrives at the point of giving an intimation about something which is, or is becoming, or has become, or will be. And he not only names, but he does something, by connecting verbs with nouns; and therefore we say that he discourses, and to this connection of words we give the name of discourse.

Theaetetus:: True.

Stranger:: And as there are some things which fit one another, and other things which do not fit, so there are some vocal signs which do, and others which do not, combine and form discourse.

Theaetetus:: Quite true.

Stranger:: There is another small matter.

Theaetetus:: What is it?

Stranger:: A sentence must and cannot help having a subject.

Theaetetus:: True.

Stranger:: And must be of a certain quality.

Theaetetus:: Certainly.

Stranger:: And now let us mind what we are about.

Theaetetus:: We must do so.

Stranger:: I will repeat a sentence to you in which a thing and an action are combined, by the help of a noun and a verb; and you shall tell me of whom the sentence speaks.

Theaetetus:: I will, to the best of my power.

Stranger:: 'Theaetetus sits'—not a very long sentence.

Theaetetus:: Not very.

Stranger:: Of whom does the sentence speak, and who is the subject? that is what you have to tell.

Theaetetus:: Of me; I am the subject.

Stranger:: Or this sentence, again—

Theaetetus:: What sentence?

Stranger:: 'Theaetetus, with whom I am now speaking, is flying'

Theaetetus:: That also is a sentence which will be admitted by every one to speak of me, and to apply to me.

Stranger:: We agreed that every sentence must necessarily have a certain quality.

Theaetetus:: Yes.

Stranger:: And what is the quality of each of these two sentences?

Theaetetus:: The one, as I imagine, is false, and the other true.

Stranger:: The true says what is true about you?

Theaetetus:: Yes.

Stranger:: And the false says what is other than true?

Theaetetus:: Yes.

Stranger:: And therefore speaks of things which are not as if they were?

Theaetetus:: True.

Stranger:: And says that things are real of you which are not; for, as we were saying, in regard to each thing or person, there is much that is and much that is not.

Theaetetus:: Quite true.

Stranger:: The second of the two sentences which related to you was first of all an example of the shortest form consistent with our definition.

Theaetetus:: Yes, this was implied in our recent admission.

Stranger:: And, in the second place, it related to a subject?

Theaetetus:: Yes.

Stranger:: Who must be you, and can be nobody else?

Theaetetus:: Unquestionably.

Stranger:: And it would be no sentence at all if there were no subject, for, as we proved, a sentence which has no subject is impossible.

Theaetetus:: Quite true.

Stranger:: When other, then, is asserted of you as the same, and not-being as being, such a combination of nouns and verbs is really and truly false discourse.

Theaetetus:: Most true.

Stranger:: And therefore thought, opinion, and imagination are now proved to exist in our minds both as true and false.

Theaetetus:: How so?

Stranger:: You will know better if you first gain a knowledge of what they are, and in what they severally differ from one another.

Theaetetus:: Give me the knowledge which you would wish me to gain.

Stranger:: Are not thought and speech the same, with this exception, that what is called thought is the unuttered conversation of the soul with herself?

Theaetetus:: Quite true.

Stranger:: But the stream of thought which flows through the lips and is audible is called speech?

Theaetetus:: True.

Stranger:: And we know that there exists in speech...

Theaetetus:: What exists?

Stranger:: Affirmation.

Theaetetus:: Yes, we know it.

Stranger:: When the affirmation or denial takes place in silence and in the mind only, have you any other name by which to call it but opinion?

Theaetetus:: There can be no other name.

Stranger:: And when opinion is presented, not simply, but in some form of sense, would you not call it imagination?

Theaetetus:: Certainly.

Stranger:: And seeing that language is true and false, and that thought is the conversation of the soul with herself, and opinion is the end of thinking, and imagination or fantasy is the union of sense and opinion, the inference is that some of them, since they are akin to language, should have an element of falsehood as well as of truth?

Theaetetus:: Certainly.

Stranger:: Do you perceive, then, that false opinion and speech have been discovered sooner than we expected?—For just now we seemed to be undertaking a task which would never be accomplished.

Theaetetus:: I perceive.

Stranger:: Then let us not be discouraged about the future; but now having made this discovery, let us go back to our previous classification.

Theaetetus:: What classification?

Stranger:: We divided image-making into two sorts; the one making likeness-making, the other imaginative or fantastic.

Theaetetus:: True.

Stranger:: And we said that we were uncertain in which we should place the Sophist.

Theaetetus:: We did say so.

Stranger:: And our heads began to go round more and more when it was asserted that there is no such thing as an image or idol or appearance, because in no manner or time or place can there ever be such a thing as falsehood.

Theaetetus:: True.

Stranger:: And now, since there has been shown to be false speech and false opinion, there may be imitations of real existences, and out of this condition of the mind an art of deception may arise.

Theaetetus:: Quite possible.

Stranger:: And we have already admitted, in what preceded, that the Sophist was lurking in one of the divisions of the likeness-making art?

Theaetetus:: Yes.

Stranger:: Let us, then, renew the attempt, and in dividing any class, always take the part to the right, holding fast to that which holds the Sophist, until we have stripped him of all his common properties, and reached his difference or peculiar. Then we may exhibit him in his true nature, first to ourselves and then to kindred dialectical spirits.

Theaetetus:: Very good.

Stranger:: You may remember that all art was originally divided by us into creative and acquisitive.

Theaetetus:: Yes.

Stranger:: And the Sophist was flitting before us in the acquisitive class, in the subdivisions of hunting, contests, merchandize, and the like.

Theaetetus:: Very true.

Stranger:: But now that the imitative art has enclosed him, it is clear that we must begin by dividing the art of creation; for imitation is a kind of creation—of images, however, as we affirm, and not of real things.

Theaetetus:: Quite true.

Stranger:: In the first place, there are two kinds of creation.

Theaetetus:: What are they?

Stranger:: One of them is human and the other divine.

Theaetetus:: I do not follow.

Stranger:: Every power, as you may remember our saying originally, which causes things to exist, not previously existing, was defined by us as creative.

Theaetetus:: I remember.

Stranger:: Looking, now, at the world and all the animals and plants, at things which grow upon the earth from seeds and roots, as well as at inanimate substances which are formed within the earth, fusile or non-fusile, shall we say that they come into existence—not having existed previously—by the creation of God, or shall we agree with vulgar opinion about them?

Theaetetus:: What is it?

Stranger:: The opinion that nature brings them into being from some spontaneous and unintelligent cause. Or shall we say that they are created by a divine reason and a knowledge which comes from God?

Theaetetus:: I dare say that, owing to my youth, I may often waver in my view, but now when I look at you and see that you incline to refer them to God, I defer to your authority.

Stranger:: Nobly said, Theaetetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I perceive that you will come of yourself and without any argument of mine, to that belief which, as you say, attracts you, I will not forestall the work of time. Let me suppose, then, that things which are said to be made by nature are the work of divine art, and that things which are made by man out of these are works of human art. And so there are two kinds of making and production, the one human and the other divine.

Theaetetus:: True.

Stranger:: Then, now, subdivide each of the two sections which we have already.

Theaetetus:: How do you mean?

Stranger:: I mean to say that you should make a vertical division of production or invention, as you have already made a lateral one.

Theaetetus:: I have done so.

Stranger:: Then, now, there are in all four parts or segments—two of them have reference to us and are human, and two of them have reference to the gods and are divine.

Theaetetus:: True.

Stranger:: And, again, in the division which was supposed to be made in the other way, one part in each subdivision is the making of the things themselves, but the two remaining parts may be called the making of likenesses; and so the productive art is again divided into two parts.

Theaetetus:: Tell me the divisions once more.

Stranger:: I suppose that we, and the other animals, and the elements out of which things are made—fire, water, and the like—are known by us to be each and all the creation and work of God.

Theaetetus:: True.

Stranger:: And there are images of them, which are not them, but which correspond to them; and these are also the creation of a wonderful skill.

Theaetetus:: What are they?

Stranger:: The appearances which spring up of themselves in sleep or by day, such as a shadow when darkness arises in a fire, or the reflection which is produced when the light in bright and smooth objects meets on their surface with an external light, and creates a perception the opposite of our ordinary sight.

Theaetetus:: Yes; and the images as well as the creation are equally the work of a divine hand.

Stranger:: And what shall we say of human art? Do we not make one house by the art of building, and another by the art of drawing, which is a sort of dream created by man for those who are awake?

Theaetetus:: Quite true.

Stranger:: And other products of human creation are also twofold and go in pairs; there is the thing, with which the art of making the thing is concerned, and the image, with which imitation is concerned.

Theaetetus:: Now I begin to understand, and am ready to acknowledge that there are two kinds of production, and each of them twofold; in the lateral division there is both a divine and a human production; in the vertical there are realities and a creation of a kind of similitudes.

Stranger:: And let us not forget that of the imitative class the one part was to have been likeness-making, and the other fantastic, if it could be shown that falsehood is a reality and belongs to the class of real being.

Theaetetus:: Yes.

Stranger:: And this appeared to be the case; and therefore now, without hesitation, we shall number the different kinds as two.

Theaetetus:: True.

Stranger:: Then, now, let us again divide the fantastic art.

Theaetetus:: Where shall we make the division?

Stranger:: There is one kind which is produced by an instrument, and another in which the creator of the appearance is himself the instrument.

Theaetetus:: What do you mean?

Stranger:: When any one makes himself appear like another in his figure or his voice, imitation is the name for this part of the fantastic art.

Theaetetus:: Yes.

Stranger:: Let this, then, be named the art of mimicry, and this the province assigned to it; as for the other division, we are weary and will give that up, leaving to some one else the duty of making the class and giving it a suitable name.

Theaetetus:: Let us do as you say—assign a sphere to the one and leave the other.

Stranger:: There is a further distinction, Theaetetus, which is worthy of our consideration, and for a reason which I will tell you.

Theaetetus:: Let me hear.

Stranger:: There are some who imitate, knowing what they imitate, and some who do not know. And what line of distinction can there possibly be greater than that which divides ignorance from knowledge?

Theaetetus:: There can be no greater.

Stranger:: Was not the sort of imitation of which we spoke just now the imitation of those who know? For he who would imitate you would surely know you and your figure?

Theaetetus:: Naturally.

Stranger:: And what would you say of the figure or form of justice or of virtue in general? Are we not well aware that many, having no knowledge of either, but only a sort of opinion, do their best to show that this opinion is really entertained by them, by expressing it, as far as they can, in word and deed?

Theaetetus:: Yes, that is very common.

Stranger:: And do they always fail in their attempt to be thought just, when they are not? Or is not the very opposite true?

Theaetetus:: The very opposite.

Stranger:: Such a one, then, should be described as an imitator—to be distinguished from the other, as he who is ignorant is distinguished from him who knows?

Theaetetus:: True.

Stranger:: Can we find a suitable name for each of them? This is clearly not an easy task; for among the ancients there was some confusion of ideas, which prevented them from attempting to divide genera into species; wherefore there is no great abundance of names. Yet, for the sake of distinctness, I will make bold to call the imitation which coexists with opinion, the imitation of appearance—that which coexists with science, a scientific or learned imitation.

Theaetetus:: Granted.

Stranger:: The former is our present concern, for the Sophist was classed with imitators indeed, but not among those who have knowledge.

Theaetetus:: Very true.

Stranger:: Let us, then, examine our imitator of appearance, and see whether he is sound, like a piece of iron, or whether there is still some crack in him.

Theaetetus:: Let us examine him.

Stranger:: Indeed there is a very considerable crack; for if you look, you find that one of the two classes of imitators is a simple creature, who thinks that he knows that which he only fancies; the other sort has knocked about among arguments, until he suspects and fears that he is ignorant of that which to the many he pretends to know.

Theaetetus:: There are certainly the two kinds which you describe.

Stranger:: Shall we regard one as the simple imitator—the other as the dissembling or ironical imitator?

Theaetetus:: Very good.

Stranger:: And shall we further speak of this latter class as having one or two divisions?

Theaetetus:: Answer yourself.

Stranger:: Upon consideration, then, there appear to me to be two; there is the dissembler, who harangues a multitude in public in a long speech, and the dissembler, who in private and in short speeches compels the person who is conversing with him to contradict himself.

Theaetetus:: What you say is most true.

Stranger:: And who is the maker of the longer speeches? Is he the statesman or the popular orator?

Theaetetus:: The latter.

Stranger:: And what shall we call the other? Is he the philosopher or the Sophist?

Theaetetus:: The philosopher he cannot be, for upon our view he is ignorant; but since he is an imitator of the wise he will have a name which is formed by an adaptation of the word σοφός. What shall we name him? I am pretty sure that I cannot be mistaken in terming him the true and very Sophist.

Stranger:: Shall we bind up his name as we did before, making a chain from one end of his genealogy to the other?

Theaetetus:: By all means.

Stranger:: He, then, who traces the pedigree of his art as follows—who, belonging to the conscious or dissembling section of the art of causing self-contradiction, is an imitator of appearance, and is separated from the class of fantastic which is a branch of image-making into that further division of creation, the juggling of words, a creation human, and not divine—any one who affirms the real Sophist to be of this blood and lineage will say the very truth.

Theaetetus:: Undoubtedly.

# The Sophistes Of Plato.

A DIALOGUE OF TRUE AND FALSE TEACHING.

Translated by E. W. Mackay, M. A., 1868.

Theodorus, Socrates, An Elean Stranger, Theaetetus.

Theodorus::—Conformably to our yesterdays agreement, Socrates, we have come ourselves and have brought with us this stranger, by birth an Elean, one of the followers of Parmenides and Zeno, and a great philosopher.

Socrates::—Possibly, Theodorus, you have unconsciously brought with you not a mere mortal visitor, but a God; since Homer tells how Gods—the God of strangers especially—are wont, in company with just and conscientious persons, to come inspecting the iniquities and righteousness of men. So perhaps this stranger is some higher being who has followed you in order to inspect and impeach the imperfections of our reasonings, being, in truth, some cross-examining God.

Theodorus::—Not so, Socrates; our friends argumentative method is, comparatively speaking, more moderate than that of ordinary Eristic cavilers; and though the man, in my opinion, is no God, he has nevertheless something divine about him; for such, indeed, I hold to be the case with all true philosophers.

Socrates::—You do well, my friend; although I fear that this kind of man is not much easier to distinguish than that of the Gods. For these,—I mean the true, not fictitious, philosophers, assume all sorts of fictitious semblances through others ignorance, and in the course of their peregrinations and inspection of the life of those below them, appear to some nothing worth, while surpassingly excellent in the esteem of others. Sometimes they take the form of statesmen, sometimes of (teachers or) sophists, while to some they seem as if altogether insane. However, I would gladly learn from this our guest, if not displeasing to him, what opinion his countrymen entertain, and what name they give to these several characters.

Theodorus::—What characters?

Socrates::—Those of the Sophist, the politician, and the philosopher.

Theodorus::—What specific doubt respecting them prompts your inquiry?

Socrates::—I wish to know whether they esteem them as one, or as two, or as three, assigning each of the three names to a separate genus.

Theodorus::—There can, I presume, be no objection to answer the question;—how say you, Stranger?

Stranger::—None in the least, Theodorus; there is neither scruple nor difficulty in saying that they consider them to be three; at the same time, to define each of them accurately is no small or easy task.

Theodorus::—You have accidentally, Socrates, touched on matters which we happened to be questioning him about before coming here, and he then made,, the same answer to us as now to you, saying he has heard and recollects all about it.

Socrates::—Do not then, Stranger, refuse the favor already asked. Tell us first, however, this—whether you prefer to reply in the form of a continuous discourse, or rather in that of answers to a series of questions, the form in which once, when young, I remember hearing Parmenides deliver some very beautiful arguments, he being very old at the time?

Stranger::—The colloquial form is certainly better, if it be used fluently and easily; if not, the form of monologue were preferable.

Socrates::—Choose, then, among those present one with whom to converse, for all will readily follow you. But if you take my advice you will select one of the younger men—Theaetetus here, for instance, or any other you like.

Stranger::—I feel ashamed, Socrates, at having in this, our first interview, to hold a lengthened discourse, either alone or with another, as if to make a display; for, in truth, the subject proposed is not to be comprised in a simple answer to a question as one might think, but is a matter requiring long discussion. Yet not to comply with your and their wishes were rude and unfriendly, especially after what you have said; and I accept Theaetetus as my fellow dialogist the more readily because I was already conversing with him in anticipation of your recommendation.

Theaetetus::—Pray do then, Stranger, consent to gratify us all?

Stranger::—Say no more, Theaetetus; I shall now address myself to you; and if hereafter you should feel fatigue through the prolixity of what you undertake, you must not blame me, but your own friends here.

Theaetetus::—I don’t fear defeat this time; but, in case of accident, I will take this younger Socrates, a crony of my own age, as an ally one who is not unaccustomed to share my exercises.

Stranger::—Well! settle this between yourselves as the discourse proceeds. We will begin, then, our mutual enquiry with the Sophist; considering and explaining what he is. At present you and I have only the name in common; each of us probably entertains a different idea as to the thing. But in every matter it is far more important to be agreed as to the thing by means of rational explanations, than to repeat the name without explanation. Now, it is not easy to determine the class or kind in which the Sophist is to be placed. But since, in order to deal effectually with great and important matters, universal experience shows it to be better to approach the investigation by means of simple and easy examples, I propose that we should do so in the present case, and study the obscure nature of the Sophist and his mode of action in some familiar instance; unless you, Theaetetus, can point out a. better way.

Theaetetus::—I can think of none better.

Stranger::—Suppose then we take something common and trivial, using it as a pattern or illustration of a greater thing.

Theaetetus::—Well!

Stranger::—Let us take something easily manageable and familiar, yet admitting rational exposition as much as a greater, a fisherman, for instance; this is a well-known and common thing.

Theaetetus::—Certainly.

Stranger::—I think it may suggest a method and an explanation not inapposite to our purpose.

Theaetetus::—Then will it answer well.

Stranger::—Come, then, let us begin thus; shall we call the fisherman an artist; or inartistic, but possessing some other faculty.

Theaetetus::—Certainly not inartistic!

Stranger::—But all art falls under two kinds.

Theaetetus::—How so?

Stranger::—Agriculture and all manipulations of material body, the putting together and forming of utensils, and the imitative art, all these may be called by one name.

Theaetetus::—What name?

Stranger::—When one brings into existence that which before had no existence, then we say that he who does so makes, and that the thing so brought into being is made or created.

Theaetetus::—Right.

Stranger::—But all the above-recited arts have a power of effecting this.

Theaetetus::—They have.

Stranger::—Summing them altogether in one, we may call them creative art (ποιητική).

Theaetetus::—Yes.

Stranger::—On the other hand, all the operations of science and knowledge, of money-making, gymnastics, hunting, etc.,—these, as creating nothing new, but only taking hold of things existing already, in the way of apprehending them by acts or words, or preventing others doing so, may be called acquisitive art (κτητική).

Theaetetus::—Just so.

Stranger::—All art, then, being either creative or acquisitive, in which class shall we place the art of fishing?

Theaetetus::—Doubtless in the acquisitive class.

Stranger::—But is not the acquisitive art itself of two kinds; one carried on by voluntary interchanges of gifts, wages, and values; the other, a seizure by means of acts or words altogether forcibly?

Theaetetus::—So it appears.

Stranger::—But is not the forcibly acquisitive art too susceptible of two-fold division?

Theaetetus::—How?

Stranger::—One kind consisting in open competition, the other in secret hunting.

Theaetetus::—Yes.

Stranger::—But the art of hunting too we must needs in reason divide.

Theaetetus::—Say how.

Stranger::—Into hunting the inanimate, and hunting the animate.

Theaetetus::—Of course, if there are both these.

Stranger::—Of course there must be; and we must leave alone the hunting of the inanimate, which, for the most part, is nameless, unless it be the art of diving and such like; on the other hand, we will call the art of hunting the animate animal hunting.

Theaetetus::—Be it so.

Stranger::—Of animal hunting again there may be said to be two sorts; one hunting on dry land, of which there are several kinds and names; another, the hunting of sailing and floating animals, or liquid hunting.

Theaetetus::—Certainly.

Stranger::—Of the floating animals, some are in air, some in water.

Theaetetus::—Certainly.

Stranger::—The hunting of the feathered tribe is called fowling.

Theaetetus::—True.

Stranger::—And the aquatic hunting is almost wholly fishing.

Theaetetus::—Yes.

Stranger::—But say, shall we not divide this sort of hunting also into two chief parts?

Theaetetus::—What parts?

Stranger::—One sort carried on with nets or gins, the other with blows.

Theaetetus::—How do you distinguish each?

Stranger::—One, because everything enclosing and constraining another may be called a barrier or net.

Theaetetus::—Certainly.

Stranger::—Such contrivances, whether formed of wicker or twine, or nooses of reeds or drags, are they not all snares or nets?

Theaetetus::—Doubtless.

Stranger::—This sort of hunting then we may term net hunting, or something of the sort.

Theaetetus::—Yes.

Stranger::—But the hunting with hooks and spears or by a blow, we may call hunting by striking, or can you suggest a better name?

Theaetetus::—Never mind the name; this is quite good enough.

Stranger::—But of the hunting by blows some is carried on by night with torches, so that the fishing is called torch fishing.

Theaetetus::—So it is.

Stranger::—But that by day may be all called hook fishing, since the spears too which are used in it are barbed or hooked.

Theaetetus::—So they say.

Stranger::—But of the hunting by blows of hooks one sort is practiced from above, downwards, and is called spearing or harpooning.

Theaetetus::—So indeed they call it.

Stranger::—And there remains one kind only, in which the hook, unlike the harpoon, does not strike any part of the body at random, but always some part of the mouth or head, and by means of a reed or rod draws the fish from below upwards. Now what name, Theaetetus, shall we give to this operation?

Theaetetus::—I think we have now solved the problem which it was proposed to unravel.

Stranger::—You and I, then, are now agreed not only as to the name of the art of angling, but as to the thing. For of all art one-half was acquisitive, the half of this seizing, half of this hunting, half of this animal hunting, half of this hunting in a fluid,—the lower division of which was the fisherman's art; of fishing half was fishing by blows, half again of this hook fishing; and the half of this which draws from below upwards is the anglers art, which has obtained a name in analogy with the action practiced.

Theaetetus::—This is certainly very sufficiently explained.

Stranger::—Come now, let us endeavor to find out according to this example what a Sophist is.

Theaetetus::—Very well.

Stranger::—In conformity with our plan we had to enquire first, whether the angler be an ignoramus or possessor of art?

Theaetetus::—Yes.

Stranger::—And now in regard to the Sophist; shall we assume him to be an ignoramus, or one really and truly a Sophist?

Theaetetus::—Certainly not an ignoramus; I understand your meaning, namely, that one having the name of "Sophist" should possess the thing to which the name applies; but what particular art are we to suppose him to possess?

Stranger::—What art? has it then escaped us that the two men we have been talking of have affinity with one another?

Theaetetus::—Which men?

Stranger::—Why the angler and the Sophist.

Theaetetus::—How so?

Stranger::—Both appear to me to be hunters.

Theaetetus::—What then is the game of the Sophist? of the other enough has been said.

Stranger::—Did we not just now divide hunting into fluid hunting and land hunting?

Theaetetus::—Yes.

Stranger::—And that portion of the whole which has to do with floating in water we have already explained; the land hunting we left undivided, remarking only that it comprehends many kinds.

Theaetetus::—Yes.

Stranger::—So far then the Sophist and angler both proceed from a common art of acquiring.

Theaetetus::—So it appears.

Stranger::—But in their animal hunting they separate, one turning to the sea, the rivers and lakes, the other to the land, and to certain other rivers, inexhaustible pastures as it were of wealth and youth, in order to get hold of the animals there nourished.

Theaetetus::—How mean you?

Stranger::—Of the land hunting there were two great divisions.

Theaetetus::—Which?

Stranger::—One the hunting of tame, the other of wild animals.

Theaetetus::—Are tame animals then hunted?

Stranger::—Yes; if man be a tame animal. But make what supposition you like; either that there is no tame animal, or that some other animal is tame and man wild; or will you suppose man to be tame, but not an object of chase. Tell me which supposition you prefer.

Theaetetus::—I think, my friend, that we are tame animals, and that man is an object of chase.

Stranger::—Let us then say that tame animal hunting is of two kinds.

Theaetetus::—How so?

Stranger::—All robbery, enslavement, tyranny, and warfare we place under one head of hunting with violence; but judgment, oratory, affability, we may also include in one term as popular conciliation or persuasion.

Theaetetus::—Very well.

Stranger::—But of persuasion we may say that there are two sorts; one private, the other public. Of the former again, one kind seeks pay, the other confers gifts.

Theaetetus::—I don’t follow this.

Stranger::—It seems you have not yet paid attention to the chase carried on by lovers?

Theaetetus::—In what respect?

Stranger::—Inasmuch as they confer gifts on the beloved objects.

Theaetetus::—True.

Stranger::—Let this then be set apart as the form of the lovers art. But of the mercenary or pay-seeking subdivision, that kind which courts popular favor, and using pleasure as a bait, seeks only sustenance for self, all men would, I suppose, call the art of pleasing or adulation.

Theaetetus::—Certainly.

Stranger::—But the other kind, professing to court association for the sake of cultivating virtue, yet receiving reward in the shape of pay, does not this deserve a different appellation?

Theaetetus::—Certainly it does.

Stranger::—But what name? Try and tell us.

Theaetetus::—It is evident. We seem now to have discovered the Sophist; this, I think, is the fitting name for him.

Stranger::—So then, according to our present course of reasoning, Theaetetus, the Sophistical art is a sort of acquisitive land-animal-hunting, a chase of individual men for money reward, a hunting of rich and noble young men by seeming educators.

Theaetetus::—Such it certainly appears.

Stranger::—But let us also consider it thus; for the object of our present enquiry is no trivial thing, but a very various and complicated one; it would seem indeed from what was before said not to be of the kind now stated, but something quite different.

Theaetetus::—How so?

Stranger::—We divided, I think, the acquisitive art into hunting, and another kind carried on by way of exchange?

Theaetetus::—It was so.

Stranger::—But of exchanges there are two sorts, one by way of gift, the other of purchase.

Theaetetus::—Yes.

Stranger::—And shall we also divide purchase into two kinds?

Theaetetus::—How?

Stranger::—By distinguishing those exchanging their own productions from those exchanging the productions of others.

Theaetetus::—Very well.

Stranger::—But of all exchange, is not that which takes place within the same city, constituting nearly half of the whole, called retail traffic?

Theaetetus::—Yes.

Stranger::—And that which occurs in the way of purchase and sale between city and city is called wholesale or mercantile?

Theaetetus::—Of course.

Stranger::—And observe, one kind of trade exchanges for money things for the use and nourishment of the body, another things for the use of the soul.

Theaetetus::—How mean you?

Stranger::—That which concerns the soul escapes us, perhaps; the other kind we understand well enough.

Theaetetus::—Yes.

Stranger::—Well then, may we not say that he who imports and furnishes the different kinds of ornamental culture, the arts of music, painting, wonder-working, and other aids of the soul, destined either for its amusement or instruction, deserves the name of trader or merchant, quite as much, as the purveyor of meat and drink.

Theaetetus::—Very true.

Stranger::—And does not the same name belong also to him who buys knowledge and sells it again from city to city?

Theaetetus::—Certainly.

Stranger::—But of this traffic in commodities for the soul may not one part be justly styled display; while the other, though no less ridiculous than the former, must nevertheless, as a selling of learning, be called by some analogous name?

Theaetetus::—Certainly.

Stranger::—Of this traffic in knowledge and learning, then, that part which concerns the arts generally must be called by one name, that which concerns virtue by another.

Theaetetus::—Very true.

Stranger::—Dealing in arts and accomplishments is a sufficient designation of the one; for the other do you yourself devise a name.

Theaetetus::—What other name can we well give it but that of the Sophistical art which we are now seeking?

Stranger::—No other, certainly! Now then let us recapitulate the heads of our second description of it, having the characteristics of acquisition, acquisition by exchange, commercially exchanging, trading, trading in commodities concerning the soul, namely, in reasonings and knowledge, and trafficking in virtue.

Theaetetus::—Very true.

Stranger::—Again, thirdly, if any one coming to establish himself in the city should propose to get his living by selling such stores of learning, partly purchased and partly fabricated by himself, you would give him no other name.

Theaetetus::—Certainly.

Stranger::—That acquisitive art, then, which is carried on by traffic and exchange, whether the commodities sold are bought or self-produced, must in both cases, if dealing with commodities of learning, be termed Sophistical.

Theaetetus::—Certainly; such is the necessary inference.

Stranger::—Let us also consider whether what we are now seeking is not allied to something like the following; Of the acquisitive art one part, you may recollect, we denned as contentious or competitive.

Theaetetus::—True.

Stranger::—We may then, as usual, divide it into two sorts the struggle of rivals, and the fight of foes.

Theaetetus::—Well.

Stranger::—Of fighting, that kind which is carried on bodily between man and man may be termed violent; whereas strife carried on in words against words is controversy.

Theaetetus::—Yes.

Stranger::—But controversies are of two sorts; those publicly held in continuous discourses on questions of just and unjust are legal pleadings; those privately conducted in the form of question and answer are called disputations.

Theaetetus::—Yes.

Stranger::—But disputation, so far as it concerns business contracts, and is carried on carelessly and unartificially, though recognizable as a separate kind, has not obtained a distinct name in former time, nor shall it now from us.

Theaetetus::—Certainly; for it concerns only a variety of small trivialities.

Stranger::—But the artificial kind, which embarks in general and systematic controversies on the essential nature of justice, injustice, and all other things, do we not usually call this the "eristic" or wrangling art?

Theaetetus::—Yes.

Stranger::—But of wrangling one sort destroys wealth, the other increases it.

Theaetetus::—Very true.

Stranger::—Let us now try to find a suitable name for each.

Theaetetus::—We must do so.

Stranger::—That which occurs to the neglect of our private affairs, to gratify the idle garrulity of the speaker, and often to the disgust of the hearers, may, I think, be called prosing or babbling.

Theaetetus::—So it may, indeed.

Stranger::—And the kind opposed to this, which makes money out of private disputations, what would you term it?

Theaetetus::—What answer can be given to such a question except that we have here a fourth characteristic of the wonderful being we are in search of, namely the Sophist?

Stranger::—It doubtless is that acquisitive race which, practicing the general art of wrangling and controversy, is specially distinguished by the private character of its contentions and their lucrative results.

Theaetetus::—Very true.

Stranger::—You see, then, how true it is that this is a various and very questionable animal one not to be caught with the left hand, as the saying is.

Theaetetus::—Nay; we must use both hands.

Stranger::—True; and let us do our best to do so, following up its footmarks, for instance, as follows; say, do we not sometimes employ household terms?

Theaetetus::—To which do you allude?

Stranger::—Expressions such as straining, filtering, sifting, sorting?

Theaetetus::—Of course.

Stranger::—Moreover, carding, weaving, combing, and many other expressions used in the arts.

Theaetetus::—For what particular purpose of explanation do you select these instances?

Stranger::—All these instances denote division and separation.

Theaetetus::—Yes.

Stranger::—Since, then, one operation pervades them all, we may apply one name to all.

Theaetetus::—What name?

Stranger::—The discriminative art (Diacritike).

Theaetetus::—Be it so.

Stranger::—Consider, now, if there be two sorts of this.

Theaetetus::—You are rather too quick for me.

Stranger::—Of the divisions alluded to, some are of better from worse, some of like from like.

Theaetetus::—So, indeed, it seems.

Stranger::—For one of these I have no name; but for that which leaves the good and rejects the bad, I have one.

Theaetetus::—What is it?

Stranger::—All separation of this nature is called, I think, purification.

Theaetetus::—So it is.

Stranger::—And are there not two sorts of purification?

Theaetetus::—Yes, perhaps, if one had time to consider; but I don't at present see it.

Stranger::—The various kinds of bodily purification may be comprehended under one name.

Theaetetus::—What are they,?

Stranger::—In regard to animal bodies, the legitimate inward purifications of exercise and medicine; in regard to the outside, all that is effected by bathing; in the inanimate, all that is done by the fullers art and by cosmetics, suggesting many minute specialties and ridiculous terms.

Theaetetus::—Certainly.

Stranger::—Yes, Theaetetus; but our method of enquiry cares little for differences of quality or utility in the particular kinds of purification cited as examples. For its aim is clear and definite ideas; for this it endeavors to distinguish in all arts that which is similar or dissimilar, treating all for its own particular purpose as being on the same footing in regard to dignity—none of them, indeed, as more despicable than another if only it can supply a useful analogy. For instance, it does not esteem the hunting pursued in a military campaign more really important than the hunting of vermin, but only a more ostentatious and pretentious sort of it. In reference to your question, it matters not by what name we denominate the various purifications of animate or inanimate bodies; only it should be one comprehending all, purifications of the soul excepted. Our sole object, at present, is to separate mental from other sorts of purification.

Theaetetus::—I understand, and admit two sorts; one relating to the body, the other to the soul.

Stranger::—Very well. Now listen; try to divide the kind just alluded to into two parts.

Theaetetus::—Lead, and I will try to follow you in the division.

Stranger::—Do we not reckon vice as differing from virtue in the soul?

Theaetetus::—Certainly.

Stranger::—And purification was found to consist in leaving the one and expelling what is evil?

Theaetetus::—Of course.

Stranger::—Any expulsion of depravity from the soul then may properly be termed purification?

Theaetetus::—Certainly.

Stranger::—We may, I think, distinguish two kinds of mental depravity,—one analogous to bodily sickness, the other to bodily deformity.

Theaetetus::—I don't follow.

Stranger::—Are not sickness and sedition identical things?

Theaetetus::—I don't quite see.

Stranger::—Is not sedition a corruption of something naturally allied, in consequence of some discord?

Theaetetus::—Yes.

Stranger::—And is deformity anything but the repulsive appearance arising wherever harmony is absent?

Theaetetus::—Nothing else.

Stranger::—Well then,—do we not see in the souls of the ill-conditioned, opinion at issue with desire, fortitude with pleasure, reason with pain, and indeed discord of all kinds?

Theaetetus::—Certainly.

Stranger::—Nevertheless all these elements are naturally allied?

Theaetetus::—Of course they are.

Stranger::—We may therefore aptly call vice a sedition and disease of the soul.

Theaetetus::—Very truly so.

Stranger::—But when things having motion and a certain end in view, fail in their efforts to reach it by being carried hither and thither by particular impulses, shall we say that the failure arises from internal harmony and congruity, or from incongruity?

Theaetetus::—Evidently through incongruity.

Stranger::—But we are certain that all ignorance is contrary to the instincts of the soul.

Theaetetus::—Quite so.

Stranger::—Ignorance, however, is only the error of a soul aiming at truth, but swerving from its course.

Theaetetus::—Assuredly.

Stranger::—An ignorant soul must therefore be considered deformed and inharmonious?

Theaetetus::—So it appears.

Stranger::—There are then two kinds of evil besetting it; one called by the many vice or depravity, and being most certainly a disease in it; the other ignorance; but this they will not allow to be the special vice of the soul.

Theaetetus::—I must admit the truth of what I just now doubted, namely what you said about there being two kinds of vice in the soul; cowardice, intemperance, injustice, and faults of this description, must be allowed to be diseases; but the state of ignorance in its various phases is deformity.

Stranger::—But now, so far as the body is concerned, are there not two arts dealing with these two evils respectively?

Theaetetus::—What are they?

Stranger::—Gymnastics for deformity, medicine for disease.

Theaetetus::—Tis so indeed.

Stranger::—To repress insolence, injustice, cowardice, etc., is not the best preservative that which punishes, namely law or justice?

Theaetetus::—So it appears, to human estimation at least.

Stranger::—But for ignorance generally what remedy is there except instruction?

Theaetetus::—None.

Stranger::—But now, consider; is there one kind of instruction only or several; and of many are not two of supreme importance? Reflect!

Theaetetus::—Well. I am reflecting.

Stranger::—It seems to me that we shall best get an answer by considering whether ignorance does not admit a two-fold division, for so each of its divisions will ask its own special remedy.

Theaetetus::—Do you see the way to a solution?

Stranger::—Yes. I do think I see a great and very dangerous kind of ignorance, which alone may well be considered equivalent to all its other forms.

Theaetetus::—Which is it?

Stranger::—The fancying we know when we are in fact ignorant; out of which mistake almost all our intellectual errors arise.

Theaetetus::—True.

Stranger::—I think it is this sort of ignorance which has specially earned the name stupidity (αμαθια).

Theaetetus::—Very true.

Stranger::—Which kind of instruction then shall we propose as a remedy for this?

Theaetetus::—All other teaching may, I think, be called handicraft teaching; l the kind here particularly required is among us at Athens called education.

Stranger::—So it is, Theaetetus, by nearly all the Greeks; but let us consider whether education be entirely homogeneous, or something admitting division.

Theaetetus::—We must consider this.

Stranger::—It seems to me then to be susceptible of division, of the teaching by means of discourse one way appears to me difficult, the other easier.

Theaetetus::—Tell me which they are.

Stranger::—One is the respectable hereditary practice used of old, and even now, when a fault is committed, either in the way of angry reprimand or mild reproval; all this may pass by the name of admonition.

Theaetetus::—So it is.

Stranger::—But the other kind,—since some seem, after mature reflection, to have come to the conclusion that all ignorance is involuntary, and that no one esteeming himself wise would wish to learn the things which he thinks he already knows, and under any circumstances would benefit but little from the admonitory method—

Theaetetus::—And they are right.

Stranger::—So they address themselves in another way to eradicate this opinion.

Theaetetus::—How?

Stranger::—They question a man as to things about which he thinks he can speak when in reality he cannot. They expose the vacillating uncertainty of his opinions, placing the latter as summarized from the discourse side by side in clear contrast, so as to show their essential weakness and inconsistency. Seeing this, their authors get angry with themselves and at the same time more tolerant towards others; and in this way they become emancipated from strongly self-complacent and inveterate prejudices, an emancipation very pleasant to listen to and very salutary to the patient himself.

For as physicians consider that the body cannot properly profit by the nourishment given if, until obstructions have been removed, so these purifiers of the soul believe that it cannot make proper use of instruction until obstructive opinions have been expelled, and the patient, shamed by refutation, becomes intellectually pure and clear, thinking he knows what he really knows, and nothing more.

Theaetetus::—This is a most excellent and wise proceeding.

Stranger::—For all these reasons, Theaetetus, the Elenchus (criticism or argumentative refutation), appears to me the greatest and most effectual of all purifications, and that he who has not passed through this ordeal, even were he the great king himself, is impure, ignorant, and uncomely in the important matters most concerning his real happiness.

Theaetetus::—Very true.

Stranger::—But now, what shall we call those using this art; for I fear to call them Sophists.

Theaetetus::—Why so?

Stranger::—Lest we ascribe to them a higher honor than they deserve.

Theaetetus::—Yet the description just given resembles something of the sort.

Stranger::—So does a wolf a dog, the wildest animal the tamest. But a prudent man will be cautious in making comparisons, for this is a very slippery and hazardous kind. Nevertheless let them pass as such; for, if we are sufficiently on our guard, there will, I apprehend, be no dispute about small differences.

Theaetetus::—No, it is not likely.

Stranger::—Of the discriminative or reparative art then, let us take the purifying; of purification generally the purification of the soul;. of this instruction, of instruction generally, education; and of education generally let that part which consists in refuting the false semblance of wisdom be called, for the reason now given, the noble art of the genuine or generic Sophist.

Theaetetus::—So be it. But I am at a loss now, in consequence of so much having been brought forward, what we are to say with confidence that the Sophist really is.

Stranger::—You may well be puzzled; yet even the Sophist himself will now probably feel not a little puzzled how to escape our analysis; since as the proverb says, it is not easy to escape all traps; let us then attack him now with all our might.

Theaetetus::—Well.

Stranger::—Let us, however, first breathe awhile, considering with ourselves, while resting, the many various forms under which the Sophist has presented himself to us; first, I think, he was found to be a mercenary hunter of the young and rich?

Theaetetus::—Yes.

Stranger::—Secondly, a kind of trafficker in instruction of the soul.

Theaetetus::—Just so.

Stranger::—Thirdly, a retailer of these same commodities.

Theaetetus::—Yes, and, fourthly, a seller of wares of this nature of his own manufacture.

Stranger::—Correctly recapitulated. I will now try to recall a fifth characteristic; in the department of contention he was defined as a wrestler with words, a professor of the art of wrangling.

Theaetetus::—He was.

Stranger::—A sixth characteristic was left in some uncertainty; yet we allowed, though with some slight misgiving, that the Sophist purifies the soul from prejudices obstructive to real knowledge.

Theaetetus::—So we did.

Stranger::—But do you not perceive that when a person appears conversant with a variety of things, while nominally professing only a single art, this appearance is not wholesome, the spectator not being able to see the common kind referred to by the various accomplishments of such artist, whence he is induced to give their possessor many names instead of one?

Theaetetus::—So it indeed seems.

Stranger::—Let us not then through indolence undergo the same sort of misconception in our enquiry, but let us recall to mind the various predicates assigned to the Sophist; one particular trait seemed to me especially to mark him.

Theaetetus::—Which?

Stranger::—Did we not describe him as a disputer or wrangler?

Theaetetus::—Yes.

Stranger::—And also a teacher of this qualification to others?

Theaetetus::—Of course.

Stranger::—Let us then consider about what things such persons undertake to qualify others to dispute. and suppose we begin our inquiry thus:—say, do they profess to do this in relation to divine things, which are non-apparent to the many?

Theaetetus::—They are certainly said to do so.

Stranger::—And what of the conspicuous phenomena of earth and sky and things pertaining to these?

Theaetetus::—The answer must be the same.

Stranger::—When in private conversation questions arise about generation and existence generally, do we not find them powerful in reply and able to make others equally so?

Theaetetus::—Certainly.

Stranger::—But again in regard to the laws and political affairs, do they not undertake to give ability to argue about these also?

Theaetetus::—Assuredly no one would converse with them if they did not promise this.

Stranger::—In regard to the arts, all and singular, is it not published and laid down in writings, what replies are to be made to the professors of such arts?

Theaetetus::—You seem to allude to the writings of Protagoras having to do with wrestling and other arts.

Stranger::—And many other similar writings also, my good friend; may we not then say in a word that the art of wrangling implies ability to argue about everything?

Theaetetus::—It, indeed, seems to omit nothing.

Stranger::—But, in the name of heaven, boy, do you think this possible? Perhaps you youngsters see this matter more clearly than us old folks.

Theaetetus::—What mean you? I don't quite understand the question.

Stranger::—Whether it be possible for one man to understand all things?

Theaetetus::—Happy, indeed, should we be if it were so!

Stranger::—How, then, can one who is unskilled say anything to the purpose in arguing with the skilled?

Theaetetus::—He cannot.

Stranger::—In what, then, consists the marvel of the sophistical art?

Theaetetus::—How shown?

Stranger::—In the power they possess of making young people think that they themselves are wisest of all and on all subjects. For it is clear that if they neither answered correctly, nor seemed to their hearers to do so, or did not leave the discussion with increased reputation for cleverness, what you just now suggested hypothetically would be realized—none would choose to pay them or learn from them.

Theaetetus::—Scarcely, indeed!

Stranger::—But as it is, they do choose to do so.

Theaetetus::—Yes; very eagerly.

Stranger::—I presume, then, it is because they appear to be intelligently conversant with the matters upon which they dispute.

Theaetetus::—Certainly.

Stranger::—And they dispute on all subjects?

Theaetetus::—Yes.

Stranger::—They appear, then, wise in the eyes of their disciples on all subjects?

Theaetetus::—Of course.

Stranger::—But not as being really so; for this was found to be impossible?

Theaetetus::—Clearly.

Stranger::—So, then, the Sophist is found to profess a seeming universal wisdom, not a real?

Theaetetus::—Certainly; and this appears to describe him exactly.

Stranger::—Suppose we take a still more evident illustration.

Theaetetus::—What is it?

Stranger::—This and consider well before answering.

Theaetetus::—Well; say what.

Stranger::—Suppose any one were to profess to be able not merely to speak and to reply, but to make and do all things by one art.

Theaetetus::—How all?

Stranger::—You forthwith forget the prime point of the question; you don't understand, it seems, what I mean by all?

Theaetetus::—No.

Stranger::—I mean by all that which comprehends you and me, and, moreover, other things, both animal and vegetable.

Theaetetus::—How say you?

Stranger::—Suppose one were to profess to be able to make you and me and all natural products?

Theaetetus::—What kind of making mean you by this? Not that of a husbandman, I suppose; for the maker you spoke of was a maker of animals.

Stranger::—Yes; maker also of sea and land, of the heaven, of the gods, and of all things; one who, having made these things, disposes of each of them for a very small amount.

Theaetetus::—You are jesting.

Stranger::—And pray, then, shall we not esteem it a jest that any one should profess to know all things, and to teach all for a small sum in a short space of time?

Theaetetus::—Certainly we must.

Stranger::—Of jesting or sporting, now, is there any more agreeable or ingenious kind than imitation?

Theaetetus::—None. In that one word you sum up a very large and most multifarious genus.

Stranger::—He, then, who should profess to be able to make all things by one art, might, by forming homonymous imitations of things, for instance, by the art of painting, and by showing such painted images to silly little children at a distance, cheat them into a belief of his being able to make any of the things he chose.

Theaetetus::—Very likely.

Stranger::—Well, then, in the case of word imitations by the art of language, is it not the same? Is it not possible, by means of discourses, so to impose on the ears of young people, who are still far from the truth of things, by exhibiting all sorts of wordy imagery to them, to make them believe that the things spoken are true, and that the speaker is universally wise and wisest of men?

Theaetetus::—Certainly, there may be such an art.

Stranger::—And is it not inevitable, Theaetetus, that the majority of such hearers, when, with advancing time and age they become more closely intimate with realities, and compelled by experience to see things as they are, should change their previous opinions, so that what appeared great before should now seem little, and that which was easy, difficult—in short, that all the fantastic notions so engendered by discourses should be entirely upset by being brought into contact with practical facts?

Theaetetus::—Yes, so far as I can judge. But I must admit myself to be of the number of those who are still far remote from truth.

Stranger::—We, then, who are here present, will endeavor to bring you as near to it as possible without the painful teaching of experience. But now tell me about the Sophist;—is it agreed that he is a juggler or impostor, as being an imitator of reality, or do you really suppose he really possesses scientific knowledge of the things about which he professes to dispute?

Theaetetus::—How can he? Surely it is clear from what has been said, that he is one of those occupied with child's play.

Stranger::—One must then call him a mimic and a mountebank.

Theaetetus::—Certainly.

Stranger::—Now, then, we must be careful not to let the quarry again give us the slip; for we have now pretty nearly enclosed him in a network of argument, from which he cannot escape.

Theaetetus::—What network?

Stranger::—We have convicted him of being a certain kind of juggler.

Theaetetus::—So it seems to me, too.

Stranger::—We must then at once search carefully the image-making art, and, invading its confines, seize the Sophist, if he await our coming, so as to deliver him up captive to the king whose servants we are; or if he try to escape by any bye-path of the mimetic art, we must follow him up, continually dividing the department containing him, until he be caught; for neither he nor any other shall ever boast of being able to escape the method of those who can thus follow up the game both severally and generally.

Theaetetus::—Well said, so let us do.

Stranger::—Following our former plan of subdivision I think I now see two kinds of imitative art; but am not yet able to discern in which of them the species now sought is to be found.

Theaetetus::—Tell us first what two kinds you mean.

Stranger::—One is the assimilative art. This is when any one produces an imitation according to the true dimensions or proportions of the original in length, breadth, and thickness, adding colors suitable to the respective objects.

Theaetetus::—But do not all imitators do the like?

Stranger::—Not those who paint or mould any great work. For you know that if they were to give the true and exact proportions of the beautiful, the upper portions would necessarily seem smaller, the lower larger, on account of their respective distance or nearness to the eye. So that here the artist, abandoning literal copying, tries to give not the real but the seeming and most agreeable proportions to his imitative work.

Theaetetus::—Certainly.

Stranger::—May we not then call the one, as being copied, a faithful image or copy?

Theaetetus::—Yes.

Stranger::—And the department of the imitative art concerned with this is called, as we have said, assimilative.

Theaetetus::—It is so.

Stranger::—But what shall we term that which appears indeed from a fitting point of view to resemble the beautiful, but which, when seen by one able to form a just estimate of such matters, is not really like the thing it professes to be like? Must we not call it an appearance or phantasm, since it appears to be like, but is not?

Theaetetus::—Certainly.

Stranger::—And is not this sort very common in painting and all imitative art?

Theaetetus::—Of course.

Stranger::—The art, then, which produces a phantasm, but not a true image or copy, we may term fantastic?

Theaetetus::—And rightly.

Stranger::—But I before doubted in which of the two kinds I should place the Sophist, and this doubt still continues; for lie is truly a marvelous being, very difficult to understand thoroughly. You see how very adroitly and cleverly he has at this moment hid himself in a genus in which it is very hard to find him out.

Theaetetus::—So it seems.

Stranger::—Does your assent proceed from knowledge and conviction, or has a certain rush of words hurried you into hasty assent through the mere habit of assenting?

Theaetetus::—What mean you by the question?

Stranger::—Most certainly, my friend, we are engaged in a very arduous investigation. For that a thing should appear and be thought to be, yet not be, or that a man should assert certain things, yet not true things, all this is now, as it ever was, full of difficulty. It is indeed very difficult to see how a man can be said to affirm or suppose falsehood really to exist without being involved in a contradiction.

Theaetetus::—How so?

Stranger::—Because this would be equivalent to affirming non-entity to exist; since, otherwise it were impossible for falsehood to exist. The great Parmenides, my son, was always conjuring us both in prose and verse to this effect—

> Never affirm that non-entities exist;
> But carefully guard your mind from this way of thinking.

Such was his testimony, and a little consideration of the subject will clearly prove its correctness. Suppose, then, we examine it a little?

Theaetetus::—I am quite at your disposal, and pray conduct the argument as may be most suitable; lead the way and I will follow.

Stranger::—So be it then. And now tell me; do we ever venture to speak that which in no respect is?

Theaetetus::—Why not?

Stranger::—Suppose that, not jestingly or for contentions sake, but in sober earnest, one had to answer as to how and in reference to what the phrase “non-entity” should be used, what think you would be the reply?

Theaetetus::—You ask a difficult and to me altogether insoluble question.

Stranger::—But this, at least, is clear that nonentity cannot be ascribed to any entity.

Theaetetus::—How can it?

Stranger::—If, then, not to be ascribed to an entity, it cannot be ascribed to anything.

Theaetetus::—No, indeed.

Stranger::—But it is evident that the word “something” is always applied to some entity; we cannot pronounce “something” nakedly as it were, and as wholly destitute of reality; is it not so?

Theaetetus::—Impossible.

Stranger::—And do you admit that when we speak of something we necessarily mean some one thing?

Theaetetus::—Yes.

Stranger::—You admit that “something” means one thing, “somethings” many?

Theaetetus::—Of course.

Stranger::—And does it not follow that he who speaks of that which is not something necessarily speaks of nothing?

Theaetetus::—Certainly.

Stranger::—Must it not further be allowed that one undertaking to speak of non-entity not only speaks of nothing, but does not even speak at all?

Theaetetus::—This seemingly ends the difficulty.

Stranger::—Don't exult too soon, my good friend, for the difficulty is before us still, and, indeed, the primary and greatest difficulty of all, since it concerns the very essence of our argument.

Theaetetus::—How? Explain yourself.

Stranger::—To any existing thing another thing may, you will allow, be added?

Theaetetus::—Of course.

Stranger::—But can anything which is be added to that which is not?

Theaetetus::—Impossible.

Stranger::—But the general attribute of number, does not this belong to (the category of) existing things?

Theaetetus::—Yes, if indeed any other thing can be said to be.

Stranger::—We must not, then, attempt to ascribe number, either as plurality or unity to the non-existent.

Theaetetus::—It would certainly be improper to do so, as the argument shows.

Stranger::—But how can any one speak or think of the non-existent, either as one or as many, apart from number?

Theaetetus::—How, indeed!

Stranger::—When we speak of "non-existent things" do we not predicate number?

Theaetetus::—Of course.

Stranger::—And is not speaking of "the nonexistent" the speaking of unity?

Theaetetus::—Clearly.

Stranger::—And yet we just now denied it to be just or right to add the existent to the nonexistent.

Theaetetus::—Very true.

Stranger::—You see, then, that it is impossible rightly to speak or think of the non-existent alone and by itself, it being unthinkable, unspeakable, unpronounceable, and irrational.

Theaetetus::—Certainly.

Stranger::—Was I then wrong just now in saying I had still to state its greatest difficulty?

Theaetetus::—How indeed can there be a greater difficulty than this?

Stranger::—Do you not perceive, my good friend, from what has been said, that he who undertakes to refute the non-existent is obliged, by the very nature of his subject, to contradict himself?

Theaetetus::—How say you? explain more clearly.

Stranger::—It is vain to look to me for a clearer explanation. I before showed that neither unity nor plurality could be ascribed to the non-existent; now I speak of it as one; I say "the non-existent." Do you understand?

Theaetetus::—Yes.

Stranger::—And yet just before I said it was unutterable, unpronounceable, irrational;—do you follow me?

Theaetetus::—To a certain extent—yes.

Stranger::—Do I not contradict myself in trying to combine being with non-being?

Theaetetus::—So it seems.

Stranger::—Did I not in fact attempt to make this combination when speaking of non-entity as a unity?

Theaetetus::—Yes.

Stranger::—And while declaring it irrational and ineffable, I spoke of this ineffable non-entity as one?

Theaetetus::—Certainly.

Stranger::—But I am assuming that in strictness we ought to speak of it neither as one, nor as many, nor indeed to name it at all; since by so doing we necessarily mention it as one.

Theaetetus::—Assuredly.

Stranger::—Why then continue the exposition as from myself, being proved both before and now to be at fault and defeated in this question about nonentity; suppose, then, instead of looking for a solution of the problem from my answers, we pursue the enquiry through the medium of yours.

Theaetetus::—How?

Stranger::—Come now, try with all the generous enthusiasm of youth, exerting yourself to the utmost, to say something correctly about non-entity, adding to it neither the predicate of existence nor that of number.

Theaetetus::—Such an attempt would be very absurd in me, after witnessing your failure.

Stranger::—If so we must both give it up and finally dismiss the argument; and until we chance upon some one able to do what we cannot, we must conclude that the Sophist has with unequalled knavery undertaken to pass where there is positively no outlet.

Theaetetus::—So it clearly appears.

Stranger::—If then we say he possesses a certain fantastic art, he will easily take advantage of that use of language to contradict us by asking what we mean by image when calling him an image-maker? We must therefore consider, Theaetetus, what answer should be given to the fellow.

Theaetetus::—We should of course advert to images reflected in water and in mirrors, also to painted, sculptured, and other similar imagery.

Stranger::—It is evident, Theaetetus, that you never saw a Sophist.

Theaetetus::—Why?

Stranger::—Because, if you had, you would have found him to be blind or blinking.

Theaetetus::—How?

Stranger::—If you made him your proposed answer about mirrors and sculpture, he would laugh in your face for talking to him as to one possessing eyes; he would ignore water, mirrors, and eye-sight generally, and restrict his interrogations to the logical inferences of your own admissions.

Theaetetus::—How should he do this?

Stranger::—He would require you to define an image, the one common idea running through the many particulars you have named. Speak then, and maintain your ground manfully.

Theaetetus::—What, stranger, should an image be but a sort of imitative other or counterpart of the true?

Stranger::—Do you mean by “other” another true thing or repetition, or how another?

Theaetetus::—Not a true thing, but a resemblance.

Stranger::—Meaning by “true” that which really exists?

Theaetetus::—Certainly.

Stranger::—But that which is contrary to the true is, I suppose, the false?

Theaetetus::—Of course.

Stranger::—When then you speak of a resemblance as not true, you mean, I presume, that it is nonexistent?

Theaetetus::—No; it does exist in a certain way.

Stranger::—But not truly, you say?

Theaetetus::—No, only as a resemblance of the true.

Stranger::—The image of the real is then a really existing unreal thing?

Theaetetus::—There indeed seems to be some such sort of combination of non-entity with entity, and very strange it is.

Stranger::—Of course it is; see now, how, in consequence of this ambiguity, our many-headed Sophist has forced us unwillingly to admit that the nonexistent does in a certain way exist.

Theaetetus::—I see it well enough.

Stranger::—What now shall we define his art to be without ourselves falling into a self-contradiction?

Theaetetus::—How mean you? What fear you?

Stranger::—If we say that he deals in phantasms and exercises a deceptive art, must we not infer that our souls, misled by his art, form false conceptions?

Theaetetus::—Certainly; how can it be otherwise?

Stranger::—But a false conception is one formed in contrariety to that which exists, is it not?

Theaetetus::—Certainly.

Stranger::—You mean then that a false conception is a conception of the non-existent?

Theaetetus::—Of course.

Stranger::—Does the falsehood consist in supposing that non-entities exist not, or that they somehow exist?

Theaetetus::—In the latter supposition certainly, namely that non-entity somehow exists; there is no other room for falsehood.

Stranger::—But is it not possible to conceive that that which truly exists, exists not?

Theaetetus::—Yes.

Stranger::—And this too is false?

Theaetetus::—Yes.

Stranger::—It will then be equally false to say that the existing exists not, and that the non-existent exists?

Theaetetus::—Assuredly, and I don't see how there can be any other kind of falsehood.

Stranger::—Scarcely; but this the Sophist will not admit. For how can any one of sound understanding be brought to admit that things just before allowed and granted are unspeakable, irrational, and incomprehensible? Do you fully enter, Theaetetus, into the Sophists meaning?

Theaetetus::—Yes; he will tell us we contradict ourselves, when venturing to speak of falsehoods as existing, either in opinion or discourse; that we are constantly obliged to unite entity to non-entity, after having just before admitted this to be of all things the most impossible.

Stranger::—Correctly recapitulated. But it is high time to consider what to do with the Sophist. For you see how many ready contradictions and difficulties suggest themselves as soon as we try to track him out in that art of mountebank imposture in which we have placed him.

Theaetetus::—Yes, indeed.

Stranger::—We have gone through only a few of them; but they are, in fact, infinite.

Theaetetus::—If so, it must be impossible to catch and refute him.

Stranger::—What, then, shall we yield to fatigue and give it up?

Theaetetus::—I am for continuing the pursuit, even if we only catch the fellow by the skirt of his coat.

Stranger::—You must, then, excuse shortcomings, and be satisfied if we drag him ever so little out of the strong fences of argument in which he entrenches himself?

Theaetetus::—Of course.

Stranger::—And may I further make this request of you namely, not to take me for a kind of parricide?

Theaetetus::—How so?

Stranger::—It will be necessary for our defense to criticize the doctrine of father Parmenides to prove that non-entity may have a relative existence, and entity be said, in a certain sense, not to exist.

Theaetetus::—Such, indeed, appears to be the task before us.

Stranger::—It is evident even to the blind, as the saying is; for how, while these matters are neither admitted nor refuted, can any one speak about false reasonings or opinions, whether as appearances, images, resemblances, or phantasms, or about any of the arts relating to them, without ridiculously contradicting himself?

Theaetetus::—Very true.

Stranger::—Therefore we must now venture to attack our fathers reasoning, or, if reluctant to do this, give up the matter altogether.

Theaetetus::—By no means let any false delicacy stay us.

Stranger::—Well then, allow me to make one trifling request more. I just now said I felt considerable difficulty and misgiving as to the coming enquiry, and such indeed is my present feeling about it.

Theaetetus::—You did so.

Stranger::—I fear too I may appear to you half insane, through the many turns and changes inevitably occurring in the course of the argument; for your sake, however, I will attempt it to the best of my ability.

Theaetetus::—Be assured, so far as I am concerned, there is no risk of your appearing to act improperly in advancing boldly to this task of negative demonstration.

Stranger::—Come, then, how shall we begin this perilous argument? We must needs methinks take this course; first, let us examine that which seems already familiar, that we may not hereafter feel confused by making inconsiderate concessions.

Theaetetus::—Explain.

Stranger::—Parmenides seems to me to have taken it very easily in his discourses, and the same may be said of all who have hitherto attempted to define the nature of things in regard to quantity and quality.

Theaetetus::—How so?

Stranger::—They all appear to be, as it were, telling stories to children; one saying that there are three elements or kinds of being, some of them at war with the others, or again in amity with them, marrying, bringing forth, and nourishing their progeny. Another, speaking of two elements, as moist and dry, or warm and cold, brings them together and marries them; our school alone, namely that of Elea, commencing with Xenophanes and even earlier, speaks in its poetical lucubration of all things as one. Other votaries of the Muse, Ionian or Sicilian, thought it safer to combine the two theories; to say that all things are both one and many, held together by love and hate. Of these the more firmly modulated strain taught how the separated elements are continually reunited; while the softer, admitting this to be true in the universal, contended that in particulars the all is alternately one under the sway of Aphrodite, and then again many and at issue with itself. Whether in all this they or any of them spoke truly it were difficult, perhaps invidious under the circumstances, to question; yet thus much at least may be said, that they who so curtly wound up their several theories evinced little regard for us their ordinary readers, caring little whether we follow them or not.

Theaetetus::—What particular difficulty do you allude to?

Stranger::—By heaven, Theaetetus, when they talk about two or many, or the one as being or becoming, or speak of the combinations and separations of warm and cold, are you able to understand them? When as a young man I first heard our present problem about non-entity discussed, I fancied I understood it thoroughly; but you see now how completely we are in the dark about it.

Theaetetus::—Yes.

Stranger::—It is quite possible too that the case may be exactly similar in regard to entity; that while fancying we understand it perfectly we may be really as much at fault respecting it as about non-entity; in short, that we are equally ignorant of both.

Theaetetus::—Very likely.

Stranger::—And the same may also be said as to the other things mentioned above.

Theaetetus::—Certainly.

Stranger::—We will then, if you please, adjourn our consideration of the other things, and now concentrate our attention on the main and most important part of our subject.

Theaetetus::—You doubtless allude to the problem of entity or being; we must first enquire what is meant by those who speak of it.

Stranger::—Rightly apprehended, Theaetetus; yet we must pursue the enquiry as if in presence of those whom we thus interrogate Ho! ye who assert the All to consist of hot and cold, or any two elements of this nature, what is it you mean when you affirm both of these severally and conjointly, to *exist*; what are we to understand by this predicate "existence?" is it a third element to be added to the other two? for in assigning to both the attribute of being you surely do not mean that both are or exist in the same manner? for in that case they would not be two, but one.

Theaetetus::—True.

Stranger::—But still you call both entities?

Theaetetus::—Perhaps.

Stranger::—Yet even so, my friend, we must say that the two are clearly one.

Theaetetus::—Most true.

Stranger::—Since then we find ourselves at a loss, do you yourselves explain what it is you mean when speaking of being. For you evidently understood the matter long ago; we, on the contrary, before thought we understood, but now find a difficulty. Instruct us then first in this very thing, that we may not fancy we understand you, and afterwards find ourselves mistaken. In making this request of these and all others who assert the All to be more than one, say, boy, are we asking any more than is fair and reasonable?

Theaetetus::—Not at all.

Stranger::—Again, as to those who affirm all to be one, must we not try as far may be to find out what they too mean by being?

Theaetetus::—Certainly.

Stranger::—Let them, then, answer this; you say only the one is or exists; yes, they reply; I rejoin, do you call being anything?

Theaetetus::—Of course it is.

Stranger::—Is it, then, the same as the one, or another name for it, or how?

Theaetetus::—What, O, Stranger, will be their answer to this?

Stranger::—Clearly, Theaetetus, it will not be very easy for those holding this hypothesis (i.e. of the identity of the two) to reply to the question now proposed, or, indeed, to any other.

Theaetetus::—Why so?

Stranger::—Because it seems absurd to admit two names after having said there is only one thing.

Theaetetus::—Very true.

Stranger::—Absurd too to admit that a name may exist by itself without a corresponding thing.

Theaetetus::—How so?

Stranger::—He who proposes a name differing from a thing, speaks, in fact, of two things.

Theaetetus::—Yes.

Stranger::—Even if he propose the name as one with the thing, he must admit it either to be the name of nothing, or else only the name of another name, not of another thing.

Theaetetus::—It is so.

Stranger::—And the one, too, is the entity of unity only, not that of a mere name?

Theaetetus::—Of course.

Stranger::—Once more:—will they call the whole something different from the one existing, or the same with it?

Theaetetus::—Of course they must mean it to be the same.

Stranger::—If, then, it be a whole, as described in the verse of Parmenides—

> “Like the bulk of a perfect sphere,
> Equally balanced everywhere from the centre,
> Having no greater size or weight on one side than the other”—

it follows that such an entity must have a middle and extremities, and consequently parts; is it not so?

Theaetetus::—Yes.

Stranger::—Now, certainly, a thing having parts may have the affection of unity, or share in all its several parts the quality of unity; in this sense an aggregate existence or whole may, doubtless, be one.

Theaetetus::—Of course.

Stranger::—But it is impossible for that which has this secondary kind of unity to be itself the very one.

Theaetetus::—Why so?

Stranger::—Because reason demands that that which is truly one should be absolutely and entirely without parts.

Theaetetus::—Certainly.

Stranger::—But the divisible whole in question, being compounded of parts, does not agree with this.

Theaetetus::—I see.

Stranger::—Is, then, being or the existent a whole and one in the secondary sense, as suffering or sharing the character of unity and entirety; or is it not to be called a whole at all?

Theaetetus::—A perplexing alternative this!

Stranger::—Right! for the existent, as partaking in a secondary sense of unity, is not the same as the one, and the all must be more than one.

Theaetetus::—Yes.

Stranger::—And if the existent be not a whole in the aforesaid sense of partaking of unity, but be itself the very whole, it will turn out to be less than itself.

Theaetetus::—Certainly.

Stranger::—And being minus itself, will not be existent?

Theaetetus::—Just so.

Stranger::—The all, again, seems more than the one, the existent and the whole having each obtained their proper nature apart from the other.

Theaetetus::—Yes.

Stranger::—But if the whole exist not at all, the same inference must be made as to existence or entity; and moreover, not only it could not be, it could never have been produced.

Theaetetus::—How so?

Stranger::—That which is produced is ever produced as a whole; so that it is impossible to speak of existence or generation unless the whole be placed among entities.

Theaetetus::—Such, appears to be the case.

Stranger::—Moreover, the non-whole could have no magnitude; for whatever it be, it must be the quantity of its being which constitutes it a whole.

Theaetetus::—Of course.

Stranger::—A thousand other similar insoluble difficulties will be found to beset the path of him who maintains being to be two or only one.

Theaetetus::—So it appears from what has been advanced; each point is linked with another, entailing ever more and more obscurity on all that had gone before.

Stranger::—We are far from having gone through all the current philosophic subtleties about being and non-being; but let this suffice; and now let us advert to those treating the subject on a different footing, that it may be on all hands evident that being is no easier to define than non-being.

Theaetetus::—Yes, let us address ourselves to these too.

Stranger::—There really seems to be a sort of battle of giants among them in regard to the problem of being.

Theaetetus::—How so?

Stranger::—Some of them are for dragging everything down from heaven and the unseen world to earth, rudely clutching with their fingers trees and stones; laying their hands on these and the like, they stoutly maintain that alone to exist which can be pressed or touched, defining being as identical with body; and if any one talks of the existence of the incorporeal, they frown and refuse to have anything more to say to him.

Theaetetus::—These are terrible fellows indeed; I have met with such ere now.

Stranger::—Their opponents very adroitly defend themselves out of the resources of the supernal invisible world, insisting that certain incorporeal forms (ἔιδη) cognizable by intellect are the true existences; and breaking up or analyzing what the others held to be body and truth in their discourses, they call it generation or becoming instead of being. Between these two parties, Theaetetus, there has ever raged the fiercest antagonism.

Theaetetus::—Surely.

Stranger::—We will then reckon with each party separately about existence.

Theaetetus::—How is it to be managed?

Stranger::—With those who attribute existence to “ideas” or forms the task is easy; for they are of milder temper; those on the other hand who drag all things down to the corporeal, it is difficult, almost impossible to manage. The only way of treating them is, I think, this; we must in the first place try, if possible, to make them really and indeed better; failing in this we must make them so hypothetically in word and discourse, assuming their willingness to answer more fairly than is their wont. For that which is assented to by the good carries more weight with it than the opinions of inferior persons; however, it is not of them that we have to think so much as about truth.

Theaetetus::—Certainly.

Stranger::—Summon then our hypothetically reformed respondents to the bar, and do you interpret their answers.

Theaetetus::—So be it.

Stranger::—Let them say if they admit a mortal animal to be an existing thing.

Theaetetus::—Of course they must.

Stranger::—And do they not admit this animal to consist of body and soul?

Theaetetus::—Certainly.

Stranger::—Do they reckon the soul among existing things?

Theaetetus::—Yes.

Stranger::—But do not souls differ? are there not just and unjust, wise and unwise souls?

Theaetetus::—Of course.

Stranger::—And do not these differences arise in each instance from the possession and presence of each of these different qualities?

Theaetetus::—Yes, they allow this too.

Stranger::—Since then justice, and prudence, and the other virtues with their contraries exist, as also the souls in which they exist, do they consider them as visible and tangible, or as all of them invisible?

Theaetetus::—As nearly all invisible.

Stranger::—But have such things a body?

Theaetetus::—To this question they do not give one uniform answer; the soul they suppose to have a certain body; but as to prudence and the other matters enquired about, they would neither venture to deny their belonging to the number of existing things, nor to say that they are bodies.

Stranger::—Clearly, Theaetetus, these men are mending; for the genuine original and earth-born (materialist) would not shrink from either assertion, but would insist that whatever he cannot clutch and press with his fingers has no existence whatever.

Theaetetus::—You express very nearly their real meaning.

Stranger::—We will, then, once more question them, since if they will but allow any thing, however small and unimportant, to possess existence independently of body it suffices. Let them, then, explain what it is they mean by the word existence used in both instances, what they intend it to designate as naturally given both in the incorporeal, and also in that which has a body. They may perhaps feel at a loss here; if so, try and find out whether they are disposed to receive and approve the proposition we are about to make as to the nature of being.

Theaetetus::—State your proposition and we shall see.

Stranger::—It is this; I say that that which possesses power of any kind, either in the way of acting on some other thing or of being acted on by it, although it be ever so little and for the shortest time, all this really exists; in short, I define existence to be nothing else than power or force.

Theaetetus::—Having themselves nothing better to propose at the moment, I may say that our respondents accept this.

Stranger::—Very well; let a possible alteration of opinion be reserved on both sides; for the present, so far as concerns these parties, let this be understood as mutually agreed.

Theaetetus::—Well.

Stranger::—Proceed we now to the others—namely, the friends of forms, and be you interpreter of their pretensions. Say, therefore, in your capacity of expositor, do you not distinguish (becoming or) generation as something differing and apart from being or existence?

Theaetetus::—Yes.

Stranger::—Do you not also say that, by means of our bodies, we have communion with the nature of becoming, the object contemplated by the senses; and by means of our souls with that of true and real being, the object contemplated by reason;—that which you hold to be ever unique and changeless, whereas generated being is ever changing?

Theaetetus::—Such is the doctrine held by us.

Stranger::—But what mean you, my dear friends, by the phrase “having communion” in these two cases; is it not identical with the active and passive influence just now alluded to as exercised by power or force? Perhaps, Theaetetus, you may not exactly comprehend the answers given to this, while I, being more accustomed to them, apprehend it better.

Theaetetus::—What, then, do they say?

Stranger::—They don’t agree with what we just now said in reference to being when dealing with the earth-born fellows; I mean, when considering it sufficient to define it as consisting in power to act or suffer, even to the smallest extent.

Theaetetus::—Indeed!

Stranger::—They rejoin that generation partakes of the power to act and suffer, but that neither of these powers agree with the nature of being.

Theaetetus::—Is the objection well founded?

Stranger::—We reply, we desire further to learn from them whether they allow that the soul knows, and that being is known?

Theaetetus::—They do agree to this?

Stranger::—Well, then, are not knowing and being known a sort of acting and suffering, or both; or is one an act, the other a suffering; or are we to suppose that neither has anything to do with either?

Theaetetus::—Evidently, neither with either; were it otherwise, they should be contradicting what they just before admitted.

Stranger::—Yet, assuredly, if to know be a certain act, to be known must imply passivity or suffering, and then being, so far as it is a subject of knowledge, becomes also subject to passivity and movement, which had before been said to be impossible.

Theaetetus::—Very true.

Stranger::—But more than this; surely we shall not easily allow ourselves to be persuaded that movement, life, soul, understanding, do not appertain to (perfect or) absolute existence; that it is lifeless and unconscious, a motionless stability, destitute of the sublime attributes of mind?

Theaetetus::—This were, indeed, O Stranger, a miserable concession to make?

Stranger::—Yet if it have mind, it must have life, surely?

Theaetetus::—Of course.

Stranger::—And if it possess both these, does it not possess them by virtue of a soul?

Theaetetus::—How can it be otherwise?

Stranger::—And if it have mind and life and soul, can we imagine this living existence to stand for ever motionless?

Theaetetus::—The supposition appears the extremist absurdity.

Stranger::—The moved and motion itself then must be allowed to share the nature of existence?

Theaetetus::—Of course.

Stranger::—It follows then, Theaetetus, that were being entirely motionless, no one could have any intelligence of any thing.

Theaetetus::—Evidently.

Stranger::—And yet, were we to concede every thing to be borne about and moved, we should be forced in consistency to draw the same inference?

Theaetetus::—How so?

Stranger::—Can you conceive the unique, identical, and immutable to be without stability.

Theaetetus::—Certainly not.

Stranger::—But is any mental cognition or understanding of any thing possible without these characteristics?

Theaetetus::—Certainly, all knowledge implies them.

Stranger::—And assuredly we ought to contend with all our might against any one who, while obliterating belief in science, understanding, and reason, pretends to speak with assured certainty about anything whatever?

Theaetetus::—Certainly.

Stranger::—Consequently no philosopher or friend of truth ought to accept the doctrine of the absolute immobility of the All, whether viewed as one or as many; nor, on the other hand, listen to those representing it as wholly in motion; but should rather, as children do when asked to choose, decide for both, combining immobility with stability, whenever dealing with being and the All.

Theaetetus::—Very true.

Stranger::—Well, then, have we not satisfactorily explained the problem of existence?

Theaetetus::—Quite so.

Stranger::—Pooh, pooh, Theaetetus! it seems to me that we are but just beginning to comprehend the difficulty of the enquiry.

Theaetetus::—What mean you by this?

Stranger::—Do you not see, my dear friend, that we are in the greatest ignorance respecting it, while fancying we are giving a satisfactory account?

Theaetetus::—To me it appeared satisfactory, and I don't see how we are unconsciously so wide of the mark.

Stranger::—Consider well whether our present inferences would not justly leave us exposed to the same questions as those we lately addressed to the maintainers of "hot and cold."

Theaetetus::—Which questions? Do me the favor to recall them.

Stranger::—Certainly; and I will endeavor to do so by interrogating you as I before did those others, so as to make some progress.

Theaetetus::—Right!

Stranger::—Well, then, are not motion and rest contradictories?

Theaetetus::—Of course.

Stranger::—Yet you maintain that both and each alike exist?

Theaetetus::—Yes.

Stranger::—Admitting both and each to be moved when you say they exist?

Theaetetus::—No.

Stranger::—You mean then that both exist in a state of rest?

Theaetetus::—How can that be?

Stranger::—You must then be assuming some third condition of being comprehending both rest and motion, and so viewing them as partaking of the common property of being you say that "they are."

Theaetetus::—We seem, in very truth, to be divining a third kind of being when asserting both rest and motion to be.

Stranger::—Rest and motion then combined do not constitute being; it must be something distinct from these.

Theaetetus::—So it seems.

Stranger::—Consequently being in its own essential nature is neither at rest nor in motion.

Theaetetus::—You almost hit it.

Stranger::—Which way then can we turn our thought in order to arrive at a certain inference in regard to being? Its assuredly no easy problem! If not moved, how can it be otherwise than still? If not still, how other than in motion? But being has just now appeared to us to repel or stand apart from both; is this possible?

Theaetetus::—Quite impossible.

Stranger::—And we should, moreover, remember this, that when interrogated as to what the name of non-being should be referred to, we were utterly bewildered and at fault. Do you recollect?

Theaetetus::—Of course.

Stranger::—And now are we not in equal perplexity about being?

Theaetetus::—Nay, in more, if possible, in my opinion.

Stranger::—Let the problem then rest here awhile unsolved; and since being and non-being seem both of them to involve equal difficulty, we may hope that, in proportion as the one becomes darker or clearer, so too will the other; and should we fail in comprehending either, we shall thus be most appropriately pursuing our enquiry as best we may in regard to both.

Theaetetus::—Very well.

Stranger::—Suppose, then, we explain how one and the same thing comes to be called by many names.

Theaetetus::—As how? Give an example.

Stranger::—To man, for instance, we assign various appellations derived from color, magnitude, form, vices and virtues; in all which cases and many others we say not only that man exists, but that a good man exists, and so forth; and so too in the case of other things, we suppose a single thing, and then assign many names (or predicates) to it.

Theaetetus::—True.

Stranger::—Here methinks we have prepared a welcome treat for the young and also for late learners among the old; for any one can readily cavil at the proposition that the many are one and the one many, exultingly proclaiming that it is absurd to talk of a good man, good being solely good, and man, man. You often, I think, Theaetetus, fall in with men addicting themselves to this kind of quibbling, sometimes even grave and elderly persons, who through the poverty of their intellectual stock-in-trade make much of such like things, and even esteem them to be the perfection of wise discovery.

Theaetetus::—That is quite true.

Stranger::—Therefore, in order that our argument may meet all who have ever reasoned about existence, let the questions we are now about to put be supposed to be addressed to them as well as to our former respondents.

Theaetetus::—What questions?

Stranger::—I will make three alternative propositions, and ask which of them you accept. First, is it impossible to conjoin being or other things with rest and motion and other things on the ground of their unmixed singleness and incapacity to share each others nature; or secondly, are all things alike indiscriminately susceptible of intercommunion with all others; or finally, susceptible of some but not of all; which of these answers, Theaetetus, are we to suppose they would adopt?

Theaetetus::—I feel incompetent. to answer on their behalf; pray be good enough yourself to consider what would follow from their answers in the several cases stated.

Stranger::—Very well; suppose first that there is no capacity in anything to associate or share the nature of anything else, have motion and rest no share in existence.

Theaetetus::—Certainly not.

Stranger::—How? Can either of them be, if they have no share of being?

Theaetetus::—No.

Stranger::—The admission then seems at once to overthrow the first supposition, both in the case of those who assert universal movement and those asserting universal rest; nay, all who consider things as maintaining a constant uniformity according to forms or ideas; for all these conjoin existence when affirming the real existence of movement and rest.

Theaetetus::—Certainly.

Stranger::—Likewise, all those who at one time unite all things, at another separate them, whether uniting infinite elements in one, or dividing one into many finite or infinite elements and again recomposing them, whether alternately or continuously,—all these affirmations would mean nothing were there no conjunction.

Theaetetus::—Right.

Stranger::—Besides, they would be most absurd reasoners if they allow nothing to be called different (i.e. to vary in its nature) through participation in something else.

Theaetetus::—How so?

Stranger::—They have continually to employ the category of being, as well as that of division, differentiation, isolation, and others innumerable, which being absolutely obliged to use in connecting their discourses, they need no adversary for their refutation, since they bear about with them a domestic adversary, like the strange voice of the ventriloquist Eurycles, internally thwarting them and recording their own refutation.

Theaetetus::—A very apt and true parallel!

Stranger::—But what of the second supposition? Are we to allow to all things the capacity of combining alike with all?

Theaetetus::—This even I can refute.

Stranger::—How?

Theaetetus::—Because on this supposition motion itself might be at rest, and rest in motion, if they communicated with each other.

Stranger::—It is certainly quite impossible that movement should stand still and rest be moved.

Theaetetus::—Of course.

Stranger::—There remains then only the third supposition, for we had but these three alternatives,—either that all may join, or none, or that some may and some not.

Theaetetus::—Certainly.

Stranger::—Well, the two first suppositions being dismissed, the third must in fairness be accepted.

Theaetetus::—Evidently.

Stranger::—Some things being thus susceptible of association, others not, the case resembles that of letters, some of which fit together, others not.

Theaetetus::—Just so.

Stranger::—The vowels especially are as a chain passing throughout, so that without one or other of them it is impossible to join any letters together.

Theaetetus::—Certainly.

Stranger::—How, then, is it known which letters fit with others? Does it not require the dexterity of art to join them correctly?

Theaetetus::—Yes.

Stranger::—What art?

Theaetetus::—That of grammar.

Stranger::—And is it not the same in the case of low notes and high ones; the person possessing the art of discriminating notes capable of blending being a musician, whereas he who has it not is unmusical; and so of other arts?

Theaetetus::—True.

Stranger::—But since it has been agreed that genera or kinds are susceptible of similar combinations, does it not follow that some sort of science must be needed in order effectually to demonstrate what kinds agree with others, and the reverse; also whether the combinations are universally continuous, so as to be susceptible of intermingling, and again, in cases of severance, whether there are kinds universally causing separation?

Theaetetus::—Certainly there is need of science—indeed, the highest science.

Stranger::—What name then shall we give to this science? Can it be that we have unsuspectingly stumbled against the science of the free, and while seeking the Sophist have found the true philosopher?

Theaetetus::—How mean you?

Stranger::—Is not the separating according to kinds, taking care not to combine or distinguish inaccurately, either by confounding the different or severing the identical, that which is meant by the art of dialectics?

Theaetetus::—Yes.

Stranger::—He then who can do this will perceive clearly how one kind or idea pervades many several individual things, and also how many diverse ideas are externally comprehended in one how, again, the one extending throughout the aggregated many is internally knit together, and how many ideas are sundered and entirely inconsistent with one another. This is what is meant by knowing how to distinguish scientifically between kinds,—between those, I mean, which are capable of combination and those not so.

Theaetetus::—Exactly.

Stranger::—But surely you will not attribute the true art of dialectics to any except to the true and genuine philosopher?

Theaetetus::—How, indeed, assign it to any other?

Stranger::—Certainly we shall always find the philosopher conspicuous in this department; yet it is difficult to identify him exactly; and the difficulty in his case and that of the Sophist is of a different sort.

Theaetetus::—How so?

Stranger::—The difficulty in the case of the Sophist consists in his ever running off into the darkness of non-entity, the subject of his habitual concern and occupation,—and so eluding observation through the surrounding obscurity.

Theaetetus::—So it seems.

Stranger::—But the philosopher, ever intently studying the idea of true existence by means of reason, becomes difficult to follow through the brightness of the region inhabited by him; for the mental eye of the many is unable to endure continuously the effulgence of the divine.

Theaetetus::—The explanation here is correct as before.

Stranger::—Respecting the philosopher, we will, if agreeable, treat more accurately hereafter; as to the Sophist, it seems impossible to stop until we get a clear view of him.

Theaetetus::—Well said.

Stranger::—Since then it is acknowledged that some genera are disposed to communion with each other, others not, and that some may have communion with a few, others with many, while others again are free to combine universally with all,—I propose we follow up our course of reasoning by enquiring, not about all genera, lest we be confounded by their number, but selecting some of the most important,—first, what are the specific qualities of each, then what capacity they have of mutual intercommunion;—in order that, though we may not be able to comprehend thoroughly the nature of entity and non-entity, we may, at least, not be without some comprehension of them, so far as permitted by the plan of our present argument, if, indeed, we may in any way venture unscathed to say that non-entity exists.

Theaetetus::—Such, indeed, must be our plan.

Stranger::—The most important forms or genera are those just mentioned—namely, existence itself, and rest and movement.

Theaetetus::—Certainly.

Stranger::—And yet we agreed that two of these are mutually incongruous?

Theaetetus::—No doubt.

Stranger::—But existence mingles with both; for both rest and movement exists.

Theaetetus::—How not?

Stranger::—These, then, are three?

Theaetetus::—Certainly.

Stranger::—Each different from the two others, but identical with itself!

Theaetetus::—It is so.

Stranger::—But what is it we are now saying about difference and identity? Are these also two ideas or kinds, differing from the others, although necessarily ever mingling with them, so that we have now five existences before us for consideration instead of three? or do we unconsciously mean by “different” and “identical” one or other of the former?

Theaetetus::—Perhaps we do.

Stranger::—But motion and rest are not the same as diversity and identity.

Theaetetus::—How so?

Stranger::—That which we affirm of, or assign as an attribute to, both rest and motion indifferently cannot possibly be itself either rest or motion.

Theaetetus::—Why?

Stranger::—Because if it were, motion would be rest, and rest motion; for in both cases the happening of one or other to either of the two will force the other to change its nature, as participating in its contrary.

Theaetetus::—Very true.

Stranger::—For both rest and motion partake the nature of identity and diversity.

Theaetetus::—Yes.

Stranger::—Let us not then call motion and diversity one, nor rest one with identity.

Theaetetus::—No.

Stranger::—And are we to conceive existence and identity as one?

Theaetetus::—Possibly.

Stranger::—But if existence and identity are the same, we shall again find ourselves compelled to identify rest and motion, since both rest and motion exist.

Theaetetus::—But this is impossible.

Stranger::—Then it is impossible that existence and identity should be one.

Theaetetus::—So it seems.

Stranger::—We must then consider identity as a fourth kind or “form” along with the others.

Theaetetus::—Certainly.

Stranger::—And must we not make diversity a fifth? or shall we take both this and existence to be merely two names for one thing?

Theaetetus::—Possibly we may.

Stranger::—Yet I think you will admit that of existences some are spoken of as absolute, some relative.

Theaetetus::—Yes.

Stranger::—And is not diversity always relative?

Theaetetus::—Certainly.

Stranger::—Not so unless existence and diversity be thoroughly distinct; if diversity could be participant of both these, like being or existence, then there might be a kind of diversity which is not relative; but we have just seen that whatever is diverse must always be so relatively to something else.

Theaetetus::—So it is.

Stranger::—Diversity then must be reckoned as a fifth in the list of our selected forms.

Theaetetus::—Yes.

Stranger::—And we may say of it that it pervades all the others, for each differs from the other not through its own nature, but through participating the form of diversity.

Theaetetus::—Certainly.

Stranger::—We may then thus recapitulate the nature of our five forms:—motion differs wholly from rest—it is not rest, yet partakes of being as existing; motion, again, differs from identity—it is not identity, yet still it is in one sense identical inasmuch as all things partake of identity; and this equivalency and non-equivalency of motion and identity must not be taken amiss; for in asserting both propositions we do not mean to assert them in the same sense; in the first case, we mean the sharing identity in regard to itself; in the second, we think of the same things participation in diversity, through which, parted from identity, it becomes not that but another, so as again to be rightly styled non-identical.

Theaetetus::—Very well!

Stranger::—And if in any respect motion should partake of the nature of rest, it would not be absurd to speak of it as resting.

Theaetetus::—Certainly, since we agree that of kinds or forms some have a tendency to mingle with one another, others not.

Stranger::—Indeed, we came to the demonstration of this before, showing it to be naturally thus.

Theaetetus::—Certainly.

Stranger::—Let us repeat then—motion differs from diversity, as it also differed from identity and from rest?

Theaetetus::—Necessarily.

Stranger::—Yet in a certain sense it is not different, though different according to our present meaning?

Theaetetus::—True.

Stranger::—Well, then, having divided it from three of our forms, shall we confound it with the fourth, after having agreed upon five several forms as subjects of enquiry?

Theaetetus::—How can the number possibly be less than that before shown?

Stranger::—We may then boldly assert motion to differ from being?

Theaetetus::—Most certainly.

Stranger::—Is not motion, then, actually an instance of non-being, although at the same time being, inasmuch as participating being?

Theaetetus::—Clearly.

Stranger::—Of necessity, then, non-entity must exist both in regard to motion and all forms, since through out all of them the nature of diversity distorts and suppresses their being, making each of them in a sense not to be; so that in this way we may correctly speak of all as not being, although at the same time being—namely, as partaking of being.

Theaetetus::—So it appears.

Stranger::—In each of the forms, then, there is abundance of being, also an infinite quantity of nonbeing.

Theaetetus::—So, indeed, it seems.

Stranger::—Must we, then, not speak of being itself as differing from the other forms?

Theaetetus::—Necessarily.

Stranger::—Being, too, then may be said relatively not to be in as many cases as there are other forms; for though considered as excluding each of these, it is in itself individual and one, its negations (or diversities) relatively to other forms of being are infinite.

Theaetetus::—Almost, indeed.

Stranger::—These positions, then, should not be thought extravagant, since genera tend by their very nature to mutual communion; if any one disallow them, let him show that we are wrong in the former steps of the argument, and so proceed to dispute what follows.

Theaetetus::—Your claim is just.

Stranger::—Let us also consider this, that when we speak of non-being, we do not predicate the contrary of being, but only diversity.

Theaetetus::—How so?

Stranger::—When, for example, we speak of a thing as not great, do we seem to mean the small rather than the unequal (or the relatively small)?

Theaetetus::—Certainly not.

Stranger::—Therefore when negation is said to imply contradiction, we shall not concede this, but only that the negative sign implies some diversity or exclusion of the after accompanying properties or predicates.

Theaetetus::—Very true.

Stranger::—Let us also, if you please, attend to this, that the nature of the diverse appears to me to be liable to subdivision to the same extent as science itself.

Theaetetus::—How so?

Stranger::—Science, too, is one, yet each of its several provinces has its own specific name. Hence the usual enumeration of many arts and sciences.

Theaetetus::—Certainly.

Stranger::—And is not this equally the case with subdivisions of the diverse?

Theaetetus::—Perhaps so; but say how.

Stranger::—Has not the beautiful a certain diversity opposed to it?

Theaetetus::—Yes.

Stranger::—Has this diversity a name, or is it nameless?

Theaetetus::—It has a name; for what we call not beautiful is that which is diverse from the nature of the beautiful, and from that only.

Stranger::—But tell me, is not the not beautiful to be considered as existing, as being severed from, and also opposed to, a certain class of existences?

Theaetetus::—Yes.

Stranger::—The existence of the non-beautiful is then an antithesis of being to being?

Theaetetus::—True.

Stranger::—And according to our present reasoning has the beautiful more claim to be reckoned among existences than the non-beautiful?

Theaetetus::—No.

Stranger::—Similarly we must say that the non-great exists equally with the great?

Theaetetus::—Quite so.

Stranger::—The unjust too must in this view be placed on an equal footing with the just, inasmuch as one exists no less than the other?

Theaetetus::—Of course.

Stranger::—It will also follow in other cases, that since the diverse has appeared to be among the number of existing natures, its several parts or subdivisions must likewise exist?

Theaetetus::—Certainly.

Stranger::—It seems, then, that the opposition between a particular segment of the diverse and a segment of the existent—is no less existent if we may so say—than the existent itself; not in the sense of contradiction between the two, but only of diversity.

Theaetetus::—Clearly so.

Stranger::—How shall we then name it?

Theaetetus::—Evidently, it is the non-existent or non-entity which we have been looking for on the Sophists account.

Stranger::—Non-entity then is no more deficient in regard to existence than other kinds of being, and we may now declare confidently that it possesses a nature of its own, like the great and the not great, the beautiful and not beautiful; so, too, non-being exists as non-being, a specific kind or form among the many kinds of being. Is there any reason, Theaetetus, for distrusting this inference?

Theaetetus::—None whatever.

Stranger::—Do you see, then, how we have done more than disobey the immediate prohibition of Parmenides?

Theaetetus::—How so?

Stranger::—Because we have not only not abstained from enquiry as he directed, but have arrived at a positive result.

Theaetetus::—How?

Stranger::—Parmenides says;

> “Never venture to assert non-entity to exist,
> But carefully withdraw your mind from this enquiry”—

whereas we have not only shown that non-entity exists, but also how it exists—namely, its kind or form; for we have explained how the diverse exists and is distributed through all forms of correlated being; and have ventured to call that portion of it which is severally antithetical to each segment of being as constituting in the aggregate the true essence of non-entity.

Theaetetus::—Your inferences, Stranger, appear to me altogether unexceptionable.

Stranger::—Let not, then, any one assert that we venture to speak of non-entity as existing in the sense of the contrary of entity; since long ago we gave up asserting the existence or rationality of any such contrary. But in regard to what has just been advanced as to the nature of non-entity, let it either be distinctly proved that we are wrong, or else let our adversaries agree that the kinds of being and of diversity intermingle throughout,—that the diverse, by participating being, is or exists through such participation, yet not as identical with that in which it participates, but as something different, and being so different from being, is so far clearly non-being; on the other hand, that being, by participating diversity, becomes differentiated from all other kinds or forms; and as such is neither one of them in particular, nor all together, nor any except itself; so that incontestably being appears in a thousand ways as non-being; and all other forms, both individually and collectively, in many respects may be said to be, in many not to be.

Theaetetus::—True.

Stranger::—And if anyone disputes these antitheses, let him reflect and produce something better; or if, seeing the difficulty, he amuses himself by caviling this way and that, let him be assured that he only wastes his time, as our present arguments show. For this last alternative is neither clever nor difficult; whereas the former is not only difficult but glorious.

Theaetetus::—Which former?

Stranger::—I mean that before stated, that allowing the possibility of these (inferences or antitheses) he should be able intelligently to follow each step in argument, and, whenever the diverse is alleged to be in a sense identical, or the identical diverse, to discriminate the special manner and relation predicated of each kind; while, on the other hand, arbitrarily to confound the several kinds, indiscriminately calling the identical different, the great small, the similar dissimilar, etc., and moreover to exult in making this confusion, this is no genuine mode of argument, but only the rash venture of one newly attempting the problem of being.

Theaetetus::—Very true.

Stranger::—And moreover, my good friend, a constant effort to sever every thing from every thing is inharmonious and rude, the part of one quite untutored and unphilosophical.

Theaetetus::—How so?

Stranger::—Because the complete severance of every thing from every thing else amounts to complete suppression of all rational discourse; for it is through the mutual interlacement of ideas or forms that discourse becomes possible.

Theaetetus::—True.

Stranger::—Consider now how opportunely we have fought the matter out with these men, and compelled them to admit that one kind mingles with another.

Theaetetus::—To what end?

Stranger::—In order to make it appear how discourse forms one of our existing genera. Were we deprived of it, first and foremost, we should be bereft of all philosophy; moreover, it is especially needful to come to an understanding about it at the present moment, since if compelled to relinquish it as an existing reality we could not utter a word more. And this, indeed, we should be, were it admitted that there can be no union of anything with anything.

Theaetetus::—In this you are right; but I don't see why we should at this particular moment have to come to an agreement as to the nature of discourse.

Stranger::—You will, perhaps, best learn by thus following the course of the argument. Non-being or non-entity was found to be one of the other forms or genera, spreading through all existence. Was it not?

Theaetetus::—Yes.

Stranger::—We have then to enquire further whether it mingles with opinion and discourse.

Theaetetus::—How so?

Stranger::—Because if it mingle not with these all language and opinion must be true; if on the contrary it can and does mingle, false opinion and false reasoning become possible; falsehood, in thought and speech, being, in fact, nothing more than thinking or saying the thing which is not.

Theaetetus::—Very true.

Stranger::—And from falsehood follows deception.

Theaetetus::—Yes.

Stranger::—And deception implies the prevalence of visionary and fantastic images.

Theaetetus::—Of course.

Stranger::—But this was precisely the hiding-place to which we before traced the Sophist—he all the time utterly denying even the possible existence of falsehood; for lie said that no one could either think or speak non-entity, non-entity no way possessing any share of being.

Theaetetus::—It was so.

Stranger::—But the contrary of this has been made evident, and will probably no longer be disputed; but perhaps it may be pretended that some forms or genera, partake of non-entity, others not, and that opinion and discourse are of the latter class. Hence the Sophist may say that the fantastic and image-making art do not exist at all; since if there be no union of opinion and discourse with non-entity, there can be no falsehood. Therefore we will consider the nature of discourse, opinion, and fantasy, in order, in the first place, to show their communion with non-entity; and, on the basis of this showing, prove the existence of falsehood, and having proved the falsehood, bind the Sophist to it, if he be guilty; or else release and seek him in some other kind.

Theaetetus::—Most true, O Stranger, appears to be what you said at the beginning, that the Sophist is a species difficult to hunt out. For he seems to be inexhaustible in resources of defense, and we have to fight our way through each of these fences before getting at himself. Scarcely had we got through the pretence that non-entity exists not, when we had to face another, and to show that falsehood exists both in opinions and discourses; after this we shall, perhaps, find another, and another after that, and so on endlessly.

Stranger::—He, Theaetetus, who is able to make even a small advance, must be of good courage. For what would he, who in these circumstances desponds, do in another case in which he should make no advance or be driven back? Scarcely would such an one take the city, as the saying is. But now, since the obstacle you speak of is passed, the main fortress may be considered to be won—the rest is easier and less important.

Theaetetus::—Very well.

Stranger::—First, then, let us consider opinion and discourse, in order to ascertain whether non-entity reaches them, or whether they are universally true and exempt from falsehood.

Theaetetus::—Very well.

Stranger::—Well, then, let us now consider words, as we before dealt with ideas and letters; for this way seems to lie the object of our search.

Theaetetus::—What, then, is to be said respecting words?

Stranger::—Whether all words agree together or none; or whether some do and some not.

Theaetetus::—Clearly the latter alternative is the truth.

Stranger::—You mean possibly that those which follow each other in a sentence or proposition agree, and that such as are unmeaning when placed consecutively disagree?

Theaetetus::—Why so?

Stranger::—I allude to what I presume to be your meaning in your last given assent; for in fact there are two distinct sorts of words used in declarations about existence.

Theaetetus::—Which are they?

Stranger::—Some called names, others predicates or verbs.

Theaetetus::—Describe them.

Stranger::—Declarations about actions are called verbs.

Theaetetus::—Yes.

Stranger::—And the vocal signs affixed to the agents (or subjects) of those actions are names.

Theaetetus::—Very true.

Stranger::—Names alone uttered consecutively do not form a-discourse, neither do verbs spoken alone without names.

Theaetetus::—I don't see this.

Stranger::—Clearly, then, you were thinking of something else when you just now assented to what, in effect, I am now saying,—namely, that such words alone spoken together do not make a discourse.

Theaetetus::—As how?

Stranger::—For instance, "walks, runs, sleeps," and so of other words denoting actions; no amount of these strung together would make a discourse.

Theaetetus::—How indeed should it?

Stranger::—Again, if you say "lion, stag, horse,"—and so forth, no such series of words amounts to a discourse; for in neither case do the words say any thing, by attributing action or inaction to being or non-being; this occurs only when verbs are joined with names; each then fits the other, and discourse is produced in its first and simplest form.

Theaetetus::—How mean you this?

Stranger::—As when one says—man learns—here is an instance of the shortest and most elementary speech.

Theaetetus::—Yes.

Stranger::—For, then, by connecting verbs with nouns, he asserts something about the existing or becoming things which are or are about to be; not merely recounting names, but also transactions; hence we said that he not only names but speaks, and called the tissue of such connected speech discourse.

Theaetetus::—Right.

Stranger::—Thus, then, as among things some fit together, others not, so too among vocal signs or words some disagree, while to those agreeing together we give the title of discourse.

Theaetetus::—Very true.

Stranger::—Add also this trifling circumstance—that discourse, in order really to be, must be about something, not about nothing.

Theaetetus::—Certainly.

Stranger::—Hence it must have a certain quality.

Theaetetus::—Of course.

Stranger::—Now, then, let us look to ourselves and our own doings; I will frame a discourse, connecting a thing with an act by means of a noun and verb; do you tell me what the discourse is about.

Theaetetus::—To the best of my power I will do so.

Stranger::—"Theaetetus sits"—this discourse is no long one.

Theaetetus::—Short enough!

Stranger::—You are now to say what it is about, and whom.

Theaetetus::—About me and my act.

Stranger::—But how is it with the following—"Theaetetus, with whom I am now talking, flies."

Theaetetus::—This too can scarcely be said to be other than of and about me.

Stranger::—But we said that all discourse must have a certain quality?

Theaetetus::—Yes.

Stranger::—Then what is the quality of each of the two foregoing propositions?

Theaetetus::—One is false, the other true.

Stranger::—The true one affirms that which is respecting you, the false something other than what is?

Theaetetus::—Certainly.

Stranger::—Stating the non-existent as if it existed?

Theaetetus::—Yes.

Stranger::—An existence different from that truly existing about you; for we said before that much is about every individual, and that much is not?

Theaetetus::—Yes.

Stranger::—Now the last uttered discourse about you must, according to the definition given, be necessarily one of the shortest?

Theaetetus::—Such was our conclusion.

Stranger::—Also about something?

Theaetetus::—So it is.

Stranger::—And if not about you it is about no one nothing.

Theaetetus::—Of course.

Stranger::—But if about nothing it is not discourse at all; since we showed that it is impossible for discourse to be about nothing?

Theaetetus::—Very true.

Stranger::—When, then, in speaking of you the different is stated as identical and the nonexistent as existent, it appears that such a tissue of nouns and verbs is really and truly a false discourse?

Theaetetus::—Most certainly it is.

Stranger::—But how about thought, opinion, and appearance? Is it not clear that all these kinds are formed falsely as well as truly in our souls?

Theaetetus::—How?

Stranger::—You will understand better by considering separately the specific nature of each;—are not thought and discourse the same, save that the former, being the souls silent discourse (dialogos) within itself, has hence been called “Dianoia?”

Theaetetus::— Certainly.

Stranger::—And its outpour thence through the lips in sound is called (λογος) speech or discourse?

Theaetetus::—True.

Stranger::—And this so expressed in words we know to be either affirmation or denial?

Theaetetus::—Certainly.

Stranger::—But when occurring silently within the soul in the form of thought, what name can you give it save that of opinion?

Theaetetus::—None.

Stranger::—And when such a condition occurs not independently in the soul, but as a consequence of sensation, what name can you give it save that of fantasy or appearance?

Theaetetus::—None other.

Stranger::—Since then discourse was shown to be of two qualities, namely, true or false, and since thought is the internal discourse of the soul terminating in opinion, while fantasy is a compound of sensation and opinion, it follows that of these correlatives of discourse some are sometimes false.

Theaetetus::—Of course.

Stranger::—See now how false opinion and discourse have been far more easily and quickly discovered than we lately anticipated.

Theaetetus::—I perceive.

Stranger::—Let us then not despond as to what remains, and having so far pursued our discoveries let us recall our former several kinds and divisions.

Theaetetus::—Which divisions?

Stranger::—We distinguished two kinds of the imitative art, the assimilative and the fantastic.

Theaetetus::—Yes.

Stranger::—And we then professed to be at a loss in which to place the Sophist.

Theaetetus::—So it was.

Stranger::—And while thus doubting we became involved in still deeper obscurity in consequence of the all-controverting suggestion, that there can be no unveracious image, similitude, or phantasm whatever, falsehood being everywhere and always impossible.

Theaetetus::—True.

Stranger::—But now, since it has been made evident that there may be both false discourse and false opinion, it follows that false imitations of real being may exist, and that hence a deceptive art may be produced.

Theaetetus::—Certainly.

Stranger::—Also it was before agreed that the Sophist must belong to one or other of those two kinds?

Theaetetus::—Yes.

Stranger::—Let us, then, again proceed to divide the given genus, and so adhering to the right hand segment continually follow the characteristics of the Sophist, until, having divested him of all that he has in common with others, we exhibit him in his proper and peculiar nature,—for our own edification in the first instance, and next for the benefit of those who by nature are most nearly allied to his mode of arguing.

Theaetetus::—Very well.

Stranger::—Did we not at the outset distinguish the formative and acquisitive arts?

Theaetetus::—Yes.

Stranger::—And under the head of acquisitive he appeared to be among hunters, wrestlers, traffickers, and others of the sort?

Theaetetus::—Certainly.

Stranger::—But now, since the imitative art has caught him, it is clear that we must first make a two fold division also of the formative or creative; for imitation is a sort of forming, that is, of images, not of things themselves; is it not so?

Theaetetus::—Yes.

Stranger::—Of the formative art, then, let there be two kinds, the divine and human.

Theaetetus::—I don’t quite see this.

Stranger::—The formative or creative art was, according to our former definitions, any force or agency causing things not existing before to exist afterwards.

Theaetetus::—I remember.

Stranger::—Well, then, shall we say of animals and plants, and all things growing from seeds or roots, or formed within the earth of a fusible or infusible nature, that these were brought from nonbeing into being by any other than a creating God?—or, borrowing the words and notions of the many, shall we suppose them to be casual spontaneous products of unreasoning nature, rather than of a divine cause acting with reason and divine science?

Theaetetus::—It is inexperience, probably, which makes me hesitate between two opinions; looking, however, at the present moment to you, and supposing you to be so minded, I now hold them to originate from God.

Stranger::—Very well, Theaetetus; if I thought that hereafter you would be one among differently minded persons, I would even now endeavor to persuade you to the contrary by cogent reasons; but, knowing your disposition and that you are of yourself, without any argument of mine, already tending the way to which you now incline, I omit this as taking up too much time; assuming, meanwhile, that the so-called products of nature are creations of divine art, as those formed by man out of these are of human, so that there will be two kinds of formative art, one human, one divine.

Theaetetus::—Well.

Stranger::—Divide now each of these again into two, so that the whole of formative art may appear in four segments, two dependent on us, or human, two on the gods, or divine.

Theaetetus::—Very well.

Stranger::—And since they are again divided transversely, let one segment of each of the former divisions be called "freely creative," of the other two "image creative."

Theaetetus::—Pray describe them.

Stranger::—Ourselves and other animals, and the elements, as fire, water, etc., out of which things arise, each of these products we recognize as the very work of God, do we not?

Theaetetus::—Yes.

Stranger::—And the accompanying images of these, not their very selves, these too are formations of divine art, are they not?

Theaetetus::—What are you alluding to?

Stranger::—All sleeping and waking images that are called natural, such as dreams, shadows produced by intercepted light, also the images reflected from smooth bright surfaces, where a confluence of original and derived light exhibits the ordinary appearance reversed.

Theaetetus::—These two, then, are products of divine art, the thing itself, and its accompanying image or shadow.

Stranger::—But what of human art? Shall we not say that it too has a double function, one producing things, e.g. a house by the builders art, the other, the painters art for instance, producing a sort of waking dream?

Theaetetus::—Certainly.

Stranger::—So that of these two products of human formative art the one may be called freely creative or auto-poetic, the other imitative or image creative.

Theaetetus::—I see now, and assume two kinds of formative art under two separate heads; human and divine according to one division, according to the other true existence and fictitious or simulative.

Stranger::—It should be also remembered that of the image-making art there were to be two kinds, the assimilative and fantastic, at least if it turned out that falsehood really is, as one among things existing.

Theaetetus::—So it was agreed.

Stranger::—Well, such having proved to be the case, we may now assume these two, and then again divide the fantastic art into two kinds.

Theaetetus::—How?

Stranger::—The one produced by means of instruments, the other where the appearance-producing artist is himself the instrument of his work.

Theaetetus::—What mean you?

Stranger::—When any one in his own person counterfeits your person or voice, this aspect of fantastic art may, I presume, be called mimicry?

Theaetetus::—Yes.

Stranger::—Let this name, then, be awarded to it as a distinctive appellation; the remaining portion it were more easy and agreeable to omit, leaving it to some one else to summaries and find a fitting name for it.

Theaetetus::—So be it.

Stranger::—But mimicry too, Theaetetus, should be treated as twofold; some mimics practice their art knowingly, others not; and what difference can be greater than that of knowledge and ignorance?

Theaetetus::—None.

Stranger::—The instance just adduced was one of knowing mimicry; for only one knowing you and your appearance could imitate it.

Theaetetus::—Of course.

Stranger::—But how of the form of justice and of virtue generally, do not many, destitute of knowledge and having only seeming or opinion, strive with all their might to counterfeit the semblances of virtue, imitating it as much as possible in act and word?

Theaetetus::—Very many indeed.

Stranger::—Do they fail in their efforts to appear what they are not?

Theaetetus::—Quite the contrary.

Stranger::—Such ignorant mimics, I presume, must be held to be quite different from the others, who know what they imitate?

Theaetetus::—Yes.

Stranger::—Whence, then, shall we get a suitable name for each? Evidently it is difficult, because former thinkers entertained a groundless prejudice against special and generic distinctions, so that none attempted to make them; and hence a dearth of appropriate names. Nevertheless, however rash the attempt, we will venture to call the mimicry or imitation resting on opinion only—"doxomimetic,"—that based on science "scientific."

Theaetetus::—Very well.

Stranger::—One of these will suffice for our present purpose; for the Sophist is an imitator or mimic, but not with knowledge.

Theaetetus::—Certainly.

Stranger::—Let us, then, test the doxomimic like steel, whether he be sound or have a flaw in him.

Theaetetus::—Apply your test.

Stranger::—A flaw he certainly has, and that a large one. One among the number of such is simple, fancying he knows what really he only opines; but the other sort by his elaborate logical evolutions creates infinite terror and suspicion in the minds of his hearers, lest he prove to be ignorant of what he pretends before the multitude to know.

Theaetetus::—There are indeed these two sorts.

Stranger::—Suppose, then, we call one the simple mimic, the other the insincere or ironical?

Theaetetus::—Very well.

Stranger::—And of this last is there one kind or two?

Theaetetus::—That is for you to consider.

Stranger::—I do, and seem to see two sorts; one able to play the ironical mimic publicly before a numerous audience in long winded harangues, another who in short private conversations drives the interlocutor to a self-contradiction.

Theaetetus::—Most true.

Stranger::—What, then, shall we term the lengthy speaker, a statesman or a mob-orator?

Theaetetus::—A mob-orator.

Stranger::—And what the other; a wise man or a Sophist?

Theaetetus::—A wise man (or true philosopher) we cannot call him, having already supposed him to be ignorant; but as an imitator of the wise (sophos) it is fit that he should have some analogous designation; and now methinks I see pretty plainly that it is he whom we must address as the real and genuine Sophist.

Stranger::—Shall we, then, as before, summaries the constituent elements comprehended under this title, recapitulating the whole backwards from the end up to the beginning?

Theaetetus::—Agreed.

Stranger::—Whoever, singling out that portion of the doxomimetic art, or art of fictitious imitation founded on mere opinion, which with ironical insincerity drives interlocutors to a self-contradiction, derived from the race of fantastic human image-makers playing the charlatan with words,—whoever, I say, shall speak of the genuine Sophist as coming of this blood and lineage, will, in my opinion, most truly describe him.

# The Sophista.

Translated by Thomas Taylor.

*PERSONS OF THE DIALOGUE.*

THEODORUS, An ELEAN GUEST, or STRANGER, SOCRATES, And THEÆTETUS.

Theodorus:: We are come, Socrates, according to our agreement yesterday, as good manners require, and have brought with us this guest, who is an Elean by birth, but very different from the associates of Parmenides and Zeno: he is however a great philosopher.

Socrates:: Perhaps, therefore, Theodorus, according to the assertion of Homer, you are conducting a certain God, and not a stranger. For he says, that both other Gods, and especially the hospitable deity, are conversant with men who participate of just shame, and that they inspect the insolent and the equitable conduct of men. So that perhaps he who now follows you, is one of the natures superior to man, who attends you in order to behold and confute us who dispute badly, as being himself a certain reprehending God.

Theodorus:: This is not the manner of this guest, Socrates, but he is more modest than those that are studious of contention. And he appears to me, as being a man, not to be a God, but to be divine: for so I denominate all philosophers.

Socrates:: And you do well in calling them so, my friend. But indeed the genus of philosophers is not much more easily distinguished, as I may say, than that of divinity. For those who are not fictitiously but truly philosophers, appear through the ignorance of others to be of an all-various nature, while they wander about cities, and behold from on high the life of inferior natures. And to some they appear to deserve no honor, but by others they are considered as worthy of all honor. And sometimes they appear to be politicians, but at other times Sophists; and sometimes, in the opinion of certain persons, they are considered to be perfectly in sane. I would gladly, therefore, inquire of this our guest, if agreeable to him, what his familiars the Eleans think of these things, and how they denominate them.

Theodorus:: What things do you mean, Socrates?

Socrates:: The sophist, politician, and philosopher.

Theodorus:: What, and of what kind, is the doubt about these, which you would wish to have dissolved?

Socrates:: This: Whether they denominate all these, one or two. Or as there are three names, whether they also make a distribution into three genera, and ascribe the respective names to the respective genera.

Theodorus:: But I think that he will not enviously refuse to discuss these things. Or how shall we say, guest?

Stranger:: In this manner, Theodorus. For I shall not enviously refuse, nor is it difficult to inform you, that they think these are three genera: but to define clearly what each of them is, is not a small nor an easy work.

Theodorus:: You have perhaps, Socrates, fallen upon questions similar to those which we were asking this our guest before we came hither. But he then gave us the same answers as he just now gave you: for he said, that he had sufficiently heard, and did not forget them.

Socrates:: You ought, therefore, to gratify us, O guest, with respect to our first question: But tell us thus much, whether you are accustomed to discuss by yourself in a long discourse, that which you wish to evince, or by interrogations, which I once heard Parmenides employing, and at the same time delivering all-beautiful arguments, I being then a young and he a very elderly man.

Stranger:: If any one answers, Socrates, without difficulty, and in a placid manner, it is more easy to discourse with such a one by interrogating; but if not, it is better to discourse by oneself.

Socrates:: You are at liberty, therefore, to choose whichever of these you please: for we shall all of us obey you without reluctance. But I would advise you to choose some young man for this purpose, either Theætetus here, or any other that you may think proper.

Stranger:: I am ashamed, Socrates, that, conversing with you now for the first time, I have not given word for word, but, making a long discourse either by myself or to another, I have acted as if I had been framing a demonstration. For in reality no one should expect that the present question can be solved with the greatest facility: For it requires a very long discussion. On the contrary, not to gratify you, and those that are now assembled, especially since you have asked in so modest a manner; would, as it appears to me, be inhospitable and rustic; since, from what I have before said, and from what you have now urged me to do, I shall have Theætetus here as my associate in the discussion.

Theaetetus:: By thus acting indeed, O guest, as Socrates says, you will gratify all of us.

Stranger:: It appears then, Theætetus, that nothing further must be said against these things. And as it seems, after this, I must address myself to you. But if being weary through the length of the discourse you should become indignant, do not blame me, but these your companions, as the cause of this.

Theaetetus:: I am far from thinking that this will be the case: but if a thing of this kind should take place, then we can call upon the namesake of Socrates here, who is of the same age with me, and is my associate in gymnastic exercises, and who is not unaccustomed to accomplish many laborious things in conjunction with me.

Stranger:: You speak well. Deliberate, therefore, about these things by yourself, in the course of the disputation: but now consider in common with me, beginning in the first place (as it appears to me) from the sophist; and let us evince by our discourse what he is. For now both you and I have only the name in common respecting this thing: but perhaps each of us thinks differently as to the thing denominated. But it is always requisite respecting every thing, rather to consent through reasons to the thing itself, than to the name alone without reason. However, with respect to the tribe which we now take upon us to investigate, it is by no means easy to apprehend what a sophist is. It appears however to all men, and is an ancient opinion, that whoever wishes to labor through great things well, should exercise himself in such as are small and more easy, before he attempts such as are the greatest. Now, therefore, as we are of opinion that the genus of a sophist is difficult to investigate, I would advise, Theætetus, that we should first of all consider the method of this investigation, in something more easy: unless you are able to show a more expeditious way.

Theaetetus:: But I am not able.

Stranger:: Are you willing, therefore, that, adducing a vile thing, we should establish it as a paradigm of a greater thing?

Theaetetus:: Yes.

Stranger:: But what if we propose a thing well known, and of a trifling nature, but which will contribute as well as any thing to the apprehension of greater things? as for instance a fisherman. Is he not known to every one? and is it not likewise certain, that he does not deserve much serious consideration?

Theaetetus:: It is so.

Stranger:: Yet I suspect he will furnish us with a method, and reasoning process, not unadapted to our design.

Theaetetus:: In this case, therefore, it will be well.

Stranger:: Come then, let us begin from this: and inform me, whether we should consider a fisherman, as one endued with art, or as without art, but possessing another power.

Theaetetus:: We must by no means consider him as without art.

Stranger:: But there are nearly two species of all arts.

Theaetetus:: How so?

Stranger:: Agriculture, and the care respecting every mortal body, together with that pertaining to every thing composite and plastic, which we denominate an utensil, and in conjunction with these the imitative power, all which may be justly called by one name.

Theaetetus:: How so? and by what name?

Stranger:: When any one afterwards leads into existence that which was not before, then we say that he who leads makes, and that the thing led is made.

Theaetetus:: Right.

Stranger:: But all the particulars which we just now mentioned possess a power adapted to this.

Theaetetus:: They do.

Stranger:: In a summary way, therefore, we shall denominate them effective.

Theaetetus:: Be it so.

Stranger:: But after this, the whole species of discipline and knowledge, together with the species of gain, contest and hunting, may be called a certain art of acquiring, since no one of these fabricates any thing, but procures things which are and have been, partly subjecting them to its power by words and actions, and partly conceding them to those by whom they are received.

Theaetetus:: They may be so called: For it is proper.

Stranger:: Since all arts, therefore, consist either in acquiring or in effecting, in which of these, Theætetus, shall we place the art of fishing?

Theaetetus:: Doubtless in the art of acquiring.

Stranger:: But are there not two species of the art of acquiring? the one being a commutation between those that are willing, through gifts, buying, and wages? But the other will be a mancipation, effected either by deeds or words.

Theaetetus:: It appears this must be the case, from what has been said.

Stranger:: But what? Must not mancipation also receive a two-fold division?

Theaetetus:: After what manner?

Stranger:: The one being apparent, and wholly agonistic; but the other being occult, and wholly consisting in hunting.

Theaetetus:: Yes.

Stranger:: It is likewise absurd, not to give hunting a two-fold division.

Theaetetus:: Inform me how.

Stranger:: One member of the division consists of the inanimate, and the other of the animated kind.

Theaetetus:: Undoubtedly: for there are both these.

Stranger:: How, indeed, is it possible there should not? And it is requisite that we should leave the hunting of inanimate things without a name, and that we should likewise dismiss the consideration of certain parts of the art of swimming, and other trifling things of this kind; and denominate the other part, which is the hunting of animated natures, the hunting of animals.

Theaetetus:: Be it so.

Stranger:: But is it not justly said, that there is a two-fold species of the hunting of animals? one being the hunting of the pedestrian kind, which is distinguished by many species and names, but the other of every swimming animal, and which is denominated hunting in water?

Theaetetus:: Entirely so.

Stranger:: But of the swimming division, we see that one kind cuts the air with wings, and that the, other is aquatic.

Theaetetus:: Undoubtedly.

Stranger:: But all the hunting of the winged tribe is called fowling.

Theaetetus:: It is so.

Stranger:: But nearly that of all the aquatic tribe, fishing.

Theaetetus:: Yes.

Stranger:: But what? Must we not divide this hunting into two greatest parts?

Theaetetus:: What are these parts?

Stranger:: According to which we either fish with nets, or by percussion.

Theaetetus:: How do you say? And how do you divide each?

Stranger:: That every thing which on all sides enclosing restrains anything for the sake of impediment, is fitly denominated a net.

Theaetetus:: Entirely so.

Stranger:: But do you call a bow-net, dictuon, a snare, and a calling-net, any thing else than nets?

Theaetetus:: Nothing else.

Stranger:: We must say, therefore, that this hunting with nets is a part of fishing, or something of this kind.

Theaetetus:: We must.

Stranger:: But that which is accomplished with hooks and darts, by percussion, and which is different from the other kind of fishing, it will be proper that we should now call by one word, percussion-hunting, unless you, Theætetus, have any thing better to say.

Theaetetus:: Let us pay no attention to the name: for this is sufficient.

Stranger:: Of percussion-hunting, therefore, one kind is I think nocturnal, being effected by the light of fire; and on this account it happens to be called igniferous.

Theaetetus:: Entirely so.

Stranger:: But the other kind is diurnal, and is effected with tridents hooked on the extremities of rods; the whole of this being aduncous fishing.

Theaetetus:: It is indeed so called.

Stranger:: Of aduncous-percussion-fishing, therefore, that kind which is effected by darting the tridents into the water from on high, is I think called by some trident fishing.

Theaetetus:: So certain persons say.

Stranger:: Only one species then, as I may say, remains.

Theaetetus:: What is that?

Stranger:: A percussion contrary to this, effected indeed with a hook, but not casually striking any part of the body, as in fishing with tridents, but piercing only the head and mouth of the fish, and drawing it upwards with rods and reeds. By what name, Theætetus, shall we say this ought to be called?

Theaetetus:: By that of aduncous fishing with rods: and we now appear to have accomplished that which we proposed to discuss.

Stranger:: Now, therefore, you and I have not only accorded in giving a name to fishing, but we have likewise sufficiently explained the manner in which it is conducted. For, of the whole art, one half we said consisted in acquiring; and the half of this in manual subjugation; and again the half of this in hunting. Likewise that the half of hunting consisted in the capture of animals; and that the half of the capture of animals was hunting in water. That again, of hunting in water, the downward division of the whole was fishing; that the half of fishing was percussion; that the half of percussion fishing was performed with a hook: and lastly, that the half of this consisted in drawing that which is downwards upwards; and that, thence deriving its name, it is called aduncous fishing with rods.

Theaetetus:: This, therefore, has been in every respect sufficiently shown.

Stranger:: Come then, let us endeavor according to this paradigm to discover what a sophist is.

Theaetetus:: By all means.

Stranger:: And this indeed was the first object of inquiry in the example just adduced, whether a fisherman is to be considered as a rude character, or as one endued with a certain art.

Theaetetus:: It was.

Stranger:: And now, Theætetus, shall we call a sophist a rude character, or one in every respect skilful?

Theaetetus:: We must by no means call him a rude character. For I understand what you say, that he who is so called ought not to be unskillful, but endued with a certain art.

Stranger:: But with what art ought we to consider him endued?

Theaetetus:: I ask you the same question.

Stranger:: By the Gods, then, are we ignorant that one of these men is allied to the other?

Theaetetus:: Which men?

Stranger:: The fisherman and the sophist.

Theaetetus:: In what respect are they allied?

Stranger:: Both of them appear to me to be hunters.

Theaetetus:: Of what is this latter character a hunter? for we have spoken of the other.

Stranger:: We divided the whole of hunting into the swimming and the pedestrian.

Theaetetus:: We did.

Stranger:: And we discussed, indeed, the particulars respecting the swimming part of aquatic natures; but we omitted the pedestrian division, and said that it was multiform.

Theaetetus:: Entirely so.

Stranger:: Thus far, therefore, the sophist and the fisherman equally proceed from the art of acquiring.

Theaetetus:: They appear so indeed.

Stranger:: Some however, abandoning the hunting of land animals, betake themselves to the sea, to rivers and lakes, and hunt animals in these.

Theaetetus:: Undoubtedly.

Stranger:: But some subjugate animals on the earth, and in rivers, as in meadows abounding with riches and youthfulness.

Theaetetus:: How do you say?

Stranger:: Of pedestrian hunting there are two greatest parts.

Theaetetus:: Of what kind is each of these parts?

Stranger:: One is the hunting of tame, and the other of savage animals.

Theaetetus:: Is there any hunting then of tame animals?

Stranger:: Either man is a tame animal, (adopt what I say as you please,) or no animal is tame; or some other animal is tame, but man is a savage animal: or you may say that man indeed is a tame animal, but you may think that there is no hunting of men. Adopt whichever of these divisions is most agreeable to you.

Theaetetus:: But I think, O guest, that we are a tame animal, and I say that there is a hunting of men.

Stranger:: We must say then that there is also a two-fold hunting of tame animals.

Theaetetus:: How so?

Stranger:: By defining predatory hunting, that which reduces into bondage, and tyrannic hunting, to be all of them violent hunting.

Theaetetus:: Well defined.

Stranger:: But that which pertains to judicial cases, popular harangues, and discourse, may summarily be called a certain art of persuasion.

Theaetetus:: Right.

Stranger:: But of this art of persuasion we say there are two kinds.

Theaetetus:: What are they?

Stranger:: One of them is private, and the other public.

Theaetetus:: There are these two species.

Stranger:: Again, with respect to the hunting of private persuasion, one kind is effected by wages, and another by gifts.

Theaetetus:: I do not understand you.

Stranger:: It seems you have never attended to the hunting of lovers.

Theaetetus:: In what respect?

Stranger:: In this, that besides other things they bestow gifts on those they have caught.

Theaetetus:: You speak most true.

Stranger:: Let this then be a species of the amatory art.

Theaetetus:: By all means.

Stranger:: But with respect to that species of the hunting of persuasion which is effected by wages, that part of it which converses with others through favor, and entirely procures enchantments through pleasure, that it may thence alone receive aliment as its reward, this I think we all of us call adulation, or a certain art administering to pleasure.

Theaetetus:: Undoubtedly.

Stranger:: But another part of it professes to converse for the sake of virtue, and requires money For its reward. Ought not this part, therefore, to be called by another name?

Theaetetus:: Undoubtedly.

Stranger:: Endeavor to tell me this name.

Theaetetus:: It is evident. For we appear to me to have found a sophist; and I think this name is adapted to this other part of the object of our investigation.

Stranger:: According to the present reasoning, as it seems, Theætetus, the profession of a sophist must be called an art, servile, subjugating, and venatic; hunting pedestrian, terrestrial, and tame animals; or, in other words, privately bringing men into captivity for pecuniary rewards, and ensnaring rich and noble young men, through an opinion of erudition.

Theaetetus:: Entirely so.

Stranger:: Further still, let us consider as follows:—For the object of our present investigation does not participate of a certain vile art, but of one various in the extreme. For, from what has been before said, we may conjecture that it does not belong to that kind of art which we just now mentioned, but to another kind.

Theaetetus:: What is that kind?

Stranger:: There were in a certain respect two species of the art of acquiring, the one consisting in hunting, and the other flowing from contracts.

Theaetetus:: There were.

Stranger:: We say, therefore, that there are two species of contracts, the one consisting in bestowing, and the other in buying and selling.

Theaetetus:: There are so.

Stranger:: And again, we say that the species of contracts which consists in buying and selling, must receive a two-fold division.

Theaetetus:: How?

Stranger:: He who exposes his own works to sale may be called a seller of his own property; but he who sells the works of others, an exchanger.

Theaetetus:: Entirely so.

Stranger:: But what? Is not that exchange which takes place in the same city, and which is nearly the half of the whole of exchange, denominated cauponary?

Theaetetus:: Yes.

Stranger:: And is not the other half that which takes place by buying and selling in different cities, and which we call emporic?

Theaetetus:: Undoubtedly.

Stranger:: And do we not perceive, that of emporic exchange, one part pertains to the nutriment of the body, and the other to the discipline of the soul, exchanging erudition for money?

Theaetetus:: How do you say?

Stranger:: That part which pertains to the soul we are, perhaps, unacquainted with: for the other part we understand.

Theaetetus:: We do.

Stranger:: But we say that he who buys music in one city by learning, and sells it in another by teaching, and who acts in a similar manner with respect to painting, enchantment, and many other things pertaining to the soul, as well serious as jocose,—we say that such a one traffics no less than he who sells meats and drinks.

Theaetetus:: You speak most true.

Stranger:: Will you not, therefore, similarly denominate him who wanders about different cities in order to exchange disciplines for money?

Theaetetus:: Very much so.

Stranger:: But of this merchandize pertaining to the soul, may not one part be most justly called demonstrative; and may not the other part, though ridiculous, yet, since it is no less the selling of disciplines than the former, be called by a name which is the brother to that of selling?

Theaetetus:: Entirely so.

Stranger:: But in this traffic of disciplines, he who sells the disciplines of other arts must be called by a name different from him who sells the disciplines of virtue.

Theaetetus:: Undoubtedly.

Stranger:: For he who sells the disciplines of other arts may be aptly called a seller of arts; but consider by what name he should be called who sells the disciplines of virtue.

Theaetetus:: By what other name can he be called without error, except that which is the object of our investigation at present, a sophist?

Stranger:: By no other. We may, therefore, now collect as follows: that, by a second investigation, a sophist has appeared to us to be an exchanger, a buyer and seller, a merchant respecting discourses, and one who sells the, disciplines of virtue.

Theaetetus:: Very much so.

Stranger:: In the third place, I think that you in like manner will call him, a sophist, who being settled in a city, partly buys and partly himself fabricates disciplines, which he sells in order to procure the necessaries of life.

Theaetetus:: Why, indeed, should I not?

Stranger:: You will, therefore, call him a sophist who is conversant in acquiring, who traffics, and sells either his own inventions, or those of others, about the disciplines of virtue.

Theaetetus:: Necessarily so. For it is requisite to assent to reason.

Stranger:: Let us still further consider, whether the genus which we are at present investigating is similar to a certain thing of this kind.

Theaetetus:: Of what kind?

Stranger:: Of the art of acquiring, a certain part appeared to us to be; agonistic.

Theaetetus:: It did.

Stranger:: It will not, therefore, be improper to give it a two-fold division.

Theaetetus:: Inform me how you divide it.

Stranger:: One part is defensive, and the other offensive.

Theaetetus:: It is so.

Stranger:: Of the offensive part, therefore, that which takes place when bodies fight against bodies may be fitly called violence.

Theaetetus:: It may.

Stranger:: But what else, Theætetus, can that which takes place when arguments oppose arguments be called, except contention?

Theaetetus:: Nothing else.

Stranger:: But as to contentions, there must be a two-fold division.

Theaetetus:: In what respect?

Stranger:: For, so far as contention takes place through employing prolix arguments against prolix arguments in public concerning things just and unjust, it is judicial.

Theaetetus:: It is.

Stranger:: But when it takes place in private, by a distribution into minute parts, through question and answer, are we accustomed to call it any thing else than contradiction?

Theaetetus:: Nothing else.

Stranger:: But of contradiction, that part which is employed about contracts, and which subsists casually, and without art, is to be placed as a separate species, since reason distinguishes it from other kinds of contradiction; but it has neither been assigned a name by any of the ancients, nor does it deserve to be denominated by us at present.

Theaetetus:: True.

Stranger:: For it is divided into parts extremely small and all-various. But that which proceeds according to art, and disputes about things just and unjust, and universally about other particulars, we are accustomed to call contentious.

Theaetetus:: Undoubtedly.

Stranger:: But of the contentious division, one part dissipates possessions, and the other accumulates wealth.

Theaetetus:: Entirely so.

Stranger:: We should, therefore, endeavor to discover by what name each of these ought to be called.

Theaetetus:: It is proper to do so.

Stranger:: It appears then to me, that he who, through delighting in the study of contention, neglects his affairs, and is always hunting after trifling questions, cannot be called any thing else than a man of words.

Theaetetus:: He may, indeed, be called so.

Stranger:: But do you now, in your turn, endeavor to inform me how he is to be denominated who endeavors to acquire wealth from private contention.

Theaetetus:: Can any one with rectitude call him any thing else than that wonderful character the sophist, which we investigate, and who now again for the fourth time presents himself to our view?

Stranger:: As reason, therefore, again shows us, a sophist is nothing else than that pecuniary genus which is conversant with the art of contention, with contradiction, controversy, hostile opposition, and with the agonistic art, and that of acquiring.

Theaetetus:: He is altogether so.

Stranger:: Do you not perceive, therefore, that it is truly said, this wild beast is a various animal, and that, according to the proverb, he is not to be caught with the other hand?

Theaetetus:: It will, therefore, be proper to use both hands.

Stranger:: It will be proper, and we must do so to the utmost of our power. But inform me, whether we have any servile names?

Theaetetus:: We have many. But respecting which of the many do you ask me?

Stranger:: Such as when we say to wash, to distribute, to boil, and to separate.

Theaetetus:: Undoubtedly.

Stranger:: And besides these, to card wool, to draw down, to comb, and ten thousand other such-like words which we meet with in the arts. Or do we not?

Theaetetus:: Which among these do you wish to serve throughout, as an instance of what you mean to evince?

Stranger:: All the names that have been mentioned are in a certain respect divisive.

Theaetetus:: They are.

Stranger:: According to my reasoning, therefore, since there is one art in all these, we should call them by one name.

Theaetetus:: By what name?

Stranger:: Segregative.

Theaetetus:: Be it so.

Stranger:: Consider, again, whether we are able to perceive two species of this?

Theaetetus:: You seem to urge me to a rapid consideration.

Stranger:: And, indeed, in all these segregations, the worse was separated from the better, and the similar from the similar.

Theaetetus:: It appears that it was nearly so said.

Stranger:: Of the latter of these segregations, therefore, I cannot tell the name; but I can of that which leaves the better and rejects the worse.

Theaetetus:: Inform me what it is.

Stranger:: The whole of this separation (as I conjecture) is called by all men a certain purification.

Theaetetus:: It is so called.

Stranger:: Does not, therefore, every one see that the cathartic species is two-fold?

Theaetetus:: Yes. If any one, perhaps, thinks about it at leisure; for I do not see it at present.

Stranger:: And, indeed, it is proper to comprehend in one name the many species of purgations pertaining to the body.

Theaetetus:: What kind of purgations do you mean? and by what name ought they to be called?

Stranger:: The inward purgations of the bodies of animals, by gymnastic and medicine, which purify by rightly separating; and those which operate externally, and which it is vile to mention, viz. such as baths afford; and likewise the purgations of inanimate bodies, by means of the fuller’s art, and the whole art of adorning the body, which occasions attention to things of a trifling nature,—all these appear to be allotted many and ridiculous names.

Theaetetus:: Very much so.

Stranger:: Entirely so, indeed, Theætetus. But the order of reasoning cares neither more nor less, whether wiping with a sponge purifies in a small degree, but the drinking a medicine is more advantageous to us, by the purification it affords. For, that it may understand all arts, by endeavoring to apprehend what is allied, and what not, it equally honors the several arts, and is of opinion that some are not more ridiculous than others according to similitude. It likewise considers hunting, effected through military discipline, as in no respect more venerable than searching after vermin, but for the most part more futile. And now, indeed, which was what you asked, we have comprehended in one name all the powers which are allotted the purification either of an animated or inanimate body; but it is of no consequence to the present disputation what name may appear to be more becoming, if it be only placed separate from the purgations of the soul, and include in itself all such things as purify the body. For the order of reasoning now endeavors to separate the purification of the dianoëtic part from other purgations, if we understand what it wishes to accomplish.

Theaetetus:: But I do understand, and I grant that there are two species of purification; one species respecting the soul, and the other, which is separate from this, respecting the body.

Stranger:: You speak in the most beautiful manner. Attend to me, therefore, in what follows, and endeavor to give a two-fold division to what has been said.

Theaetetus:: Wherever you may lead, I will endeavor to distribute in conjunction with you.

Stranger:: Do we not say, then, that depravity in the soul is something different from virtue?

Theaetetus:: Undoubtedly.

Stranger:: And we likewise said, that purification consists in rejecting what is depraved, and preserving what remains.

Theaetetus:: We did say so.

Stranger:: So far, therefore, as we shall discover an ablation of depravity in the soul, we ought to call it purgation.

Theaetetus:: And very much so.

Stranger:: Two species of depravity in the soul must be established.

Theaetetus:: What are they?

Stranger:: The one is like disease in the body, but the other resembles inherent baseness.

Theaetetus:: I do not understand you.

Stranger:: Perhaps you do not think that disease is the same with sedition.

Theaetetus:: Again, I am not able to answer this question.

Stranger:: Whether do you think sedition is any thing else than the corruption of natural alliance through a certain discord?

Theaetetus:: It is nothing else.

Stranger:: And is baseness any thing else than entire deformity, arising from the immoderation of things of one kind?

Theaetetus:: It is nothing else.

Stranger:: What then, do we not see in the soul of the depraved that opinions differ from desires, anger from pleasures, reason from pain, and all these from each other?

Theaetetus:: And very much so.

Stranger:: But all these are necessarily allied to each other.

Theaetetus:: Undoubtedly.

Stranger:: We shall speak rightly, therefore, in calling depravity the sedition and disease of the soul.

Theaetetus:: We shall speak most rightly.

Stranger:: But what, when we see such things as participate of motion, and propose to themselves a certain end, wander from and miss the mark according to every impulse, do we say that they are affected in this manner through symmetry to each other, or, on the contrary, through a privation of symmetry?

Theaetetus:: It is evident that this, happens through a privation of symmetry.

Stranger:: But we know that every soul is involuntarily ignorant of any thing.

Theaetetus:: Very much so.

Stranger:: But ignorance is nothing else than a delirium of the soul, which, while it is impelled to truth, wanders in its apprehension of things.

Theaetetus:: Entirely so.

Stranger:: We must consider, therefore, a soul involved in ignorance as base and deformed.

Theaetetus:: So it appears.

Stranger:: It seems, therefore, that there are these two genera of evils in the soul; one of which is called by the multitude depravity, and is most evidently a disease.

Theaetetus:: It is.

Stranger:: But the other the multitude call ignorance, but they are unwilling to acknowledge that this is a vice in the soul.

Theaetetus:: It must by all means be granted, though when you just now spoke I was doubtful of it, that there are two genera of vice or depravity in the soul; and that we ought to consider timidity, intemperance, injustice, and every thing else of this kind, as a disease in us; but the passion of abundant and all-various ignorance as baseness.

Stranger:: In the body, therefore, are there not two certain arts about these two passions?

Theaetetus:: What are these arts?

Stranger:: About baseness, gymnastic; but about disease, medicine.

Theaetetus:: It appears so.

Stranger:: About insolence, therefore, injustice, and timidity, is not chastising justice naturally the most adapted of all arts?

Theaetetus:: It is likely, as I may say, according to human opinion.

Stranger:: But, can any one say that there is a more proper remedy for all ignorance than erudition?

Theaetetus:: No one can.

Stranger:: Must we say, therefore, that there is only one kind of erudition, or that there are more kinds than one? But take notice, that there are two greatest genera of it.

Theaetetus:: I do take notice.

Stranger:: And it appears to me that we shall very rapidly discover this.

Theaetetus:: In what manner?

Stranger:: By perceiving that ignorance has a certain two-fold division. For, being two-fold, it is evident that it necessarily requires a two-fold mode of instruction, corresponding to the members of its division.

Theaetetus:: What then? Is that apparent which is the object of your present investigation?

Stranger:: I perceive, indeed, a great and ponderous species of ignorance, which outweighs all its other parts.

Theaetetus:: Of what kind is it?

Stranger:: When he who is ignorant of a thing appears to himself to know it. For it appears that through this all the deceptions in our dianoëtic part take place.

Theaetetus:: True.

Stranger:: And I think that to this species of ignorance alone the name of rusticity should be given.

Theaetetus:: Entirely so.

Stranger:: How, therefore, do you think that part of erudition should be called which liberates from this species of ignorance?

Theaetetus:: I think, indeed, O guest, that the other part is denominated demiurgic erudition, but that this is called by us discipline.

Stranger:: It is nearly so denominated, Theætetus, by all the Greeks. But this also must be considered by us, whether the whole of this is indivisible, or possesses a certain division which deserves to be named.

Theaetetus:: It is requisite to consider this.

Stranger:: It appears, therefore, to me, that this may be still further divided.

Theaetetus:: According to what?

Stranger:: Of the erudition which is effected by discourse, one way appears to be more rough, and another part of it more smooth.

Theaetetus:: Of what kind do we call each of these?

Stranger:: The one ancient and paternal, which men formerly adopted towards their children, and many use at present, viz. as often as children do wrong, partly severely reproving) and partly mildly admonishing them. But the whole of this may be called with the utmost propriety admonition.

Theaetetus:: It may so.

Stranger:: But some are of opinion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn those things in which he considers himself as skilled; but that the admonitory species of discipline makes very small advances with great labor.

Theaetetus:: And they think right.

Stranger:: They likewise adopt another mode in order to disclose this opinion.

Theaetetus:: What mode?

Stranger:: By inquiring into those particulars about which a man thinks he says something to the purpose, when at the same time this is far from being the case. In the next place, they easily explore the opinions of those that err, and, collecting them together by a reasoning process, render them the same with each other: and after this they evince that these opinions are contrary to themselves, respecting the same things, with reference to the same, and according to the same. But those whose opinions are thus explored, on seeing this, are indignant with themselves, and become milder to others; and after this manner are liberated from mighty and rigid opinions;

which liberation is of all others the most pleasant to hear, and the most firm to him who is the subject of it. For, O beloved youth, those that purify these think in the same manner as physicians with respect to bodies. For physicians are of opinion, that the body cannot enjoy salubrious food till some one removes, the impediments it contains. In like manner, these mental purifiers think that the soul can derive no advantage from disciplines accommodated to its nature, till he who is confuted is ashamed of his error, and, the impediments of disciplines being expelled, viz. false opinions, he becomes pure, and alone thinks that he knows the things which he does know, and not more than he knows.

Theaetetus:: This is the best and the most modest of habits.

Stranger:: Hence, Theætetus, we must say, that confutation is the greatest and the chief of all purifications; and that he who is not confuted, even though he should be the great king himself, since he would be unpurified in things of the greatest consequence, will be rude and base with respect to those things in which it is fit he should be most pure and beautiful, who wishes to become truly happy.

Theaetetus:: Entirely so.

Stranger:: But by whom shall we say this art is employed? For I am afraid to say it is used by the sophists.

Theaetetus:: On what account?

Stranger:: Lest we should honor them more than is fit.

Theaetetus:: But yet what has been just now said appears to be adapted to a certain character of this kind.

Stranger:: So likewise a wolf resembles a dog, a most savage a most mild animal. But he who wishes to be free from deception ought to guard against similitude above all things: For it is a genus of the greatest lubricity. But, at the same time, let these things be admitted; for I think it is not proper to dispute about small terms, at a time when these ought to be carefully avoided.

Theaetetus:: It is not proper.

Stranger:: Let, therefore, a species of the separating art be cathartic: and let a part of the cathartic species be limited to the soul. But of this let a part be doctrinal; and of the doctrinal let discipline be a part. But of discipline, that confutation which takes place about a vain opinion of wisdom should be called, as it appears from our present discourse, nothing else than that sophistic art which is of a noble race.

Theaetetus:: It should be so called. But I am dubious, what, out of many things which present themselves, it is fit truly and strenuously to call a sophist.

Stranger:: You are very properly dubious. But indeed it is proper to think, that even a sophist himself will now very much doubt, by what means he may escape our arguments. For the proverb rightly says, It is not easy to avoid all things. Now, therefore, let us attack him with all our might.

Theaetetus:: You speak well.

Stranger:: But, in the first place, let us stop as it were to take breath, and reason among ourselves, at the same time mutually resting when we are weary. Let us consider, then, how many forms the sophist assumes. For we appear from our first investigation to have discovered, that he is a mercenary hunter of the youthful and rich.

Theaetetus:: We do so.

Stranger:: But from our second investigation it appears, that he is a certain merchant in the disciplines of the soul.

Theaetetus:: Entirely so.

Stranger:: And did he not, in the third place, appear to be a huckster about these same things?

Theaetetus:: He did. And did we not, in the fourth place, find him to be one who sells us his own inventions?

Stranger:: You properly remind me. But I will endeavor to remember the fifth particular. For, in the next place, we found him to be one who strives in the agonistic exercise about discourses, and who is defined from the art of contention.

Theaetetus:: We did so.

Stranger:: The sixth form is indeed ambiguous; but at the same time we must admit it, and grant that a sophist is a purifier of such opinions as are an impediment to disciplines respecting the soul.

Theaetetus:: Entirely so.

Stranger:: Do you therefore perceive, that, when any one appears to possess a scientific knowledge of many things, and is called by the name of one art, this is not a sound phantasm? It is indeed evident, that he who is thus affected with respect to any art cannot behold that particular thing to which all these disciplines look. Hence he who possesses a multitude of disciplines should be called by many names, instead of one name.

Theaetetus:: This appears to be in the highest degree natural.

Stranger:: Lest, therefore, the same thing should happen to us through indolence in this investigation, let us repeat, in the first place, one of the things which we said respecting the sophist: for one of these appears to me especially to indicate him.

Theaetetus:: Which of them?

Stranger:: We said that he was in a certain respect a contradictor.

Theaetetus:: We did.

Stranger:: And does he not also become a teacher of this to others?

Theaetetus:: Undoubtedly.

Stranger:: Let us now, therefore, consider, about what it is that sophists say they make others contradictors. But let our consideration from the beginning be as follows. With respect to divine things which are unapparent to the many, do sophists sufficiently impart the power of contradiction?

Theaetetus:: This is indeed asserted of them.

Stranger:: But what with respect to things apparent, such as earth and heaven, and the particulars pertaining to these?

Theaetetus:: What of them?

Stranger:: For, in private conversations, when any thing is asserted in general respecting generation and essence, we say that the sophists are skilled in contradicting, and that they are able to render others like themselves.

Theaetetus:: Entirely so.

Stranger:: But what, with respect to laws, and all political concerns, do they not also promise to make men contentious in these?

Theaetetus:: No one, as I may say, would discourse with them unless they promised this.

Stranger:: But writings containing such contradictions as ought to be urged against the professors of the several arts, may every where be procured by him who wishes to learn the art of contradiction.

Theaetetus:: You appear to me to allude to the writings of Protagoras respecting wrestling and the other arts.

Stranger:: And to the writings of many others, O blessed man. But is not the art of contradicting, summarily a certain power, sufficient to bring all things into controversy?

Theaetetus:: It appears, therefore, that nearly nothing is omitted.

Stranger:: But by the Gods, O boy, do you think this is possible? For perhaps you young men behold this more acutely, but we more dully.

Theaetetus:: In what respect? and why do you particularly assert this? For I do not understand your present question.

Stranger:: I asked, if it were possible for any one man to know all things.

Theaetetus:: If it were possible, our race, O guest, would be blessed.

Stranger:: How, therefore, can any one destitute of science be able, by contradicting, to urge any thing sound against him who is endued with science?

Theaetetus:: He cannot in any respect.

Stranger:: What then is it which will be wonderful in the sophistic power?

Theaetetus:: About what?

Stranger:: The manner by which sophists are able to produce an opinion in young men, that they are the wisest of all men in all things? For it is evident that, unless they contradicted rightly, or at least appeared to do so to young men, and, when appearing to do so, unless they were considered to be more wise through their contentions, they would be without employment, and, as you said, no one would give them money to become their disciple.

Theaetetus:: Doubtless no one would.

Stranger:: But now men are willing to do this.

Theaetetus:: And very much so.

Stranger:: For I think the sophists appear to have a scientific knowledge of those particulars about which they employ contradiction.

Theaetetus:: Undoubtedly.

Stranger:: But do they employ contradiction in all things? Shall we say so?

Theaetetus:: Yes.

Stranger:: They appear, therefore, to their disciples to be wise in all things.

Theaetetus:: Undoubtedly.

Stranger:: But yet they are not: for this seems to be impossible.

Theaetetus:: It does.

Stranger:: A sophist, therefore, appears to us to possess doxastic, and not true science, about all things.

Theaetetus:: Entirely so. And what has been now said, respecting sophists, seems to be most rightly said.

Stranger:: Let us, therefore, assume a clearer paradigm respecting them.

Theaetetus:: What is that?

Stranger:: This. But endeavor to attend to what I say, and answer me in the best manner you are able.

Theaetetus:: Of what kind is the paradigm?

Stranger:: Just as if any one should assert that he neither says any thing, nor contradicts, but that he makes and causes all things to be known by one art.

Theaetetus:: What is your meaning in all this?

Stranger:: You are obviously ignorant of the beginning of what is said: for, as it seems, you do not understand the word all.

Theaetetus:: I do not.

Stranger:: I say then that you and I are in the number of all things, and besides us, other animals and trees.

Theaetetus:: How do you say?

Stranger:: If any one should assert that he would make you and me, and all other living things.

Theaetetus:: Of what making do you speak? For you do not mean a husbandman, because the artificer you mention is a maker of animals.

Stranger:: I do say so. And besides this, he is the maker of the sea, the earth, the heavens, the Gods, and all other things. And as he rapidly makes each of these, so he fills each for a small price.

Theaetetus:: You speak in jest.

Stranger:: What then? May not he also be said to jest, who asserts that he knows all things, and professes himself able to teach another all things, for a small sum of money, and in a short time?

Theaetetus:: Entirely so.

Stranger:: But have you any species of jesting more artificial and agreeable than the imitative?

Theaetetus:: I have not. For you have mentioned a very ample species. which comprehends all things in one, and is nearly most various.

Stranger:: Do we not, therefore, know that he who professes himself able to make all things by one art, in consequence of fabricating imitations and homonyms of things, by the art of painting, is able to deceive stupid young men and boys, by showing them his pictures at a distance, and induce them to believe that he is sufficient to effect whatever he pleases?

Theaetetus:: Undoubtedly.

Stranger:: But what as to discourses, will it not appear to us that there is another certain art respecting these, by which seducers, as if employing certain incantations, are able to draw young men far away from the truth, by bewitching their ears with their discourses, and exhibiting to them images of every thing, instead of realities; so as to cause themselves to appear to speak the truth, and to be the wisest of all men in all things?

Theaetetus:: Why should there not be another certain art of this kind?

Stranger:: Is it not, therefore, necessary, Theætetus, that many of those who then hear these things, after through the course of time they have arrived at the perfection of manhood, and consider the things themselves nigh at hand, and are compelled through passions clearly to handle realities, will then abandon their former opinions, and be induced to consider those things as small, which once appeared to them to be great, those things difficult which they once considered easy, and thus at length entirely subvert all the phantasms produced by discourse, through the works which take place in actions?

Theaetetus:: It appears so to me, as far as my age is capable of judging. For I am of opinion, that as yet I rank among those who are far distant from the truth.

Stranger:: All we, therefore, who are present will endeavor to assist you. And now we shall endeavor, free from passion, to approach as near as possible to the truth. With respect to a sophist, then, inform me whether this is clear, that he ranks among enchanters, being an imitator of things? or must we yet doubt whether he possesses in reality the sciences of those things respecting which he appears able to contradict?

Theaetetus:: But how can we doubt this, O guest? For it is nearly evident from what has been said that he is one of those who participate parts of erudition.

Stranger:: He must be considered, therefore, as a certain enchanter and mimic.

Theaetetus:: Undoubtedly.

Stranger:: Come then: for we must now no longer drop our prey; as we have now nearly enclosed the sophist in a certain not of reasoning; so that he cannot hereafter escape from this.

Theaetetus:: From what?

Stranger:: That he is one of those who work miracles.

Theaetetus:: This also is my opinion respecting him.

Stranger:: It seems, therefore, that we should divide with the utmost celerity the image producing art; and that, entering into it, if the sophist evidently waits for us, we should apprehend him conformably to the royal mandate, and, delivering him up, exhibit our prey to the king: but that, if he enters into the parts of the imitative art, we should follow him, always dividing the part which receives him, till we apprehend him. For neither will he, nor any other genus, ever be able to fly from him who can pursue every particular through all things according to method.

Theaetetus:: You speak well. And in this manner, therefore, we must act.

Stranger:: According to the superior mode of division, I now appear to myself to see two species of the imitative art; but in which of these we should place the idea which is the object of our investigation, it does not yet appear, to me possible to know.

Theaetetus:: But first of all inform me by division what these two species are.

Stranger:: I see that one indeed is the assimilative art. But this especially takes place, when any one according to the commensurations of a paradigm, in length, depth, and breadth, and besides this by the addition of convenient colors, gives birth to a resemblance.

Theaetetus:: What then, do not all those that imitate any thing endeavor to do this?

Stranger:: Not such as fashion or paint any great work. For, if they should impart the true symmetry of things beautiful, you know that the upper parts would appear smaller than is fit, and the lower parts greater, in consequence of the former being seen by us at a distance, and the latter nigh at hand.

Theaetetus:: Entirely so.

Stranger:: Do not therefore artists, bidding farewell to truth, neglect real symmetry, and accommodate to images such commensurations as are only apparently beautiful?

Theaetetus:: Entirely so.

Stranger:: Is it not, therefore, just to call the one species, since it is a likeness, an image?

Theaetetus:: Perfectly so.

Stranger:: And is it not just to call the other species assimilative?

Theaetetus:: Yes.

Stranger:: We must, therefore, call the other part of the imitative art, as we said above, assimilative.

Theaetetus:: We must so call it.

Stranger:: But what shall we call that which appears indeed similar to the beautiful, but, when inspected by him who is endued with a power sufficient for the purpose, is found not to resemble that to which it appears to be similar? Must we not call it a phantasm, since it appears to be but is not similar?

Theaetetus:: Undoubtedly.

Stranger:: Is not this part abundantly to be found in painting, and in the whole of the imitative art?

Theaetetus:: It is impossible it should not.

Stranger:: But may we not with the greatest rectitude call that art which produces a phantasm, and not an image, fantastic?

Theaetetus:: Very much so.

Stranger:: I have already, therefore, said that these were two species of the image-producing art, viz. the assimilative and fantastic.

Theaetetus:: Right.

Stranger:: But neither am I able now to see clearly, that of which I was then dubious, viz. in which of these species the sophist is to be placed. For this is truly a wonderful man; and it is extremely difficult to discern him; since even now, in a very excellent and elegant manner, he has fled into a species which it is almost impossible to investigate.

Theaetetus:: It seems so.

Stranger:: Do you then assent to this in consequence of understanding it? or does a certain usual impetus arising from discourse induce you to a rapid coincidence of sentiment?

Theaetetus:: How, and with a view to what, do you say this?

Stranger:: O blessed man, we are truly engaged in a speculation perfectly difficult. For that this thing should appear and seem to be, and yet is not; and that a man should assert certain things, and yet not such as are true,—all these things have always been subjects of the greatest doubt in former times, and are so at present. For it follows, that he who speaks in this manner must either speak falsely, or be of opinion that such things truly are; and thus speaking, Theætetus, it is extremely difficult for him not to contradict himself.

Theaetetus:: Why so?

Stranger:: Because such a mode of speaking dares to admit that non-being is: for otherwise it would not be false, which it is. But the great Parmenides, O boy, while we were yet boys, both from the first and to the end, rejected this mode of speaking. For, both in prose and verse, he every where speaks as follows: “Non-beings can never, nor by any means, be. But do thou, when inquiring, restrain thy conceptions from this path.” The truth of this, therefore, is testified by him, and this assertion will the most of all things become evident, if moderately discussed. Let us, therefore, if it is not disagreeable to you, consider this in the first place.

Theaetetus:: You may do as you please with respect to me. But do you consider what it is best to investigate, and in this path lead me.

Stranger:: It will be proper so to do. Tell me, then: Dare we to pronounce that which in no respect is?

Theaetetus:: How is it possible we should not?

Stranger:: Not for the sake of contention, therefore, nor jesting, but seriously, every one who hears us ought to join with us in considering the import of this word non-being. But can we think that he who is asked this question would know where to turn himself, or how to show what non-being is?

Theaetetus:: You ask a difficult question, and to me, as I may say, entirely impervious.

Stranger:: This, however, is evident, that non-being cannot be attributed to any thing which ranks among beings.

Theaetetus:: For how could it?

Stranger:: Since, therefore, it cannot be attributed to being, neither can any one rightly attribute it to any thing.

Theaetetus:: Certainly not.

Stranger:: This also is evident to us, that this word something is every where predicated of a certain being. For it is impossible to speak of it alone, as if it were naked and solitary with respect to all beings.

Theaetetus:: It is impossible.

Stranger:: Thus considering, therefore, must you not agree with me, that he who speaks of something must necessarily speak of one certain thing?

Theaetetus:: Yes.

Stranger:: For you would say, that the word something is a sign of one thing, and that certain things is a sign of many things.

Theaetetus:: Undoubtedly.

Stranger:: But it is most necessary, as it appears, that he who speaks of that which is not something must entirely speak of nothing.

Theaetetus:: This is most necessary.

Stranger:: Must it not therefore follow, that neither this is to be granted, that he who speaks of something speaks of that which is not even one thing, or nothing? But neither must we say that he speaks who endeavors to enunciate non-being.

Theaetetus:: The doubts, therefore, in which our discourse is involved should come to an end.

Stranger:: You do not as yet speak of something great. For, O blessed man, the greatest and first of doubts still remains about these things: For it is a doubt which takes place about the principle of non-being.

Theaetetus:: Tell me how, and do not be remiss.

Stranger:: To that which is, something else belonging to beings may happen.

Theaetetus:: Undoubtedly.

Stranger:: But shall we say, that any thing belonging to beings can ever be present to that which is not?

Theaetetus:: How can we?

Stranger:: But do we not rank the whole of number among beings?

Theaetetus:: Undoubtedly, if we rank any thing else among beings.

Stranger:: We should, therefore, neither attempt to attribute the multitude of number, nor the one, to non-being.

Theaetetus:: Reason shows that we cannot with propriety.

Stranger:: How, therefore, can any one enunciate by the mouth, or altogether comprehend by the dianoëtic power, non-beings, or non-being separate from number?

Theaetetus:: Tell me why not.

Stranger:: When we say nonbeings, do we not endeavor to adjoin the multitude of number?

Theaetetus:: Undoubtedly.

Stranger:: And when we say non-being, do we not endeavor to adjoin the one?

Theaetetus:: Most clearly so.

Stranger:: And besides this we say, that it is neither just nor right to endeavor to adapt being to non-being.

Theaetetus:: You speak most truly.

Stranger:: Do you not, therefore, perceive, that non-being can neither be rightly enunciated, nor spoken, nor yet be cogitated, itself by itself, but that it is incomprehensible by thought, ineffable, non-vocal, and irrational?

Theaetetus:: Entirely so.

Stranger:: Did I, therefore, just now speak falsely when I said, that I could produce the greatest doubt respecting it?

Theaetetus:: What then, can we mention any doubt greater than this?

Stranger:: Do you not see, O wonderful youth, from what has been said, that non-being leads him who confutes it into such perplexity, that in the very attempt to confute it he is compelled to contradict himself?

Theaetetus:: How do you say? Speak yet clearer.

Stranger:: There is no occasion to consider any thing clearer in me. For, when I adopted the position, that non-being ought to participate neither of the one, nor of many, both a little before, and now, I employed the term the one. For I enunciated non-being. Do you perceive this?

Theaetetus:: Yes.

Stranger:: And again, a little before, I said that non-being was non-vocal, ineffable, and irrational. Do you apprehend me?

Theaetetus:: I do. For how is it possible I should not?

Stranger:: When, therefore, I endeavored to adapt being to non-being, did I not assert things contrary to what I had before advanced?

Theaetetus:: It appears so.

Stranger:: And in consequence of attributing this to it, did I not speak of it as one thing?

Theaetetus:: Yes.

Stranger:: And besides this, while I called it irrational, ineffable, and non-vocal, did we not make these assertions as pertaining to one thing?

Theaetetus:: Undoubtedly.

Stranger:: For we have said, that he who speaks of non-being in a proper manner, ought neither to define it as one, nor many, nor give it any appellation whatever: For it is impossible to denominate it, without at the same time calling it one thing.

Theaetetus:: Entirely so.

Stranger:: What then will some one say of me? For, both formerly and now, he will find me vanquished in this contention respecting non-being. So that, as I have already said, you must not expect me to speak properly on this subject. But come, let us now consider this affair in you.

Theaetetus:: How do you say?

Stranger:: endeavor in a becoming and generous manner, as being a young man, and with all your might, to assert something about non-being, conformable to right reason, without adding to it either essence, or the one, or the multitude of number.

Theaetetus:: It certainly would be great rashness in me to engage in a contest in which you have been vanquished.

Stranger:: But, if it is agreeable to you, we will dismiss you and me; and till we meet with some one who is able to accomplish this, we will say that a sophist more than any other person conceals himself in an impervious place.

Theaetetus:: Very much so, indeed.

Stranger:: If, therefore, we should say that he possessed a certain fantastic art from this use of words, he Would easily attack us, and turn the discourse to the very contrary of what is asserted. For, while we call him a maker of images, he will immediately ask us what we assert an image to be. Consider therefore, Theætetus, what answer we should give to this question of the sophist.

Theaetetus:: It is evident we should say that images are such things as are seen in water and mirrors, and besides this, such things as are painted and carved, and every thing else of this kind.

Stranger:: It seems, Theætetus, that you have never seen a sophist.

Theaetetus:: Why so?

Stranger:: He would appear to you to wink, or to be entirely deprived of eyes.

Theaetetus:: How so?

Stranger:: He would laugh at you for answering him by appearances in mirrors, and by pictures and carvings, when you speak to him as being yourself endued with sight; and he will pretend that he knows nothing about mirrors, or water, or even sight itself, but that he alone interrogates you about this one thing.

Theaetetus:: What is that?

Stranger:: That which in all the particulars you have mentioned you think fit to call by one name, pronouncing the word image in all of them, as being one thing. Speak, therefore, and give assistance, and do not yield to the man.

Theaetetus:: But what, O guest, can we say an image is, except that which, being itself something different, approaches to a true similitude to another thing?

Stranger:: When you say an image is something different, do you mean that it is truly different, or do you assert this of something else?

Theaetetus:: It is by no means truly different, but only appears to be so, or is similar.

Stranger:: Do you, therefore, call real being that which is true?

Theaetetus:: I do.

Stranger:: But is not that which is not true contrary to the true?

Theaetetus:: Undoubtedly.

Stranger:: When, therefore, you say that which is similar is at the same time not true, you assert that it is not. It has however a being.

Theaetetus:: How so?

Stranger:: You say that it truly is not.

Theaetetus:: It certainly is not; but it is truly an image.

Stranger:: That, therefore, which we called an image of being, is not truly being, and that which is not truly being, truly is.

Theaetetus:: Non-being appears to possess a certain connection of this kind with being, and that in a very wonderful manner.

Stranger:: How is it possible it should not appear wonderful? You now, therefore, perceive that the many-headed sophist, through this alternation, compels us unwillingly to confess that non-being in a certain respect is.

Theaetetus:: I see it, and very much so.

Stranger:: How, then, shall we define this art, so that we may be confident with ourselves?

Theaetetus:: What is it you are afraid of, that you speak in this manner?

Stranger:: When we said that he was a deceiver about a phantasm, and that his art was a certain deception, whether shall we say that our soul then opined falsely, through his art; or what shall we say?

Theaetetus:: This very thing. For what else can we say?

Stranger:: But is false opinion that which opines things contrary to things which are?

Theaetetus:: It is.

Stranger:: You say, therefore, that false opinion opines things which are not.

Theaetetus:: It is necessary.

Stranger:: Whether does it opine that non-beings are not, or that things which have no subsistence whatever, in a certain respect are?

Theaetetus:: If any one is ever deceived, and in the smallest degree, it is necessary he should opine that non-beings in a certain respect are.

Stranger:: And will he not also opine, that things which entirely are, in no respect are?

Theaetetus:: Yes.

Stranger:: And this also falsely?

Theaetetus:: And this too.

Stranger:: And false speech, in my opinion, will think after the same manner, asserting that beings are not, and that non-beings are.

Theaetetus:: For how can it otherwise become false?

Stranger:: Nearly, no otherwise. But the sophist will not say so. For by what possible device can any one of a sound mind admit the things which have been previously granted, since they are non-vocal, ineffable, irrational, and incomprehensible by the dianoëtic power? Do we understand what the sophist says, Theætetus?

Theaetetus:: How is it possible we should not? For he says that our former assertions are contrary to the present, since we have falsely dared to assert that non-being subsists in opinion and discourse. He likewise adds, that we have often been compelled to adapt being to non-being, though we have just now acknowledged, that this is in a certain respect the most impossible of all things.

Stranger:: You rightly recollect. But we should now consult what we ought to do respecting the sophist. For, if we should attempt to investigate him, by placing him in the art of deceivers and enchanters, you see that many doubts will arise.

Theaetetus:: Many, indeed.

Stranger:: We have, therefore, only discussed a small part of them, since they are, as I may say, innumerable.

Theaetetus:: But if this is the case, it appears to be impossible to apprehend a sophist.

Stranger:: What then, shall we thus effeminately desist from our undertaking?

Theaetetus:: I say we ought not, if there is the least possibility of apprehending this man.

Stranger:: You will, therefore, pardon, and, as you just now said, be satisfied, if we make but a small proficiency in so arduous an affair.

Theaetetus:: How is it possible I should not?

Stranger:: I, therefore, in a still greater degree request this of you.

Theaetetus:: What?

Stranger:: That you do not think I am become, as it were, a certain parricide.

Theaetetus:: Why do you request this?

Stranger:: Because it will be necessary for us to examine with our opponents the discourse of our father Parmenides, and. to compel non-being in a certain respect to be, and again being, in a certain respect not to be.

Theaetetus:: It appears that a thing of this kind must be contended for in our discourse.

Stranger:: For how is it possible this should not appear, and, as it is said, even to a blind man? For, while these things are neither confuted, nor assented to, no one can speak either about false assertions, or about opinion, whether respecting resemblances, or images, or imitations, or phantasms, or of the arts conversant with these, without being ridiculous in consequence of being compelled to contradict himself.

Theaetetus:: Most true.

Stranger:: Hence, we must dare to oppose the paternal discourse; or we must entirely dismiss it, if a certain sluggishness restrains us from opposing it.

Theaetetus:: But nothing will in any respect hinder us from opposing it.

Stranger:: I still, therefore, request a third, and a trifling thing of you.

Theaetetus:: Only say what it is.

Stranger:: I just now said that I was always wearied in the confutation of things of this kind, and that I am so at present.

Theaetetus:: You did say so.

Stranger:: I am afraid lest I should appear to you to be insane, in consequence of what I have said, and from immediately transferring myself upwards and downwards.

For we shall enter on the confutation of the paternal discourse, for your sake, if we happen to confute it.

Theaetetus:: As you will not, therefore, by any means be considered by me as acting in a disorderly manner by entering on this confutation, and demonstration, on this account engage boldly in this affair.

Stranger:: Come then, whence shall we begin this very dangerous discourse? For it appears, O boy, to be most necessary for us to proceed in the following path.

Theaetetus:: What is that path?

Stranger:: That we should first of all consider those things which now appear to be clear, lest we immediately desist from our undertaking, deterred by its difficulty; and that we should proceed in an easy manner, by mutually assenting to each other, as if we were engaged in a subject which may be easily discussed.

Theaetetus:: Speak more clearly.

Stranger:: Parmenides appears to me to have spoken with ease, and whoever else has attempted to determine the number and quality of beings.

Theaetetus:: How so?

Stranger:: It seems to me that each of them has related a fable to us, as being boys. One of them, by asserting that the things which have a subsistence are three; but that some of them sometimes oppose each other in a hostile manner; and at other times becoming friends, unite in marriage, bring forth, and administer aliment to their offspring. But another of these says that beings are only two, viz. the moist and the dry, or the hot and the cold; and these he associates with each other. But the Eleatic sect among us, which derives its origin from Zenophanes, and from others still prior to him, by denominating all things one, discusses its doctrines in fables. But the Iades, and certain Sicilian Muses posterior to these, have thought it more safe to connect these with each other, and to say that being is both many and one, but is held together by strife and friendship. For that which is discordant always unites with something else, as the more vehement Muses assert. But the more effeminate Muses always loosen the many from the one; and assert that the universe is alternately one, and in friendship with itself, through Venus; and many, and hostile to itself, through a certain strife. But with respect to all these assertions, whether they are true or false, to oppose such illustrious and ancient men is difficult and rash. This, however, may be asserted without envy.

Theaetetus:: What?

Stranger:: That they very much despised us who rank among the multitude. For each of them finishes his own work, without being at all concerned whether we can follow them in what they assert.

Theaetetus:: How do you say?

Stranger:: When any one of them asserts that the many is, or was, or is generated, or that this is the case with two or one, and that the hot is mingled with the cold, externally adducing for this purpose separations and concretions,—by the Gods, Theætetus, do you understand what they mean by each of these assertions? Indeed, when I was younger, I was confident that I accurately understood that of which we are now dubious, when any one spoke of non-being; but now you see in what difficulties we are involved through doubting about it.

Theaetetus:: I do see.

Stranger:: Perhaps, therefore, receiving in no less a degree the same passion in our soul respecting being, we say that it is easy to understand it when it is enunciated by any one, but that this cannot be asserted of non-beings though we are similarly affected with respect to both.

Theaetetus:: Perhaps so.

Stranger:: And this very same thing has been said by us respecting the other particulars which we mentioned before.

Theaetetus:: Entirely so.

Stranger:: We will consider, therefore, after this respecting many things, if it is agreeable to you; but let us now first speculate about that which is the greatest and principal thing.

Theaetetus:: Of what are you speaking? Or do you say that we ought in the first place to investigate being, and consider what they assert who are thought to evince something about it?

Stranger:: You clearly apprehend me, Theætetus. For I say that we ought to proceed in the same manner as if those I just now mentioned were present, and to interrogate them as follows: Ye who assert that the hot and the cold, or any two such things, are all things, what is it you affirm to subsist in both these, when you say that both are, and that each is? What are we to understand by this term of yours to be t Is it a third thing different from those two, and are we to establish three things as constituting the all, and no longer two things, according to your hypothesis? For, while you call either of the two being, you cannot say that both similarly are. For each would nearly be one thing, and not two.

Theaetetus:: You speak the truth.

Stranger:: Are you, therefore, willing to call both of them being?

Theaetetus:: Perhaps so.

Stranger:: But, O friends, we shall say, thus also you will most clearly call two things one.

Theaetetus:: You speak with the utmost rectitude.

Stranger:: Since, therefore, we are thus involved in doubt, will you sufficiently unfold to us what you wish to signify when you pronounce being? For it is evident that you have had a knowledge of these things for some time past: but we, indeed, at first thought we knew them, but now we are dubious. Instruct us, therefore, first of all in this, that we may not think we learn the things asserted by you, when the very contrary to this takes place, By speaking in this manner, and making this request, both to these, and to such others as assert that the all is more than one thing, shall we, O boy, err?

Theaetetus:: By no means.

Stranger:: But what with respect to those who assert that the all is one, ought we not to inquire of them, to the utmost of our power, what they call being?

Theaetetus:: Undoubtedly.

Stranger:: To this question, therefore, they may answer: Do you say there is one thing alone? We do say so. Or will they not speak in this manner?

Theaetetus:: They will.

Stranger:: What then, do you call being any thing?

Theaetetus:: Yes.

Stranger:: Do you call it the one, employing two names respecting the same thing? Or how do you say?

Theaetetus:: What answer will they give to these things, O guest?

Stranger:: It is evident, Theaetetus, that he who says down this hypothesis will not be able with perfect ease to answer the present question, or any other whatever.

Theaetetus:: How so?

Stranger:: To acknowledge that there are two names, while establishing nothing but one thing, is ridiculous.

Theaetetus:: Undoubtedly.

Stranger:: And this also is ridiculous, to assent in every respect to him who asserts that there is a name to a thing of which no account can be given.

Theaetetus:: In what manner?

Stranger:: He who establishes a name different from a thing, speaks of two certain things.

Theaetetus:: He does.

Stranger:: And besides this, if he asserts that a name is the same with a thing, he is either compelled to say that it is the name of nothing; or, if he says it is the name of something, it must happen that a name is alone the name of a name, but of nothing else.

Theaetetus:: It must so.

Stranger:: And the one must be the one being alone of one, and this must be the one being of a name.

Theaetetus:: It is necessary.

Stranger:: But what, do they say that which is a whole is different from, one being, or the same with it?

Theaetetus:: Undoubtedly, they will and do say so.

Stranger:: If, therefore, a whole is, as Parmenides says, “that which is every where similar to the bulk of a perfect sphere, entirely possessing equal powers from the middle; for nothing is greater or more stable than this:”—if this be the case, it is necessary that being should have a middle and an extremity. And having these, it must unavoidably have parts. Or how shall we say?

Theaetetus:: Just so.

Stranger:: But, indeed, nothing hinders but that, when it is divided, it should have the passion of the one, in all its parts, and that thus the one should be every being, and a whole.

Theaetetus:: Undoubtedly.

Stranger:: But is it not impossible that that which suffers these things should be the one?

Theaetetus:: Why?

Stranger:: Because, according to right reason, that which is truly one should be said to be entirely without parts.

Theaetetus:: It must indeed necessarily be so.

Stranger:: But such a thing as we have just now mentioned, in consequence of consisting of many parts, would not harmonize with the one.

Theaetetus:: I understand you.

Stranger:: But whether will the whole having the passion of the one, be thus one, and a whole, or must we by no means say that the one is a whole?

Theaetetus:: You propose a difficult choice.

Stranger:: You speak most true. *For, since in a certain respect being is passive to the one*, it does not appear to be the same with the one, and all things will be more than one. Is it not so?

Theaetetus:: Yes.

Stranger:: But likewise if being is a non-whole on account of its becoming passive to whole, but yet is whole itself, being in this case will happen to be indigent of itself.

Theaetetus:: Entirely so.

Stranger:: And being, according to this reasoning, since it is deprived of itself, will be non-being.

Theaetetus:: It will so.

Stranger:: And thus again all things will be more than one, since being and the whole are allotted their proper nature, each separate from the other.

Theaetetus:: True.

Stranger:: And if the whole has in no respect a subsistence, these same things will take place with respect to being; and besides, being not having a subsistence, neither will it at any time have been generated.

Theaetetus:: Why not?

Stranger:: Whatever is generated is always generated a whole. So that he who does not place in the rank of beings, the one or the whole, ought neither to denominate essence, nor generation, as that which has a being.

Theaetetus:: It appears that this is entirely the case.

Stranger:: Likewise, that which is not a whole ought not to be any quantum whatever. For, being a certain quantum, so far as it is so, it must necessarily be a whole.

Theaetetus:: Entirely so.

Stranger:: It appears, therefore, that every one will be involved in ten thousand other insoluble doubts, who says that being is alone either two or one.

Theaetetus:: This is nearly evident by the things which have just now been shown. For greater and more difficult doubts will always follow each other in a connected series, respecting what has been above asserted.

Stranger:: But we have not yet discussed the assertions of those who accurately discourse about being and non-being. At the same time, what we have already said is sufficient. But let us again consider those who speak inaccurately about these, that we may perceive from all things, that it is in no respect more easy to say what being is, than what *non-being* is.

Theaetetus:: It will be, therefore, requisite to consider those.

Stranger:: Indeed, there appears to be among these a certain gigantic war as it were, through the doubts in which they are mutually involved respecting essence.

Theaetetus:: How so?

Stranger:: Some of these draw down all things from heaven and the invisible region to earth, seizing in reality, for this purpose, rocks and oaks. For, in consequence of touching all such things as these, they strenuously contend that that alone has a being which can be seen and handled, and this they define to be body and essence. But if any one says that there are other things which are without a body, they perfectly despise the assertion, and are unwilling to hear of any thing that is not corporeal.

Theaetetus:: You speak of dire men: but I also have frequently met with such.

Stranger:: On the contrary, the opponents of these men very religiously contend supernally from the invisible region, and compel certain intelligible and incorporeal species to be true essence: but by their arguments they break into small pieces the bodies of the others, and that which is denominated by them truth, at the same time calling it flowing generation instead of essence. But between these, Theætetus, an immense contest always subsisted.

Theaetetus:: True.

Stranger:: Let us now, therefore, receive from each a particular account of the essence established by each.

Theaetetus:: But how can we receive it?

Stranger:: From those that place essence in forms we may easily receive it: for they are more mild. But from those who violently draw all things to body we shall receive it more difficultly. And perhaps it will be nearly impossible to do so. It appears to me, however, that we should act in the following manner with respect to them.

Theaetetus:: How?

Stranger:: It will be best, if possible, to make them in reality better: but if this is impossible, we must be content with making them so in our discourse, and suppose them to answer more equitably than at present they would be willing to do. For that which is assented to by better men possesses more authority than that which is assented to by worse men. However, we pay no attention to these things, but explore the truth.

Theaetetus:: Most right.

Stranger:: Order them, therefore, as being made better to answer you, and to unfold the meaning of that which they assert.

Theaetetus:: Be it so.

Stranger:: Do they, therefore, say, that what they call a mortal animal is any thing?

Theaetetus:: Undoubtedly they do.

Stranger:: And do they not acknowledge that this is an animated body?

Theaetetus:: Entirely so.

Stranger:: And, admitting this, do they also acknowledge that soul is something?

Theaetetus:: Yes.

Stranger:: Do they likewise assert that one soul is just, and another unjust; and that one is wise, and another unwise?

Theaetetus:: Undoubtedly.

Stranger:: But does not every soul become such through the habit and presence of justice, and the contrary, through the habit and presence of the contraries to these?

Theaetetus:: These things also they will assent to.

Stranger:: But will they say that that is altogether any thing, which is able to be present to and absent from any thing?

Theaetetus:: They will.

Stranger:: Since, therefore, justice is something, and likewise prudence, and every other virtue, and the contraries to the virtues, together with soul in which these subsist, whether will they say that each of these is visible and tangible, or that all of them are invisible?

Theaetetus:: They will nearly assert that no one of these is visible.

Stranger:: But what? Will they say that any one of things of this kind has a body?

Theaetetus:: They will not give the same answer to the whole of this question: but soul itself will appear to them to possess a certain body; but with respect to prudence, and the other things about which you just now inquired, they will be restrained by shame from daring strenuously to assert, that they are either nothing, or that all of them are bodies.

Stranger:: The men, Theætetus, are clearly become better. For such of them as are Spartans or natives would not be ashamed to assert this, but would contend that whatever cannot be grasped by the hands is altogether nothing.

Theaetetus:: You nearly speak their conceptions.

Stranger:: Let us, therefore, again ask them. For, if they are willing to grant that even any trifling thing is incorporeal, it is sufficient. For we ask them respecting that which is connate with incorporeal, and at the same time with corporeal natures, what it is they look to, when they say that both of them have a being.

Theaetetus:: Perhaps they would not be able to give an answer, if they should suffer any thing of this kind.

Stranger:: Consider whether, in consequence of our proposing this question, they will be willing to admit and acknowledge that being is a thing of this kind.

Theaetetus:: Of what kind? Speak, and perhaps we shall understand.

Stranger:: I say then that whatever possesses any power, whether of doing any thing naturally, or of suffering though in the least degree from the vilest thing, and though this takes place but once,—every thing of this kind truly is. For I define being to be nothing else than power.

Theaetetus:: But since they cannot at present say any thing better than this, they must admit it.

Stranger:: It is well said: for perhaps afterwards both we and they may think differently. Let this then now remain acknowledged by them.

Theaetetus:: Let it remain.

Stranger:: Let us now proceed to the others, the friends of forms. And do you unfold to us their sentiments.

Theaetetus:: Be it so.

Stranger:: Do you then say that generation is one thing, and essence another, separating them from each other?

Theaetetus:: We do.

Stranger:: And do you admit that by our body we communicate with generation, through sense, but that by our soul we communicate with true essence, through the reasoning power? Do you likewise say, that true essence always subsists similarly according to the same, but that generation subsists differently at different times?

Theaetetus:: We do.

Stranger:: But, O best of men, what do you call the communion which subsists between these two? Is it that which we just now mentioned?

Theaetetus:: What was that?

Stranger:: Passion or action arising from a certain power, from the concurrence of things with each other. Perhaps you, Theætetus, do not know what answer they would give to this question; but perhaps I do, through my familiarity with them.

Theaetetus:: What answer then would they give?

Stranger:: They would not grant us that which was just now said to the earth-born men respecting essence.

Theaetetus:: What was that?

Stranger:: We established this to be a sufficient definition of beings, viz. when a power though the smallest is present to any thing, either of acting or suffering.

Theaetetus:: We did.

Stranger:: To this they will say, that a power of acting and suffering is present with generation, but that no power of this kind is adapted to essence.

Theaetetus:: They will, therefore, speak to the purpose.

Stranger:: To this, however, we must say, that we require to hear from them still more clearly, whether they acknowledge that the soul knows, and that essence is known.

Theaetetus:: They certainly say so.

Stranger:: But what? Do you say that to know, or to be known, is action, or passion, or both? Or do you say that action is one thing, and passion another? Or that neither of these participates in no respect of the other? It is evident, indeed, that neither participates of the other. For, if they admitted this, they would contradict what they asserted above.

Theaetetus:: I understand you.

Stranger:: For if to know was to do something, it would necessarily happen that what is known would suffer, or become passive. And thus, according to this reasoning, essence being known by knowledge, would, so far as it is known, be moved, through becoming passive; which we say cannot take place about a thing at rest.

Theaetetus:: Right.

Stranger:: What then, by Jupiter, shall we be easily persuaded that true motion, life, soul, and prudence, are not present to that which is perfectly being, and that it neither lives, nor is wise, but abides immovable, not possessing a venerable and holy intellect?

Theaetetus:: But it would be a dire thing, O guest, to admit this.

Stranger:: Shall we say then that it possesses intellect, but not life?

Theaetetus:: And how?

Stranger:: Or shall we say that both these reside in it, but that it does not possess these in soul?

Theaetetus:: But after what other manner can it possess these?

Stranger:: Shall we then say that it possesses intellect, life, and soul, but that, though animated, it abides perfectly immovable?

Theaetetus:: All these things appear to me to be irrational.

Stranger:: We must therefore grant, that both that which is moved, and motion, are beings.

Theaetetus:: Undoubtedly.

Stranger:: It follows therefore, Theætetus, that intellect will never in any respect be present to any thing immovable.

Theaetetus:: It does follow.

Stranger:: But, indeed, if we grant that all things are borne along and moved, we shall by such an assertion take away sameness from beings.

Theaetetus:: How so?

Stranger:: Does it appear to you that that which subsists according to the same, and in a similar manner, and about the same, can ever subsist without *permanency*?

Theaetetus:: By no means.

Stranger:: But do you perceive that intellect, ever was, or is, without these?

Theaetetus:: In the smallest degree.

Stranger:: But besides this, we should oppose, by every possible argument, him who entirely taking away science, or prudence, or intellect, strenuously endeavors to introduce any thing else.

Theaetetus:: And very much so.

Stranger:: But it is perfectly necessary, as it appears, that the philosopher, and he who honors these things in the highest degree, should not assent to those who, asserting that there is either one, or many species of things, consider the universe as standing still: nor yet should he by any means hear those who affirm that being is every where moved; but, according to the opinion even of boys, he should call things immovable, and things moved, considered as subsisting together, being, and the all.

Theaetetus:: Most true.

Stranger:: Do we not, then, now appear to have equitably comprehended being in our discourse?

Theaetetus:: Entirely so.

Stranger:: Now therefore, Theætetus, as it appears to me, we are strangely involved in doubt.

Theaetetus:: How so? and why do you assert this?

Stranger:: Do you not perceive, O blessed man, that we are at present in the greatest ignorance respecting being, and yet we have appeared to ourselves to say something about it?

Theaetetus:: I do perceive it; but I do not altogether understand in what respect we have deceived ourselves.

Stranger:: Consider more clearly, whether, in consequence of assenting to these things, any one may justly interrogate us, in the same manner as we interrogated those who said that the whole of things consisted of the hot and the cold.

Theaetetus:: Remind me what these interrogations were.

Stranger:: By all means: and I will endeavor to do this by asking you the same question as I then asked them, that we may at the same time make some advance in our inquiry.

Theaetetus:: Right.

Stranger:: Do you not then say, that motion and permanency are contrary to each other?

Theaetetus:: Undoubtedly.

Stranger:: And do you not likewise say, that both and each of them similarly are?

Theaetetus:: I do.

Stranger:: Do you, therefore, say, that both and each are moved, when you admit that they are?

Theaetetus:: By no means.

Stranger:: But do you signify that they stand still, when you say that both are?

Theaetetus:: But how can I?

Stranger:: You may, therefore, place in your soul being, as a third thing different from these, considering it as comprehending under itself permanency and motion; and looking to the communion of these with essence, you may thus assert that both of them are.

Theaetetus:: We seem to prophesy that being is a certain third thing, when we say that there are motion and permanency.

Stranger:: Being, therefore, is not both motion and permanency, but something different from these.

Theaetetus:: It appears so.

Stranger:: Hence being, according to its own nature, neither stands still, nor is moved.

Theaetetus:: It is nearly so.

Stranger:: Where then ought he to turn his thoughts, who wishes to establish in himself any clear conceptions respecting being?

Theaetetus:: Where?

Stranger:: I do not think it is yet easy for him to turn his thoughts any where. For, if being is not moved, why does it not stand still? Or how is it possible, if it in no respect stands still, that it should not be moved? But being has now appeared to us without both these. Is this, however, possible?

Theaetetus:: It is the most impossible of all things.

Stranger:: In the next place, therefore, it will be just to call to mind this.

Theaetetus:: What?

Stranger:: That being asked respecting the name of non-being, we were involved in the greatest doubt respecting what it ought to be. Do you remember?

Theaetetus:: Undoubtedly.

Stranger:: Are we, therefore, now involved in less doubt respecting being?

Theaetetus:: If it be possible to say so, O guest, we appear to be involved in greater doubt.

Stranger:: Let this ambiguity then rest here. But since both being and non-being equally participate of doubt, we may now hope, that if one of them shall appear to be more obscure, or more clear, the other likewise will appear to be the same: and again, that if we should not be able to perceive one of them, the other will also be invisible to us. And thus we shall pursue the discourse respecting both of them in the most becoming manner we are able.

Theaetetus:: It is well said.

Stranger:: Let us relate, then, after what manner we denominate this same thing by many names.

Theaetetus:: Adduce for this purpose a certain paradigm.

Stranger:: In speaking of man, we give him various appellations, and attribute to him color, figure, magnitude, virtue, and vice; in all which, and ten thousand other particulars, we not only say that man is, but that he is good, and an infinity of other things: and we act in a similar manner with respect to other particulars; for, considering each as one thing, we again call it many things, and by many names.

Theaetetus:: True.

Stranger:: Whence, I think, we have given a feast to young men, and to those who study in old-age. For it is easy for every one immediately to object, that it is impossible for the many to be one, and the one many. Hence, they will exult, not suffering us to say that a man is good, but that good is good, and man man. For I think, Theætetus, that you have often met with young men who seriously apply themselves to things of this kind, and sometimes with men advanced in years, who, through the poverty of their possessions with respect to wisdom, admire such things as these, and who think themselves all-wise for having discovered this.

Theaetetus:: Entirely so.

Stranger:: That our discourse, therefore, may extend to all who have ever asserted any thing respecting essence, let what we shall now say in the way of interrogation be understood as addressed as well to these as to those others whom we have above mentioned.

Theaetetus:: What is it you are now going to say?

Stranger:: Whether we should neither conjoin essence with motion and permanency, nor any thing else with any thing else, but, as if things were unmingled, and it were impossible for them to communicate with each other, we should consider them as separate in our discourse? Or whether we should collect, all things into the same, as if they were able to communicate with each other? Or consider this as the case with some things, but not with others? Which of these, Theætetus, shall we say is to be preferred?

Theaetetus:: I indeed have nothing to answer to these things. Why, there fore, do you not, by answering to each particular, consider what follows from each?

Stranger:: You speak well. We will suppose them, therefore, if you please, to say, in the first place, that nothing has any power of communicating with any thing, in any respect. Will it not, therefore, follow, that motion and permanency in no respect participate of essence?

Theaetetus:: They certainly will not.

Stranger:: But what? Will any one of them be, and at the same time have no communication with essence?

Theaetetus:: It will not.

Stranger:: From consenting to this, all things, as it seems, will become rapidly subverted, as well the doctrine of those who contend that all things are moved, as of those who contend that all things stand still, together with the dogmas of those who assert that such things as subsist according to forms or species subsist similarly according to the same. For all these conjoin being with their doctrines, some asserting that things are truly moved, and others that they truly stand still.

Theaetetus:: Entirely so.

Stranger:: Such, likewise, as at one time unite all things, and at another time separate them, whether dividing from one thing into things infinite, or into things which have finite elements, and composing from these, and whether they consider this as partially, or as always taking place,—in all these cases they will say nothing to the purpose, if there is in no respect a mixture of things.

Theaetetus:: Right.

Stranger:: Further still, we ourselves shall have discoursed the most ridiculously of all men, who permitting nothing pertaining to the communion of the passion of different, have yet used the appellation the other.

Theaetetus:: How so?

Stranger:: They are in a certain respect compelled to employ the term to be, about all things, likewise the terms separate, others, and by itself, and ten thousand others, from which being unable to abstain, and finding it necessary to insert these expressions in their discourses, they do not require any other confutation, but, as it is said, they have an enemy and an adversary at home, vociferating within, and always walk as if carrying about with them the absurd Eurycles.

Theaetetus:: You very much speak of that which is like and true.

Stranger:: But what if we should permit all things to have the power of communicating with each other? This, indeed, I myself am able to dissolve.

Theaetetus:: How?

Stranger:: Because motion itself would entirely stand still, and again, permanency itself would be moved, if they were mingled with each other. But this indeed is impossible from the greatest necessity, that motion should stand still, and permanency be moved.

Theaetetus:: Undoubtedly.

Stranger:: The third thing, therefore, alone remains.

Theaetetus:: It does.

Stranger:: For one of these things is necessary, either that all things should be mingled together, or nothing; or that some things should be willing to be mingled with each other, and that other things should be unwilling.

Theaetetus:: Undoubtedly.

Stranger:: And two of the members of this division cannot be found.

Theaetetus:: They cannot.

Stranger:: Every one, therefore, who wishes to answer rightly should adopt that which remains of the three.

Theaetetus:: And very much so.

Stranger:: But since some things are willing to be mingled, and others not, they will nearly be affected in the same manner as letters. For some of these are incongruous with respect to each other, but others mutually harmonize.

Theaetetus:: Undoubtedly.

Stranger:: For vowels being in a particular manner the bond, as it were, of the other letters, pervade through all of them, so that without some one of these it is impossible for any two of the others to accord with each other.

Theaetetus:: And very much so.

Stranger:: Does every one, therefore, know what letters will communicate with each other? or is art requisite in order to accomplish this sufficiently?

Theaetetus:: Art is requisite.

Stranger:: What kind of art?

Theaetetus:: The grammatical.

Stranger:: And is not this the case with respect to sharp and flat sounds? I mean, Is not he who knows by art what sounds are consonant or dissonant; a musician, but he who is ignorant of this not so?

Theaetetus:: It is.

Stranger:: And in other arts, and the privation of arts, we shall find other such circumstances take place.

Theaetetus:: Undoubtedly.

Stranger:: Since then we have acknowledged, that the genera of being are mixed with each other, after the same manner, ought not he necessarily to proceed in his discourse scientifically, who is about to show what genera mutually accord, and what do not admit each other? Likewise, whether these genera so hold together through all things as to be capable of being mutually mingled? And again in their divisions, if there is another cause of division through wholes?

Theaetetus:: How is it possible science should not be requisite for this purpose, and nearly, perhaps, the greatest of all sciences?

Stranger:: What then, again, Theætetus, shall we call this science? Or, by Jupiter, have we ignorantly fallen upon the science of the liberal? And do we appear, while investigating a sophist, to have first found a philosopher?

Theaetetus:: How do you say?

Stranger:: Do we not say, that to divide according to genera, and neither to think the same species different, nor a different species the same, is the business of the dialectic science?

Theaetetus:: We do say so.

Stranger:: He, therefore, who is able to do this, sufficiently perceives one idea every way extended through many things, the individuals of which are placed apart from each other, and many ideas different from each other externally comprehended under one, and one idea through many wholes conjoined in one; and lastly, many ideas, every way divided apart from each other. This is to know scientifically, how to distinguish according to genus, in what respect particulars communicate, and how far they do not communicate with each other.

Theaetetus:: Entirely so.

Stranger:: But I think you do not give dialectic to any other than one who philosophizes purely and justly.

Theaetetus:: For how is it possible to give it to any other?

Stranger:: If we seek, indeed, we shall find a philosopher in a place, of this kind, both now and hereafter, though it is also difficult to see this character clearly; but the difficulty of perceiving a sophist is of a different kind from that with which the perceiving a philosopher is attended.

Theaetetus:: How so?

Stranger:: The former flying into the darkness of non-being, and by use becoming adapted to it, is with difficulty perceived through the obscurity of the place. Is it not so?

Theaetetus:: So it seems.

Stranger:: But the philosopher through reasoning, being always situated near the idea of being, is by no means easily discerned, on account of the splendor of the region. For the eyes of vulgar souls are unable to support the view of that which is divine.

Theaetetus:: It is likely that these things subsist in this manner, no less than those.

Stranger:: About this particular, therefore, we shall perhaps at another time consider more clearly, if it be permitted us. But, with respect to the sophist, it is evident that we should not dismiss him till we have sufficiently surveyed him.

Theaetetus:: You speak well.

Stranger:: Since then it is acknowledged by us, that some of the genera of being communicate with each other, and that some do not, and that some communicate with a few, and others with many things, and others again are not hindered from communicating through all things with all things;—this being the case, let us, in the next place, following the order of course, speculate not about all species, lest we should be confounded by their multitude,—but, choosing certain of those which are called the greatest, let us, in the first place, consider the qualities of each, and, in the next place, what communion of power they possess with each other, that we may not in any respect be indigent of discourse about being and non-being (though we may not be able to comprehend them with perfect perspicuity), as far as the condition of the present speculation admits. If, therefore, while we are assimilating non-being, we should say that it is truly non-being, we should be exculpated.

Theaetetus:: It would indeed be proper that we should.

Stranger:: But the greatest of all the genera which we have now mentioned are, being itself, permanency, and motion.

Theaetetus:: Very much so.

Stranger:: And we have said that the two latter are unmingled with each other.

Theaetetus:: Very much so.

Stranger:: But being is mingled with both: for both after a manner are.

Theaetetus:: Undoubtedly.

Stranger:: These things then become three.

Theaetetus:: Certainly.

Stranger:: Is not, therefore, each of these different from the other two, but the same with itself?

Theaetetus:: It is.

Stranger:: What then shall we now say respecting sameness and difference? Shall we say that they are two certain genera, different from the other three, but yet always mingled with them from necessity? And thus are we to consider about five, and not three genera only? Or are we ignorant that we have denominated this sameness and difference, as something belonging to the other three?

Theaetetus:: Perhaps so.

Stranger:: But, indeed, motion and permanency are neither different nor same.

Theaetetus:: How so?

Stranger:: That which we in common call motion and permanency can be neither of these.

Theaetetus:: Why?

Stranger:: Because motion would be permanent, and permanency be moved. For, with respect to both, the one becoming the other, would compel that other to change into the contrary to its nature, as participating of the contrary.

Theaetetus:: Very much so.

Stranger:: But yet both participate of same and different.

Theaetetus:: They do.

Stranger:: We must not, therefore, say that motion is either same or different, nor yet must we assert this of permanency.

Theaetetus:: We must not.

Stranger:: Are, therefore, being and sameness to be considered by us as one certain thing?

Theaetetus:: Perhaps so.

Stranger:: But if being and sameness signify that which is in no respect different, when we again assert of motion and permanency, that both are, we thus denominate both of them the same, as things which have a being.

Theaetetus:: But, indeed, this is impossible.

Stranger:: It is impossible, therefore, that sameness and being should be one thing.

Theaetetus:: Nearly so.

Stranger:: We must place sameness, therefore, as a fourth species, in addition to the former three.

Theaetetus:: Entirely so.

Stranger:: But what? Must we not say that difference is a fifth species? Or is it proper to think that this, and being, are two names belonging to one genus?

Theaetetus:: Perhaps so.

Stranger:: But I think you will grant, that of beings, some always subsist themselves by themselves, but others in relation to other things.

Theaetetus:: Undoubtedly.

Stranger:: But different is always referred to different. Is it not?

Theaetetus:: It is.

Stranger:: But this would not be the case unless being and difference widely differed from each other. But if difference participated of both species, as is the case with being, there would be some one among things different, which would be no longer different with reference to that which is different. But now it happens from necessity. that whatever is different is so from its relation to that which is different.

Theaetetus:: It is as you say.

Stranger:: We must say, then, that the nature of different must be added as a fifth to the species of which we have already spoken.

Theaetetus:: Yes.

Stranger:: And we must likewise say that it pervades through all these. For each one of the others is different, not through its own nature, but through participating the idea of difference.

Theaetetus:: And very much so.

Stranger:: But we may thus speak respecting each of the five genera.

Theaetetus:: How?

Stranger:: In the first place, that motion is entirely different from permanency. Or how shall we say?

Theaetetus:: That it is so.

Stranger:: It is not, therefore, permanency.

Theaetetus:: By no means.

Stranger:: But it is, through participating of being.

Theaetetus:: It is.

Stranger:: Again, motion is different from sameness.

Theaetetus:: Nearly so.

Stranger:: It is not, therefore, sameness.

Theaetetus:: It is not.

Stranger:: And yet it is same, in consequence of all things participating of sameness.

Theaetetus:: And very much so.

Stranger:: It must be confessed, therefore, that motion is both same, and not same, nor must we be indignant that it is so. For, when we say that it is both same, and not same, we do not speak of it in a similar manner; but when we say it is same, we call it so, through the participation of sameness with respect to itself; and when we say it is not same, we call it so through its communion with different, through which, separating it from same, it becomes not same, but different. So that it is again rightly said to be not same.

Theaetetus:: Entirely so.

Stranger:: If, therefore, motion itself should in any respect participate of permanency, there would be no absurdity in calling it stable.

Theaetetus:: Most right, since we have acknowledged that some of the genera are willing to be mingled with each other, and others not.

Stranger:: And, indeed, we arrived at the demonstration of this prior to what we have evinced at present, by proving that the thing subsists after this manner.

Theaetetus:: Undoubtedly.

Stranger:: But we may again say that motion is different from different, just as it is different from sameness and permanency.

Theaetetus:: It is necessary.

Stranger:: It is, therefore, in a certain respect, not different and different, according to this reasoning.

Theaetetus:: True.

Stranger:: What then follows? Shall we say it is different from three of the genera, but not from the fourth? acknowledging that the genera are five, about which, and in which, we propose to speculate?

Theaetetus:: And how?

Stranger:: For it is impossible to grant that they are fewer in number than they now appear to be. We may, therefore, safely contend, that motion is different from being.

Theaetetus:: We may, most safely.

Stranger:: It clearly follows, therefore, that motion is truly non-being, and at the same time being, since it participates of being.

Theaetetus:: Most clearly.

Stranger:: Non-being, therefore, is necessarily in motion, and in all the genera. For, in all of them, the nature of different rendering them different from being, makes each to be non-being. Hence, we rightly say that all of them are non-beings; and again, because they participate of Being, that they are, and are beings.

Theaetetus:: It appears so.

Stranger:: About each of the species, therefore, there is much of being, but there is also non-being infinite in multitude.

Theaetetus:: It appears so.

Stranger:: Must not, therefore, being itself be said to be different from the others?

Theaetetus:: It is necessary.

Stranger:: Being, therefore, is not so many in number as the others; for not being them, it is itself one, but is not other things, which are infinite in number.

Theaetetus:: This is nearly the case.

Stranger:: We ought not, therefore, to be indignant at these things, since the genera have naturally a mutual communion. But if some one does not admit these things, yet, as we have been persuaded by the former assertions. in like manner we ought to be persuaded by these.

Theaetetus:: You speak most justly.

Stranger:: We may also see this.

Theaetetus:: What?

Stranger:: When we say non-being, we do not, as it appears, say any thing contrary to being, but only that which is different.

Theaetetus:: How so?

Stranger:: Just as when we say a thing is not great, do we then appear to you to evince by this word that which is small rather than that which is equal?

Theaetetus:: How is it possible we should?

Stranger:: We must not, therefore, admit that the contrary to a thing is signified, when negation is spoken of; but thus much only must be asserted, that the terms not, and neither, signify something of other things, when placed before names, or rather before things, about which the names of the negations afterwards enunciated are distributed.

Theaetetus:: Entirely so.

Stranger:: This also we may consider by a dianoëtic energy, if it is agreeable to you.

Theaetetus:: What is that?

Stranger:: The nature of different appears to me to be cut into small parts, in the same manner as science.

Theaetetus:: How?

Stranger:: This nature itself is one; but a part of it residing in any thing and being individually defined, possesses a private appellation of its own; on which account there are said to be many arts and sciences.

Theaetetus:: Entirely so.

Stranger:: Do not, therefore, the parts of the nature of different, which is itself one thing, suffer this very same thing?

Theaetetus:: Perhaps so. But we must show how this takes place.

Stranger:: Is there any part of different opposite to the beautiful?

Theaetetus:: There is.

Stranger:: Must we say that this part is nameless, or that it has a certain name?

Theaetetus:: That it has a name. For every thing which we say is not beautiful, is not different from any thing else than the nature of the beautiful.

Stranger:: Come, then, answer me the following question.

Theaetetus:: What question?

Stranger:: When any thing is defined as belonging to one particular genus, and is again opposed to a certain essence, does it happen that thus it is not beautiful?

Theaetetus:: It does.

Stranger:: But the opposition of being to being happens, as it seems, to be not beautiful.

Theaetetus:: Most right.

Stranger:: What then? Does it follow from this reasoning that the beautiful belongs more to beings, and the non-beautiful less?

Theaetetus:: It does not.

Stranger:: We must say, therefore, that the non-great and the great similarly are.

Theaetetus:: Similarly.

Stranger:: Hence, too, we must assert of the just and the non-just, that the one in no respect is more than the other.

Theaetetus:: Undoubtedly.

Stranger:: And the same must be said of other things, since the nature of different appears to rank among beings. But difference having a subsistence, it is necessary to place the parts of it as no less having subsistence.

Theaetetus:: Undoubtedly.

Stranger:: As it appears, therefore, the opposition of a part of the nature of different, and of the parts of being, are no less essence, if it be lawful so to speak, than being itself; nor do they signify that which is contrary to being, but only something different from it.

Theaetetus:: It is most clear.

Stranger:: What then shall we call it?

Theaetetus:: It is evident that non-being, which we have sought after on account of a sophist, is this very thing.

Stranger:: Whether, therefore, as you say, is it no more deficient of essence than the others? And ought we now boldly to say, that non-being possesses its own nature firmly, in the same manner as the great was found to be great, and the beautiful beautiful, and the non-great to be non-great, and the non-beautiful non-beautiful? Shall we in like manner say, that non-being was and is non-being, as one species which must be numbered among many beings? Or must we still, Theætetus, be diffident about this?

Theaetetus:: By no means.

Stranger:: Do you perceive, therefore, how disobedient we have been to the prohibition of Parmenides?

Theaetetus:: In what respect?

Stranger:: We have wandered beyond the limits he appointed us, by thus continuing still further to explore and evince.

Theaetetus:: How?

Stranger:: Because he says, "Non-beings never, and by no means are; but do you, while investigating, restrain your conceptions from this path."

Theaetetus:: He does speak in this manner.

Stranger:: But we have not only shown that non-beings are, but we have demonstrated what the form of non-being is. For, having evinced that the nature of different has a subsistence, and that it is divided into small parts, which are mutually distributed through all things, we then dared to say, that the part of it which is opposed to the being of every thing, is itself truly non-being.

Theaetetus:: And to me, O guest, we appear to have spoken with the greatest truth.

Stranger:: Let no one, therefore, say, that we, having evinced that non-being is contrary to being, dare to assert that it is For we some time since bade farewell to him who asks whether that which is contrary to any thing has a subsistence, and possesses a certain reason, or is entirely irrational. But, with respect to that which we now call non-being, either some one who is not persuaded by our arguments should confute us, as not having spoken well; or, if he cannot do this, he must also say as we say, that the genera are mingled with each other, and that being and different pervading through all things, and through each other, different participating of being, is through this participation, not being that of which it participates, but something else. But, being different from being, it clearly follows that it is necessarily non-being. And again, being, in consequence of participating of difference, will be different from the other genera: but being different from all of them, it is not any one of them, nor all the others, nor any thing besides itself. So that, without doubt, being is not ten thousand things in ten thousand things: and, in like manner, each and all of the other genera are multifariously distributed, but are not themselves multifarious.

Theaetetus:: True.

Stranger:: And if any one does not believe in these contrarieties, he should consider, and assert something better than has been now said. Or if some one, in consequence of finding this to be a difficult speculation, rejoices, drawing the arguments from one side to another, such a one, as our present reasoning asserts, is not engaged in a pursuit which deserves much serious attention. For this neither possesses any thing elegant, nor is difficult to discover; but that is difficult, and at the same time beautiful.

Theaetetus:: What?

Stranger:: That of which we have spoken above; I mean that, omitting these particulars, we may be able to confute any one who asserts that different is same, or same different. For, to show that same is different, and different same, that the great is small, and the similar dissimilar, and to rejoice in thus introducing contraries in discourse, is not a true confutation, but is evidently the province of one who has but a slight apprehension of the thing, and is recently born.

Theaetetus:: Very much so.

Stranger:: For, O excellent young man, to endeavor to separate every thing from every thing, is both inelegant, and the province of one rude and destitute of philosophy.

Theaetetus:: Why so?

Stranger:: To dissolve each thing from all things, is the most perfect abolition of all discourse. For discourse subsists through the conjunction of species with each other.

Theaetetus:: True.

Stranger:: Consider, therefore, how opportunely we have now contended with men of this kind, and compelled them to permit one thing to be mingled with another.

Theaetetus:: With a view to what?

Stranger:: To this, that discourse may be one certain thing belonging to the genera of being. For, if we are deprived of this, we shall, for the most part, be deprived of philosophy. And further still, it is requisite at present that we should mutually consent to determine what discourse is. But, if it is entirely taken away from us, we can no longer speak about any thing. And it will be taken away, if we admit that things are not in any respect mingled with each other.

Theaetetus:: Right. But I do not understand why we should now mutually consent to determine what discourse is.

Stranger:: But, perhaps, you will easily understand by attending to this.

Theaetetus:: To what?

Stranger:: Non-being has appeared to us to be one of the other genera, and to be dispersed through all beings.

Theaetetus:: It has so.

Stranger:: After this, therefore, we should consider whether it is mingled with opinion and discourse.

Theaetetus:: On what account?

Stranger:: Because, if it is not mingled with these, it must necessarily follow that all things are true: but, if it is mingled with these, false opinion and false discourse must be produced. For to opine, or speak of non-beings, is itself falsehood subsisting in the dianoëtic part and discourse.

Theaetetus:: It is so.

Stranger:: But, being falsehood, it is deception.

Theaetetus:: It is.

Stranger:: And deception subsisting, all things must necessarily be full of resemblances, images, and fantasy.

Theaetetus:: Undoubtedly.

Stranger:: But we have said that the sophist flies into this place, while he denies that there is any such thing as falsehood. For he asserts that no one can either think or speak of non-being; because it in no respect participates of essence.

Theaetetus:: These things were said by us.

Stranger:: But now it has appeared that non-being participates of being. So that in this respect perhaps he will no longer oppose us. Perhaps however he will say, that of species, some participate of non-being, and others not; and that discourse and opinion rank among those things which do not participate it. So that he will again contend with us, that the image-making; and fantastic art, in which we have said he is concealed, has no subsistence; since opinion and discourse have no communion with non-being. He will likewise assert that falsehood has not any kind of subsistence, since this communion of things is no where to be found. Hence we must investigate the nature of discourse, opinion, and fantasy, that, these becoming apparent, we may perceive their communion with non-being; and, perceiving this, may evince that there is such a thing as falsehood; and, having evinced this, may bind the sophist in it, if he is found to be guilty; or, liberating him, investigate in some other genus.

Theaetetus:: That, O guest, which we said at first about the sophist, appears to be very true—I mean, that he is a genus difficult to apprehend. For he appears to be full of problems; nor can any one arrive at his retreats, till he has first vanquished the obstacle which he throws in the way. For now we have scarcely overcome the obstacle which he hurled forth, I mean that non-being is not, and he immediately throws in our way another. Hence it is requisite to show that there is falsehood, both in discourse and opinion, and after this perhaps something else, and another thing after that, and so on, as it appears, without end.

Stranger:: He, O Theætetus, who is able to make advances continually, though in a small degree, ought to proceed boldly in this affair. For what will he be able to accomplish in other things, who is without ardor in these? For he who either effects nothing in these, or is repelled backwards, will scarcely (according to the proverb) ever take the city. But now, O good man, since as you say this is accomplished, we shall have captured the greatest wall, and the rest will be easy and trifling.

Theaetetus:: You speak well.

Stranger:: Let us then now, in the first place, as we said, consider discourse and opinion, that we may more clearly show, whether non-being touches upon these, or whether both these are in every respect true, and neither of them at any time false.

Theaetetus:: Right.

Stranger:: Come then, let us again speculate about nouns, in the same manner as we did about species and letters. For that which is the object of our present investigation appears in a certain respect to have a similar subsistence.

Theaetetus:: What is it you wish to be conceived respecting nouns?

Stranger:: Whether all of them harmonize with each other; or some accord, but others do not.

Theaetetus:: It is evident that some accord, and others do not.

Stranger:: Perhaps your meaning is this, that such nouns as in an orderly succession assert and evince something, mutually accord; but that such as signify nothing by continuity, do not mutually accord.

Theaetetus:: How do you mean? and what is it you say?

Stranger:: What I thought you would both understand and assent to. For there is a two-fold genus of vocal declarations respecting essence.

Theaetetus:: How?

Stranger:: One, which is called nouns, and the other verbs.

Theaetetus:: Speak of each.

Stranger:: That which is a declaration in actions, we call a verb.

Theaetetus:: We do.

Stranger:: But a mark or sign of voice imposed on the agents themselves, we call a noun.

Theaetetus:: Very much so.

Stranger:: From nouns, therefore, alone, enunciated in continued succession, a sentence is never produced; nor yet again from verbs enunciated without nouns.

Theaetetus:: These things I have not learned.

Stranger:: But it is evident that you just now acknowledged this, when looking to something else. For this is what I wished to say, that when these are enunciated in continued succession, a sentence is not produced.

Theaetetus:: How so?

Stranger:: As, for instance, walks, runs, sleeps, and such other words as signify actions, all which when any one enunciates in continued succession, he will not by this means produce a sentence.

Theaetetus:: For how can he?

Stranger:: Again, therefore, when any one says, a lion, a stag, a horse, and such other nouns as signify agents themselves, a sentence will not yet be produced by this continuity. For the things enunciated do not evince action, or a privation of action, or the essence of a thing which is, or which is not, till verbs are mingled with nouns. But when they are harmonized, a sentence is immediately produced, and the first connection of these is nearly the first sentence, though it should be the shortest possible.

Theaetetus:: How is this?

Stranger:: When any one says, A man learns, would you not say that this is the shortest and first sentence?

Theaetetus:: I should.

Stranger:: For he then evinces something respecting things which actually are, or are rising into being, or have been, or will be. Nor does he denominate only, but he finishes something connecting verbs and nouns. Hence we say that he speaks, and does not alone denominate, and to this connection we give the name of discourse.

Theaetetus:: Right.

Stranger:: And thus as we said respecting things, that some harmonized with each other, and that others did not, so likewise with respect to the signs of voice, some do not harmonize, but others do, and produce discourse.

Theaetetus:: Entirely so.

Stranger:: Further still, attend to this trifling thing.

Theaetetus:: To what?

Stranger:: That discourse when it takes place must necessarily be a discourse about something: For it is impossible that it can be about nothing.

Theaetetus:: It must.

Stranger:: Ought it not, therefore, to be of some particular kind?

Theaetetus:: Undoubtedly.

Stranger:: Let us then give diligent attention.

Theaetetus:: For it is requisite.

Stranger:: I will, therefore, enunciate to you a sentence, in which a thing is conjoined with action, through a noun and a verb: but do you inform me of what it is a sentence.

Theaetetus:: I will, as far as I am able.

Stranger:: Theætetus sits:—is this a long sentence?

Theaetetus:: It is not; but a moderate one.

Stranger:: It is now your business to say what it is about, and of whom it is a sentence.

Theaetetus:: It is evident that it is about me, and of me.

Stranger:: But what again with respect to this?

Theaetetus:: To what?

Stranger:: Theætetus, with whom I now discourse, flies.

Theaetetus:: Respecting this also, no one can say but that it is about me, and of me.

Stranger:: But we said it was necessary that every sentence should be of some particular kind.

Theaetetus:: We did.

Stranger:: But of what kind must each of the sentences just now mentioned be?

Theaetetus:: One must be false, and the other true.

Stranger:: But that which is true asserts things respecting you as they are.

Theaetetus:: Undoubtedly.

Stranger:: But that which is false asserts things respecting you different from what they are.

Theaetetus:: It does.

Stranger:: It speaks, therefore, of things which are not, as if they were.

Theaetetus:: Nearly so.

Stranger:: And it speaks of things which have a subsistence, but which do not belong to you. For we say, that about every thing there are many things which have a subsistence, and many things which have no subsistence.

Theaetetus:: Very much so.

Stranger:: In the first place, therefore, it is most necessary, that the latter sentence which I enunciated respecting you should be one of the shortest, according to the definition we have given of a sentence.

Theaetetus:: This must now be acknowledged by us.

Stranger:: In the next place, it must be confessed that it is a sentence of something.

Theaetetus:: It must.

Stranger:: But if it is not of you, it is not of any thing else.

Theaetetus:: For how should it?

Stranger:: But if it is not of any thing, it cannot in any respect be a sentence. For we have shown that it belongs to things impossible, that discourse should exist, and yet be a discourse of nothing.

Theaetetus:: Most right.

Stranger:: When, therefore, other things are asserted of you, as if they were the same, and things which are not, as things which are, such a composition of verbs and nouns becomes altogether, as it appears, a really and truly false discourse.

Theaetetus:: Most true.

Stranger:: But what with respect to the dianoëtic energy, opinion, and fantasy, is it not now evident that all these genera, as well the false as the true, are produced in our souls?

Theaetetus:: How?

Stranger:: You will easily understand, if you first of all apprehend what each of them is, and in what they differ from each other.

Theaetetus:: Only inform me.

Stranger:: Are not, therefore, the dianoëtic energy and discourse the same, except that the former is an inward dialogue without voice, of soul with itself?

Theaetetus:: Entirely so.

Stranger:: But the fluxion from the dianoëtic energy through the mouth, proceeding with sound, is called discourse.

Theaetetus:: True.

Stranger:: We perceive this also in discourse.

Theaetetus:: What?

Stranger:: Affirmation and negation.

Theaetetus:: We do.

Stranger:: When, therefore, this takes place in the soul according to the dianoëtic energy, accompanied with silence, can you call it any thing else than opinion?

Theaetetus:: How can I?

Stranger:: But, when again, a certain passion of this kind is present, not according to the dianoëtic energy, but through sense, can it be rightly denominated any thing else than fantasy?

Theaetetus:: Nothing else.

Stranger:: Since, then, discourse is both true and false, and it appears that the dianoëtic energy is a dialogue of the soul with itself, but opinion the conclusion of the dianoëtic energy, and fantasy the mixture of sense and opinion with each other, it is necessary, since these are allied to discourse, that some of them should be sometimes true, and sometimes false.

Theaetetus:: Undoubtedly.

Stranger:: Do you perceive, therefore, that we have found more easily than we expected, that opinion and discourse are sometimes false? For just now we were afraid, lest by investigating this matter we should attempt a work which it is perfectly impossible to accomplish.

Theaetetus:: I do perceive.

Stranger:: Let us not, therefore, despair as to what remains; but, since these things are rendered apparent, let us recall into our memory those divisions according to species which we mentioned before.

Theaetetus:: Of what kind were they?

Stranger:: We divided image-making into two species; the one assimilative, and the other fantastic.

Theaetetus:: We did.

Stranger:: And we said we were dubious in which of these we should place the sophist.

Theaetetus:: These things were said by us.

Stranger:: And while we were doubting about this, we were oppressed with a still darker vertigo, in consequence of that assertion which is dubious to all men, that there can be no such thing as either a resemblance, or an image, because that which is false has never in any respect any subsistence whatever.

Theaetetus:: You speak the truth.

Stranger:: But now since discourse has become apparent, and likewise false opinion, it is possible there may be imitations of things, and that from this disposition the art of deceiving may be produced.

Theaetetus:: It is possible.

Stranger:: And was it not also acknowledged by us above, that the sophist is conversant with these?

Theaetetus:: It was.

Stranger:: Let us, therefore, again endeavor, by always bisecting the proposed genus, to proceed to the right hand part of the section, attending to its communion with the sophist, till, having taken away all his common properties, and leaving the nature peculiar to him, we may be able especially to exhibit this to ourselves, and afterwards to those who are naturally most proximate to the genus of this method.

Theaetetus:: Right.

Stranger:: Did we not, therefore, begin dividing the effective art, and the art of acquiring?

Theaetetus:: Yes.

Stranger:: And the art of acquiring presented itself to us in hunting, contests, merchandize, and such-like species.

Theaetetus:: Entirely so.

Stranger:: But now, since the imitative art comprehends the sophist, it is evident that the effective art must first receive a two-fold division. For Imitation is a certain making. We said, indeed, it was the making of images, and not of things themselves. Did we not?

Theaetetus:: Entirely so.

Stranger:: But, in the first place, let there be two parts of the effective art.

Theaetetus:: What are they?

Stranger:: The one is divine, the other human.

Theaetetus:: I do not yet understand you.

Stranger:: If we remember what was said at first we asserted that the whole of the effective art was a power causing things to exist afterwards which were not before.

Theaetetus:: We do remember.

Stranger:: But, with respect to all mortal animals, and plants which are produced in the earth from seeds and roots, together with such inanimate natures as subsist on the earth, whether they are bodies which can be liquefied, or not, can we say that they were afterwards generated, when before they were not, by any other than a certain fabricating God? Or shall we employ the dogma and assertion of many?

Theaetetus:: What is that?

Stranger:: That nature generates these from a certain fortuitous cause, and which operates without thought. Or shall we say that they are produced in conjunction with reason and divine science, originating from Deity itself?

Theaetetus:: I, perhaps, through my age, often change my opinion. However, at present looking to you, and apprehending that you think these things were produced by Divinity, I think so too.

Stranger:: It is well, Theætetus. And if we thought that in some future time you would be of a different opinion, we should now endeavor to make you acknowledge this by the force of reason, in conjunction with necessary persuasion; but since I know your nature to be such, that, without any arguments from us, you would of yourself arrive at that conclusion to which I have drawn you, I shall dismiss the attempt; for it would be superfluous. But I adopt this position, that things which are said to subsist from nature are produced by a divine art: but that the things which are composed from these by men, are produced by human art: and that, according to this position, there are two genera of the effective art, one of which is human, and the other divine.

Theaetetus:: Right.

Stranger:: But, since there are two genera, bisect each of them.

Theaetetus:: How?

Stranger:: Just as the whole of the effective art was then divided according to breadth, so now let it be divided according to length.

Theaetetus:: Let it be so divided.

Stranger:: And thus all its parts will become four; two of which indeed, with reference to us, will be human; and two again, with reference to the Gods, divine.

Theaetetus:: They will.

Stranger:: But with respect to these, as being again divided in a different manner, one part of each division is effective, but the remaining parts may be nearly called representative. And hence, again, the effective art receives a two-fold division.

Theaetetus:: Inform me again how each is to be divided.

Stranger:: With respect to ourselves and other animals, and the things from which they naturally consist, viz. fire and water, and the sisters of these, we know that each of these productions is the offspring of Divinity. Do we not?

Theaetetus:: We do.

Stranger:: After these the images of each, and not the things themselves, follow; and these are produced by a dæmoniacal artifice.

Theaetetus:: What kind of images are these?

Stranger:: Phantasms which occur in sleep, and such as appearing in the day are called spontaneous; as, for instance, shadow, when darkness is generated in fire: but this is two-fold, when domestic and foreign light concurring in one about splendid and smooth bodies, and producing a sensation of seeing contrary to accustomed vision, effect by these means a species.

Theaetetus:: These works, therefore, of divine making are two, viz. the things themselves, and the image which follows each.

Stranger:: But what? Shall we not say that our art, by architecture, makes a house, but by painting, that other thing, the image of the house, which is, as it were, a human dream effected by men awake?

Theaetetus:: Entirely so.

Stranger:: Hence, by giving a two-fold division after this manner to other things, we shall again find two-fold works of our effective action, and we must call the one *auturgic*, or the thing itself effected, but the image, representative.

Theaetetus:: I now understand you better, and I admit these two species of the effective art, with a two-fold division, viz. the divine and human according to one section; and the thing itself effected, and the offspring of certain imitations, according to the other.

Stranger:: Let us, therefore, recollect, that of the image-producing art we said, one kind would be assimilative, and the other fantastic, if it should appear that the false is truly false, and one certain thing belonging to beings.

Theaetetus:: We did say so.

Stranger:: Is it not, therefore, apparent, that we have now indubitably enumerated two species?

Theaetetus:: Yes.

Stranger:: We must, therefore, again give a two-fold distribution to the fantastic species.

Theaetetus:: How?

Stranger:: One kind being that which is effected through instruments, but the other being the phantasm of that which exhibits itself as the instrument of the efficient.

Theaetetus:: How do you say?

Stranger:: I think, when any one employing your figure causes body to appear similar to body, or voice to voice, this is particularly called an imitation belonging to the fantastic species.

Theaetetus:: It is.

Stranger:: Calling this then imitative, we will divide it; but we will dismiss the whole of the other member, as being now weary, and we will permit some other person to collect it into one, and give it a proper denomination.

Theaetetus:: Let the member then you speak of be divided, and let us dismiss the other.

Stranger:: And indeed, Theætetus, it is fit to think that this also is two-fold; but take notice on what account.

Theaetetus:: Say.

Stranger:: Of those who imitate, some knowing that which they imitate do this, but others not knowing it. Though, can we place any division greater than that of ignorance and knowledge?

Theaetetus:: We cannot.

Stranger:: Will not, therefore, that which we just now Spoke of be an imitation of those that are endued with knowledge? For this man, knowing you, imitates your figure.

Theaetetus:: Undoubtedly.

Stranger:: But what shall we say respecting the figure of justice, and, in short, of the whole of virtue? Do not many, though they are ignorant, think that they know this, and, while they imitate that which seems to them to be the figure of justice, endeavor, both in words and works, to make it appear that it is inherent in them?

Theaetetus:: Very many, indeed.

Stranger:: Are they not, therefore, disappointed in their expectations of appearing to be just, as they are not so in any respect? Or does the very contrary to this take place?

Theaetetus:: The very contrary takes place.

Stranger:: I think then we must say that this imitator is different from the other, he who is ignorant from him who knows.

Theaetetus:: We must.

Stranger:: Whence, then, can any one derive a name adapted to each? Or is it evident that it is difficult? Because a certain ancient cause of the division of genera into species was unknown to our ancestors, so that none of them attempted to divide; and on this account they were necessarily very much in want of names. But at the same time, though it may be a bolder assertion, for the sake of distinction, we shall call the imitation which subsists with opinion *doxomimetic*; but that which subsists in conjunction with science, a certain historic imitation.

Theaetetus:: Be it so.

Stranger:: The other of these appellations, therefore, must be used: for a sophist was not found to be among the scientific, but among imitators.

Theaetetus:: And very much so.

Stranger:: Let us then consider this *doxastic imitator*, or one who imitates from opinion, as if he were iron, and see whether he is sound, or whether he contains in himself something two-fold.

Theaetetus:: Let us consider.

Stranger:: He is, therefore, very copious. For, of sophists, one is foolish, thinking that he knows the things which he opines: but the figure of another, through his rolling like a cylinder in discourse, is replete with abundance of suspicion and fear, that he is ignorant of those things which he feigns himself to know before others.

Theaetetus:: There are both these kinds of sophists, as you have said.

Stranger:: May we not, therefore, place one of these as a simple, and the other as an ironical imitator?

Theaetetus:: It is proper so to do.

Stranger:: And again, shall we say that the genus of this is one or two?

Theaetetus:: Do you see whether it is or not.

Stranger:: I consider; and two imitators appear to me: one employing irony among the multitude publicly, and in prolix discourses; and the other compelling the person who converses with him to contradict himself, and this privately, and by short discourses.

Theaetetus:: You speak most rightly.

Stranger:: What then did we evince the imitator to be who employs prolix discourses? Did we evince him to be a politician, or a popular speaker?

Theaetetus:: A popular speaker.

Stranger:: But what did we call the other,—a wise man, or sophistic?

Theaetetus:: To call him a wise man is impossible, since we have placed him as one who is ignorant; but as he is an imitator of a wise man, he must evidently receive a similar appellation. And I now nearly understand that this character ought truly to be called one who is in every respect a real sophist.

Stranger:: Shall we not, therefore, bind together his name, as we did before, connecting every thing from the end to the beginning?

Theaetetus:: Entirely so.

Stranger:: He, therefore, who compels those that converse with him to contradict themselves, who is a part of the ironic genus, and a doxastic imitator, who likewise belongs to the fantastic genus, which proceeds from the representative art, who is to be defined to be not a divine but a human production, and who by the artifice of his discourses belongs to the wonder-working division; he who says that a real sophist is of this stock and consanguinity will, as it appears, speak most truly.

Theaetetus:: Entirely so.

THE END OF THE SOPHISTA.

## Sophist

Translated by Nicholas P. White.

Socrates, Visitor, Theodorus, Theaetetus

Theodorus:: We've come at the proper time by yesterday's agreement, Socrates. We're also bringing this man who's visiting us. He's from Elea and he's a member of the group who gather around Parmenides and Zeno. And he's very much a philosopher.

Socrates:: Are you bringing a visitor, Theodorus? Or are you bringing a god without realizing it instead, like the ones Homer mentions? He says gods accompany people who are respectful and just. He also says the god of visitors—who's at least as much a god as any other—is a companion who keeps an eye on people's actions, both the criminal and the lawful ones. So your visitor might be a greater power following along with you, a sort of god of refutation to keep watch on us and show how bad we are at speaking—and to refute us.

Theodorus:: That's not our visitor's style, Socrates. He's more moderate than the enthusiasts for debating are. And he doesn't seem to me to be a god at all. He is divine—but then I call all philosophers that.

Socrates:: And that's the right thing for you to do, my friend. But probably it's no easier, I imagine, to distinguish that kind of person than it is to distinguish gods. Certainly the genuine philosophers who "haunt our cities"—by contrast to the fake ones—take on all sorts of different appearances just because of other people's ignorance. As philosophers look down from above at the lives of those below them, some people think they're worthless and others think they're worth everything in the world. Sometimes they take on the appearance of statesmen, and sometimes of sophists. Sometimes, too, they might give the impression that they’re completely insane. But if it’s all right with our visitor I'd be glad to have him tell us what the people where he comes from used to apply the following names to, and what they thought about these things?

Theodorus:: What things?

Socrates:: Sophist, statesman, and philosopher.

Theodorus:: What, or what kind of thing, especially makes you consider asking that question? What special problem about them do you have in mind?

Socrates:: This: did they think that sophists, statesmen, and philosophers make up one kind of thing or two? Or did they divide them up into three kinds corresponding to the three names and attach one name to each of them?

Theodorus:: I don’t think it would offend him to tell us about it. Or would it, sir?

Stranger:: No, Theodorus, it wouldn’t offend me. I don’t have any objection. And the answer is easy: they think there are three kinds. Distinguishing clearly what each of them is, though, isn’t a small or easy job.

Theodorus:: Luckily, Socrates, you’ve gotten hold of words that are very much like the ones we happened to be asking him about. And he made the same excuse to us that he made to you just now—since he’s heard a lot about the issue, after all, and hasn’t forgotten it.

Socrates:: In that case, sir, don’t refuse our very first request. Tell us this. When you want to explain something to somebody, do you usually prefer to explain it by yourself in a long speech, or to do it with questions? That’s the way Parmenides did it one time, when he was very old and I was young. He used questions to generate a very fine discussion.

Stranger:: It's easier to do it the second way, Socrates, if you're talking with someone who's easy to handle and isn't a trouble-maker. Otherwise it's easier to do it alone.

Socrates:: You can pick anyone here you want. They'll all answer you politely. But if you take my advice you'll choose one of the young ones— Theaetetus here or for that matter any of the others you prefer.

Stranger:: As long as I'm here with you for the first time, Socrates, I'd be embarrassed not to make our meeting a conversational give-and-take, but instead to stretch things out and give a long continuous speech by myself or even to someone else, as if I were delivering an oration. A person wouldn't expect the issue you just mentioned to be as small as your question suggests. In fact it needs a very long discussion. On the other hand, it certainly seems rude and uncivilized for a visitor not to oblige you and these people here, especially when you've spoken the way you have. So I'll accept Theaetetus as the person to talk with, on the basis of your urging, and because I've talked with him myself before.

Theaetetus:: Then please do that, sir, and you'll be doing us all a favor, just as Socrates said.

Stranger:: We probably don't need to say anything more about that, then, Theaetetus. From now on you're the one I should have the rest of our talk with. But if you're annoyed at how long the job takes, you should blame your friends here instead of me.

Theaetetus:: I don't think I'll give out now, but if anything like that does happen we'll have to use this other Socrates over here as a substitute. He's Socrates' namesake, but he's my age and exercises with me and he's used to sharing lots of tasks with me.

Stranger:: Good. As the talk goes along you'll think about that on your own. But with me I think you need to begin the investigation from the sophist—by searching for him and giving a clear account of what he is. Now in this case you and I only have the name in common, and maybe we've each used it for a different thing. In every case, though, we always need to be in agreement about the thing itself by means of a verbal explanation, rather than doing without any such explanation and merely agreeing about the name. But it isn't the easiest thing in the world to grasp the tribe we're planning to search for—I mean, the sophist—or say what it is. But if an important issue needs to be worked out well, then as everyone has long thought, you need to practice on unimportant, easier issues first. So that's my advice to us now, Theaetetus: since we think it's hard to hunt down and deal with the kind, sophist, we ought to practice our method of hunting on something easier first—unless you can tell us about another way that's somehow more promising.

Theaetetus:: I can't.

Stranger:: Do you want us to focus on something trivial and try to use it as a model for the more important issue?

Theaetetus:: Yes.

Stranger:: What might we propose that's unimportant and easy to understand, but can have an account given of it just as much as more important things can? For example, an angler: isn't that recognizable to everybody, but not worth being too serious about?

Theaetetus:: Yes.

Stranger:: That, I expect, will provide an appropriate method of hunting and way of talking for what we want.

Theaetetus:: That would be fine.

Stranger:: Well then, let's go after the angler from this starting point. Tell me, shall we take him to be an expert at something, or a nonexpert with another sort of capacity?

Theaetetus:: He's definitely not a nonexpert.

Stranger:: But expertise as a whole falls pretty much into two types.

Theaetetus:: How?

Stranger:: There's farming, or any sort of caring for any mortal body; and there's also caring for things that are put together or fabricated, which we call equipment; and there's imitation. The right thing would be to call all those things by a single name.

Theaetetus:: How? What name?

Stranger:: When you bring anything into being that wasn't in being before, we say you're a producer and that the thing you've brought into being is produced.

Theaetetus:: That's right.

Stranger:: And all the things we went through just now have their own capacity for that.

Theaetetus:: Yes.

Stranger:: Let's put them under the heading of production.

Theaetetus:: All right.

Stranger:: Next, consider the whole type that has to do with learning, recognition, commerce, combat, and hunting. None of these creates anything. They take things that are or have come into being, and they take possession of some of them with words and actions, and they keep other things from being taken possession of. For that reason it would be appropriate to call all the parts of this type acquisition.

Theaetetus:: Yes, that would be appropriate.

Stranger:: If every expertise falls under acquisition or production, Theaetetus, which one shall we put angling in?

Theaetetus:: Acquisition, obviously.

Stranger:: Aren't there two types of expertise in acquisition? Is one type mutually willing exchange, through gifts and wages and purchase? And would the other type, which brings things into one’s possession by actions or words, be expertise in taking possession?

Theaetetus:: It seems so, anyway, given what we’ve said.

Stranger:: Well then, shouldn’t we cut possession-taking in two?

Theaetetus:: How?

Stranger:: The part that’s done openly we label combat, and the part that’s secret we call hunting.

Theaetetus:: Yes.

Stranger:: And furthermore it would be unreasonable not to cut hunting in two.

Theaetetus:: How?

Stranger:: We divide it into the hunting of living things and the hunting of lifeless things.

Theaetetus:: Yes, if there are both kinds.

Stranger:: How could there not be? But we should let the part involving lifeless things go. It doesn’t have a name, except for some kinds of diving and other trivial things like that. The other part—namely the hunting of living animals—we should call animal-hunting.

Theaetetus:: All right.

Stranger:: And isn’t it right to say that animal-hunting has two types? One is land-hunting, the hunting of things with feet, which is divided into many types with many names. The other is aquatic hunting, which hunts animals that swim.

Theaetetus:: Of course.

Stranger:: And things that swim, we see, fall into things with wings and things living underwater.

Theaetetus:: Of course.

Stranger:: And all hunting of things that have wings, I suppose, is called bird-catching.

Theaetetus:: Yes.

Stranger:: And all hunting of underwater things is fishing.

Theaetetus:: Yes.

Stranger:: Well then, this kind of hunting might be divided into two main parts.

Theaetetus:: What are they?

Stranger:: One of them does its hunting with stationary nets and the other one does it by striking.

Theaetetus:: What do you mean? How are you dividing them?

Stranger:: The first one is whatever involves surrounding something and enclosing it to prevent it from escaping, so it's reasonable to call it enclosure.

Theaetetus:: Of course.

Stranger:: Shouldn't baskets, nets, slipknots, creels, and so forth be called enclosures?

Theaetetus:: Yes.

Stranger:: So we'll call this part of hunting enclosure-hunting or something like that.

Theaetetus:: Yes.

Stranger:: But the kind that's done by striking with hooks or three-pronged spears is different, and we should call it by one word, strike-hunting. Or what term would be better?

Theaetetus:: Let's not worry about the name. That one will do.

Stranger:: Then there's a part of striking that's done at night by firelight, and as it happens is called torch-hunting by the people who do it.

Theaetetus:: Of course.

Stranger:: But the whole daytime part is called hooking, since even the three-pronged spears have hooks on their points.

Theaetetus:: Yes, that's what it's called.

Stranger:: Then one part of the hooking part of striking is done by striking downward from above. And since you usually use a three-pronged spear that way, I think it's called spearing.

Theaetetus:: Some people do call it that.

Stranger:: And I suppose there's only one type left.

Theaetetus:: What?

Stranger:: It's the type of striking contrary to the previous one. It's done with a hook, not to just any part of the fish's body but always to the prey's head and mouth, and pulls it upward from below with rods or reeds. What are we going to say its name should be, Theaetetus?

Theaetetus:: I think we've now found what we said we aimed to find.

Stranger:: So now we're in agreement about the angler's expertise, not just as to its name; in addition we've also sufficiently grasped a verbal explanation concerning the thing itself. Within expertise as a whole one half was acquisitive; half of the acquisitive was taking possession; half of possession-taking was hunting; half of hunting was animal-hunting; half of animal-hunting was aquatic hunting; all of the lower portion of aquatic hunting was fishing; half of fishing was hunting by striking; and half of striking was hooking. And the part of hooking that involves a blow drawing a thing upward from underneath is called by a name that's derived by its similarity to the action itself, that is, it's called draw-fishing or angling— which is what we're searching for.

Theaetetus:: We've got a completely adequate demonstration of that, anyway.

Stranger:: Well then, let's use that model to try and find the sophist, and see what he is.

Theaetetus:: Fine.

Stranger:: The first question, then, was whether we should suppose the angler is a nonexpert, or that he's an expert at something?

Theaetetus:: Yes.

Stranger:: Well, shall we suppose the sophist is a layman, or completely and truly an expert?

Theaetetus:: He's not a layman at all. I understand what you're saying: he has to be the kind of person that the name sophist indicates.

Stranger:: So it seems we need to take him to have a kind of expertise.

Theaetetus:: But what is it?

Stranger:: For heaven's sake, don't we recognize that the one man belongs to the same kind as the other?

Theaetetus:: Which men?

Stranger:: The angler and the sophist.

Theaetetus:: In what way?

Stranger:: To me they both clearly appear to be hunters.

Theaetetus:: We said which kind of hunting the angler does. What kind does the sophist do?

Stranger:: We divided all hunting into two parts, one for land animals and one for swimming animals.

Theaetetus:: Yes.

Stranger:: We went through one part, about the animals that swim underwater. But we left the land part undivided, though we noted that it contains many types.

Theaetetus:: Of course.

Stranger:: Up till that point the sophist and the angler go the same way, beginning from expertise in acquisition.

Theaetetus:: They seem to, anyway.

Stranger:: Starting from animal hunting, though, they turn away from each other. One goes to ponds, rivers, and the sea, and hunts for the animals there.

Theaetetus:: Of course.

Stranger:: The other one goes to the land and to different kinds of rivers, which are like plentiful meadows of wealthy youths, to take possession of the things living there.

Theaetetus:: What do you mean?

Stranger:: There are two main kinds of things to hunt on land.

Theaetetus:: What are they?

Stranger:: Tame things and wild ones.

Theaetetus:: Is there any such thing as hunting tame animals?

Stranger:: There is if human beings are tame animals, at any rate. Make whichever assumption you like: either there are no tame animals, or there are tame animals but humans are wild, or else, you'll say, humans are tame but aren't hunted. Specify whichever you prefer to say.

Theaetetus:: I think we're tame animals and I'll say that humans are in fact hunted.

Stranger:: Then let's say that the hunting of tame animals falls into two parts.

Theaetetus:: How?

Stranger:: Let's take piracy, enslavement, tyranny, along with everything that has to do with war, and let's define them all together as hunting by force.

Theaetetus:: Fine.

Stranger:: And we'll also take legal oratory, political oratory, and conversation all together in one whole, and call them all one single sort of expertise, expertise in persuasion.

Theaetetus:: Right.

Stranger:: Let's say that there are two kinds of persuasion.

Theaetetus:: What are they?

Stranger:: One is done privately, and the other is done in public.

Theaetetus:: Yes, each of those is one type.

Stranger:: And doesn't one part of private hunting earn wages, while the other part gives gifts?

Theaetetus:: I don't understand.

Stranger:: It seems you aren't paying attention to the way lovers hunt.

Theaetetus:: In what connection?

Stranger:: The fact that when they hunt people they give presents to them too.

Theaetetus:: Very true.

Stranger:: Let's call this type expertise in love.

Theaetetus:: All right.

Stranger:: One part of the wage-earning type approaches people by being agreeable, uses only pleasure as its bait, and earns only its own room and board. I think we'd all call it flattery, or expertise in pleasing people.

Theaetetus:: Of course.

Stranger:: But doesn't the kind of wage-earning that actually earns money, though it claims to deal with people for the sake of virtue, deserve to be called by a different name?

Theaetetus:: Of course.

Stranger:: What name? Try and tell me.

Theaetetus:: It's obvious. I think we've found the sophist. I think that's the name that would be suitable for him.

Stranger:: So according to our account now, Theaetetus, it seems that this sort of expertise belongs to appropriation, taking possession, hunting, animal-hunting, hunting on land, human hunting, hunting by persuasion, hunting privately, and money-earning. It's the hunting of rich, prominent young men. And according to the way our account has turned out, it's what should be called the expertise of the sophist.

Theaetetus:: Absolutely.

Stranger:: Still, let's look at it this way too, since what we're looking for isn't a trivial sort of expertise but quite a diverse one. And even in what we've just said earlier it actually presents the appearance of being not what we're now saying, but a different type.

Theaetetus:: How?

Stranger:: Expertise in acquisition had two parts, hunting and exchanging.

Theaetetus:: Yes.

Stranger:: And let's say there are two types of exchanging, giving and selling.

Theaetetus:: All right.

Stranger:: And we're also going to say that selling divides in two.

Theaetetus:: How?

Stranger:: One part is the sale of things that the seller himself makes. The other is purveying, that is, the purveying of things other people make.

Theaetetus:: Of course.

Stranger:: Then what? Isn't the part of purveying that's done within the city—about half of it—called retailing?

Theaetetus:: Yes.

Stranger:: And isn't wholesaling the part that buys and sells things for exchange between one city and another?

Theaetetus:: Of course.

Stranger:: And can't we see that one part of wholesaling sells things for the nourishment and use of the body in exchange for cash, and the other sells things for the soul?

Theaetetus:: What do you mean by that?

Stranger:: Maybe we don't understand the one for the soul—since certainly we understand the other kind.

Theaetetus:: Yes.

Stranger:: Let's consider every kind of music that's carried from one city to another and bought here and sold there, as well as painting and shows and other things for the soul. Some of them are transported and sold for amusement and others for serious purposes. We can use the word wholesaler for the transporter and seller of these things just as well as for someone who sells food and beverages.

Theaetetus:: That's absolutely true.

Stranger:: Wouldn't you use the same name for somebody who bought and exchanged items of knowledge for money from city to city?

Theaetetus:: Definitely.

Stranger:: Wouldn't the right thing to say be that the art of display is one part of that soul-wholesaling? And don't we have to call the other part of it, the part that consists in selling knowledge, by a name that's similar and also equally ridiculous?

Theaetetus:: Definitely.

Stranger:: And one name should be used for the part of this knowledge-selling that deals with knowledge of virtue, and another name for the part that deals with knowledge of other things?

Theaetetus:: Of course.

Stranger:: “Expertise-selling” would fit the second one. You try and tell me the name of the first one.

Theaetetus:: What other name could you mention that would fit, except for the kind, sophist, which we’re looking for right now?

Stranger:: I couldn’t mention any other one. Come on now and let’s collect it all together. We’ll say that the expertise of the part of acquisition, exchange, selling, wholesaling, and soul-wholesaling, dealing in words and learning that have to do with virtue—that’s sophistry in its second appearance.

Theaetetus:: Definitely.

Stranger:: In the third place I think you'd call somebody just the same thing if he settled here in the city and undertook to make his living selling those same things, both ones that he'd bought and ones that he'd made himself.

Theaetetus:: Yes, I would.

Stranger:: So apparently you’ll still say that sophistry falls under acquisition, exchange, and selling, either by retailing things that others make or by selling things that he makes himself. It’s the retail sale of any learning that has to do with the sorts of things we mentioned.

Theaetetus:: It has to be, since we need to stay consistent with what we said before.

Stranger:: Now let’s see whether the type we’re chasing is something like the following.

Theaetetus:: What?

Stranger:: Combat was one part of acquisition.

Theaetetus:: Yes.

Stranger:: And it makes sense to divide it in two.

Theaetetus:: How?

Stranger:: We'll take one part to be competition and the other part to be fighting.

Theaetetus:: Yes.

Stranger:: And it would be fitting and proper to give a name like violence to the part of fighting in which one body fights against another.

Theaetetus:: Yes.

Stranger:: And as for the part that pits words against words, what else would you call it other than controversy?

Theaetetus:: Nothing else.

Stranger:: But we have to have two types of controversy.

Theaetetus:: In what way?

Stranger:: So far as it involves one long public speech directed against another and deals with justice and injustice, it's forensic.

Theaetetus:: Yes.

Stranger:: But if it goes on in private discussions and is chopped up into questions and answers, don't we usually call it disputation?

Theaetetus:: Yes.

Stranger:: One part of disputation involves controversy about contracts and isn't carried on in any systematic or expert way. We should take that to be a type of disputation, since we can express what makes it different. But it hasn't been given a name before and it doesn't deserve to get one from us.

Theaetetus:: That's true. Its subtypes are too small and varied.

Stranger:: But what about disputation that's done expertly and involves controversy about general issues, including what's just and what's unjust? Don't we normally call that debating?

Theaetetus:: Of course.

Stranger:: Part of debating, it turns out, wastes money and the other part makes money.

Theaetetus:: Absolutely.

Stranger:: Let's try and say what each of them ought to be called.

Theaetetus:: We have to.

Stranger:: I think one type of debating is a result of the pleasure a person gets from the activity, and involves neglecting his own livelihood. But its style is unpleasant to most people who hear it, and in my view it's right to call it chatter.

Theaetetus:: That's pretty much what people do call it.

Stranger:: You take a turn now. Say what its contrary is, which makes money from debates between individuals.

Theaetetus:: How could anyone go wrong in saying that the amazing sophist we've been after has turned up once again for the fourth time.

Stranger:: It seems his type is precisely the money-making branch of expertise in debating, disputation, controversy, fighting, combat, and acquisition. According to what our account shows us now, that's the sophist.

Theaetetus:: Absolutely.

Stranger:: So you see how true it is that the beast is complex and can't be caught with one hand, as they say.

Theaetetus:: It does take both hands.

Stranger:: Yes, and you need all your capacity to follow his tracks in what's to come. Tell me: don't we call some things by names that house-servants use?

Theaetetus:: A lot of things. But what are you asking about?

Stranger:: For example things like filtering, straining, winnowing.

Theaetetus:: Of course.

Stranger:: And also we know about carding, spinning, weaving, and a million other things like that which are involved in experts' crafts. Is that right?

Theaetetus:: What general point are you trying to make with these examples?

Stranger:: All the things I've mentioned are kinds of dividing.

Theaetetus:: Yes.

Stranger:: Since there's a single kind of expertise involved in all of them, then according to what I've said we'll expect it to have a single name.

Theaetetus:: What shall we call it?

Stranger:: Discrimination.

Theaetetus:: All right.

Stranger:: Think about whether we can see two types in it.

Theaetetus:: You're asking me to do some quick thinking.

Stranger:: In fact in what we've called discriminations one kind separates what's worse from what's better and the other separates like from like.

Theaetetus:: That's obvious—now that you've said it.

Stranger:: I don't have an ordinary name for one of them, but I do have a name for the kind of discrimination that leaves what's better and throws away what's worse.

Theaetetus:: What? Tell me.

Stranger:: I think everyone says that that kind of discrimination is cleansing.

Theaetetus:: Yes.

Stranger:: Won't everyone see that cleansing has two types?

Theaetetus:: Yes, maybe, if they had time, but I don't see now.

Stranger:: Many kinds of cleansing that have to do with the body can appropriately be included under a simple name.

Theaetetus:: Which ones? What name?

Stranger:: There's the cleansing of the inside part of living bodies, which is done by gymnastics and medicine. And there's the cleansing of the insignificant outside part that's done by bathing. And also there's the cleansing of nonliving bodies, which fulling and all kinds of furbishing take care of and which have lots of specialized and ridiculous-seeming names.

Theaetetus:: Very ridiculous.

Stranger:: Of course, Theaetetus. But our method of dealing with words doesn't care one way or the other whether cleansing by sponging or by taking medicine does a lot of good or only a little. The method aims at acquiring intelligence, so it tries to understand how all kinds of expertise belong to the same kind or not. And so for that it values them all equally without thinking that some of them are more ridiculous than others, as far as their similarity is concerned. And it doesn't consider a person more impressive because he exemplifies hunting by military expertise rather than by picking lice. Instead it usually considers him more vapid. Moreover you just asked about what name we call all the capacities that are assigned to living or nonliving bodies.

As far as that's concerned, it doesn't matter to our method which name would seem to be the most appropriate, just so long as it keeps the cleansing of the soul separate from the cleansing of everything else. For the time being, the method has only tried to distinguish the cleansing that concerns thinking from the other kinds—if, that is, we understand what its aim is.

Theaetetus:: I do understand, and I agree that there are two types of cleansing, one dealing with the soul and a separate one dealing with the body.

Stranger:: Fine. Next listen and try to cut the one we've mentioned in two.

Theaetetus:: I'll try to follow your lead and cut it however you say.

Stranger:: Do we say that wickedness in the soul is something different from virtue?

Theaetetus:: Of course.

Stranger:: And to cleanse something was to leave what's good and throw out whatever's inferior.

Theaetetus:: Yes.

Stranger:: So insofar as we can find some way to remove what's bad in the soul, it will be suitable to call it cleansing.

Theaetetus:: Of course.

Stranger:: We have to say that there are two kinds of badness that affect the soul.

Theaetetus:: What are they?

Stranger:: One is like bodily sickness, and the other is like ugliness.

Theaetetus:: I don't understand.

Stranger:: Presumably you regard sickness and discord as the same thing, don't you?

Theaetetus:: I don't know what I should say to that.

Stranger:: Do you think that discord is just dissension among things that are naturally of the same kind, and arises out of some kind of corruption?

Theaetetus:: Yes.

Stranger:: And ugliness is precisely a consistently unattractive sort of disproportion?

Theaetetus:: Yes.

Stranger:: Well then, don’t we see that there’s dissension in the souls of people in poor condition, between beliefs and desires, anger and pleasures, reason and pains, and all of those things with each other?

Theaetetus:: Absolutely.

Stranger:: But all of them do have to be akin to each other.

Theaetetus:: Of course.

Stranger:: So we'd be right if we said that wickedness is discord and sickness of the soul.

Theaetetus:: Absolutely right.

Stranger:: Well then, suppose something that’s in motion aims at a target and tries to hit it, but on every try passes by it and misses. Are we going to say that it does this because it’s properly proportioned or because it’s out of proportion?

Theaetetus:: Out of proportion, obviously.

Stranger:: But we know that no soul is willingly ignorant of anything.

Theaetetus:: Definitely.

Stranger:: But ignorance occurs precisely when a soul tries for the truth, but swerves aside from understanding and so is beside itself.

Theaetetus:: Of course.

Stranger:: So we have to take it that an ignorant soul is ugly and out of proportion.

Theaetetus:: It seems so.

Stranger:: Then there are, it appears, these two kinds of badness in the soul. Most people call one of them wickedness, but it's obviously a disease of the soul.

Theaetetus:: Yes.

Stranger:: They call the other one ignorance, but if it occurs only in a person's soul they aren't willing to agree that it's a form of badness.

Theaetetus:: One thing absolutely must be granted—the point I was in doubt about when you made it just now—that there are two kinds of deficiency in the soul. We need to say that cowardice, licentiousness, and injustice are a disease in us, and that to be extremely ignorant of all sorts of things is a kind of ugliness.

Stranger:: In the case of the body, weren't there two kinds of expertise dealing with those two conditions?

Theaetetus:: What were they?

Stranger:: Gymnastics for ugliness and medicine for sickness.

Theaetetus:: Apparently.

Stranger:: And isn't correction the most appropriate of all kinds of expertise for treating insolence, injustice, and cowardice?

Theaetetus:: So it seems, to judge by what people think.

Stranger:: Well then, for all kinds of ignorance wouldn't teaching be the right treatment to mention?

Theaetetus:: Yes.

Stranger:: Now should we say that there's only one kind of expertise in teaching or more than one, with two of them being the most important ones? Think about it.

Theaetetus:: I am.

Stranger:: I think we'll find it quickest this way.

Theaetetus:: How?

Stranger:: By seeing whether ignorance has a cut down the middle of it. If it has two parts, that will force teaching to have two parts too, one for each of the parts of ignorance.

Theaetetus:: Well, do you see what we're looking for?

Stranger:: I think I see a large, difficult type of ignorance marked off from the others and overshadowing all of them.

Theaetetus:: What's it like?

Stranger:: Not knowing, but thinking that you know. That's what probably causes all the mistakes we make when we think.

Theaetetus:: That's true.

Stranger:: And furthermore it's the only kind of ignorance that's called lack of learning.

Theaetetus:: Certainly.

Stranger:: Well then, what should we call the part of teaching that gets rid of it?

Theaetetus:: The other part consists in the teaching of crafts, I think, but here in Athens we call this one education.

Stranger:: And just about all other Greeks do too, Theaetetus. But we still have to think about whether education is indivisible or has divisions that are worth mentioning.

Theaetetus:: We do have to think about that.

Stranger:: I think it can be cut somehow.

Theaetetus:: How?

Stranger:: One part of the kind of teaching that's done in words is a rough road, and the other part is smoother.

Theaetetus:: What do you mean by these two parts?

Stranger:: One of them is our forefathers' time-honored method of scolding or gently encouraging. They used to employ it especially on their sons, and many still use it on them nowadays when they do something wrong. Admonition would be the right thing to call all of this.

Theaetetus:: Yes.

Stranger:: As for the other part, some people seem to have an argument to give to themselves that lack of learning is always involuntary, and that if someone thinks he's wise, he'll never be willing to learn anything about what he thinks he's clever at. These people think that though admonition is a lot of work, it doesn't do much good.

Theaetetus:: They're right about that.

Stranger:: So they set out to get rid of the belief in one's own wisdom in another way.

Theaetetus:: How?

Stranger:: They cross-examine someone when he thinks he's saying something though he's saying nothing. Then, since his opinions will vary inconsistently, these people will easily scrutinize them. They collect his opinions together during the discussion, put them side by side, and show that they conflict with each other at the same time on the same subjects in relation to the same things and in the same respects. The people who are being examined see this, get angry at themselves, and become calmer toward others. They lose their inflated and rigid beliefs about themselves that way, and no loss is pleasanter to hear or has a more lasting effect on them. Doctors who work on the body think it can't benefit from any food that's offered to it until what's interfering with it from inside is removed. The people who cleanse the soul, my young friend, likewise think the soul, too, won't get any advantage from any learning that's offered to it until someone shames it by refuting it, removes the opinions that interfere with learning, and exhibits it cleansed, believing that it knows only those things that it does know, and nothing more.

Theaetetus:: That's the best and most healthy-minded way to be.

Stranger:: For all these reasons, Theaetetus, we have to say that refutation is the principal and most important kind of cleansing. Conversely we have to think that even the king of Persia, if he remains unrefuted, is uncleansed in the most important respect. He's also uneducated and ugly, in just the ways that anyone who is going to be really happy has to be completely clean and beautiful.

Theaetetus:: Absolutely.

Stranger:: Well then, who are we going to say the people who apply this form of expertise are? I'm afraid to call them sophists.

Theaetetus:: Why?

Stranger:: So we don't pay sophists too high an honor.

Theaetetus:: But there's a similarity between a sophist and what we've been talking about.

Stranger:: And between a wolf and a dog, the wildest thing there is and the gentlest. If you're going to be safe, you have to be especially careful about similarities, since the type we're talking about is very slippery. Anyway, let that description of them stand. I certainly don't think that when the sophists are enough on their guard the dispute will be about an unimportant distinction.

Theaetetus:: That seems right.

Stranger:: So let it be the cleansing part of the expertise of discriminating things; and let it be marked off as the part of that which concerns souls; and within that it's teaching; and within teaching it’s education. And let’s say that within education, according to the way the discussion has turned now, the refutation of the empty belief in one’s own wisdom is nothing other than our noble sophistry.

Theaetetus:: Let’s say that. But the sophist has appeared in lots of different ways. So I’m confused about what expression or assertion could convey the truth about what he really is.

Stranger:: You’re right to be confused. But we have to think that he’s extremely confused, too, about where he can go to escape from our account of him. The saying that you can’t escape all your pursuers is right. So now we really have to go after him.

Theaetetus:: Right.

Stranger:: But let’s stop first and catch our breath, so to speak. And while we’re resting let’s ask ourselves, “Now, how many different appearances has the sophist presented to us?” I think we first discovered him as a hired hunter of rich young men.

Theaetetus:: Yes.

Stranger:: Second, as a wholesaler of learning about the soul.

Theaetetus:: Right.

Stranger:: Third, didn’t he appear as a retailer of the same things?

Theaetetus:: Yes, and fourth as a seller of his own learning?

Stranger:: Your memory’s correct. I’ll try to recall the fifth way: he was an athlete in verbal combat, distinguished by his expertise in debating.

Theaetetus:: Yes.

Stranger:: The sixth appearance was disputed, but still we made a concession to him and took it that he cleanses the soul of beliefs that interfere with learning.

Theaetetus:: Definitely.

Stranger:: Well then, suppose people apply the name of a single sort of expertise to someone, but he appears to have expert knowledge of lots of things. In a case like that don't you notice that something's wrong with the way he appears? Isn't it obvious that if somebody takes him to be an expert at many things, then that observer can't be seeing clearly what it is in his expertise that all of those many pieces of learning focus on— which is why he calls him by many names instead of one?

Theaetetus:: That definitely does seem to be the nature of the case.

Stranger:: So let's not let laziness make that happen to us. First let's take up one of the things we said about the sophist before, which seemed to me to exhibit him especially clearly.

Theaetetus:: What is it?

Stranger:: We said that he engages in disputes, didn't we?

Theaetetus:: Yes.

Stranger:: And also that he teaches other people to do the same thing too?

Theaetetus:: Of course.

Stranger:: Then let's think: what subject do people like him claim to make others able to engage in disputes about? Let's start with something like this: do sophists make people competent to dispute about issues about the gods, which are opaque to most people?

Theaetetus:: Well, people say they do.

Stranger:: And also things that are open to view, on the earth and in the sky, and related matters?

Theaetetus:: Of course.

Stranger:: And when people make general statements in private discussions about being and coming-to-be, we know that sophists are clever at contradicting them and they also make other people able to do the same thing?

Theaetetus:: Absolutely.

Stranger:: And what about laws and all kinds of political issues? Don't sophists promise to make people capable of engaging in controversies about them?

Theaetetus:: If they didn't promise that, practically no one would bother to discuss anything with them.

Stranger:: As a matter of fact you can find anything you need to say to contradict any expert himself, both in general and within each particular field, laid out published and written down for anybody who wants to learn it.

Theaetetus:: Apparently you're talking about Protagoras' writings on wrestling and other fields of expertise.

Stranger:: And on many other things, too, my friend. In fact, take expertise in disputation as a whole. Doesn't it seem like a capacity that's sufficient for carrying on controversies about absolutely everything?

Theaetetus:: It doesn't seem to leave much of anything out, anyway.

Stranger:: But for heaven's sake, my boy, do you think that's possible? Or maybe you young people see into this issue more keenly than we do.

Theaetetus:: Into what? What are you getting at? I don't fully understand what you're asking.

Stranger:: Whether it's possible for any human being to know everything.

Theaetetus:: If it were, sir, we'd be very well off.

Stranger:: But how could someone who didn’t know about a subject make a sound objection against someone who knew about it?

Theaetetus:: He couldn’t.

Stranger:: Then what is it in the sophist’s capacity that’s so amazing?

Theaetetus:: About what?

Stranger:: How the sophists can ever make young people believe they’re wiser than everyone else about everything. It’s obvious that they didn’t make correct objections against anyone, or didn’t appear so to young people. Or if they did appear to make correct objections, but their controversies didn’t make them look any the wiser for it, then—just as you say— people would hardly be willing to pay them money to become their students.

Theaetetus:: Right.

Stranger:: But people are willing to?

Theaetetus:: They certainly are.

Stranger:: Since sophists do seem, I think, to know about the things they dispute about.

Theaetetus:: Of course.

Stranger:: And they do it, we say, about every subject?

Theaetetus:: Yes.

Stranger:: So to their students they appear wise about everything?

Theaetetus:: Of course.

Stranger:: But without actually being wise—since that appeared impossible.

Theaetetus:: Of course it’s impossible.

Stranger:: So the sophist has now appeared as having a kind of belief-knowledge about everything, but not truth.

Theaetetus:: Absolutely. What you’ve said about them is probably just right.

Stranger:: But let’s consider a pattern that will exhibit them more clearly.

Theaetetus:: What pattern is that?

Stranger:: This one. Pay attention to me, and try to do a good job of answering my questions.

Theaetetus:: Which questions?

Stranger:: If someone claimed that by a single kind of expertise he could know, not just how to say things or to contradict people, but how to make and do everything, then …

Theaetetus:: What do you mean, everything?

Stranger:: You don’t understand the first thing I say! Seemingly you don’t understand everything!

Theaetetus:: No, I don’t.

Stranger:: Well, I mean everything to include you and me and also the other animals and plants …

Theaetetus:: What are you talking about?

Stranger:: If someone claimed that he'd make you and me and all the other living things …

Theaetetus:: What kind of making are you talking about? You’re not talking about some kind of gardener—after all, you did say he made animals.

Stranger:: Yes, and also I mean the sea and earth and heaven and gods and everything else. And furthermore he makes them each quickly and sells them at a low price.

Theaetetus:: You’re talking about some kind of game for schoolchildren.

Stranger:: Well, if someone says he knows everything and would teach it to someone else cheaply and quickly, shouldn't we think it's a game?

Theaetetus:: Of course.

Stranger:: Do you know of any game that involves more expertise than imitation does, and is more engaging?

Theaetetus:: No, not at all, since you've collected everything together and designated a very broad, extremely diverse type.

Stranger:: So think about the man who promises he can make everything by means of a single kind of expertise. Suppose that by being expert at drawing he produces things that have the same names as real things. Then we know that when he shows his drawings from far away he'll be able to fool the more mindless young children into thinking that he can actually produce anything he wants to.

Theaetetus:: Of course.

Stranger:: Well then, won't we expect that there's another kind of expertise—this time having to do with words—and that someone can use it to trick young people when they stand even farther away from the truth about things? Wouldn't he do it by putting words in their ears, and by showing them spoken copies of everything, so as to make them believe that the words are true and that the person who's speaking to them is the wisest person there is?

Theaetetus:: Yes, why shouldn't there be that kind of expertise too?

Stranger:: So, Theaetetus, suppose enough time has passed and the sophist's hearers have gotten older, and that they approach closer to real things and are forced by their experiences to touch up palpably against them. Won't most of them inevitably change their earlier beliefs, which made large things appear small and easy things appear hard? And won't the facts they've encountered in the course of their actions completely overturn all the appearances that had come to them in the form of words?

Theaetetus:: Yes—at least as far as what someone my age can tell. But I think I'm one of the young people who are still standing far away from real things.

Stranger:: That's why all of us here will keep trying to take you as close to them as possible, but without your needing those experiences to force you. But tell me about the sophist. Is it obvious by now that he's a kind of cheat who imitates real things? Or are we still in any doubt about whether he truly knows all the things that he seems to be able to engage in controversies about?

Theaetetus:: But, sir, how could we be in any doubt? By this time it's pretty obvious from what we've said that he's one of those people who play games.

Stranger:: So we have to regard him as a cheat and an imitator.

Theaetetus:: How could we avoid it?

Stranger:: Well, now it's our job not to let the beast escape. We've almost hemmed him in with one of those net-like devices that words provide for things like this. So anyway he won't get away from this next point.

Theaetetus:: What is it?

Stranger:: From being taken to be a kind of magician.

Theaetetus:: That's what he seems to me to be too.

Stranger:: So it's settled. We'll divide the craft of copy-making as quickly as we can and we'll go down into it. Then if the sophist gives up right away we'll obey the royal command and we'll capture him and hand our catch over to the king. But if the sophist slips down somewhere into the parts of the craft of imitation, we'll follow along with him and we’ll divide each of the parts that contain him until we catch him. Anyway, neither he nor any other kind will ever be able to boast that he’s escaped from the method of people who are able to chase a thing through both the particular and the general.

Theaetetus:: Good. That’s how we have to do it.

Stranger:: Going by the method of division that we’ve used so far, I think I see two types of imitation here too. But I don’t think I can clearly tell yet which one the type or form we’re looking for is in.

Theaetetus:: Well, first tell us what distinction you mean.

Stranger:: One type of imitation I see is the art of likeness-making. That’s the one we have whenever someone produces an imitation by keeping to the proportions of length, breadth, and depth of his model, and also by keeping to the appropriate colors of its parts.

Theaetetus:: But don’t all imitators try to do that?

Stranger:: Not the ones who sculpt or draw very large works. If they reproduced the true proportions of their beautiful subjects, you see, the upper parts would appear smaller than they should, and the lower parts would appear larger, because we see the upper parts from farther away and the lower parts from closer.

Theaetetus:: Of course.

Stranger:: So don’t those craftsmen say goodbye to truth, and produce in their images the proportions that seem to be beautiful instead of the real ones?

Theaetetus:: Absolutely.

Stranger:: So can’t the first sort of image be called a likeness, since it’s like the thing?

Theaetetus:: Yes.

Stranger:: And as we said before, the part of imitation that deals with that should be called likeness-making.

Theaetetus:: Yes.

Stranger:: Now, what are we going to call something that appears to be like a beautiful thing, but only because it's seen from a viewpoint that's not beautiful, and would seem unlike the thing it claims to be like if you came to be able to see such large things adequately? If it appears the way the thing does but in fact isn't like it, isn't it an appearance?

Theaetetus:: Of course.

Stranger:: And this part of imitation covers a great deal of painting and of the rest of imitation.

Theaetetus:: Of course.

Stranger:: Wouldn't appearance-making be the right thing to call expertise in producing appearances that aren't likenesses?

Theaetetus:: Yes, definitely.

Stranger:: Well, these are the two types of copy-making I meant, likeness-making and appearance-making.

Theaetetus:: You were right about that.

Stranger:: But still I can't see clearly the thing I was in doubt about then, namely, which type we should put the sophist in. He's really an amazing man—very hard to make out. He's still escaped neatly into an impossibly confusing type to search through.

Theaetetus:: It seems that way.

Stranger:: Are you agreeing with me because you know that, or is the current dragging you, so to speak, into agreement so quickly because the discussion has given you a habit of agreeing?

Theaetetus:: What do you mean? Why do you say that?

Stranger:: Really, my young friend, this is a very difficult investigation we're engaged in. This appearing, and this seeming but not being, and this saying things but not true things—all these issues are full of confusion, just as they always have been. It's extremely hard, Theaetetus, to say what form of speech we should use to say that there really is such a thing as false saying or believing, and moreover to utter this without being caught in a verbal conflict.

Theaetetus:: Why?

Stranger:: Because this form of speech of ours involves the rash assumption that that which is not is, since otherwise falsity wouldn't come into being. But when we were boys, my boy, the great Parmenides testified to us from start to finish, speaking in both prose and poetic rhythms, that

> Never shall this force itself on us, that that which is not may be;
>
> While you search, keep your thought far away from this path.

So we have his testimony to this. And our own way of speaking itself would make the point especially obvious if it we examined it a little. So if it's all the same to you, let's look at that first.

Theaetetus:: As far as I'm concerned you can do what you want. But as far as our way of speaking is concerned, think about how it will go best, and follow along with it and take me along the road with you.

Stranger:: That's what we have to do. Tell me: do we dare to utter the sound that which in no way is?

Theaetetus:: Of course.

Stranger:: But suppose one of our listeners weren't debating or playing a game but had to think seriously and answer the following question: What should the name, that which is not, be applied to? Why do we think he’ use it, and in what connection, and for what kind of purpose? And what would he indicate by it to someone else who wanted to find out about it?

Theaetetus:: That’s a hard question. In fact, it’s just about completely, impossibly confusing for someone like me to answer.

Stranger:: But anyway this much is obvious to us, that that which is not can’t be applied to any of those which are.

Theaetetus:: Of course not.

Stranger:: So if you can’t apply it to that which is, it wouldn’t be right either to apply it to something.

Theaetetus:: Why not?

Stranger:: It’s obvious to us that we always apply this something to a being, since it’s impossible to say it by itself, as if it were naked and isolated from all beings. Isn’t that right?

Theaetetus:: Yes.

Stranger:: Are you agreeing because you’re thinking that a person who says something has to be saying some one thing?

Theaetetus:: Yes.

Stranger:: Since you'd say that something is a sign of one, and that a couple of things is a sign of two, and somethings is a sign of a plurality?

Theaetetus:: Of course.

Stranger:: And it’s absolutely necessary, it seems, that someone who does not say something says nothing at all.

Theaetetus:: Yes.

Stranger:: Therefore don’t we have to refuse to admit that a person like that speaks but says nothing? Instead, don’t we have to deny that anyone who tries to utter that which is not is even speaking?

Theaetetus:: Then our way of speaking would have reached the height of confusion.

Stranger:: Don’t do any boasting yet. There are still more confusions to come, including the primary and most fundamental one, which actually happens to be at the source of the whole problem.

Theaetetus:: What do you mean? Don’t hold back. Tell me.

Stranger:: To that which is there might belong some other of those which are.

Theaetetus:: Of course.

Stranger:: But shall we say that any of those which are can ever belong to that which is not?

Theaetetus:: How could they?

Stranger:: Now then, we take all the numbers to be beings.

Theaetetus:: Yes, if we take anything else to be.

Stranger:: Then let’s not even try to apply either plurality of number or one to that which is not.

Theaetetus:: Our way of speaking itself tells us that it would be wrong to try to.

Stranger:: Then how would anyone try either to say those which are not or that which is not out loud, or even grasp them in thought, apart from number?

Theaetetus:: Tell me.

Stranger:: Whenever we speak of those which are not, aren’t we trying to apply numerical plurality to them?

Theaetetus:: Of course.

Stranger:: And when we speak of that which is not aren’t we applying one to it?

Theaetetus:: Obviously.

Stranger:: But we say it isn't either right or correct to try to attach that which is to that which is not.

Theaetetus:: That's absolutely true.

Stranger:: Do you understand, then, that it's impossible to say, speak, or think that which is not itself correctly by itself? It's unthinkable, unsayable, unutterable, and unformulable in speech.

Theaetetus:: Absolutely.

Stranger:: So was I wrong just now when I said that I would formulate the biggest confusion about it, when we have this other one to state which is even bigger?

Theaetetus:: What is it?

Stranger:: My good young friend, don't you notice on the basis of the things we said that that which is not even confuses the person who's refuting it in just this way, that whenever someone tries to refute it, he's forced to say mutually contrary things about it?

Theaetetus:: What do you mean? Say it more clearly.

Stranger:: You shouldn't expect more clarity from me. I was the one who made the statement that that which is not should not share either in one or in plurality. But even so I've continued after all that to speak of it as one, since I say that which is not. You understand?

Theaetetus:: Yes.

Stranger:: And again a little earlier I said that it is unutterable, unsayable, and inexpressible in speech. Do you follow?

Theaetetus:: I follow, of course.

Stranger:: So in trying to attach being to it wasn't I saying things that were the contrary of what I'd said before?

Theaetetus:: Apparently.

Stranger:: And in attaching that which, wasn’t I speaking of it as one?

Theaetetus:: Yes.

Stranger:: And also in speaking of it as something inexpressible in speech, unsayable, and unutterable, I was speaking of it as one thing.

Theaetetus:: Of course.

Stranger:: But we say that if someone speaks correctly he shouldn’t definitely fix it as either one or plural. He shouldn’t even call it it at all, since even calling it by that label he'd be addressing it by means of the form, one.

Theaetetus:: Absolutely.

Stranger:: Then what would somebody say about me? He'd find that the refutation of that which is not has been defeating me for a long time. So, as I said, let’s not use what I say to help us think of how to speak correctly about that which is not. Come on, let’s use what you say instead.

Theaetetus:: What do you mean?

Stranger:: Come on, pull yourself together for us as well as you can and try it—since you’re young. Try to say something correct about that which is not, without attaching either being, one, or numerical plurality to it.

Theaetetus:: I'd have to have a strangely large amount of enthusiasm for the project to try it myself after seeing what you’ve gone through.

Stranger:: Well, let’s give up on both you and me, if you prefer. But until we meet someone who can do it let’s say that the sophist has stopped at nothing. He’s escaped down into inaccessible confusion.

Theaetetus:: He certainly seems to have.

Stranger:: So if we say he has some expertise in appearance-making, it will be easy for him to grab hold of our use of words in return and twist our words in the contrary direction. Whenever we call him a copy-maker he'll ask us what in the world we mean by a "copy." We need to think, Theaetetus, about how to answer the young man's question.

Theaetetus:: Obviously we'll say we mean copies in water and mirrors, and also copies that are drawn and stamped and everything else like that.

Stranger:: Evidently, Theaetetus, you haven't seen a sophist.

Theaetetus:: Why do you say that?

Stranger:: He'll seem to you to have his eyes shut, or else not to have any eyes at all.

Theaetetus:: How?

Stranger:: He'll laugh at what you say when you answer him that way, with talk about things in mirrors or sculptures, and when you speak to him as if he could see. He'll pretend he doesn't know about mirrors or water or even sight, and he'll put his question to you only in terms of words.

Theaetetus:: What sort of question?

Stranger:: He'll ask about what runs through all those things which you call many, but which you thought you should call by the one name, copy, to cover them all, as if they were all one thing. Say something, then, and defend yourself, and don't give any ground to him.

Theaetetus:: What in the world would we say a copy is, sir, except something that's made similar to a true thing and is another thing that's like it?

Stranger:: You're saying it's another true thing like it? Or what do you mean by like it?

Theaetetus:: Not that it's true at all, but that it resembles the true thing.

Stranger:: Meaning by true, really being?

Theaetetus:: Yes.

Stranger:: And meaning by not true, contrary of true?

Theaetetus:: Of course.

Stranger:: So you're saying that that which is like is not really that which is, if you speak of it as not true.

Theaetetus:: But it is, in a way.

Stranger:: But not truly, you say.

Theaetetus:: No, except that it really is a likeness.

Stranger:: So it's not really what is, but it really is what we call a likeness?

Theaetetus:: Maybe that which is not is woven together with that which is in some way like that—it's quite bizarre.

Stranger:: Of course it's strange. Anyway, you can see that the many-headed sophist is still using this interweaving to force us to agree unwillingly that that which is not in a way is.

Theaetetus:: I definitely do see it.

Stranger:: Well then, how can we define his field of expertise, so as to be consistent?

Theaetetus:: What do you mean? What kind of problem are you afraid of?

Stranger:: When we say that he deceives us about appearances and that he's an expert at deception, are we saying so because his expertise makes our souls believe what is false? Or what shall we say?

Theaetetus:: Just that. What else would we say?

Stranger:: Again, a false belief will be a matter of believing things that are contrary to those which are? Or what?

Theaetetus:: Yes, contrary.

Stranger:: So you're saying that a false belief is believing those which are not.

Theaetetus:: Necessarily.

Stranger:: Believing that those which are not are not, or that those which in no way are in a way are?

Theaetetus:: That those which are not are in a way, it has to be, if anyone is ever going to be even a little bit wrong.

Stranger:: Well, doesn't a false belief also believe that those which completely are in no way are?

Theaetetus:: Yes.

Stranger:: And this is false too?

Theaetetus:: Yes.

Stranger:: And I think we'll also regard false speaking the same way, as saying that those which are are not, and that those which are not are.

Theaetetus:: How else would it be false?

Stranger:: I don't suppose there's any other way. The sophist, though, is going to deny that this way is possible. And how could any sensible person accept it, now that what we agreed to earlier has been reinforced. Do we understand what he's saying, Theaetetus?

Theaetetus:: How could we not understand that when we dare to say that falsity is in beliefs and words contain falsity, we're saying what is contrary to what we said just before. We're forced to attach that which is to that which is not, even though we agreed just now that that's completely impossible.

Stranger:: Your memory's correct. But think about what we need to do about the sophist. You see how many and easily available his supply of objections and confusions is if we assume, as we search for him, that he's an expert at cheating and falsehood-making.

Theaetetus:: Definitely.

Stranger:: He's got a practically infinite supply of them, and we've gone through only a small fraction.

Theaetetus:: If so, then it seems it would be impossible to catch him.

Stranger:: What, then? Are we going to go soft and give up?

Theaetetus:: I say we shouldn't, if there's even the smallest chance that we can catch him.

Stranger:: So you'll be forgiving and, as you said, happy if we can somehow extricate ourselves even slightly from such a powerful argument?

Theaetetus:: Of course.

Stranger:: Then I've got something even more urgent to request.

Theaetetus:: What?

Stranger:: Not to think that I'm turning into some kind of patricide.

Theaetetus:: What do you mean?

Stranger:: In order to defend ourselves we're going to have to subject father Parmenides' saying to further examination, and insist by brute force both that that which is not somehow is, and then again that that which is somehow is not.

Theaetetus:: It does seem that in what we're going to say, we'll to have to fight through that issue.

Stranger:: That's obvious even to a blind man, as they say. We'll never be able to avoid having to make ourselves ridiculous by saying conflicting things whenever we talk about false statements and beliefs, either as copies or likenesses or imitations or appearances, or about whatever sorts of expertise there are concerning those things—unless, that is, we either refute Parmenides' claims or else agree to accept them.

Theaetetus:: That's true.

Stranger:: So that's why we have to be bold enough to attack what our father says. Or, if fear keeps us from doing that, then we'll have to leave it alone completely.

Theaetetus:: Fear, anyway, isn't going to stop us.

Stranger:: Well then, I've got a third thing to ask you, something small.

Theaetetus:: Just tell me what it is.

Stranger:: When I was talking a minute ago I said that I've always given up whenever I've tried to refute what Parmenides said, just the way I did this time.

Theaetetus:: Yes, you did say that.

Stranger:: I'm afraid I'll seem insane to you if I'm always shifting my position back and forth, given what I've said. It's for your sake that we'll be trying to refute what Parmenides said—if we can do it.

Theaetetus:: Go ahead, then. Don't worry about that. I won't think you're behaving inappropriately in any way if you go right ahead with your refutation and demonstration.

Stranger:: Well then, how shall I begin this dangerous discussion? The path we absolutely have to turn onto, my boy, is this.

Theaetetus:: Namely, …?

Stranger:: We have to reconsider whether we may not be somehow confused about things that now seem to be clear, and whether over-hasty judgment may make us agree too easily.

Theaetetus:: Say what you mean more clearly.

Stranger:: Parmenides’ way of talking to us has been rather easygoing, it seems to me. So does the way of talking that everyone uses who has ever urged us to specify just how many beings there are and what they’re like.

Theaetetus:: How?

Stranger:: They each appear to me to tell us a myth, as if we were children. One tells us that there are three beings, and that sometimes they’re somehow at war with each other, while at other times they become friendly, marry, give birth, and bring up their offspring. Another one says that there are two beings, wet and dry or hot and cold. He marries them off and makes them set up house together. And our Eleatic tribe, starting from Xenophanes and even people before him, tells us their myth on the assumption that what they call “all things” are just one. Later on, some Ionian and Sicilian muses both had the idea that it was safer to weave the two views together. They say that that which is is both many and one, and is bound by both hatred and friendship. According to the terser of these muses, in being taken apart they’re brought together. The more relaxed muses, though, allow things to be free from that condition sometimes. They say that all that there is alternates, and that sometimes it’s one and friendly under Aphrodite’s influence, but at other times it’s many and at war with itself because of some kind of strife. It’s hard to say whether any one of these thinkers has told us the truth or not, and it wouldn’t be appropriate for us to be critical of such renowned and venerable men. But it wouldn’t be offensive to note the following thing, either.

Theaetetus:: What?

Stranger:: That they’ve been inconsiderate and contemptuous toward us. They’ve simply been talking their way through their explanations, without paying any attention to whether we were following them or were left behind.

Theaetetus:: What do you mean?

Stranger:: For heaven’s sake, Theaetetus, do you understand anything of what they mean each time one of them says that many or one or two things are or have become or are becoming, or when another one speaks of hot mixed with cold and supposes that there are separations and combinations? Earlier in my life I used to think I understood exactly what someone meant when he said just what we’re confused about now, namely, this is not. You do see what confusion we’re in about it?

Theaetetus:: Yes, I do.

Stranger:: But just perhaps the very same thing has happened to us equally about is. We say we’re in the clear about it, and that we understand when someone says it, but that we don’t understand is not. But maybe we’re in the same state about both.

Theaetetus:: Maybe.

Stranger:: And let’s suppose the same thing may be true of the other expressions we’ve just used.

Theaetetus:: All right.

Stranger:: We can look into most of them later, if that seems to be the best thing to do. Now we’ll think about the most fundamental and most important expression.

Theaetetus:: Which one? Oh, obviously you’re saying that being is the one we have to explore first—that we have to ask what people who say it think they’re indicating by it.

Stranger:: You understand exactly, Theaetetus. I’m saying we have to follow the track this way. Let’s ask—as if they were here—”Listen, you people who say that all things are just some two things, hot and cold or some such pair. What are you saying about them both when you say that they both are and each one is? What shall we take this being to be? Is it a third thing alongside those two beings, so that according to you everything is no longer two but three? Surely in calling one or the other of the two of them being, you aren't saying that they both are, since then in either case they' be one and not two."

Theaetetus:: That's true.

Stranger:: "But you do want to call both of them being?"

Theaetetus:: Probably.

Stranger:: "But," we'll say, "if you did that, friends, you'd also be saying very clearly that the two are one."

Theaetetus:: That's absolutely right.

Stranger:: "Then clarify this for us, since we're confused about it. What do you want to signify when you say being? Obviously you've known for a long time. We thought we did, but now we're confused about it. So first teach it to us, so we won't think we understand what you're saying when just the contrary is the case." Would it be the least bit inappropriate for us to ask them this, and anyone else who says that everything is more than one?

Theaetetus:: Not at all.

Stranger:: Well, then, shouldn't we do our best to find out from the people who say that everything is one what they mean by being?

Theaetetus:: Of course.

Stranger:: Then they should answer this question: "Do you say that only one thing is?" "We do," they'll say, won't they?

Theaetetus:: Yes.

Stranger:: "Well then, you call something being?"

Theaetetus:: Yes.

Stranger:: "Is that just what you call one, so that you use two names for the same thing? Or what?"

Theaetetus:: How will they answer that question?

Stranger:: Obviously it's not the easiest thing in the world to answer that question—or any other question, either—for someone who makes the supposition that they do.

Theaetetus:: Why not?

Stranger:: Surely it's absurd for someone to agree that there are two names when he maintains that there's only one thing.

Theaetetus:: Of course.

Stranger:: And it's completely absurd, and unacceptable, for someone to say that there's a name if there's no account of it.

Theaetetus:: What do you mean?

Stranger:: If he supposes that a thing is different from its name, then surely he's mentioning two things.

Theaetetus:: Yes.

Stranger:: And moreover if he supposes that the name is the same as the thing, he'll either be forced to say that the name is the name of nothing, or else, if he says that it's the name of something, then it's the name of nothing other than itself and so will turn out to be only the name of a name and nothing else.

Theaetetus:: Yes.

Stranger:: And also the one, being the name of the one, will also be the one of the name.

Theaetetus:: It will have to be.

Stranger:: Well then, will they say that the whole is different from the one being, or the same as it?

Theaetetus:: Of course they'll say it's the same, and they do.

Stranger:: But suppose a whole is, as even Parmenides says;

> All around like the bulk of a well-formed sphere,
> Equal-balanced all ways from the middle, since neither anything more
> Must it be, this way or that way, nor anything less.

If it's like that, then that which is will have a middle and extremities. And if it has those then it absolutely has to have parts, doesn't it?

Theaetetus:: Yes.

Stranger:: But if a thing has parts then nothing keeps it from having the characteristic of being one in all its parts, and in that way it's all being and it's also one whole.

Theaetetus:: Of course.

Stranger:: But something with that characteristic can't be just the one itself, can it?

Theaetetus:: Why not?

Stranger:: Surely a thing that's truly one, properly speaking, has to be completely without parts.

Theaetetus:: Yes.

Stranger:: But a thing like what we've described, which consists of many parts, won't fit that account.

Theaetetus:: I understand.

Stranger:: Now if that which is has the characteristic of the one in this way, will it be one and a whole? Or shall we simply deny it's a whole at all?

Theaetetus:: That's a hard choice.

Stranger:: You're right. If it has the characteristic of somehow being one, it won't appear to be the same as the one. Moreover, everything will then be more than one.

Theaetetus:: Yes.

Stranger:: Further if that which is is not a whole by possessing that as a characteristic, but rather just is the whole itself, that which is will turn out to be less than itself.

Theaetetus:: Certainly.

Stranger:: And because it's deprived of itself, that which is will be not being, according to that account.

Theaetetus:: Yes.

Stranger:: And everything will be more than one, since that which is and the whole will each have its own separate nature.

Theaetetus:: Yes.

Stranger:: But if the whole is not at all, then the very same things are true of that which is, and in addition to not being, it would not even become a being.

Theaetetus:: Why not?

Stranger:: Invariably whatever becomes has at some point become as a whole. So we can't label either being or becoming as being without taking the whole to be among the beings too.

Theaetetus:: That seems entirely right.

Stranger:: And moreover something that isn't a whole can't be of any quantity at all, since something that's of a certain quantity has to be a whole of that quantity, whatever it may be.

Theaetetus:: Exactly.

Stranger:: And millions of other issues will also arise, each generating indefinitely many confusions, if you say that being is only two or one.

Theaetetus:: The ones that just turned up show that. One problem led to another, and at each step there was more and more difficulty and uncertainty about what we'd just said at the previous stage.

Stranger:: We haven’t gone through all the detailed accounts that people give of that which is and that which is not, but this is enough. Now we have to look at the people who discuss the issue in another way. Our aim is to have them all in view and that way to see that saying what that which is is isn’t a bit easier than saying what that which is not is.

Theaetetus:: So we need to go on to these people too.

Stranger:: It seems that there’s something like a battle of gods and giants among them, because of their dispute with each other over being.

Theaetetus:: How?

Stranger:: One group drags everything down to earth from the heavenly region of the invisible, actually clutching rocks and trees with their hands. When they take hold of all these things they insist that only what offers tangible contact is, since they define being as the same as body. And if any of the others say that something without a body is, they absolutely despise him and won’t listen to him any more.

Theaetetus:: These are frightening men you’re talking about. I’ve met quite a lot of them already.

Stranger:: Therefore the people on the other side of the debate defend their position very cautiously, from somewhere up out of sight. They insist violently that true being is certain nonbodily forms that can be thought about. They take the bodies of the other group, and also what they call the truth, and they break them up verbally into little bits and call them a process of coming-to-be instead of being. There’s a never-ending battle going on constantly between them about this issue.

Theaetetus:: That’s true.

Stranger:: Let's talk with each of these groups about the being that they posit.

Theaetetus:: How shall we do it?

Stranger:: It's easier to talk with the ones who put being in the forms. They're gentler people. It's harder—and perhaps just about impossible— with the ones who drag everything down to body by force. It seems to me that we have to deal with them this way.

Theaetetus:: Namely …?

Stranger:: Mainly by making them actually better than they are—if we somehow could. But if we can't do that in fact, then let's do it in words, by supposing that they're willing to answer less wildly than they actually do. Something that better people agree to is worth more than what worse ones agree to. Anyway we're not concerned with the people; we're looking for what's true.

Theaetetus:: That's absolutely right.

Stranger:: Then tell the better people to answer you and interpret what they say.

Theaetetus:: All right.

Stranger:: Then let them tell us this: do they say that anything is a mortal animal?

Theaetetus:: Of course they do.

Stranger:: And they agree that a mortal animal is an ensouled body?

Theaetetus:: Of course.

Stranger:: And so they're placing soul among the beings?

Theaetetus:: Yes.

Stranger:: What then? Do they say that this soul is just and that soul is unjust, and that this one's intelligent and that one isn't?

Theaetetus:: Of course.

Stranger:: But isn't a soul just by the possession and presence of justice, and isn't another soul contrary to it by the possession and presence of the contrary?

Theaetetus:: Yes, they agree with that.

Stranger:: But they'll say further that at any rate what can be present to a thing or absent from it is something.

Theaetetus:: Yes.

Stranger:: So since there is justice and intelligence and the rest of virtue, and also their contraries, and moreover since there is a soul in which those things come to be present, do they say that any of these are visible or touchable, or that they all are invisible?

Theaetetus:: They can hardly say any of them is visible.

Stranger:: And what about these invisible things? Do they say that they have bodies?

Theaetetus:: They don't give one single answer to that question. They do say that the soul seems to them to have a kind of body. But as far as intelligence and the other things you've asked about are concerned, they're ashamed and don't dare either to agree that they are not beings or to insist that everything is a body.

Stranger:: Obviously this breed of men has improved, Theaetetus. The native earthborn giants would never have been ashamed to hold the line for their position, that anything they can't squeeze in their hands is absolutely nothing.

Theaetetus:: That pretty much describes their thinking.

Stranger:: Then let's go back to questioning them. It's enough if they admit that even a small part of that which is doesn't have body. They need to say something about what's common to both it and the things that do have body, which they focus on when they say that they both are. Maybe that will raise some confusion for them. If it does, then think about whether they' be willing to accept our suggestion that that which is is something like the following.

Theaetetus:: Like what? Tell me and maybe we'll know.

Stranger:: I'm saying that a thing really is if it has any capacity at all, either by nature to do something to something else or to have even the smallest thing done to it by even the most trivial thing, even if it only happens once. I'll take it as a definition that those which are amount to nothing other than capacity.

Theaetetus:: They accept that, since they don't have anything better to say right now.

Stranger:: Fine. Maybe something else will occur to them later, and to us too. For now let's agree with them on this much.

Theaetetus:: All right.

Stranger:: Let's turn to the other people, the friends of the forms. You serve as their interpreter for us.

Theaetetus:: All right.

Stranger:: You people distinguish coming-to-be and being and say that they are separate? Is that right?

Theaetetus:: "Yes."

Stranger:: And you say that by our bodies and through perception we have dealings with coming-to-be, but we deal with real being by our souls and through reasoning. You say that being always stays the same and in the same state, but coming-to-be varies from one time to another.

Theaetetus:: "We do say that."

Stranger:: And what shall we say this dealing with is that you apply in the two cases? Doesn't it mean what we said just now?

Theaetetus:: "What?"

Stranger:: What happens when two things come together, and by some capacity one does something to the other or has something done to it. Or maybe you don’t hear their answer clearly, Theaetetus. But I do, probably because I’m used to them.

Theaetetus:: Then what account do they give?

Stranger:: They don’t agree with what we just said to the earth people about being.

Theaetetus:: What’s that?

Stranger:: We took it as a sufficient definition of beings that the capacity be present in a thing to do something or have something done to it, to or by even the smallest thing or degree.

Theaetetus:: Yes.

Stranger:: In reply they say that coming-to-be has the capacity to do something or have something done to it, but that this capacity doesn’t fit with being.

Theaetetus:: Is there anything to that?

Stranger:: We have to reply that we need them to tell us more clearly whether they agree that the soul knows and also that being is known.

Theaetetus:: “Yes,” they say.

Stranger:: Well then, do you say that knowing and being known are cases of doing, or having something done, or both? Is one of them doing and the other having something done? Or is neither a case of either?

Theaetetus:: Obviously neither is a case of either, since otherwise they’ be saying something contrary to what they said before.

Stranger:: Oh, I see. You mean that if knowing is doing something, then necessarily what is known has something done to it. When being is known by knowledge, according to this account, then insofar as it’s known it’s changed by having something done to it—which we say wouldn’t happen to something that’s at rest.

Theaetetus:: That’s correct.

Stranger:: But for heaven’s sake, are we going to be convinced that it’s true that change, life, soul, and intelligence are not present in that which wholly is, and that it neither lives nor thinks, but stays changeless, solemn, and holy, without any understanding?

Theaetetus:: If we did, sir, we'd be admitting something frightening.

Stranger:: But are we going to say that it has understanding but doesn’t have life?

Theaetetus:: Of course not.

Stranger:: But are we saying that it has both those things in it while denying that it has them in its soul?

Theaetetus:: How else would it have them?

Stranger:: And are we saying that it has intelligence, life, and soul, but that it’s at rest and completely changeless even though it’s alive?

Theaetetus:: All that seems completely unreasonable.

Stranger:: Then both that which changes and also change have to be admitted as being.

Theaetetus:: Of course.

Stranger:: And so, Theaetetus, it turns out that if no beings change then nothing anywhere possesses any intelligence about anything.

Theaetetus:: Absolutely not.

Stranger:: But furthermore if we admit that everything is moving and changing, then on that account we take the very same thing away from those which are.

Theaetetus:: Why?

Stranger:: Do you think that without rest anything would be the same, in the same state in the same respects?

Theaetetus:: Not at all.

Stranger:: Well then, do you see any case in which intelligence is or comes-to-be anywhere without these things?

Theaetetus:: Not in the least.

Stranger:: And we need to use every argument we can to fight against anyone who does away with knowledge, understanding, and intelligence but at the same time asserts anything at all about anything.

Theaetetus:: Definitely.

Stranger:: The philosopher—the person who values these things the most—absolutely has to refuse to accept the claim that everything is at rest, either from defenders of the one or from friends of the many forms. In addition he has to refuse to listen to people who say that that which is changes in every way. He has to be like a child begging for "both," and say that that which is—everything—is both the unchanging and that which changes.

Theaetetus:: True.

Stranger:: Well now, apparently we've done a fine job of making our account pull together that which is, haven't we?

Theaetetus:: Absolutely.

Stranger:: But for heaven's sake, Theaetetus,... Now I think we'll recognize how confused our investigation about it is.

Theaetetus:: Why, though? What do you mean?

Stranger:: Don't you notice, my young friend, that we're now in extreme ignorance about it, though it appears to us that we're saying something.

Theaetetus:: It does to me anyway. But I don’t completely understand how we got into this situation without noticing.

Stranger:: Then think more clearly about it. Given what we’ve just agreed to, would it be fair for someone to ask us the same question we earlier asked the people who say that everything is just hot and cold?

Theaetetus:: What was it? Remind me.

Stranger:: Certainly. And I’ll try, at any rate, to do it by asking you in just the same way as I asked them, so that we can move forward at the same pace.

Theaetetus:: Good.

Stranger:: Now then, wouldn’t you say that change and rest are completely contrary to each other?

Theaetetus:: Of course.

Stranger:: And you'd say they both equally are, and that each of them equally is?

Theaetetus:: Yes.

Stranger:: When you admit that they are, are you saying that both and each of them change?

Theaetetus:: Not at all.

Stranger:: And are you signifying that they rest when you say that they both are?

Theaetetus:: Of course not.

Stranger:: So do you conceive that which is as a third thing alongside them which encompasses rest and change? And when you say that they both are, are you taking the two of them together and focusing on their association with being?

Theaetetus:: It does seem probably true that when we say change and rest are, we do have a kind of omen of that which is as a third thing.

Stranger:: So that which is isn't both change and rest; it's something different from them instead.

Theaetetus:: It seems so.

Stranger:: Therefore by its own nature that which is doesn't either rest or change.

Theaetetus:: I suppose it doesn't.

Stranger:: Which way should someone turn his thoughts if he wants to establish for himself something clear about it?

Theaetetus:: I don't know.

Stranger:: I don't think any line is easy. If something isn't changing, how can it not be resting? And how can something not change if it doesn't in any way rest? But now that which is appears to fall outside both of them. Is that possible?

Theaetetus:: Absolutely not.

Stranger:: In this connection we ought to remember the following.

Theaetetus:: What?

Stranger:: When we were asked what we should apply the name that which is not to, we became completely confused. Do you remember?

Theaetetus:: Of course.

Stranger:: And now aren't we in just as much confusion about that which is?

Theaetetus:: We seem to be in even more confusion, if that's possible.

Stranger:: Then we've now given a complete statement of our confusion. But there's now hope, precisely because both that which is and that which is not are involved in equal confusion. That is, in so far as one of them is clarified, either brightly or dimly, the other will be too. And if we can't see either of them, then anyway we'll push our account of both of them forward as well as we can.

Theaetetus:: Fine.

Stranger:: Let's give an account of how we call the very same thing, whatever it may be, by several names.

Theaetetus:: What, for instance? Give me an example.

Stranger:: Surely we're speaking of a man even when we name him several things, that is, when we apply colors to him and shapes, sizes, defects, and virtues. In these cases and a million others we say that he's not only a man but also is good and indefinitely many different things. And similarly on the same account we take a thing to be one, and at the same time we speak of it as many by using many names for it.

Theaetetus:: That's true.

Stranger:: Out of all this we've prepared a feast for young people and for old late-learners. They can grab hold of the handy idea that it's impossible for that which is many to be one and for that which is one to be many. They evidently enjoy forbidding us to say that a man is good, and only letting us say that that which is good is good, or that the man is a man. You've often met people, I suppose, who are carried away by things like that. Sometimes they're elderly people who are amazed at this kind of thing, because their understanding is so poor and they think they've discovered something prodigiously wise.

Theaetetus:: Of course.

Stranger:: Then let's direct our questions now both to these people and also to the others we were talking with before. That way our account will be addressed to everyone who's ever said anything at all about being.

Theaetetus:: What questions do you mean?

Stranger:: Shall we refuse to apply being to change or to rest, or anything to anything else? Shall we take these things to be unblended and incapable of having a share of each other in the things we say? Or shall we pull them all together and treat them all as capable of associating with each other? Or shall we say that some can associate and some can't? Which of these options shall we say they' choose, Theaetetus?

Theaetetus:: I don't know how to answer for them.

Stranger:: Why don't you reply to the options one by one by thinking about what results from each of them?

Theaetetus:: Fine.

Stranger:: First, if you like, let's take them to say that nothing has any capacity at all for association with anything. Then change and rest won't have any share in being.

Theaetetus:: No, they won't.

Stranger:: Well then, will either of them be, if they have no association with being?

Theaetetus:: No.

Stranger:: It seems that agreeing to that destroys everything right away, both for the people who make everything change, for the ones who make everything an unchanging unit, and for the ones who say that beings are forms that always stay the same and in the same state. All of these people apply being. Some do it when they say that things really are changing, and others do it when they say that things really are at rest.

Theaetetus:: Absolutely.

Stranger:: Also there are people who put everything together at one time and divide them at another. Some put them together into one and divide them into indefinitely many, and others divide them into a finite number of elements and put them back together out of them. None of these people, regardless of whether they take this to happen in stages or continuously, would be saying anything if there isn't any blending.

Theaetetus:: Right.

Stranger:: But furthermore the most ridiculous account is the one that's adopted by the people who won't allow anything to be called by a name that it gets by association with something else.

Theaetetus:: Why?

Stranger:: They're forced to use being about everything, and also separate, from others, of itself, and a million other things. They're powerless to keep from doing it—that is, from linking them together in their speech. So they don't need other people to refute them, but have an enemy within, as people say, to contradict them, and they go carrying him around talking in an undertone inside them like the strange ventriloquist Eurycles.

Theaetetus:: That's a very accurate comparison.

Stranger:: Well then, what if we admit that everything has the capacity to associate with everything else?

Theaetetus:: I can solve that one.

Stranger:: How?

Theaetetus:: Because if change and rest belonged to each other then change would be completely at rest and conversely rest itself would be changing.

Stranger:: But I suppose it's ruled out by very strict necessity that change should be at rest and that rest should change.

Theaetetus:: Of course.

Stranger:: So the third option is the only one left.

Theaetetus:: Yes.

Stranger:: Certainly one of the following things has to be the case: either everything is willing to blend, or nothing is, or some things are and some are not.

Theaetetus:: Of course.

Stranger:: And we found that the first two options were impossible.

Theaetetus:: Yes.

Stranger:: So everyone who wants to give the right answer will choose the third.

Theaetetus:: Absolutely.

Stranger:: Since some will blend and some won't, they'll be a good deal like letters of the alphabet. Some of them fit together with each other and some don't.

Theaetetus:: Of course.

Stranger:: More than the other letters the vowels run through all of them like a bond, linking them together, so that without a vowel no one of the others can fit with another.

Theaetetus:: Definitely.

Stranger:: So does everyone know which kinds of letters can associate with which, or does it take an expert?

Theaetetus:: It takes an expert.

Stranger:: What kind?

Theaetetus:: An expert in grammar.

Stranger:: Well then, isn't it the same with high and low notes? The musician is the one with the expertise to know which ones mix and which ones don't, and the unmusical person is the one who doesn't understand that.

Theaetetus:: Yes.

Stranger:: And in other cases of expertise and the lack of it we'll find something similar.

Theaetetus:: Of course.

Stranger:: Well then, we've agreed that kinds mix with each other in the same way. So if someone's going to show us correctly which kinds harmonize with which and which kinds exclude each other, doesn't he have to have some kind of knowledge as he proceeds through the discussion? And in addition doesn't he have to know whether there are any kinds that run through all of them and link them together to make them capable of blending, and also, when there are divisions, whether certain kinds running through wholes are always the cause of the division?

Theaetetus:: Of course that requires knowledge—probably just about the most important kind.

Stranger:: So, Theaetetus, what shall we label this knowledge? Or for heaven's sake, without noticing have we stumbled on the knowledge that free people have? Maybe we've found the philosopher even though we were looking for the sophist?

Theaetetus:: What do you mean?

Stranger:: Aren't we going to say that it takes expertise in dialectic to divide things by kinds and not to think that the same form is a different one or that a different form is the same?

Theaetetus:: Yes.

Stranger:: So if a person can do that, he'll be capable of adequately discriminating a single form spread out all through a lot of other things, each of which stands separate from the others. In addition he can discriminate forms that are different from each other but are included within a single form that's outside them, or a single form that's connected as a unit throughout many wholes, or many forms that are completely separate from others. That's what it is to know how to discriminate by kinds how things can associate and how they can't.

Theaetetus:: Absolutely.

Stranger:: And you'll assign this dialectical activity only to someone who has a pure and just love of wisdom.

Theaetetus:: You certainly couldn't assign it to anyone else.

Stranger:: We'll find that the philosopher will always be in a location like this if we look for him. He's hard to see clearly too, but not in the same way as the sophist.

Theaetetus:: Why not?

Stranger:: The sophist runs off into the darkness of that which is not, which he's had practice dealing with, and he's hard to see because the place is so dark. Isn't that right?

Theaetetus:: It seems to be.

Stranger:: But the philosopher always uses reasoning to stay near the form, being. He isn't at all easy to see because that area is so bright and the eyes of most people's souls can't bear to look at what's divine.

Theaetetus:: That seems just as right as what you just said before.

Stranger:: We'll think about the philosopher more clearly soon if we want to. But as far as the sophist is concerned we obviously shouldn't give up until we've gotten a good enough look at him.

Theaetetus:: Fine.

Stranger:: We've agreed on this: some kinds will associate with each other and some won't, some will to a small extent and others will associate a great deal, nothing prevents still others from being all-pervading—from being associated with every one of them. So next let's pursue our account together this way. Let's not talk about every form. That way we won't be thrown off by dealing with too many of them. Instead let's choose some of the most important ones. First we'll ask what they're like, and next we'll ask about their ability to associate with each other. Even if our grasp of that which is and that which is not isn't completely clear, our aim will be to avoid being totally without an account of them—so far as that's allowed by our present line of inquiry—and see whether we can get away with saying that that which is not really is that which is not.

Theaetetus:: That's what we have to do.

Stranger:: The most important kinds we've just been discussing are that which is, rest, and change.

Theaetetus:: Yes, by far.

Stranger:: And we say that two of them don't blend with each other.

Theaetetus:: Definitely not.

Stranger:: But that which is blends with both of them, since presumably both of them are.

Theaetetus:: Of course.

Stranger:: We do have three of them.

Theaetetus:: Yes.

Stranger:: So each of them is different from two of them, but is the same as itself.

Theaetetus:: Yes.

Stranger:: But what in the world are the same and the different that we've been speaking of? Are they two kinds other than those three but necessarily always blending with them? And do we have to think of them all as being five and not three? Or have what we've been calling the same and the different turned out, without our realizing it, to be among those three?

Theaetetus:: Maybe.

Stranger:: But change and rest are certainly not different or the same.

Theaetetus:: Why not?

Stranger:: Whatever we call change and rest in common can’t be either one of them.

Theaetetus:: Why not?

Stranger:: Then change would rest and rest would change. In both cases, if either change or rest comes to be either same or different, then it will force the other to change to the contrary of its own nature, since it will share in its contrary.

Theaetetus:: Absolutely.

Stranger:: And both do share in the same and in the different.

Theaetetus:: Yes.

Stranger:: Then anyway let’s not say that change is the same or the different, nor that rest is.

Theaetetus:: All right.

Stranger:: But do we have to think of that which is and the same as one thing?

Theaetetus:: Maybe.

Stranger:: But if that which is and the same don’t signify distinct things, then when we say that change and rest both are, we’ll be labeling both of them as being the same.

Theaetetus:: But certainly that’s impossible.

Stranger:: So it’s impossible for the same and that which is to be one.

Theaetetus:: I suppose so.

Stranger:: Shall we take the same as a fourth in addition to the other three forms?

Theaetetus:: Of course.

Stranger:: Well then, do we have to call the different a fifth? Or should we think of it and that which is as two names for one kind?

Theaetetus:: Maybe.

Stranger:: But I think you'll admit that some of those which are are said by themselves, but some are always said in relation to other things.

Theaetetus:: Of course.

Stranger:: But the different is always said in relation to another, isn't it?

Theaetetus:: Yes.

Stranger:: But it wouldn't be if that which is and the different weren't completely distinct. If the different shared in both kinds the way that which is does, then some of the things that are different would be different without being different in relation to anything different. In fact, though, it turns out that whatever is different definitely has to be what it is from something that's different.

Theaetetus:: That's exactly the way it is.

Stranger:: And we do have to call the nature of the different a fifth among the forms we're choosing.

Theaetetus:: Yes.

Stranger:: And we're going to say that it pervades all of them, since each of them is different from the others, not because of its own nature but because of sharing in the type of the different.

Theaetetus:: Absolutely.

Stranger:: Let's take up each of the five one by one and say this.

Theaetetus:: What?

Stranger:: First let's say that change is completely different from rest. Shall we say that?

Theaetetus:: Yes.

Stranger:: So it is not rest.

Theaetetus:: Not at all.

Stranger:: But it is, because it shares in that which is.

Theaetetus:: Yes.

Stranger:: Then again change is different from the same.

Theaetetus:: Pretty much.

Stranger:: So it is not the same.

Theaetetus:: No.

Stranger:: But still it was the same, we said, because everything has a share of that.

Theaetetus:: Definitely.

Stranger:: We have to agree without any qualms that change is the same and not the same. When we say that it's the same and not the same, we aren't speaking the same way. When we say it's the same, that's because it shares in the same in relation to itself. But when we say it's not the same, that's because of its association with the different. Because of its association with the different, change is separated from the same, and so becomes not it but different. So that it's right to say that it's not the same.

Theaetetus:: Of course.

Stranger:: So if change itself ever somehow had a share in rest, there would be nothing strange about labeling it resting?

Theaetetus:: That's absolutely right, as long as we admit that some kinds will blend with each other and some won't.

Stranger:: That, though, we demonstrated earlier, before we came to this point, and we showed that by nature it has to be so.

Theaetetus:: Of course.

Stranger:: To repeat, change is different from different, just as it's other than both the same and rest.

Theaetetus:: It has to be.

Stranger:: So in a way it is different and not different, according to what we've said.

Theaetetus:: Right.

Stranger:: So what next? Are we going to say that change is different from the first three but not from the fourth, in spite of the fact that we've agreed that there were five things we were going to investigate?

Theaetetus:: How could we do that? We can't admit that there are fewer of them than there appeared to be just now.

Stranger:: So shall we go on fearlessly contending that change is different from that which is?

Theaetetus:: Yes, we should be absolutely fearless.

Stranger:: So it's clear that change really is both something that is not, but also a thing that is since it partakes in that which is?

Theaetetus:: That's absolutely clear.

Stranger:: So it has to be possible for that which is not to be, in the case of change and also as applied to all the kinds. That's because as applied to all of them the nature of the different makes each of them not be, by making it different from that which is. And we're going to be right if we say that all of them are not in this same way. And on the other hand we're also going to be right if we call them beings, because they have a share in that which is.

Theaetetus:: It seems that way.

Stranger:: So as concerning each of the forms that which is is extensive, and that which is not is indefinite in quantity.

Theaetetus:: That seems right.

Stranger:: So we have to say that that which is itself is different from the others.

Theaetetus:: Necessarily.

Stranger:: So even that which is is not, in as many applications as there are of the others, since, not being them, it is one thing, namely itself, and on the other hand it is not those others, which are an indefinite number.

Theaetetus:: I suppose so.

Stranger:: So then we shouldn't even be annoyed about this conclusion, precisely because it's the nature of kinds to allow association with each other. And if somebody doesn't admit that, then he needs to win us over from our earlier line of argument for it, in order to win us over from its consequences.

Theaetetus:: That's entirely fair.

Stranger:: Now let's look at this.

Theaetetus:: What?

Stranger:: It seems that when we say that which is not, we don't say something contrary to that which is, but only something different from it.

Theaetetus:: Why?

Stranger:: It's like this. When we speak of something as not large, does it seem to you that we indicate the small rather than the equal?

Theaetetus:: Of course not.

Stranger:: So we won't agree with somebody who says that denial signifies a contrary. We'll only admit this much: when "not" and "non-" are prefixed to names that follow them, they indicate something other than the names, or rather, other than the things to which the names following the negation are applied.

Theaetetus:: Absolutely.

Stranger:: If you don’t mind, though, let’s think about this.

Theaetetus:: What?

Stranger:: The nature of the different appears to be chopped up, just like knowledge.

Theaetetus:: Why?

Stranger:: Knowledge is a single thing, too, I suppose. But each part of it that has to do with something is marked off and has a name peculiar to itself. That’s why there are said to be many expertises and many kinds of knowledge.

Theaetetus:: Of course.

Stranger:: And so the same thing happens to the parts of the nature of the different, too, even though it’s one thing.

Theaetetus:: Maybe. But shall we say how?

Stranger:: Is there a part of the different that’s placed over against the beautiful?

Theaetetus:: Yes.

Stranger:: Shall we say that it’s nameless, or does it have a name?

Theaetetus:: It has a name. What we call not beautiful is the thing that’s different from nothing other than the nature of the beautiful.

Stranger:: Now go ahead and tell me this.

Theaetetus:: What?

Stranger:: Isn’t it in the following way that the not beautiful turns out to be, namely, by being both marked off within one kind of those that are, and also set over against one of those that are?

Theaetetus:: Yes.

Stranger:: Then it seems that the not beautiful is a sort of setting of a being over against a being.

Theaetetus:: That’s absolutely right.

Stranger:: Well then, according to this account, is the beautiful more a being than the not beautiful?

Theaetetus:: Not at all.

Stranger:: So we have to say that both the not large and the large equally are.

Theaetetus:: Yes.

Stranger:: So we also have to put the not just on a par with the just, in that neither is any more than the other.

Theaetetus:: Of course.

Stranger:: And we’ll speak about the others in the same way too, since the nature of the different appeared as being one of those that are. And because it is, we have to posit its parts as no less beings.

Theaetetus:: Of course.

Stranger:: So it seems that the setting against each other of the nature of a part of the different and the nature of that which is is not any less being— if we’re allowed to say such a thing—than that which is itself. And it does not signify something contrary to that which is but only something different from it.

Theaetetus:: Clearly.

Stranger:: So what shall we call it?

Theaetetus:: Obviously that which is not—which we were looking for because of the sophist—is just exactly this.

Stranger:: Then does it have just as much being as any of the others, as you said it did? Should we work up the courage now to say that that which is not definitely is something that has its own nature? Should we say that just as the large was large, the beautiful was beautiful, the not large was not large, and the not beautiful was not beautiful, in the same way that which is not also was and is not being, and is one form among the many that are? Do we, Theaetetus, still have any doubts about that?

Theaetetus:: No.

Stranger:: You know, our disbelief in Parmenides has gone even farther than his prohibition.

Theaetetus:: How?

Stranger:: We've pushed our investigation ahead and shown him something even beyond what he prohibited us from even thinking about.

Theaetetus:: In what way?

Stranger:: Because he says, remember;

> Never shall it force itself on us, that that which is not may be;
> Keep your thought far away from this path of searching.

Theaetetus:: That's what he says.

Stranger:: But we've not only shown that those which are not are. We've also caused what turns out to be the form of that which is not to appear. Since we showed that the nature of the different is, chopped up among all beings in relation to each other, we dared to say that that which is not really is just this, namely, each part of the nature of the different that's set over against that which is.

Theaetetus:: And what we've said seems to me completely and totally true.

Stranger:: Nobody can say that this that which is not, which we've made to appear and now dare to say is, is the contrary of that which is. We've said good-bye long ago to any contrary of that which is, and to whether it is or not, and also to whether or not an account can be given of it. With regard to that which is not, which we've said is, let someone refute us and persuade us that we've made a mistake—or else, so long as he can't do that, he should say just what we say. He has to say that the kinds blend with each other, that that which is and the different pervade all of them and each other, that the different shares in that which is and so, because of that sharing, is. But he won't say that it is that which it shares in, but that it is different from it, and necessarily, because it is different from that which is, it clearly can be what is not. On the other hand that which is has a share in the different, so, being different from all of the others, it is not each of them and it is not all of the others except itself. So that which is indisputably is not millions of things, and all of the others together, and also each of them, are in many ways and also are not in many ways.

Theaetetus:: True.

Stranger:: And if anyone doesn't believe these contrarieties, he has to think about them himself and say something better than what we've said. But if he thinks he's recognized a problem in it and enjoys dragging the argument back and forth, then he's been carried away by something that's not worth much of anyone's attention—to go by what we've just been saying, anyway. A thing like that isn't clever or hard to discover, but the other thing is both difficult and at the same time beautiful.

Theaetetus:: What other thing?

Stranger:: The thing we said earlier. That is, we should leave pointless things like this alone. Instead we should be able to follow what a person says and scrutinize it step by step. When he says that what's different is the same in a certain way or that what's the same is different in a certain way, we should understand just what way he means, and the precise respect in which he's saying that the thing is the same or different. But when someone makes that which is the same appear different in just any old way, or vice versa, or when he makes what's large appear small or something that's similar appear dissimilar—well, if someone enjoys constantly trotting out contraries like that in discussion, that’s not true refutation. It’s only the obvious new-born brain-child of someone who just came into contact with those which are.

Theaetetus:: Definitely.

Stranger:: In fact, my friend, it’s inept to try to separate everything from everything else. It’s the sign of a completely unmusical and unphilosophical person.

Theaetetus:: Why?

Stranger:: To dissociate each thing from everything else is to destroy totally everything there is to say. The weaving together of forms is what makes speech possible for us.

Theaetetus:: That’s true.

Stranger:: Think about what a good moment we picked to fight it out against people like that, and to force them further to let one thing blend with another.

Theaetetus:: Why a good moment?

Stranger:: For speech’s being one kind among those that are. If we were deprived of that, we'd be deprived of philosophy—to mention the most important thing. Besides, now we have to agree about what speech is, but we'd be able to say nothing if speech were taken away from us and weren’t anything at all. And it would be taken away if we admitted that there’s no blending of anything with anything else.

Theaetetus:: This last thing is right, anyway. But I don’t understand why we have to agree about speech.

Stranger:: Well, perhaps you’ll understand if you follow me this way.

Theaetetus:: Where?

Stranger:: That which is not appeared to us to be one kind among others, but scattered over all those which are.

Theaetetus:: Yes.

Stranger:: So next we have to think about whether it blends with belief and speech.

Theaetetus:: Why?

Stranger:: If it doesn't blend with them then everything has to be true. But if it does then there will be false belief and false speech, since falsity in thinking and speaking amount to believing and saying those that are not.

Theaetetus:: Yes.

Stranger:: And if there's falsity then there's deception.

Theaetetus:: Of course.

Stranger:: And if there's deception then necessarily the world will be full of copies, likenesses, and appearances.

Theaetetus:: Of course.

Stranger:: We said that the sophist had escaped into this region, but that he denied that there has come to be or is such a thing as falsity. For he denied that anyone either thinks or says that which is not, on the ground that that which is not never in any way has a share in being.

Theaetetus:: That's what he said.

Stranger:: But now it apparently does share in that which is, so he probably wouldn't still put up a fight about that. Perhaps, though, he might say that some forms share in that which is not and some don't, and that speech and belief are ones that don't. So he might contend again that copy-making and appearance-making—in which we said he was contained—totally are not. His ground would be that belief and speech don't associate with that which is not, and that without this association falsity totally is not. That's why we have to search around for speech, belief, and appearance, and first discover what they are, so that when they appear we see their association with that which is not clearly. Then when we’ve seen that clearly we can show that falsity is, and when we’ve shown that we can tie the sophist up in it, if we can keep hold of him—or else we’ll let him go and look for him in another kind.

Theaetetus:: What you said at the start seems absolutely true. The sophist is a hard kind to hunt down. He seems to have a whole supply of roadblocks, and whenever he throws one down in our way we have to fight through it before we can get to him. But now when we’ve barely gotten through the one about how that which is not is not, he’s thrown another one down and we have to show that falsity is present in both speech and belief. And next, it seems, there will be another and another after that. A limit, it seems, never appears.

Stranger:: Even if you can only make a little progress, Theaetetus, you should cheer up. If you give up in this situation, what will you do some other time when you don’t get anywhere or even are pushed back? A person like that would hardly capture a city, as the saying goes. But since we’ve done what you just said, my friend, the largest wall may already have been captured and the rest of them may be lower and easier.

Theaetetus:: Fine.

Stranger:: Then let’s take up speech and belief, as we said just now. That way we can calculate whether that which is not comes into contact with them, or whether they’re both totally true and neither one is ever false.

Theaetetus:: All right.

Stranger:: Come on, then. Let’s think about names again, the same way as we spoke about forms and letters of the alphabet. What we’re looking for seems to lie in that direction.

Theaetetus:: What kind of question about them do we have to answer?

Stranger:: Whether they all fit with each other, or none of them do, or some of them will and some of them won’t.

Theaetetus:: Anyway it’s clear that some will and some won’t.

Stranger:: Maybe you mean something like this: names that indicate something when you say them one after another fit together, and names that don’t signify anything when you put them in a row don’t fit.

Theaetetus:: What do you mean?

Stranger:: The same thing I thought you were assuming when you agreed with me just now—since there are two ways to use your voice to indicate something about being.

Theaetetus:: What are they?

Stranger:: One kind is called names, and the other is called verbs.

Theaetetus:: Tell me what each of them is.

Stranger:: A verb is the sort of indication that’s applied to an action.

Theaetetus:: Yes.

Stranger:: And a name is the kind of spoken sign that’s applied to things that perform the actions.

Theaetetus:: Definitely.

Stranger:: So no speech is formed just from names spoken in a row, and also not from verbs that are spoken without names.

Theaetetus:: I didn’t understand that.

Stranger:: Clearly you were focusing on something else when you agreed with me just now. What I meant was simply this: things don’t form speech if they’re said in a row like this.

Theaetetus:: Like what?

Stranger:: For example, “walks runs sleeps,” and other verbs that signify actions. Even if somebody said all of them one after another that wouldn’t be speech.

Theaetetus:: Of course not.

Stranger:: Again, if somebody said “lion stag horse,” and whatever names there are of things that perform actions, the series wouldn’t make up speech. The sounds he uttered in the first or second way wouldn’t indicate either an action or an inaction or the being of something that is or of something that is not—not until he mixed verbs with nouns. But when he did that, they’ fit together and speech—the simplest and smallest kind of speech, I suppose—would arise from that first weaving of name and verb together.

Theaetetus:: What do you mean?

Stranger:: When someone says “man learns,” would you say that’s the shortest and simplest kind of speech?

Theaetetus:: Yes.

Stranger:: Since he gives an indication about what is, or comes to be, or has come to be, or is going to be. And he doesn’t just name, but accomplishes something, by weaving verbs with names. That’s why we said he speaks and doesn’t just name. In fact this weaving is what we use the word “speech” for.

Theaetetus:: Right.

Stranger:: So some things fit together and some don’t. Likewise some vocal signs don’t fit together, but the ones that do produce speech.

Theaetetus:: Absolutely.

Stranger:: But there’s still this small point.

Theaetetus:: What?

Stranger:: Whenever there's speech it has to be about something. It's impossible for it not to be about something.

Theaetetus:: Yes.

Stranger:: And speech also has to have some particular quality.

Theaetetus:: Of course.

Stranger:: Now let's turn our attention to ourselves.

Theaetetus:: All right.

Stranger:: I'll produce some speech by putting a thing together with an action by means of a name and a verb. You have to tell me what it's about.

Theaetetus:: I'll do it as well as I can.

Stranger:: "Theaetetus sits." That's not a long piece of speech, is it?

Theaetetus:: No, not too long.

Stranger:: Your job is to tell what it's about, what it's of.

Theaetetus:: Clearly it's about me, of me.

Stranger:: Then what about this one?

Theaetetus:: What one?

Stranger:: "Theaetetus (to whom I'm now talking) flies."

Theaetetus:: No one would ever deny that it's of me and about me.

Stranger:: We also say that each piece of speech has to have some particular quality.

Theaetetus:: Yes.

Stranger:: What quality should we say each one of these has?

Theaetetus:: The second one is false, I suppose, and the other one is true.

Stranger:: And the true one says those that are, as they are, about you.

Theaetetus:: Of course.

Stranger:: And the false one says things different from those that are.

Theaetetus:: Yes.

Stranger:: So it says those that are not, but that they are.

Theaetetus:: I suppose so.

Stranger:: But they're different things that are from the things that are about you—since we said that applied to each thing many beings are and many are not.

Theaetetus:: Absolutely.

Stranger:: In the first place, the second piece of speech I said about you must be one of the shortest there is, according to our definition of speech.

Theaetetus:: We agreed to that just now, anyway.

Stranger:: And we agreed that it's of something.

Theaetetus:: Yes.

Stranger:: And if it is not of you, it isn't of anything else.

Theaetetus:: Of course not.

Stranger:: And if it were not of anything it would not be speech at all, since we showed that it was impossible for speech that is, to be speech that is of nothing.

Theaetetus:: Absolutely right.

Stranger:: But if someone says things about you, but says different things as the same or not beings as beings, then it definitely seems that false speech really and truly arises from that kind of putting together of verbs and names.

Theaetetus:: Yes, very true.

Stranger:: Well then, isn't it clear by now that both true and false thought and belief and appearance can occur in our souls?

Theaetetus:: How?

Stranger:: The best way for you to know how is for you first to grasp what they are and how they're different from each other.

Theaetetus:: Then just tell me.

Stranger:: Aren't thought and speech the same, except that what we call thought is speech that occurs without the voice, inside the soul in conversation with itself?

Theaetetus:: Of course.

Stranger:: And the stream of sound from the soul that goes through the mouth is called speech?

Theaetetus:: Right.

Stranger:: And then again we know that speech contains …

Theaetetus:: What?

Stranger:: Affirmation and denial.

Theaetetus:: Yes.

Stranger:: So when affirmation or denial occurs as silent thought inside the soul, wouldn't you call that belief?

Theaetetus:: Of course.

Stranger:: And what if that doesn't happen on its own but arises for someone through perception? When that happens, what else could one call it correctly, besides appearance?

Theaetetus:: Yes.

Stranger:: So since there is true and false speech, and of the processes just mentioned, thinking appeared to be the soul's conversation with itself, belief the conclusion of thinking, and what we call appearing the blending of perception and belief, it follows that since these are all the same kind of thing as speech, some of them must sometimes be false.

Theaetetus:: Of course.

Stranger:: So you realize we’ve found false belief and speech sooner than we expected to just now. Then we were afraid that to look for it would be to attack a completely hopeless project.

Theaetetus:: Yes.

Stranger:: So let’s not be discouraged about what’s still left. Since these other things have come to light, let’s remember the divisions by types that we made earlier.

Theaetetus:: Which ones?

Stranger:: We divided copy-making into two types, likeness-making and appearance-making.

Theaetetus:: Yes.

Stranger:: And we said we were confused about which one to put the sophist in.

Theaetetus:: Yes.

Stranger:: And in our confusion about that we plunged into even greater bewilderment, when an account emerged that disagreed with everyone, by denying that there are likenesses or copies or appearances at all, on the ground that there isn’t ever any falsity in any way anywhere.

Theaetetus:: That’s right.

Stranger:: But now since false speech and false belief both appear to be, it’s possible for imitations of those that are to be, and for expertise in deception to arise from that state of affairs.

Theaetetus:: Yes.

Stranger:: And we agreed before that the sophist does fall under one of the two types we just mentioned.

Theaetetus:: Yes.

Stranger:: Then let’s try again to take the kind we’ve posited and cut it in two. Let’s go ahead and always follow the right-hand part of what we’ve cut, and hold onto things that the sophist is associated with until we strip away everything that he has in common with other things. Then when we've left his own peculiar nature, let's display it, especially to ourselves but also to people to whom this sort of procedure is naturally congenial.

Theaetetus:: All right.

Stranger:: Didn't we begin by dividing expertise into productive and acquisitive?

Theaetetus:: Yes.

Stranger:: And under the acquisitive part the sophist appeared in hunting, combat, wholesaling, and types of that sort.

Theaetetus:: Of course.

Stranger:: But now, since he's included among experts in imitation, first we obviously have to divide productive expertise in two. We say imitation is a sort of production, but of copies and not of the things themselves. Is that right?

Theaetetus:: Absolutely.

Stranger:: First of all, production has two parts.

Theaetetus:: What are they?

Stranger:: Divine and human.

Theaetetus:: I don't understand yet.

Stranger:: If you remember how we started, we said production was any capacity that causes things to come to be that previously were not.

Theaetetus:: I remember.

Stranger:: Take animals and everything mortal, including plants and everything on the earth that grows from seeds and roots, and also all lifeless bodies made up inside the earth, whether fusible or not. Are we going to say that anything besides the craftsmanship of a god makes them come to be after previously not being? Or shall we rely on the saying and the widespread belief that …?

Theaetetus:: That what?

Stranger:: Are we going to say that nature produces them by some spontaneous cause that generates them without any thought, or by a cause that works by reason and divine knowledge derived from a god?

Theaetetus:: I often shift back and forth on that from one view to the other, maybe because of my age. When I'm focusing on you now, and supposing that you think they come to be by the agency of a god, that's what I think too.

Stranger:: Fine, Theaetetus. If we thought you were the kind of person who might believe something different in the future we'd try to use some cogent, persuasive argument to make you agree. But since I know what your nature is and I know, too, that even without arguments from us it will tend in the direction that it's pulled toward now, I'll let the issue go. It would take too much time. I'll assume divine expertise produces the things that come about by so-called nature, and that human expertise produces the things that humans compound those things into. According to this account there are two kinds of production, human and divine.

Theaetetus:: Right.

Stranger:: Since there are two of them, cut each of them in two again.

Theaetetus:: How?

Stranger:: It's as if you'd already cut production all the way along its width, and now you'll cut it along its length.

Theaetetus:: All right.

Stranger:: That way there are four parts of it all together, two human ones related to us and two divine ones related to the gods.

Theaetetus:: Yes.

Stranger:: Then if we take the division we made the first way, one part of each of those parts is the production of originals. Just about the best thing to call the two parts that are left might be “copy-making.” That way, production is divided in two again.

Theaetetus:: Tell me again how each of them is divided.

Stranger:: We know that we human beings and the other living things, and also fire, water, and things like that, which natural things come from, are each generated and produced by a god. Is that right?

Theaetetus:: Yes.

Stranger:: And there are copies of each of these things, as opposed to the things themselves, that also come about by divine workmanship.

Theaetetus:: What kinds of things?

Stranger:: Things in dreams, and appearances that arise by themselves during the day. They’re shadows when darkness appears in firelight, and they’re reflections when a thing’s own light and the light of something else come together around bright, smooth surfaces and produce an appearance that looks the reverse of the way the thing looks from straight ahead.

Theaetetus:: Yes, those are two products of divine production—the things themselves and the copies corresponding to each one.

Stranger:: And what about human expertise? We say house-building makes a house itself and drawing makes a different one, like a human dream made for people who are awake.

Theaetetus:: Of course.

Stranger:: And just the same way in other cases, too, there are pairs of products of human production, that is, the thing itself, we say, and the copy.

Theaetetus:: Now I understand better and I take it that there are two kinds of double production, divine and human in each division. One kind produces things themselves, and the other kind produces things similar to them.

Stranger:: Let's recall that one part of copy-making is likeness-making. The other kind was going to be appearance-making, if falsity appeared to be truly falsity and by nature one of those that are.

Theaetetus:: Yes, it was.

Stranger:: But falsity did turn out that way, so are we going to count likeness-making and appearance-making as indisputably two forms?

Theaetetus:: Yes.

Stranger:: Then let's divide appearance-making in two again.

Theaetetus:: How?

Stranger:: Into one sort that's done with tools and one that uses one's own self as the tool of the person making the appearance.

Theaetetus:: What do you mean?

Stranger:: When somebody uses his own body or voice to make something similar to your body or voice, I think the best thing to call this part of appearance-making is "imitating."

Theaetetus:: Yes.

Stranger:: Let's set this part off by calling it imitation, and let's be lazy and let the other part go. We'll leave it to someone else to bring it together into a unit and give it a suitable name.

Theaetetus:: All right, let's take the one and let the other go.

Stranger:: But the right thing, Theaetetus, is still to take imitation to have two parts. Think about why.

Theaetetus:: Tell me.

Stranger:: Some imitators know what they're imitating and some don't. And what division is more important than the one between ignorance and knowledge?

Theaetetus:: None.

Stranger:: Wasn't the imitation that we just mentioned the kind that's associated with knowledge? Someone who knew you and your character might imitate you, mightn't he?

Theaetetus:: Of course.

Stranger:: What about the character of justice and all of virtue taken together? Don't many people who are ignorant of it, but have some beliefs about it, try hard to cause what they believe it is to appear to be present in them. And don't they imitate it in their words and actions as much as they can?

Theaetetus:: Very many people do that.

Stranger:: And are they all unsuccessful at seeming to be just without being just at all? Or is the opposite true?

Theaetetus:: Yes, the opposite.

Stranger:: I think we have to say that this person, who doesn't know, is a very different imitator from the previous one, who does.

Theaetetus:: Yes.

Stranger:: Where would you get a suitable name for each of them? Isn't it obviously hard to, just because the people who came before us were thoughtless and lazy about dividing kinds into types, and so they never even tried to divide them. That's why we necessarily lack a good supply of names. Still, even though it sounds daring let's distinguish them by calling imitation accompanied by belief "belief-mimicry" and imitation accompanied by knowledge "informed mimicry."

Theaetetus:: All right.

Stranger:: Then we need to use the former term, since the sophist isn't one of the people who know but is one of the people who imitate.

Theaetetus:: He certainly is.

Stranger:: Let's examine the belief-mimic the way people examine iron, to see whether it's sound or has a crack in it.

Theaetetus:: All right.

Stranger:: Well, it has a big one. One sort of belief-mimic is foolish and thinks he knows the things he only has beliefs about. The other sort has been around a lot of discussions, and so by temperament he's suspicious and fearful that he doesn't know the things that he pretends in front of others to know.

Theaetetus:: There definitely are both types that you've mentioned.

Stranger:: Shall we take one of these to be a sort of sincere imitator and the other to be an insincere one?

Theaetetus:: That seems right.

Stranger:: And are there one or two kinds of insincere ones?

Theaetetus:: You look and see.

Stranger:: I'm looking, and there clearly appear to be two. I see that one sort can maintain his insincerity in long speeches to a crowd, and the other uses short speeches in private conversation to force the person talking with him to contradict himself.

Theaetetus:: You're absolutely right.

Stranger:: How shall we show up the long-winded sort, as a statesman or as a demagogue?

Theaetetus:: A demagogue.

Stranger:: And what shall we call the other one? Wise, or a sophist?

Theaetetus:: We can’t call him wise, since we took him not to know anything. But since he imitates the wise man he’ll obviously have a name derived from the wise man’s name. And now at last I see that we have to call him the person who is really and truly a sophist.

Stranger:: Shall we weave his name together from start to finish and tie it up the way we did before?

Theaetetus:: Of course.

Stranger:: Imitation of the contrary-speech-producing, insincere and unknowing sort, of the appearance-making kind of copy-making, the word-juggling part of production that’s marked off as human and not divine. Anyone who says the sophist is of this “blood and family” will be saying, it seems, the complete truth.

Theaetetus:: Absolutely.

# The Statesman.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Socrates, Theodorus, a Guest, and Socrates Junior.

Socrates:: I owe you, Theodorus, surely many thanks for my acquaintance with Theætetus and this guest to boot.

Theodorus:: Perhaps, Socrates, you will owe me thrice as many, when they shall have worked out for you a statesman and a philosopher.

Socrates:: Be it so. But shall we say we have thus heard this from you, the most powerful in calculations and geometry?

Theodorus:: How, Socrates?

Socrates:: As having put down each of these men of equal worth, who are in value more removed from each other than accords with the analogy of your art.

Theodorus:: By our god Ammon, Socrates, you have well and justly, and very rememberingly reproved me for my error in calculation. But I will follow you up about this at a future time. But do not you, O guest, in any respect be faint-hearted in gratifying us; but select for us either first a statesman, or a philosopher; and having selected go through the discussion.

Stranger:: This must be done, Theodorus; for since we have put our hand to this discussion, we must not stand aloof, till we arrive at the end of it. But what must I do with Theætetus here?

Theodorus:: As regards what?

Stranger:: Shall we suffer him to rest, and take in his stead Socrates here, his fellow-combatant? Or how do you advise?

Theodorus:: Take him, as you say, in his stead. For, both being young men, they will after resting easily endure every labor.

Socrates:: And indeed, O guest, both of them appear almost to have an affinity with me from some quarter. For you say that one of them Theætetus seems to resemble me in the natural form of his face; and the appellation of the other, being of the same name as myself, and his address furnish a kind of family connection. It is meet then for us to recognize always with readiness in conversation those of the same kin. Now yesterday I mingled in a conversation with Theætetus, and I have now heard him answering; but neither case applies to Socrates here. It is meet, however, for us to consider him likewise. Let him then at some other time answer me, but at present you.

Stranger:: Be it so. Do you, Socrates junior, hear this Socrates?

Socrates Younger:: I do.

Stranger:: Do you then agree to what he says?

Socrates Younger:: Entirely.

Stranger:: It appears then, that your affairs will not be an hindrance; and perhaps it is requisite for me to be much less an hindrance. But after the sophist it is necessary, as it appears to me, for us to seek out the statesman. Tell me then, whether must we place this character too among the possessors of knowledge, or how?

Socrates Younger:: In this way.

Stranger:: We must then divide the sciences, as we did when we were inquiring into the former character.

Socrates Younger:: Perhaps so.

Stranger:: But yet the division appears to me, Socrates, to be not after the same manner.

Socrates Younger:: Why not?

Stranger:: But after another.

Socrates Younger:: It would seem so.

Stranger:: Where then can one find the statesman’s path? For find it we must; and separating it from the rest, put on it the seal of one general form, and on the other deflections the mark of another species; and thus cause our soul to conceive that all the sciences do in reality belong to two species.

Socrates Younger:: I think, O guest, that this is your business, and not mine.

Stranger:: But indeed, Socrates, it must needs be yours too, when it becomes apparent to us.

Socrates Younger:: You speak well.

Stranger:: Are not then arithmetic, and certain other sciences allied to this, divested of action; and do they not afford a subject of thought alone?

Socrates Younger:: It is so.

Stranger:: But those which pertain to carpenter’s work, and the whole of handicraft trades, possess a science, as it were, innate in their operations, and at the same time complete the bodies produced by them, which had not an existence previously.

Socrates Younger:: How not?

Stranger:: In this manner then divide sciences in general, calling one practical and the other merely intellectual.

Socrates Younger:: Let there be then of one whole science two species.

Stranger:: Whether then shall we lay down the statesman, the king, the despot, and the head of a household, and call them all by one name? Or shall we say there are as many sciences as have been their mentioned names? Or rather follow me hither.

Socrates Younger:: Whither?

*Stranger::* On this road. If a private person is able to give advice sufficiently well to any of the public physicians, is it not necessary for him to be called by the name of the art, the same as he is, to whom he gives advice.

Socrates Younger:: Yes.

Stranger:: What then, whatever private person is skilled in giving advice to the king of a country, shall we not say that he possesses the science, which the ruler himself ought to possess?

Socrates Younger:: We shall.

Stranger:: But surely the science of a true king is a kingly science.

Socrates Younger:: Yes.

Stranger:: And may not he, who possesses this science, whether he is a private man, or a king, be in every respect rightly called, according to this art, king-like.

Socrates Younger:: Justly so.

Stranger:: And are not the head of a household and a despot the same?

Socrates Younger:: How not?

Stranger:: But what, will the size of an extensive household or the swollen form of a small state make any difference as regards the government?

Socrates Younger:: Not at all.

Stranger:: It is evident then, what is indeed the thing we were just now inquiring, that there is one science respecting all these. But whether any one calls it the science of a king, a statesman, or a family-man, let us not differ about it.

Socrates Younger:: Why should we?

Stranger:: This too is evident, that each individual king has in his hands, and the whole of his body, some little power towards retaining his rule, as compared with the intelligence and strength of his soul.

Socrates Younger:: It is evident.

Stranger:: Are you willing then for us to say that a king is more allied to intellectual than to manual and wholly practical science?

Socrates Younger:: How not?

Stranger:: We will then put together in the same class statesmanship and a statesman, kingship and a king, as being all one thing.

Socrates Younger:: It is evident.

Stranger:: Shall we not proceed then in an orderly manner, if after this we divide the intellectual science?

Socrates Younger:: Entirely so.

Stranger:: Attend, then, and inform me whether we can perceive any point of union?

Socrates Younger:: Tell me of what kind.

Stranger:: Of this kind. We have a certain calculating art.

Socrates Younger:: Yes.

Stranger:: And this I think entirely belongs to the intellectual arts.

Socrates Younger:: How not?

Stranger:: Shall we concede to the calculating art, that knows the difference in numbers, any thing more than that it distinguishes things, the subjects of intellect.

Socrates Younger:: How should we?

Stranger:: For every architect is not a workman himself, but is the ruler over workmen.

Socrates Younger:: Yes.

Stranger:: And he imparts indeed intellect, but not the work by hand.

Socrates Younger:: Just so.

Stranger:: He may justly then be said to have a share in intellectual science.

Socrates Younger:: Entirely.

Stranger:: And for him I think it is fitting, after he has passed a judgment, not to have an end, nor to be freed, as the calculator was freed from doing more, but to command every workman to do that which is suited to him, until they shall have worked out what has been commanded.

Socrates Younger:: Right.

Stranger:: Are not then all such as these, and such as are consequent upon the calculating art, intellectual? And do not these two genera differ from each other in judgment and commandment?

Socrates Younger:: They appear to do so.

Stranger:: If then we should divide the whole of the intellectual science into two parts, and call the one mandatory, and the other judicial, should we not say that we have made a careful division?

Socrates Younger:: Yes, according to my mind.

Stranger:: But for those, who do any thing in common, it is delightful to be of one mind.

Socrates Younger:: How not?

Stranger:: As far then as we participate on this point, we must bid farewell to the opinions of others.

Socrates Younger:: Why not?

Stranger:: Come, then, inform me in which of these arts we must place the kingly character. Must we place him in the judicial art, as some spectator? Or rather, shall we place him in the commanding art, as being a despot?

Socrates Younger:: How not rather in this?

Stranger:: We may consider again the commanding art, whether it stands in any way apart. For it appears to me, that as the art of a huckster is separated from his, who sells his own goods, so is the genus of a king from the genus of public criers.

Socrates Younger:: How so?

Stranger:: Hucksters, having received the previously sold works of others, afterwards sell them again themselves.

Socrates Younger:: Entirely so.

Stranger:: The tribe of criers too, after receiving the thoughts of strangers, enjoins them again to others.

Socrates Younger:: Most true.

Stranger:: What then, shall we mix in the same class the king-art, and that of the interpreting, ordering, prophesying, and public-crying, and many other arts allied to these, all which have this in common that they command? Or are you willing that, as we just now instituted a resemblance in things, we should make a resemblance in the name likewise? since the genus of those, who rule their own concerns, is nearly without a name; and shall we so divide these, by placing the kingly genus among those, who command their own concerns, and by neglecting every thing else, leave any one to put another name on them? For our method was adopted for the sake of a ruler, and not for its contrary.

Socrates Younger:: Entirely so.

Stranger:: Since then this stands at a moderate distance apart from those, and is separated from that, which is foreign, into that which is domestic, it is necessary to divide this again, if we have yet any yielding section in this.

Socrates Younger:: Entirely so.

Stranger:: And, indeed, it appears that we have. But follow me and divide.

Socrates Younger:: Whither?

Stranger:: Shall we not find that all such as we conceive to be rulers, do, by making use of a command, give a command for the sake of producing something?

Socrates Younger:: How not?

Stranger:: And indeed it is not at all difficult for all things that are produced, to receive a twofold division.

Socrates Younger:: In what way?

Stranger:: Some among all of them are animated, and others are inanimate.

Socrates Younger:: They are so.

Stranger:: If we wish to cut the portion of intelligence, that has a commanding power over these very things, we will cut it.

Socrates Younger:: According to what?

Stranger:: By assigning one part over the generation of inanimate things, and the other over the generation of animated. And thus the whole will be divided into two parts.

Socrates Younger:: Entirely so.

Stranger:: One part then let us put aside, and take up again the other; and after taking it up, divide the whole into two parts.

Socrates Younger:: But which of these do you say is to be resumed?

Stranger:: By all means, that which has a command over animals. For it is not the province of the kingly science to have a command over things inanimate, like the science of architecture; but, being of a more noble nature, over animals; and it ever possesses a power relating to such very things.

Socrates Younger:: Right.

Stranger:: With respect to the generation and nurture of animals, a person may see the former as single-feeding, but the latter as the common-feeding of the nurslings in herds.

Socrates Younger:: Right.

Stranger:: But we shall find that the statesman is not a breeder of his own property, like an ox-driver, or some horse-currier; but is rather like the person who rears horses and oxen.

Socrates Younger:: What has been just said seems to be the fact.

Stranger:: Whether then with respect to the nurture of animals, shall we call the common-rearing of all together a herd-rearing, or a certain general-rearing.

Socrates Younger:: Whichever may happen in the discourse.

Stranger:: You have said well, Socrates. And if you avoid paying too serious an attention to names, you will appear in old age to be more rich in prudence. But now we must do as you recommended. But do you understand how some one will, having divided the herd-rearing art into two, cause, what is now sought for in a double, to be sought for then in halves?

Socrates Younger:: I shall be eager to do so: and it appears to me that there is one rearing of men, and another of beasts.

Stranger:: You have divided in every respect most readily and courageously. However, we must be careful to the utmost of our power not to suffer hereafter this.

Socrates Younger:: What?

Stranger:: That we do not take away one small part as applicable to many and great parts, nor yet without a species; but let it always have at the same time a species. For it is very well to separate immediately the thing sought for from all the rest, if the separation be rightly made; just as you did a little before, through conceiving the division to be rightly made, hasten on, seeing that the discourse was tending to man. But, my friend, it is not safe to divide with subtlety; but it is more safe to proceed in the middle by dividing continually; for thus will one more readily meet with forms of existence. But the whole of this relates to our inquiries.

Socrates Younger:: How say you this, O guest?

Stranger:: I must endeavor to speak yet more clearly, through a kind feeling towards your disposition, Socrates. But it is impossible in the subject at hand to show what is now said in a manner wanting in nothing; still we must endeavor, for the sake of perspicuity, to carry on the inquiry a little further.

Socrates Younger:: In what respect then do you say we have, by dividing, just now not rightly done?

Stranger:: In this respect; that, should any one attempt to give a twofold division to the human genus, he would divide, in the way that the majority here divide. For by separating the Grecian genus, as one apart from all, they give to all the rest, who are innumerable, unmixt, and not speaking the same language with each other, one name, that of a Barbarian race; and through this one name they fancy the race itself to be one; or as if some one, thinking that number should be divided into two species, should, after cutting off ten thousand from all numbers, put it aside as one species, and, giving one name to all the rest, should think that, through that appellation, this genus will become separate and different from the other. He however would make in a more beautiful manner, and more according to species, and a two-fold division, who should divide number into even and odd, and the human species into male and female; and, after arranging the Lydians or Phrygians, or some other nations, should then separate them into wholes, when he is incapable of finding the genus, and at the same time the species of each of the divided portions.

Socrates Younger:: Most right. But explain, O guest, this very thing—How can any one rather clearly know that genus and species are not the same, but different from each other?

Stranger:: O Socrates, thou best of men, thou commands no trifling thing. Already have we wandered further from our proposed discourse than is fitting; and yet you order us to wander still further. Now then let us, as is reasonable, turn back again; and hereafter we will at leisure pursue this point, as having come upon the track. Do not, however, by any means guard against this, that you have heard from me this point clearly determined.

Socrates Younger:: What?

Stranger:: That species and part are different from each other.

Socrates Younger:: Why say you so?

Stranger:: When any thing is a species of some thing, it is necessary for it to be a part of the thing of which it is said to be the species: but there is no necessity for a part to be a species. Always consider me, therefore, Socrates, as asserting this rather than that.

Socrates Younger:: Be it so.

Stranger:: But tell me that, which is after this.

Socrates Younger:: What?

Stranger:: The point of the digression which has brought us hither. For I think it was especially at that point, when, on your being asked how we must divide herd-rearing, you answered very readily, that there were two kinds of animals, the one of man, and the other of brutes taken all together.

Socrates Younger:: True.

Stranger:: And you then appeared to me, after taking away a part, to think that you ought to leave the remainder as one genus of all brutes, because you could give to them all the same name, by calling them brutes.

Socrates Younger:: Such was the case.

Stranger:: But this, O most courageous of men, is just as if some other prudent animal, such as seems to be the crane, or some other animal of a similar kind, should, in the same manner as you do, oppose the cranes, as one race, to all other animals, and make itself an object of respect; and, putting all the rest together with men into one race, call them perhaps nothing else but brutes. Let us then endeavor to avoid every thing whatsoever of this kind.

Socrates Younger:: How?

Stranger:: By not dividing every genus of animals, that we may suffer the less.

Socrates Younger:: For there is no necessity.

Stranger:: For we then erred in this way.

Socrates Younger:: In what?

Stranger:: Such part of intellectual science as related to commanding was said by us to be of the animal-rearing kind, as regards gregarious animals. Was it not?

Socrates Younger:: It was.

Stranger:: The whole animal genus, therefore, was even then divided into the tame and wild. For those animals that have a nature to become gentle, are called tame; but those that have not, are called wild.

Socrates Younger:: Correctly.

Stranger:: But the science, of which we are in the hunt, was and is in the case of tame animals, and is to be sought for among the gregarious rearlings.

Socrates Younger:: Yes.

Stranger:: Let us then not divide, as formerly, looking to all animals, nor with haste, so that we may quickly arrive at state-science. For this has caused us to suffer even now according to the proverb—

Socrates Younger:: What?

Stranger:: By not well dividing quietly, to complete the task more slowly.

Socrates Younger:: And it has, O guest, properly caused us to suffer.

Stranger:: Be it so then. But let us again from the beginning endeavor to divide the common-rearing of animals. For perhaps the discourse itself, being brought to a conclusion, will more clearly unfold what you desire. But tell me—

Socrates Younger:: What?

Stranger:: This; if indeed you have frequently heard it from certain persons. For I do not think you have met with the tame-fish places in the Nile, or in the royal lakes. But perhaps you have seen the taming of these in artificial fountains.

Socrates Younger:: I have seen these frequently, and I have heard of those from many.

Stranger:: You have likewise heard and believe that geese and cranes are reared, though you have never wandered about the Thessalian plains.

Socrates Younger:: How not?

Stranger:: On this account I have asked you all these questions, because the rearing of herds of animals is partly of those moving in the water, and partly on dry land.

Socrates Younger:: It is so.

Stranger:: Does it not then appear to you likewise, that we ought to cut in two the common-rearing science, distributing to each of them its own part, and call the one a rearing-in-moisture, and the other a rearing-on-dry-land.

Socrates Younger:: It does so appear to me.

Stranger:: But we will not in the same manner inquire to which of these arts king-science belongs. For it is evident to every one.

Socrates Younger:: How not?

Stranger:: And every one can separate the dry-rearing portion of the herd-rearing.

Socrates Younger:: How?

Stranger:: Into the flying and walking-on-foot.

Socrates Younger:: Most true.

Stranger:: But what of state-science, must it be inquired whether it relates to the walking-on-foot? Or do you not think, that the most stupid person, so to say, would imagine so?

Socrates Younger:: I do.

Stranger:: But it is requisite to show that the art of rearing foot-walking animals is, as number was just now, cut into two parts.

Socrates Younger:: This is evident.

Stranger:: And yet to the part, to which our discourse has led us on, there seem to be some two paths extending themselves; the one quicker, by being divided, a small part as compared with a large one; but the other longer, from preserving rather the precept, which we mentioned before, that we ought to cut as much as possible through the middle. It is in our power then to proceed by either of the paths we may wish.

Socrates Younger:: Is it then impossible to proceed by both?

Stranger:: What by both at once, O wonderful youth? Alternately, however, it is plain the thing is possible.

Socrates Younger:: I choose then both alternately.

Stranger:: The thing is easy; since short is the remainder of the road. In the beginning indeed and middle of our journey the command would have been difficult. But now, since this seems good, let us first proceed by the longer road. For, as we are fresh, we shall more easily journey through it. But do you look to the division.

Socrates Younger:: Speak it.

Stranger:: Of such tame animals as are gregarious, the foot-walking have been divided by us according to nature.

Socrates Younger:: What nature?

Stranger:: By some of their race being hornless and others horned.

Socrates Younger:: So it appears.

Stranger:: Divide then the art of rearing foot-walking animals, and assign to each part, making use of reason. For should you wish to name them, the thing will become complicated more than is fitting.

Socrates Younger:: How then must one speak of them?

Stranger:: Thus. Of the science of rearing foot-walking animals, divided into two parts, let one portion be assigned to the horned part of the herd, but the other to the hornless.

Socrates Younger:: Let this be so said: for they have been sufficiently shown to be so.

Stranger:: Now then the king is evidently the shepherd over a flock of animals deprived of horns.

Socrates Younger:: For how is he not evident?

Stranger:: Breaking then this herd into portions, let us endeavor to assign the result to him the king.

Socrates Younger:: Entirely so.

Stranger:: Whether then are you willing for us to divide it the herd by the cloven, or, what is called, the solid hoof? Or by a common or individual generation? For you understand.

Socrates Younger:: What?

Stranger:: That the race of horses and asses naturally procreate with each other.

Socrates Younger:: It does.

Stranger:: But the other still remaining portion of the smooth-haired herd of tame animals, is unmixed in their generation with each other.

Socrates Younger:: How not?

Stranger:: But whether does the Statesman appear to take care of animals having a common, or individual generation?

Socrates Younger:: It is evident of the unmixed generation.

Stranger:: We must then, as it seems, divide this, as those before, into two parts.

Socrates Younger:: Yes; we must.

Stranger:: But we have cut into minute portions nearly every tame and gregarious animal, except two genera. For it is not fit to rank the genus of dogs among gregarious cattle.

Socrates Younger:: It is not. But in what manner shall we divide these two?

Stranger:: In that, by which it is just for you and Theætetus to divide them, since you are handling the science of geometry.

Socrates Younger:: In what manner?

Stranger:: By the diameter, and again by the diameter of the diameter.

Socrates Younger:: How say you?

Stranger:: Is the nature, which the race of us men possesses, adapted to locomotion in any other way than as a diameter, which is two feet in power?

Socrates Younger:: In no other way.

Stranger:: Moreover the nature of the remaining genus is again according to the power of our power, a diameter, if it naturally consists of twice two feet.

Socrates Younger:: Undoubtedly. And now I nearly understand what you wish to show.

Stranger:: But in addition to these, do we perceive, Socrates, something else belonging to those having a reputation for laughter, which happened to us in making the former division?

Socrates Younger:: What is that?

Stranger:: This our human race, sharing the same lot and running the same course with a race the most generous and most handy of existing animals.

Socrates Younger:: I perceive it happening very absurdly too.

Stranger:: Is it not fit that the slowest things should arrive last of all?

Socrates Younger:: It is.

Stranger:: But we do not perceive this, that a king appears still more ridiculous, when running together with the herd, and performing his course in conjunction with him, who is exercised in the best manner with respect to a tractable life.

Socrates Younger:: Entirely so.

Stranger:: For now, Socrates, that is more apparent, which was said by us in our search for a sophist.

Socrates Younger:: What is that?

Stranger:: That in such a method of discourse there is no greater care for what is venerable, than what is not, nor does it prefer the small to the great, but always accomplishes that which according to itself is most true.

Socrates Younger:: It appears so.

Stranger:: After this, that you may not anticipate me by asking what is the shorter road to the definition of a king, shall I traverse it the first?

Socrates Younger:: By all means.

Stranger:: I say then, that we ought to have divided forthwith the foot-walking genus into the biped and quadruped; and, seeing that the human race shared the same lot with the genus flying alone, we ought to have again divided the two-footed into the wingless and winged; and this division having been made, and the art shown, which is the rearer of men, we ought to have brought forward and placed over it the statesman and kingly character, like a charioteer, and given him the reins of the city, in consequence of this science being peculiarly his own.

Socrates Younger:: You have spoken beautifully, and given me an account, as it were, of a debt, and added a digression, by way of interest, and completed the transaction.

Stranger:: Come then, let us, going back to the beginning, connect with the end the discourse concerning the name of the statesman's art.

Socrates Younger:: By all means.

Stranger:: One part then of intellectual science was at the beginning the commanding; and the part assimilated to this was called the self-commanding. Again, of the self-commanding, the rearing of animals was cut off, as not the smallest part of the genera; and of the rearing of animals, the rearing of herds was a species; and of the rearing of herds, a part was the care of foot-walking animals; and of the care of foot-walking animals, the science of rearing the hornless race was especially cut off. But of this again, it is necessary to connect a part, not less than the triple, if any one is desirous of bringing it under one name, by calling it the science of tending an unmixed genus. But a section from this, which alone remains, and which rears men, as being a biped flock, is the part which has been just now explored, and is called, at one and the same time, the kingly and statesmanly kind.

Socrates Younger:: Entirely so.

Stranger:: Do you then, Socrates, think that this has been, as you say, really done well?

Socrates Younger:: What?

Stranger:: That the thing proposed has been in every respect sufficiently discussed. Or has our investigation been particularly deficient in this very thing, that the account has been given in words, but not in all respects worked out to the end?

Socrates Younger:: How say you?

Stranger:: I will endeavor to explain to ourselves more clearly what I am thinking of.

Socrates Younger:: Say it.

Stranger:: There is then of many herdsmen's arts, that have appeared to us, one, the statesman's, and the guardianship of some one herd.

Socrates Younger:: There is.

Stranger:: This our discourse has defined to be neither the rearer of horses, nor of other animals, but to be the science of rearing men in common.

Socrates Younger:: It did so.

Stranger:: Now let us see what is the difference between all herdsmen and kings.

Socrates Younger:: What is it?

Stranger:: If any one of the rest, possessing the name of another art, says and pretends to be the rearer in common of the herd, what should we say?

Socrates Younger:: How say you?

Stranger:: Just as if all merchants, and husbandmen, and purveyors of food, and besides these, teachers of gymnastics, and the genus of physicians, should, you know that by their speeches oppose altogether the herdsmen of the human race, whom we have called statesmen, and assert that it is their care to rear men, and not only men herded together, but even the rulers themselves—

Socrates Younger:: Would they not rightly say?

Stranger:: Perhaps so. And we will consider this too. We know that no one will contend with a herdsman about things of this kind; since he is himself the rearer, himself the physician, and himself, as it were, the bridesman of the herd, and is alone skilled in the midwife's art respecting the birth and delivery of the produce. No one, besides, is better able, by such sport and music as cattle can, by their nature, share in, to console and soothe, and render gentle, both with instruments and the naked mouth, handling in the best way the music of his flock. And the same may be said of other herdsmen. Or may it not?

Socrates Younger:: Most right.

Stranger:: How then will our discourse respecting a king appear to be right and entire, when we place him alone, as the herdsman and rearer of the human herd, selecting him alone out of ten thousand others contending with him?

Socrates Younger:: By no means.

Stranger:: Did we not then a little before very properly fear, when we suspected, lest we should only speak of a certain figure of a king, and not perfectly work out the statesman, until by taking away those, who were diffused around him, and laid claim to a fellow-rearing, and, by separating him from them, we should exhibit him alone and pure?

Socrates Younger:: Most rightly did we fear.

Stranger:: This then, Socrates, must be done by us, unless we are about to bring disgrace upon our discourse at its end.

Socrates Younger:: But this at least must by no means be done.

Stranger:: We must then march by another road again from another beginning.

Socrates Younger:: By what road?

Stranger:: By mixing up almost some merriment. For it is requisite to make use of the prolix portion of a long story, and, as regards what still remains, to take away, as we did before, always a part from a part, till we arrive at the summit of the inquiry. Must we not do so?

Socrates Younger:: Certainly.

Stranger:: Give then, as children do, entirely your attention to my story; for you are not altogether flying from many years of merriment.

Socrates Younger:: Relate it.

Stranger:: Of the things then said of old, there have been, and will be still, many others preserved, and the prodigy likewise relating to the reported contests between Atreus and Thyestes. For you have surely heard and remember what is then said to have happened.

Socrates Younger:: Perhaps you mean the prodigy respecting the golden ewe.

Stranger:: By no means; but respecting the change in the rising and setting of the sun, and of the other constellations, how that they set then at the very place from whence they now rise, and rose from the opposite one; and that the deity gave a testimony in favor of Atreus, and changed the heavens into the present figure.

Socrates Younger:: This too is reported.

Stranger:: And we have likewise heard from many of the kingdom over which Kronos (Saturn) ruled.

Socrates Younger:: We have from very many.

Stranger:: And that the men of former times were produced earth-born, and not begotten from each other?

Socrates Younger:: This too is one of the things said of old.

Stranger:: All these things then arose from the same circumstance, and in addition to these ten thousand others, and still more wonderful. But, through the length of time, some of them have become extinct, and others are told in a dispersed manner, separate from each other. But that which is the cause of this to all these, no person has told as yet; and it must be now told; for being told it will be something conspicuous for showing forth the king.

Socrates Younger:: You have spoken most beautifully. Say on then, and omit nothing.

Stranger:: Hear, then. This universe the deity does at one time conduct himself, as it proceeds, and with it rolls on; but at another leaves it, when its revolutions shall have received the measure of the fitting time; and it is then brought back again of its own accord to a contrary state, being a thing of life, and having a share of intelligence from him, who put it together at its outset. Now this movement backwards has been of necessity implanted in it through this.

Socrates Younger:: Through what?

Stranger:: To subsist always according to the same, and in a similar manner, and to be the same, belongs to the most divine of all things alone. But the nature of body is not of this order. But that, which we have called heaven and the world, has a share in many and blessed gifts from the producing cause; moreover, it has had a share of body; from whence it cannot be entirely without a share of change; nevertheless, according to its power it is moved as much as possible in the same, and according to the same, by one impetus. Hence it is allotted a revolving movement, as being the smallest change in its motion. But scarcely any thing is able to turn itself by itself, except that which is the leader of all things that are moved. And it is not lawful for this to move at one time in one way, and at another in a contrary way. From all this then we must say, that the world does not always cause itself to revolve, nor that the whole is always made by the deity to revolve in two and contrary revolutions: nor, again, that some two deities, whose thoughts are contrary to each other, cause it to revolve; but what has been said just now, and remains alone, that at one time it is conducted by another divine cause, possessing the power to live again, and receiving an immortality prepared by the demiurgus; but that at another time, when it is let loose, it proceeds itself by itself; and, after being thus let loose for such a time as to perform back again many myriads of revolutions, it proceeds by its being of the greatest size, and most equally balanced, to move at the smallest foot.

Socrates Younger:: All that you have gone through appears to be said very reasonably indeed.

Stranger:: Reasoning then from what has been said already, let us think together on the circumstance, which we stated was the cause of all these wonderful doings. For it is this very thing.

Socrates Younger:: What?

Stranger:: That the movement of the universe is at one time carried on, as it is at present, in a circle, and at another time in the contrary direction.

Socrates Younger:: How is this?

Stranger:: We must consider this change of motion to be the greatest and most perfect of all the revolutions, relating to the heavenly bodies.

Socrates Younger:: It is likely.

Stranger:: It is proper then to think that the greatest changes happen at that time to us, who are living within the universe.

Socrates Younger:: And this too is likely.

Stranger:: But do we not know that the nature of animals sustains with difficulty changes great, numerous, and of all kinds?

Socrates Younger:: How not?

Stranger:: Hence the greatest destruction of other animals necessarily takes place at that time, and that of the human race only some small portion remains. And to these many other wonderful and novel circumstances happen at the same time; but this is the greatest, and follows that revolution of the universe at that period, when a turn occurs contrary to the present state of things.

Socrates Younger:: What?

Stranger:: The period of life, which each animal then had, this was first arrested in all; and all that was mortal ceased to be seen advancing to old age, but changing back to the contrary, grew, as it were, younger and more delicate. The white hairs too of older people became black, and the cheeks of those that had beards becoming smooth, brought back each person to the past blooming period of life. The bodies likewise of such as were in manhood's prime, becoming smoother and smaller each day and night, returned again to the nature of a newly-born child, and were assimilated to this nature, both in soul and body; and thenceforth wasting away, disappeared in reality entirely; and the corpses of those, who died at that time through violence, did, through undergoing the selfsame fate, become in a manner unseen, and in a few days, quite putrid.

Socrates Younger:: But what was then, O guest, the generation of animals, and in what manner were they produced from each other?

Stranger:: It is evident, Socrates, that at that time there was no generation of one thing from another; but, it is said, there was once an earth-born race; this was at that period restored back again from out the earth; and the tradition of it was remembered by our first progenitors, who were close upon the revolution that reached to the period next in order, and were born at the beginning of the present state of things. For they became the heralds to us of those accounts, which are at present disbelieved improperly by the multitude. For I think we ought to reflect together on the consequence. For from the fact of old men coming to the nature of boys, it follows, that of such as were dead, but not laid in the earth, the corpses would be put together and made to revive by the turn of production revolving in a contrary direction; and that the earth-born race would, according to this method being necessarily produced, have their name and speech, except such as a deity conveyed elsewhere, or invested with another fate.

Socrates Younger:: This really follows from what has been said above. But with respect to the life, which you say was under the rule of Kronos (Saturn), did it subsist in those revolutions, or in these? For it is evident that the change in the position of the stars and the sun coincides with both these revolutions.

Stranger:: You have followed well the discourse. But, in answer to your question respecting all things being produced spontaneously for mankind, this by no means is the case in the present revolution; but it occurred in the former. For then the deity was at first the ruler and guardian of the whole revolving circle; just as now the parts of the world are locally distributed by gods ruling in the very same way. Divine dæmons, too, had a share, after the manner of shepherds, in animals according to genera and herds, each being sufficient for all things pertaining to the several particulars over which he presided; so that there was nothing of a wild nature, no eating of each other, no war, nor sedition of any kind; and ten thousand other things might be stated, which follow upon such an arrangement. But what is said respecting the spontaneous life of these men, has been stated on this account. The deity himself tended them, and was their protector; just as men now, being an animal more divine than others, tend other races meaner than themselves; and as he tended them, there were no forms of state or polity, nor a property in women and children; for all these were restored to life from the earth, and had no recollection of former events. But all such things were absent; they had however fruit in abundance from oaks, and many other trees, not grown by land tilling, but given spontaneously by the earth. They lived, too, for the most part naked, upon no strewed couch, and in the open air; for the temperament of the seasons was not painful to them; theirs were soft beds of grass, springing up without grudging from the earth. And thus, Socrates, you hear what was the life of men under Kronos (Saturn): but you, being present yourself, perceive what is life now, which is said to be under Zeus (Jupiter). But are you able and willing likewise to judge which of these is the happier?

Socrates Younger:: By no means.

Stranger:: Do you wish then that I should, after a fashion, judge for you?

Socrates Younger:: Entirely so.

Stranger:: If then those nurtured by Kronos (Saturn), when they had so much leisure and the power to converse not only with men, but with brutes likewise, had used all these means for the purposes of philosophy, associating with brutes and with each other, and inquiring of every nature which had a perceptive power of its own, in what respect it differed from the rest for the collecting together of prudence, it is easy to judge that the men of that time were ten thousand-fold happier than those of the present. But if, being filled to satiety with meats and drinks, they discoursed with each other, and with brutes, in fables such as are now told of them, it is easy, according to my opinion, to prove the very same thing. Let us, however, dismiss this question, until some one shall appear sufficient to point out whether the men of that time had any desire for science and the need of discourse. But let us now state for what reason we have raised up the fable, in order that we may after this proceed onwards. For when the time of all these was completed, and it was necessary for a change to take place, and moreover when the whole race on earth was already consumed, and every soul had given up its generations, and as many seeds as were ordained for each soul, it having fallen on the earth,—then did the governor of the universe, releasing himself, as it were, from the handle of a rudder, depart to his own place of a look-out; and then Fate and implanted Desire. again caused the world to revolve. All the gods then, who govern locally, in conjunction with the greatest divinity, knowing what was now taking place, again deprived the parts of the world of their providential care. But the world having undergone a change in its revolution, conflicting and rushing with the contrary impulse of a beginning and end, and producing in itself a mighty concussion, worked out again another destruction of all kinds of animals. After this, when a sufficient time had gone on, the world ceasing from tumult, confusion, and concussions, did, taking advantage of a calm, proceed, arranged most beautifully in its usual course, possessing a guardianship and dominion itself over the things in itself and belonging to itself; and remembering, to the utmost of its power, the instructions of the demiurgus and father. Now at the commencement it performed this duty more carefully, but at the end more obtusely. But the cause of this is in the corporeal form of the temperature, which had grown up with its former nature; since it partook of much disorder, before it arrived at its present orderly arrangement. For from him, who put it together, it obtained every good; but from its previous habit, whatever harshness and injustice exist in heaven, these it does both possess itself from that former habit, and introduce likewise into animals. In conjunction then with the ruler, the world, when nourishing the animals within it, brings forth evil of a small kind, but good of a large; but separated from him, it conducts all things beautifully during the time nearest to his departure; but as time goes on, and oblivion comes on it, the circumstance of its former unfitness domineers with greater force; and at the concluding period of time it bursts out into the full flower of wrong; and producing only a little good, but mingling much of the temperament of things contrary to good, it arrives at the danger of both its own destruction, and of the things within it. Hence the god, who arranged the world, perceiving it in difficulties, and anxious lest, being thus tempest-tost, it should be thoroughly loosened by the hurly-burly, and be plunged into the infinite sea of dissimilitude, again seats himself at the helm; and whatever is laboring and loosened in its own former period, he having turned arranges, and by putting straight, renders the world free from death and old age. This then is one end of the whole story. But this is sufficient to show, from what has been said, the nature of a king to such, as lay hold of the discourse. For the world having been again turned to the present path of generation, its age was again stopped, and it imparted novel things, the contrary to what it had done formerly. For animals, wanting but little to be through their small size annihilated, are increased; and hoary bodies recently born from the earth, dying again, descend into the earth; and all other things are changed, imitating and following the condition of the universe. The imitation, likewise, of conception, generation, and nourishing, followed all things from necessity. For it was no longer possible for an animal to be produced in the earth, through the different things, which compose it; but, as the world was ordained to be the absolute ruler of its own progress, so after the same manner its parts also were destined by a similar guidance to spring forth, generate, and nourish, as far as they were able. But we have now arrived at the very question for the sake of which the whole of our discourse has proceeded. For, with respect to other beasts, many circumstances, and of a prolix nature, might be gone through; such as, from what each is, and through what cause they have been changed; but those relating to man are shorter, and more to our purpose. For mankind having become destitute of the guardian care of the dæmon, who possesses and tends us, while the majority of animals, that were naturally cruel, have on the other hand become savage, men, now weak, and without a guard, were torn in pieces by such animals; and, in those earliest times, they were without inventions and arts; for after the earth had failed in its spontaneous food, they did not know how to procure it, through no want having previously compelled them to get it. From all these causes they were in the greatest difficulties. Hence, the old-mentioned gifts were given us by gods, together with the necessary instruction and erudition; fire from Prometheus, and arts from Hephaestus Vulcan, and his fellow-artist Pallas; on the other hand, seeds and plants were given by others, and all such things as furnish a support for human life, were produced from these; since, as was stated just now, the guardian care of the gods had deserted mankind; and it became requisite for men to have the conduct and care of themselves, in the same manner as the whole world; in the imitating and following which, through all the revolutions of time, we live and are born, now in this way, and now in that. Let this then be the end of the story. But we will make it useful for discovering how far we have erred in defining the characters of a king and statesman in our previous discourse.

Socrates Younger:: In what respect then, and how far, do you say has there been an error?

Stranger:: Partly less, and partly in a very generous manner, and in a greater degree, and more than before.

Socrates Younger:: How?

Stranger:: Because, when we were asked respecting a king and a statesman belonging to the present revolution and generation, we spoke of a person tending a human herd of the contrary period, and this too a god, and not a man. In this then we transgressed very much. But when we exhibited him as the ruler of the whole state, we did not say in what manner he was so; and in this respect the truth was told, but not the whole truth, nor was it clearly enunciated; hence we erred less in this case than in that.

Socrates Younger:: True.

Stranger:: We ought then, it seems, to expect that the statesman will have been completely described by us, when we shall have defined the manner of governing a state.

Socrates Younger:: Very well.

Stranger:: On this account we have brought forward the story, in order that one might show, with respect to the herd-tending, not only that all contend about it with the person now sought for; but that we might more clearly perceive him, whom alone it is fitting, according to the pattern of shepherds and neat-herds, to have the tending of the human herd, and alone worthy to be called by that name.

Socrates Younger:: Right.

Stranger:: But I think, Socrates, that this figure of a divine shepherd is still greater than becomes a king; and that the statesmen now existing here are much more like subjects in their nature, and take more nearly a share in discipline and nurture.

Socrates Younger:: Entirely so.

Stranger:: But they will have to be investigated neither more nor less, whether they are naturally in this position or in that.

Socrates Younger:: How not?

Stranger:: Let us then turn back again. For we said, that there was a self-commanding art respecting animals, which took care of them, not privately, but in common; and this art we then straightway called the herd-tending art. Do you recollect?

Socrates Younger:: Yes.

Stranger:: In this then we erred. For we have not by any means laid hold of the statesman, nor given him a name; but as regards the appellation, it has lain hid from and escaped us.

Socrates Younger:: How so?

Stranger:: To tend the several kinds of herds belongs to all other herdsmen; but we have not given a fitting name to the statesman, it being requisite for him to bear one of those common to all.

Socrates Younger:: You speak the truth, if indeed there happens to be a common one.

Stranger:: But how is it not possible to apply the word healing, as something common to all, neither tending nor any other occupation being stated? and if it is lawful for persons giving a name to an art to wrap it up in words like herd-tending, or healing in any way, as being applicable generally, it is lawful to wrap up the word statesman likewise together with others, especially since reason shows that this should be done?

Socrates Younger:: Right. But after this in what manner would the division be made?

Stranger:: In the same manner, as we before divided the herd-tending art for the walking and wingless tribes, and for the unmixed and hornless, in the very same manner by dividing the herd-tending, we shall have comprehended both the present kingly rule and that in the time of Kronos (Saturn) similarly in our discourse.

Socrates Younger:: It appears so. But I am seeking what will be after this.

Stranger:: It is plain that if the word herd-tending had been thus spoken, no one would have contended with us that there is no idea whatever of attention in it; as it was then justly contended, that there is no art amongst us which deserves the appellation of tending; and that if there were, it belongs to many things prior and preferable to any thing pertaining to kings.

Socrates Younger:: Right.

Stranger:: But no other art would be willing to say that it is more and before kingly rule, as a careful tending of the whole of human fellowship, and of men taken generally.

Socrates Younger:: You say rightly.

Stranger:: But after this, Socrates, do you perceive that an error has been made frequently towards the very end?

Socrates Younger:: Of what kind?

Stranger:: In this, that though we have conceived that there is a certain rearing art of a biped herd, we ought not any more to have straightway called it, as if entirely complete, the art of the king and statesman.

Socrates Younger:: Why not?

Stranger:: In the first place, as we said, we ought to have suited the name more to guardianship than to nutriment: and in the next place, to make a division in this guardianship. For it will have no small divisions.

Socrates Younger:: Of what kind?

Stranger:: In that we can surely place apart the divine shepherd, and the human guardian.

Socrates Younger:: Right.

Stranger:: And again it is necessary to cut into two the distributed guardianship.

Socrates Younger:: Into what?

Stranger:: Into the violent and the voluntary.

Socrates Younger:: What then?

Stranger:: By erring before in this more stupidly than was fitting, we put down together a king and a tyrant as the same; although they are most dissimilar both in themselves and in their form of government respectively.

Socrates Younger:: True.

Stranger:: Now therefore, again correcting ourselves, let us, as I have already said, divide human guardianship into the violent and the voluntary.

Socrates Younger:: Entirely so.

Stranger:: And calling the guardianship by the violent tyrannic, but the voluntary, and the herd-tending of voluntary biped animals, statesmanship, let us show, that he who possesses this art and guardianship is truly a king and a statesman.

Socrates Younger:: And thus the demonstration, O guest, respecting the statesman, is very like to appear to us as being perfect.

Stranger:: This would be well for us, Socrates. But it is requisite that this should appear not only to you, but likewise to me, in common with you. At present, however, the king appears to me not to possess as yet a perfect figure; but just as statuaries, who by hastening their work sometimes unseasonably, do, through introducing more and greater things than are fitting, retard it; so have we at present, in order that we might show both quickly and splendidly, that we erred in the former part of our digression, through thinking that great patterns should be employed in the case of a king? have brought in a marvelous mass of a myth, and been compelled to use a greater portion of it than was proper. On this account, we have made a rather prolix demonstration, and have not entirely finished the fable. But our discourse really appears somewhat like an animal, to have its outline defined sufficiently, but to have not received the distinctness given by pigments, and the mixture of colors. But it is more becoming to exhibit every animal by a description, to such as are able to follow the account, than by painting, and all the work of hand; but to other persons through works of the hand.

Socrates Younger:: This indeed is said rightly: but show me why you say you have not yet spoken sufficiently.

Stranger:: It is difficult, O divine youth, to exhibit great things sufficiently, without using patterns. For each of us appear to know all things as in a night-dream, and again to be ignorant of all things according to a day-dream.

Socrates Younger:: How said you this?

Stranger:: We appear in the present case to have mooted very absurdly the circumstance relating to the knowledge which is in us.

Socrates Younger:: How so?

Stranger:: The pattern, O blessed one, has required itself again a pattern.

Socrates Younger:: What? Tell me, and do not, on my account at least, hesitate.

Stranger:: I must speak, since you are ready to follow. For we know, that children know their letters.

Socrates Younger:: What?

Stranger:: That they understand sufficiently each of the letters in the shortest and easiest syllables, and are able to speak the truth concerning them.

Socrates Younger:: How not?

Stranger:: But, being on the other hand doubtful about those in other syllables, they say what is false in idea and word.

Socrates Younger:: Entirely so.

Stranger:: Is it not then the easiest and the best thing to lead them thus to what is not yet known?

Socrates Younger:: How?

Stranger:: By first leading them back to those things, in which they had correct ideas respecting those very same matters; and after leading them, to place before them things not yet known; and by comparing them together, to show that there is the same likeness and nature in both the combinations, till the things conceived, having been compared with all the unknown, are shown correctly; and, after being shown and becoming thus patterns, cause each one of all the letters in all the syllables to be called one different, and another the same, as being always under the same circumstances, different and the same respectively.

Socrates Younger:: Entirely so.

Stranger:: This then we sufficiently comprehend, that the production of a pattern then takes place, when that, which is the same, is, in the case of another thing placed apart, rightly conceived by opinion, and being brought together to it, produces one true opinion respecting either, as it did about both.

Socrates Younger:: It appears so.

Stranger:: Shall we then wonder, if our soul, suffering naturally the same thing respecting the elements of all things, does at one time stand firm in certain points under the influence of truth respecting each individual thing, and at another time fluctuates in other points respecting all things? and that when, as regards some elements of comminglings, it thinks rightly, it should somehow or another again be ignorant of these very same things, when they are transferred to long and difficult syllable-like unions of things?

Socrates Younger:: There is nothing wonderful in this.

Stranger:: But how, my friend, can any one, beginning from false opinion, arrive at even a small portion of truth, and thus acquire wisdom?

Socrates Younger:: Nearly not at all.

Stranger:: If then these things are naturally in this way, you and I shall not in any respect overdo it, if, by first endeavoring to perceive the nature of the whole pattern in some other small and partial one, and after this, by transferring to the nature of a king, which is the greatest of all patterns, the same species, from lesser things from some quarter, we shall be about to endeavor again, through a pattern, to know by art the care of state affairs, so that there may be a day-dream instead of a night one.

Socrates Younger:: Perfectly right.

Stranger:: Again then let us take up the preceding reasoning, that since ten thousand persons contend with the kingly genus, respecting the guardianship of a state, it is requisite to separate all these, and to leave it by itself. And for this purpose we said we have need of some pattern.

Socrates Younger:: And very much so.

Stranger:: By producing then what pattern, which embraces an occupation similar to statesmanship, and is the smallest possible, could one sufficiently find the thing sought for? Are you, Socrates, willing, by Zeus, unless we have something else at hand, for us to choose at least the weaving art? and this too not the whole, if it seems good; for, perhaps, the art relating to weaving of wool will suffice. For it may happen, that even this portion being chosen will witness to what we want to show.

Socrates Younger:: For why should it not?

Stranger:: Why then have we not, as we did before, after cutting the parts, each of them separate, done the very same thing now in the case of the weaving art? and why, after passing over all things to the best of our power in the shortest manner possible, have we not come to what is useful at present?

Socrates Younger:: How say you?

Stranger:: I will make the digression itself an answer.

Socrates Younger:: You speak most excellently.

Stranger:: Of all the things which we fabricate and possess, some are for the sake of our doing something, and others are defenses against our not suffering. And of these defenses some are medicinal, both divine and human; others are protective. And of the protective, some are warlike implements, others peaceful defenses. And of the peaceful defenses, some are veils, others are to ward off heat and cold. And of those that ward off, some cover at a distance, others near. And of the near, some are extended under, others around. And of those extended around, some are cut as a whole piece, others put together. And of those put together, some are perforated, others are bound together, not perforated. And of those that are not perforated, some are composed of the fibers of the plants of the earth, others are hairy. And of the hairy, some are conglutinated by water and earth, others are connected themselves with themselves. Now to these defenses and coverings, which are wrought from the things bound together, themselves with themselves, we give the name of dress. And let us call the art, which is especially conversant with dresses, dress-making, from the thing itself; in the same manner as we called above the art respecting a state, statesmanship. And let us say too, that the weaving art, so far as it weaves for the most part garments, differs in nothing but the name from the dress-making art; just as we said there, that the king-art differed only nominally from statesmanship.

Socrates Younger:: Most correctly.

Stranger:: After this let us reason thus, that some one may perhaps think that the weaving art relating to dresses has been thus defined sufficiently, he being unable to perceive that it is not yet distinguished from its proximate co-operators, but is separated from many other things of a kindred nature.

Socrates Younger:: Tell me what things of a kindred nature.

Stranger:: You have not followed what has been said, as it seems. It appears, therefore, that we must return from the end to the beginning. For, if you understand affinity, we have now separated this from that, by separating the composition of coverings into things put under, and around.

Socrates Younger:: I understand you.

Stranger:: We have likewise separated every kind of manufacture from flax and hemp, and all such things as we just now described in the list of the fibers of plants. We also defined the art of making a felt-like substance, and the putting together by means of perforation and sewing, which for the most part pertains to the cobbler's art.

Socrates Younger:: Entirely so.

Stranger:: We have also separated the care bestowed on the cobbler's art relating to coverings cut in the whole piece, and of such as are employed in building, and in the whole of the carpenter's art, and in all others that are employed in stopping the flowing of water, and such arts too of peaceful defenses as furnish works to be an impediment to thieving and to acts of violence, and which are employed about the production of obstacles and the fixing of doors, and are distributed as parts of the bolt-making art. We have likewise divided the armor-making art, which is a section of the great and varied power of defense-making. We also defined, in the very beginning, the whole art of quackery, which is conversant with medicines; and we left, so that we might seem to be, the very art defensive against storms, of which we are in search, and which produces woolen vestments, and is called the art of weaving.

Socrates Younger:: It seems so.

Stranger:: But this matter, O boy, has not been perfectly detailed. For he, who first engaged in the making of garments, appeared to act in a manner directly contrary to weaving.

Socrates Younger:: How so?

Stranger:: For the work of weaving is a certain knitting together.

Socrates Younger:: It is.

Stranger:: But the work of the garment-maker consists in loosening things put together, and felted together.

Socrates Younger:: What kind of work is this?

Stranger:: The work of the art of the wool-carder. Or shall we dare to call the art of wool-carding the weaving art, and a wool-carder a weaver?

Socrates Younger:: By no means.

Stranger:: But if any one should call the art of making the warp and woof the weaving art, would he not assert a paradox, and give it a false name?

Socrates Younger:: How not?

Stranger:: But whether shall we say that the whole of the fuller’s and the mender’s art contribute nothing to the attention to and care of garments? Or shall we call all these weaving arts?

Socrates Younger:: By no means.

Stranger:: But all these contend with the power of the weaving art, respecting the care and the production of garments; attributing, indeed, to it the greatest part, but likewise assigning to themselves great portions of the same art.

Socrates Younger:: Entirely so.

Stranger:: Besides these, it further appears requisite, that the handicraft arts, relating to the instruments through which the works of the weaver are performed, should lay claim to be co-causes of all weaving.

Socrates Younger:: Most right.

Stranger:: Whether then will our discourse about the weaving art, a part of which we have chosen, be sufficiently defined, it we lay it down that it is the most beautiful and the greatest of all the arts, which are employed about woolen garments? Or shall we thus, indeed, speak something of the truth, but yet neither clearly nor perfectly, till we have separated all these arts from it?

Socrates Younger:: Correctly.

Stranger:: Must we not then after this so act, that, what we say, may proceed in an orderly series?

Socrates Younger:: How not?

Stranger:: In the first place then let us consider two arts, which exist about all things.

Socrates Younger:: What are they?

Stranger:: One is the co-cause of generation, and the other is the cause itself.

Socrates Younger:: How?

Stranger:: Such arts, as do not fabricate the thing itself, but prepare instruments for the fabricating arts, without the presence of which the proposed work could not be effected by each of the arts, these are co-causes: but those, which fabricate the thing itself, are causes.

Socrates Younger:: This is reasonable.

Stranger:: In the next place, those arts which produce the distaff, and the shuttle, and such other instruments as contribute to the making of garments, all these are co-causes: but those which pay attention to and fabricate garments, causes.

Socrates Younger:: Most right.

Stranger:: But of causes, it is reasonable to comprehend that portion of it especially, which pertains to washing and mending, and all the caring about these, since the adorning art is abundant, and to denominate the whole the fuller's art.

Socrates Younger:: It will so.

Stranger:: Moreover, the carding and spinning, and all that relates to the making of the garment, of which we are detailing the parts, is one art, called by all persons the wool-working.

Socrates Younger:: How not?

Stranger:: Of the wool-working there are two sections, and each of these are together naturally parts of two arts.

Socrates Younger:: How?

*Stranger::* The carding, and the half of that which uses the shuttle, and separates from each other whatever are placed together, all this in short is a part of the wool-working art; and there were two great parts as regards the whole, one commingling, and the other separating.

Socrates Younger:: Yes.

Stranger:: Of the separating then, both the carding and all those just now mentioned are a part. For that, which in the case of the wool and thread is the separating art, takes place, after one manner with the shuttle, and after another with the hands, has the names which we have just now mentioned.

Socrates Younger:: Entirely so.

Stranger:: Again, let us take a part of the commingling, and of the wool-working contained in it; but let us pass by all that was there relating to the separating, and let us bisect the wool-working art together into the commingling and separating section.

Socrates Younger:: Let it be so divided.

Stranger:: We must then, Socrates, divide the commingling, and at the same time the wool-working, if we are about to comprehend sufficiently the proposed weaving art.

Socrates Younger:: It will be requisite.

Stranger:: It will indeed; and let us say, that one part of it is twisting, and the other complicating.

Socrates Younger:: Do I then understand you? For you appear to me to say that the working of the thread is twisting.

Stranger:: Not the working of this only, but likewise of the woof. Or shall we find any production of it which is not twisting?

Socrates Younger:: By no means.

Stranger:: Define also each of these: for perhaps the definition will be suitable.

Socrates Younger:: In what way?

Stranger:: In this. We say that of the operations of wool-carding, that which has been drawn out into length and possesses breadth, is a certain filament.

Socrates Younger:: We do.

Stranger:: And of this, when it is turned by the spindle, and becomes a solid thread, do thou call a stamen; but the art, which regulates it, let us say that this is stamen-weaving.

Socrates Younger:: Right.

Stranger:: But such fabrics as receive a loose twisting, and, by the enfolding of the stamen through the dragging of the knapping process, acquire a moderate softness, of these we call what is spun the woof, but the art itself which presides over these, woof-spinning.

Socrates Younger:: Most right.

Stranger:: And now that part of the weaving art, which we have brought forward, is obvious to every one. For, with respect to a part of the commingling art in wool-working, when it accomplishes that, which is woven by a straight-knitting together of the woof and the thread, then the whole of the thing woven we call a woolen garment, but the art presiding over it, weaving.

Socrates Younger:: Most right.

Stranger:: Be it so. But why then did we not immediately answer, that the weaving art is that which enfolds the woof and the thread, instead of proceeding in a round-about way, and defining many things in vain?

Socrates Younger:: It does not appear to me, O guest, that of what has been said a single thing has been said in vain.

Stranger:: This is not at all wonderful. But perhaps, O blessed youth, it will appear so. But against such a disorder, should it hereafter by chance come upon you—for nothing is wonderful—hear a certain discourse, proper to be spoken about all such things as these.

Socrates Younger:: Only relate it.

Stranger:: Let us then in the first place look into the whole of excess and deficiency, in order that we may praise and blame according to reason whatever is said on each occasion at greater length, or the contrary, than is becoming in disputations of this kind.

Socrates Younger:: It will be proper so to do.

Stranger:: Our discourse taking place on these points, would, I think, take place rightly.

Socrates Younger:: About what things?

Stranger:: About length and shortness, and the whole of excess and deficiency. For the art of measuring is conversant with all these.

Socrates Younger:: It is.

Stranger:: Let us divide it then into two parts. For it is necessary for that, to which we are hastening.

Socrates Younger:: Inform me how this division is to be made.

Stranger:: Thus. One part according to the ideas relating in common to great and little, but the other part according to the necessary existence of production.

Socrates Younger:: How say you?

Stranger:: Does it not appear to you to be according to nature, that we ought to speak of the greater as being greater than nothing else but the lesser? and on the other hand of the lesser, as being lesser than the greater, but nothing else?

Socrates Younger:: To me it does.

Stranger:: But what, must we not say that, what surpasses the nature of moderation, and is surpassed by it, whether in words or actions, is, when produced in reality, that by which the good and bad of us differ the most from each other?

Socrates Younger:: It appears so.

Stranger:: These twofold existences then and judgments respecting the great and the small we must lay down; but not, as we just now said, with reference to each other only; but, as is just now said, we must speak of one as being referable to each other, but of the other as referable to moderation. Are we however willing to learn on what account this is requisite?

Socrates Younger:: How not?

Stranger:: If any one admits the nature of the greater to be referable to nothing but the lesser, it will not be referable to moderation. Will it?

Socrates Younger:: It will be thus.

Stranger:: Shall we not then destroy the arts themselves, and all their works, according to this reasoning? And shall we not cause to disappear entirely the statesman's science, which we are now investigating, and that which is called the weaving art? For all such things as these guard against that, which is more or less than moderation, not as if it had no existence, but as a thing of a difficult nature in practice; and after this manner preserving moderation, they effect every thing beautiful and good.

Socrates Younger:: How not?

Stranger:: If then we cause to disappear the statesman's science, will not our subsequent search of king-science be without a road?

Socrates Younger:: Very much so.

Stranger:: Whether then, as in the *Sophist*, we compelled nonentity to exist, after the discourse about it had fled from us in that direction, so now we shall compel the more and the less to become measured, not only with reference to each other, but likewise to the production of moderation? For no one can become indisputably a statesman, or be any person else, possessing a knowledge relating to actions, if this be not acknowledged.

Socrates Younger:: We ought then to do this even now as much as possible.

Stranger:: This, Socrates, is a still greater work than that; although we remember how great was its prolixity. But it is very just to put hypothetically something of this kind respecting them.

Socrates Younger:: Of what kind?

Stranger:: That there will be a need of what has been just stated, for the demonstration of what is accurate respecting it. But as regards the present question, this reasoning is shown, well and sufficiently, it appears to me, to assist us in a conspicuous manner, so that we must think all arts are to be measured according to something more and at the same time less, not only with reference to one another, but to the production likewise of moderation. For when this exists, they exist also; and when they exist, this exists also; but when either of these does not exist, neither of those will exist.

Socrates Younger:: This indeed is right. But what is there after this?

Stranger:: It is evident that we should divide the art of measuring, as has been said, into two parts; placing as one of its parts all those arts, which measure number, and length, and depth, and breadth, and thickness, with reference to the contrary; but placing as its other part, such arts as regard the moderate and the becoming, the seasonable and the fit, and all such as are separated from the extremes towards the middle point.

Socrates Younger:: Each of these sections is great, and they differ much from each other.

Stranger:: That, Socrates, which many clever men, who think they are saying something wise, sometimes assert, when they say that the art of measuring is conversant with all generated natures, that very thing happens to be now asserted by us. For all things of art do after a certain manner partake of measure; but, in consequence of not being accustomed to divide according to species, these men immediately bring together to the same point things widely differing from each other, and consider them as similar; and, on the other hand, they do the very contrary to this, by not dividing according to their parts things that are different; although it is requisite that when any one first perceives the communion of many things, he should not desist till he perceives all the differences in it, which are placed in species; and again, when the all-various dissimilitudes in multitudes are perceived, he should not be able, through a feeling of disgust, to desist from this unpleasant view, till, having enclosed all such things as are allied in one similitude, he invests them with the existence of a certain genus. And thus much may suffice respecting these particulars, and concerning defect and excess. Let us only carefully observe, that two genera of the measuring art respecting these have been found out, and let us remember what we say they are.

Socrates Younger:: We will remember.

Stranger:: After this discussion, let us assume another respecting the objects of our search, and the whole mental exercise in discourses of this kind.

Socrates Younger:: What is it?

Stranger:: If any one should ask us respecting the assembling together of those that learn their letters, when one is asked of what letters does any word consist, shall we say that the inquiry is then made for the sake of the one word proposed, rather than that of the party becoming more skilful as a grammarian, with respect to every thing placed before him.

Socrates Younger:: Evidently as regards every thing of grammar.

Stranger:: Has the inquiry respecting a statesman been proposed by us more for the sake of the statesman himself, than for ourselves to become more skilful dialecticians on every point?

Socrates Younger:: This too is evident, that it is for ourselves to become such on every point.

Stranger:: No one indeed endued with intellect would be willing to hunt out the rationale of the art of weaving, for its own sake alone. But I think it has lain hid from most men, that to some things, which are naturally easy to learn, there are certain similitudes to be perceived by the senses, which it is not difficult to make manifest, when any one wishes to point them out to some one inquiring a reason respecting a thing, not with trouble, but easily without a long speech. But of things the greatest and the most honored, there is not any image made clear for men, by which being shown, he who wishes to fill the soul of the inquirer, will fill it sufficiently by suiting it to one of the senses. Hence it is requisite to practice oneself in being able to give and receive a reason for every thing. For incorporeal natures, being the most beautiful and the greatest, are exhibited by reason alone, and by nothing else; and it is for this that all has been said now. But the consideration of every particular occurs more easily in small things than in great.

Socrates Younger:: You speak most beautifully.

Stranger:: Let us then remember that all these things have been said by us on this account.

Socrates Younger:: On what?

Stranger:: Not the least on account of the disgust, which we have felt disgustingly through the prolix discourse about the weaving art, and about the revolution of the universe, and that of the *Sophist* about the existence of a non-entity, conceiving it to have a rather considerable length. And on all these accounts we reproached ourselves, fearing lest we should speak superfluously in conjunction with prolixity. That we may not then suffer any thing of this kind again, think that on account of all these things our former remarks have been made.

Socrates Younger:: Be it so. Only say what is in order.

Stranger:: I say then, it is requisite that both you and I should be mindful of what we have now said, and to give on each occasion blame and praise of brevity as well as prolixity respecting what we may happen to be speaking, not judging of prolixities with reference to each other, but according to that part of the measuring art, which we then said we ought to remember relating to the becoming.

Socrates Younger:: Right.

Stranger:: But yet all things are not to be referred to this. For we shall not be in need of prolixity, which, as regards pleasure, is not all fitting, unless as something of no importance: on the other hand, as regards the search of what has been proposed, in order that we may find it most easily, and quickly, reason bids us regard it as a secondary, not primary object; but to honor the most and in the first place, the method of being able to divide according to species; and to pay a serious regard to a discourse, if when spoken at great length it renders the hearer more inventive; and not to take it ill; and in like manner, if it be shorter. And still, in addition to this, reason says that he who blames long discourses in meetings such as these, and who does not admit round-about periods, must not dismiss them altogether, rapidly, and immediately, by abusing merely what has been spoken at great length, but he must show moreover that he thinks that words being shorter would render persons coming together more fitted for dialectics, and more able to discover the demonstration by reason of existing things; but of the praise and blame of others relating to any other subjects we need take no thought, nor appear to hear at all such words as these. But of this there is enough, if so it seems likewise to you. Let us then again return to the statesman, introducing the pattern of the above-mentioned weaving art.

Socrates Younger:: You speak well; and let us do as you say.

Stranger:: Has not then the king been separated from the majority of arts, as are fellow-tending, or rather from all that relate to herds? But the remaining, we say, are those that belong to the co-causes, and causes relating to the state itself, which we must separate from each other.

Socrates Younger:: Right.

Stranger:: You know then that it is difficult to bisect these; and the reason will, I think, as we advance, be not the less apparent.

Socrates Younger:: It will be then meet to do so.

Stranger:: Let us then separate them like a victim piecemeal; since we cannot do so by a bisection: for it is always requisite to cut into the nearest number possible.

Socrates Younger:: How then shall we do so at present?

Stranger:: Just as before; for we laid down as co-causes whatever arts furnished instruments for weaving.

Socrates Younger:: Yes.

Stranger:: The same thing therefore we must do now, and still more than then. For such arts as fabricate, with regard to a state instrument, either small or large, we must lay down all of them as co-causes; since without these a state could not exist, nor yet statesmanship. But on the other hand we will not lay down any one of these as the work of kingship.

Socrates Younger:: We will not.

Stranger:: And yet we are attempting to do a difficult thing, in separating this genus from the rest. For if it appears that he, who says that whatever exists is an instrument of some one thing, says what is credible, still on the other hand let us say that there is this thing different from the possessions in a state.

Socrates Younger:: What thing?

Stranger:: As it is not having this very power. For that thing is not put together like an instrument, as a cause of production, but for the safety of that which is fabricated.

Socrates Younger:: What kind of thing?

Stranger:: That thing, which being worked up from materials dry and moist, and exposed to fire, and without fire, is a species of varied kind, which we call by one appellation, a vessel; and though it is a numerous species, it does not I think belong at all to the science we are seeking.

Socrates Younger:: How not?

Stranger:: Of these possessions, there is another and third species very numerous to be looked into, being on land and in the water, and much-wandering and not-wandering, and honorable and dishonorable; but possessing one name, because the whole of it exists for the sake of a certain sitting, as becoming always a seat for something.

Socrates Younger:: What kind of thing is it?

Stranger:: We call it a vehicle, a thing not at all the work of the statesman’s science, but rather more of the carpenter, potter, and brass-founder.

Socrates Younger:: I understand.

Stranger:: What of the fourth species? Must we speak of one different from these, in which the most of the things formerly mentioned are contained; every kind of dress, the greater part of arms, and all walls, such as are thrown round, of earth or stone, and ten thousand other things. And since all these are constructed for the sake of a protection, the whole may most justly be called a defense; and may, for the most part, be considered much more the work of the architect, and more rightly of the weaver, than of the statesman.

Socrates Younger:: Entirely so.

Stranger:: Are we willing to rank in the fifth place the arts of adorning and painting, and such as making use of it painting and music, finish as imitations, fabricated for our pleasure, and which may be justly comprehended in one name?

Socrates Younger:: In what name?

Stranger:: They may be surely denominated amusement.

Socrates Younger:: How not?

Stranger:: This one name then will suit, when pronounced, with all these: for not one of these things is done through seriousness, but all for the sake of amusement.

Socrates Younger:: This too I nearly understand.

Stranger:: But that, which prepares for all these materials bodies, out of which and in which, whatever arts have now been mentioned, manufacture something, shall we not place as a sixth all-various species, the offspring of many other arts.

Socrates Younger:: Of what art are you speaking?

Stranger:: That which furnishes gold and silver, and other substances found as metals, and whatever the art of felling trees, and the whole of the clipping art, furnishes to the carpenter, and the knitting art, and still further that which barks trees, and takes off the skins of living animals, the currier's art, and all such arts as are conversant with things of this kind, and such as working on corks, and papyrus-reeds, and withies, furnish the means of manufacturing from genera, not put together, species that are put together. The whole of this let us call the first-born possession of man, without any putting together, and by no means the work of the science of kingship.

Socrates Younger:: Right.

Stranger:: The possession of nutriment, and of such things as when mingled with the body possess a certain power, by their parts, to be subservient to the parts of the body, we must rank in the seventh place, by calling it altogether our nurse, unless we have some other better name to give. However, we will place the whole of this under agriculture, hunting, exercise, medicine, and cooking, and attribute it to these arts more properly than to the science of the statesman.

Socrates Younger:: How not?

Stranger:: Nearly then all, whatsoever is connected with possession, with the exception of tame animals, has I think been mentioned in these seven genera. But consider. For it was most just that the species called first-born should be placed first; and after this, instrument, vessel, vehicle, protection, amusement, and cattle. But if any thing of no great consequence has escaped us, which it is possible to suit only with difficulty to some one of these, we omit it; such as the idea of coin, of seals, and of every thing bearing a mark. For these things have not in themselves a genus much in common; but some will agree as regards ornament, others as regards instruments, drawn into the discussion indeed with violence, but nevertheless completely. But the tending of herds, as previously divided, will appear to have comprehended the whole possession of tame animals with the exception of slaves.

Socrates Younger:: Entirely so.

Stranger:: The genus of slaves and of all servants remains; amongst whom I conjecture will become apparent those, who engaged in the very thing woven, contend with the king in the same manner as those above, that are engaged in knitting, and in wool-combing, and in such other arts as we then mentioned, did with the weavers. But all the rest, spoken of as co-causes, have, together with the works just now mentioned, been done away with, and separated from the action of the king and statesman.

Socrates Younger:: So they seem.

Stranger:: Come then, let us approach nearer, and consider the rest, that we may perceive them more firmly.

Socrates Younger:: It is requisite to do so.

Stranger:: We shall find then that the greatest servants, so far as we can see from those here, are in a pursuit, and under circumstances the very contrary to what we have suspected.

Socrates Younger:: Who are they?

Stranger:: They who are purchased, and in this manner become a property; whom, beyond all controversy, we may call slaves and laying the least claim to the kingly science.

Socrates Younger:: How not?

Stranger:: But what shall we say of those free-born persons, who willingly put themselves to ministering to the parties mentioned just now, and by conveying the produce of agriculture, and of other arts, to each other, and by equalizing the possession and value of articles, do some at home markets, and others by going from state to state, by sea and land exchange coin against other things, or itself against itself, whom we have called money-changers, ship-owners, and hucksters, will these contend for any part of the statesman's science?

Socrates Younger:: Perhaps some of the foreign merchants will.

Stranger:: And yet we shall never find those, who for wages most readily become servants to all persons, laying any claim to the science of a king.

Socrates Younger:: For how should we?

Stranger:: What then shall we say of those, that do such ministering for us on each occasion.

Socrates Younger:: Of what and whom are you speaking?

Stranger:: I speak of the tribe of heralds, and of those who become accomplished in the art of writing, and often act as ministers, and certain other persons, who have very great talents for some other and many kinds of business connected with public offices. What shall we say of these?

Socrates Younger:: What you have said just now, that they are ministers, but no rulers in states.

Stranger:: But surely I was not, I think, seeing a vision, when I said that in this way, perchance, would be seen those strenuously contending for the science of a statesman. And yet it would seem to be very absurd to seek after these in any ministering portion.

Socrates Younger:: Very much so, indeed.

Stranger:: Let us then approach still nearer to those who have not been as yet examined. Now these are such as possess a certain portion of ministering science relating to divination. For they are held to be the interpreters of gods to men.

Socrates Younger:: They are.

Stranger:: The genus too of priests, as the law says, knows how gifts should be offered by us through sacrifices to the gods, agreeably to them; and how we should request of them by prayer the possession of good things. Now both these are parts of the ministering art.

Socrates Younger:: So it appears.

Stranger:: Now then we seem to me to touch, as it were, upon some foot-print of the object to which we are on the road. For the figure of priests and prophets is replete with prudence, and obtains a reputation for respect through the greatness of the matters in their hands; so that in Egypt it is not permitted for a king to govern without the sacerdotal science; and should any one previously of another genus of men become by violence the king, he is afterwards compelled to be initiated in the mysteries of this genus. Further still among the Greeks, one may find in many places that the greatest sacrifices relating to matters of this kind are imposed upon the greatest offices; and what I assert is shown particularly among you. For to him who is chosen by lot the king here, they say that of all the ancient sacrifices, those held in the highest veneration and most peculiar to the country are assigned.

Socrates Younger:: Entirely so.

Stranger:: We must then consider these kings chosen by lot, together with the priests, and their ministers, and a certain other very numerous crowd, which has just now become manifest to us, apart from those previously mentioned.

Socrates Younger:: Of whom are you speaking?

Stranger:: Of certain very strange persons.

Socrates Younger:: Why so?

Stranger:: As I was just now speculating, their genus appeared to me to be all kinds. For many men resemble lions and centaurs, and other things of this kind; and very many are similar to satyrs, and to weak and versatile wild beasts. They likewise rapidly change their forms and their power into each other. And indeed, Socrates, I appear to myself to have just now perceived these men for the first time.

Socrates Younger:: Speak; for you seem to see something strange.

Stranger:: I do; for what is strange is the result of ignorance in the case of all. And I myself just now suffered the very same thing: for I was suddenly involved in doubt on seeing the dancing-troop relating to state affairs.

Socrates Younger:: Of what kind?

Stranger:: The greatest wizard of all the wise, and the most skilled in this art; who must be separated from the really existing statesmen and kings, although it is very difficult so to separate him, if we are about to see clearly the object of our search.

Socrates Younger:: We must not give up this, at least.

Stranger:: Not, indeed, according to my opinion: but tell me this.

Socrates Younger:: What?

Stranger:: Is not a monarchy one of the forms of state-rule?

Socrates Younger:: It is.

Stranger:: And after a monarchy one would, I think, speak of an oligarchy.

Socrates Younger:: How not?

Stranger:: But is not the rule of the many called by the name of a democracy, a third form of state-polity?

Socrates Younger:: Entirely so.

Stranger:: Do not these being three become after a manner five, by two producing from themselves two other names in addition to their own?

Socrates Younger:: What?

Stranger:: They who look to the violent and the voluntary, to poverty and wealth, to law and lawlessness, which take place in them, give a twofold division to each one of the two, and call monarchy, as exhibiting two species, by two names, one tyranny, the other royalty.

Socrates Younger:: How not?

Stranger:: But the state ever governed by a few, we call an aristocracy and an oligarchy.

Socrates Younger:: Entirely so.

Stranger:: But of a democracy, whether the people govern the rich violently, or with their consent, and whether they strictly guard the laws or not, no one is ever accustomed to change the name at all.

Socrates Younger:: True.

Stranger:: What then? Do we think that any one of these state-polities is right, thus bounded by these definitions, such as by one, and a few, and a many, and by wealth and poverty, by the violent and the voluntary, and happening to exist by statutes and without laws?

Socrates Younger:: What should hinder?

Stranger:: Consider more attentively, following me by this road.

Socrates Younger:: What road?

Stranger:: Shall we abide by what was asserted at first, or shall we dissent from it?

Socrates Younger:: To what assertion are you alluding?

Stranger:: I think we said that a regal government was one of the sciences.

Socrates Younger:: Yes.

Stranger:: Yet not of those taken together as a whole; but we selected it from the other sciences, as something judicial and presiding.

Socrates Younger:: Yes.

Stranger:: And from the presiding science we selected one part, as belonging to inanimate acts, and the other as belonging to animals. And dividing after this fashion, we have arrived thus far, not forgetful of science, but unable to determine with sufficient accuracy what science is.

Socrates Younger:: You say rightly.

Stranger:: Do we then understand this very thing, that the definition must be respecting them, not as regards the few, nor the many, nor the voluntary or involuntary, nor poverty or wealth, but as regards a certain science, if we follow what has been formerly detailed?

Socrates Younger:: It is impossible, indeed, not to do this.

Stranger:: We must of necessity then consider now this; in which of these does the science respecting the government of men happen to exist, being nearly the greatest and most difficult to obtain. For it is requisite to inspect it, that we may perceive who are the parties we must take away from a prudent king, who lay claim to be statesmen, and persuade the multitude of it, and yet are so not at all.

Socrates Younger:: We must do so, as the reasoning has previously told us.

Stranger:: Does it then appear to you that the mass in a city is able to acquire this science?

Socrates Younger:: How can they?

Stranger:: But in a city of a thousand men, is it possible for a hundred, or even fifty, to acquire it sufficiently?

Socrates Younger:: It would be then the most easy of all arts. For we know that among a thousand men there could not be found so many tip-top draught-players as compared with those in the rest of Greece, much less kings. For, according to our former reasoning, we must call him, who possesses the science of a king, whether he governs or not, a regal character.

Stranger:: You have very properly reminded me. And I think it follows from this, that a right government, when it exists rightly, ought to be investigated as about one person, or two, or altogether about a few.

Socrates Younger:: How not?

Stranger:: And we must hold, as we think now, that these exercise rule according to a certain art, whether they govern the willing or the unwilling, whether according to statutes or without statutes, and whether they are rich or poor. For we have considered those as not the less physicians, whether they cure us, willing or unwilling, by cutting, or burning, or applying any other pain; and whether according to written rules or not, and whether they are themselves poor or rich. In all these cases we say that they are no less physicians, so long as they stand over the patient according to art, purging or some other way attenuating the body, or in causing it to increase, and so long as, for the good of the body alone, they bring it from a worse to a better state, and by attending preserve each body attended to. After this manner, and in no other, as I think, we will lay down that the definition of the medicinal or any other rule is rightly made.

Socrates Younger:: And very much so.

Stranger:: It is necessary then, as it seems, that of polities that must be pre-eminently correct, and the only polity, in which the governors are found to possess science truly, and not in appearance merely; whether they rule according to laws or without laws, over the willing or the unwilling, and are themselves poor or rich. For not one of these things must we consider at all, as regards any rectitude of government.

Socrates Younger:: Beautifully said.

Stranger:: And whether they purge the state to its good, by putting to death or banishing certain persons; or by sending out colonies some where, like a swarm of bees, they reduce it to a less size; or whether by introducing some others from abroad they make citizens of them, and thus increase its size, so long as by making use of science and justice, they preserve it, and cause it to the utmost of their power to pass from a worse condition to a better one, then, and according to such limits, must we speak of a polity as alone rightly existing. But we must say that such others, as we have mentioned, are not genuine, nor do they in reality exist; but that those, which we call well-regulated, imitate this for the better, the others for the worse.

Socrates Younger:: The other points, O guest, appear to have been stated with moderation: but that it is requisite to govern without laws, has been stated as a thing rather harsh to hear.

Stranger:: You have anticipated me a little, Socrates, by your question. For I was about to ask you, whether you admit all these points, or whether you find any difficulty in any matter that has been stated. It is however evident, that we now wish to discuss the point respecting the rectitude of those, who govern without laws.

Socrates Younger:: How not?

Stranger:: After a certain manner it is evident that legislation is a part of the science of a king: but it is best, not for the laws to prevail, but for a man, who has with prudence the power of a king. Do you know in what way?

Socrates Younger:: In what way do you mean?

Stranger:: Because the law cannot, by comprehending that which is the best and most accurately just in all cases, at the same time ordain what is the best. For the inequalities of men and their actions, and the fact that not a single atom, so to say, of human affairs, enjoys a state of rest, do not permit any art whatever to exhibit in any case any thing simple without exception respecting all matters and through all time. Shall we admit this?

Socrates Younger:: How not?

Stranger:: And yet we see the law tending nearly to this very point; and, like a certain self-willed and ignorant man, it does not suffer any person to do anything contrary to its own orders, nor to put a question, not even should something new happen to be in some case better as compared with the decree it had ordained.

Socrates Younger:: True. For the law does really so, as you have just now said, to each of us.

Stranger:: Is it not then impossible for that, which is under all cases simple, to do well in cases which are never at any time simple?

Socrates Younger:: It appears so nearly.

Stranger:: Why then is it necessary to lay down laws? since law is not a thing of the greatest rectitude. Of this we must inquire the cause.

Socrates Younger:: How not?

Stranger:: Are there not then amongst us, as in other cities likewise, certain exercises of men collected together for the sake of competition relating to running, or something else?

Socrates Younger:: Yes. There are very many.

Stranger:: Come then, let us again recall to our memory the orders of those, who practice scientifically exercises in meetings of this kind.

Socrates Younger:: What is this?

Stranger:: They do not conceive it is requisite to be very fine in ordering, according to each individual, what is suited to the body of each; but think more stupidly, that they ought to make their arrangements of what benefits the body, suited to the majority of circumstances and persons.

Socrates Younger:: Excellent.

Stranger:: On which account assigning now equal labors to persons collected together, they urge them on together, and stop them together in the race, and wrestling, and all the labors of the body.

Socrates Younger:: Such is the fact.

Stranger:: Let us hold then, that the legislator who would preside over his herds in matters of justice, and their contracts with each other, will never be sufficient for all collectively, by accurately enjoining upon each individual what is fitting.

Socrates Younger:: This is likely.

Stranger:: But I think he will establish laws suited to the majority of persons and circumstances, and somehow thus in a more stupid way for each, delivering them in writings, and in an unwritten form, and legislating according to the customs of the country.

Socrates Younger:: Right.

Stranger:: Right indeed. For how, Socrates, can any one be so all-sufficient as, by sitting near through the whole of life, to enjoin accurately what is adapted to each? Since, although any one soever of those who possess the science of a king could, I think, do this, he would scarcely impose on himself impediments, by writing down the so-called laws.

Socrates Younger:: So it appears, O guest, from what has been now said.

Stranger:: And still more, O thou best one, from what will be said.

Socrates Younger:: What is that?

Stranger:: Of this kind. For let us thus say to ourselves. Would not a physician, or any teacher of gymnastics, being about to travel, and to be absent as he fancied from those under his care for a long time, and thinking that those engaged in exercises, or sick, would not remember his precepts, be willing to write something to refresh their memory? Or how would he act?

Socrates Younger:: In this way.

Stranger:: But what, if the physician, having been abroad a less time than he expected, should come back, would he not dare to suggest certain other things besides those contained in his writings, other circumstances occurring more favorable for the sick, through winds, or any thing else of those that are wont to take place from Zeus the air, contrary to expectation? Would he think that he ought to persevere in not going out of his old injunctions, and neither himself order other things, nor dare to do to the sick man things different from what had been written, as if these were medicinal and salubrious, but those of a different kind noxious, and not according to art? Or rather, would not every thing of this kind, occurring according to science and true art, in all matters become altogether the greatest ridicule of such injunctions?

Socrates Younger:: Entirely so.

Stranger:: But shall not he, who writes down what is just and unjust, beautiful and base, good and evil, and who establishes unwritten laws for the herds of human beings who live in cities, in each according to the laws of those who have written them,—whether he comes himself back after having written laws contrary to art, or some other like him, be permitted to enjoin things different from these? Or, would not this interdiction appear to be in reality no less ridiculous than the former?

Socrates Younger:: How not?

Stranger:: Do you know then the language spoken by the multitude respecting such a thing?

Socrates Younger:: I have it not at present in my mind.

Stranger:: And yet it is very specious. For they say that, if any one knows of laws better than those of their ancestors, such a person should, after persuading his own state, become a legislator; otherwise not.

Socrates Younger:: Do they not then say rightly?

Stranger:: Perhaps so. But if any one should, not by persuasion, force on the better, what would be the name of this violence? Do not however say a word, but previously respecting the former.

Socrates Younger:: What do you mean?

Stranger:: Should some one, not by persuading a person under a physician, but by possessing his art correctly, compel a boy, or a man, or a woman, contrary to prescriptions, to do that which is better, what will be the name of this violence? Ought it not to be called rather any thing than some mischievous transgression of art? And is it not for us to say, that every thing has happened to the compelled person, rather than that he has suffered any thing mischievous and without art from the compelling physicians?

Socrates Younger:: You speak most true.

Stranger:: But what is that error called by us, which is contrary to the statesman's art? Must it not be the base, evil, and unjust?

Socrates Younger:: Entirely so.

Stranger:: Of those, who have been forced to act contrary to the written precepts, and the customs of the country, more justly, better, and more beautifully than before, come, tell me, can any one, unless he is about to be the most ridiculous of all men, pronounce a disapprobation of such violence done to such persons? Must it not be said rather by him on each occasion, that they, who have been forced, have suffered at the hands of the forcing party every thing, except what is base, unjust, and evil?

Socrates Younger:: You speak most true.

Stranger:: But if he who forces is rich, will the acts done forcibly by him be just, but, if he is poor, unjust? Or, whether a person persuades or does not persuade, whether rich or poor, and whether according or contrary to written statutes, he does what is useful, must this be the definition the most true on all sides of the correct administration of a state, by which a wise and good man will well administer the interests of those under his charge; just as a pilot watches over whatever happens to conduce to the welfare of the vessel and crew; and not by laying down written orders, but by making his skill a law, he preserves his fellow-sailors. And thus, after this very same manner, will an upright polity be produced by those who are able to govern thus, by exhibiting a strength of skill superior to the laws. And indeed in the case of prudent rulers there will be no error, let them do every thing; as long as they observe this one great maxim, to distribute ever with intellect and art to those in the state what is the most just, to keep them such as they are, and to finish by rendering them, as far as possible, better instead of worse.

Socrates Younger:: It is not possible to say the contrary to what has been now asserted.

Stranger:: Nor yet against those to say even a word.

Socrates Younger:: Of what are you speaking?

Stranger:: That no mob of any persons whatever can receive this kind of science, and be able to administer with intellect a state, but that we must seek for a correct polity amongst a small number, and a few, and one person; and that we must lay down other polities as imitations, as we observed a little before, some for the better, and some for the worse.

Socrates Younger:: How and why say you this? For I did not understand just now forsooth the remark respecting imitations.

Stranger:: Truly it were not a stupid act for a person, after starting an argument of this kind, to lay it down there, and not, by going through it, to show the error which at present exists about it.

Socrates Younger:: What error?

Stranger:: It is meet to search into a thing of such a kind as is not very usual, nor easy to perceive; but at the same time we must endeavor to apprehend it. For, come, since the polity of which we have spoken is the only correct one, you know that other polities ought to be thus preserved, while they use the institutions of this, and do what was just now praised, though it is not most right?

Socrates Younger:: What is that?

Stranger:: That no one of those in the city dare to do any thing contrary to the laws; and that he who dares, shall pay the forfeit by death, and all the extreme of punishments. This too is most right and beautiful, as a second thing; after that some one shall have first changed the just now said. But in what manner that, which we have called second, exists, let us proceed to state. Shall we not?

Socrates Younger:: By all means.

Stranger:: Let us then again return to the images, to which it is ever necessary to assimilate kingly rulers.

Socrates Younger:: Of what kind?

Stranger:: The noble-minded pilot, and the physician, who is of equal worth with many others. Let us then, after molding from these two a certain figure, contemplate it.

Socrates Younger:: Of what kind?

Stranger:: Such a one, as if we all conceived that we are suffering the most dreadful things from them. For such of us as either of them wish to save, they do equally save; and such as they wish to injure, they injure by cutting and burning, at the same time ordering us to bring to them the means of expense, as a tribute, of which they spend on the sick little or even nothing, but they and their domestics make use of the rest. And lastly, receiving money as wages, from either the kindred or some enemies of the sick man, they cause him to die. They too who have the command of a vessel, do ten thousand other things of this kind. For after some plotting, when out at sea, they leave persons deserted, and, committing errors at sea, hurl them into the sea, and do them other mischief. If then, reflecting on these matters, we should enter into some consultation respecting them, so that we should no longer permit either of those arts to have an absolute control over slaves or the free-born; but that we should collect together an assembly consisting of ourselves or all the people, or the rich alone; and that it should be lawful for private individuals, and the rest of the operatives, to bring together their opinions respecting sailing and diseases, as to what manner it is meet to use medicines, and medical instruments, for those that are ill; and moreover, how to use both the vessels themselves and nautical instruments for the requirements of vessels in case of danger during the voyage from winds and the sea and the meeting with pirates, and, if requisite, in fighting with long ships against others of the like kind; and that, what shall have been decreed by the multitude on these points, by the advice of physicians and pilots, or of other unskilled individuals, persons should inscribe in triangular tables and pillars, and laying down other unwritten regulations, as the customs of the country, it should be necessary to navigate vessels in all future times according to this method, and to administer remedies to the sick.

Socrates Younger:: You have mentioned things really very absurd.

Stranger:: Further, that rulers of the people should be appointed yearly, whoever may be chosen by lot from the rich or from all the people; and that the rulers so appointed should rule according to the written regulations, like pilots over vessels and physicians over the sick.

Socrates Younger:: These things are still more harsh.

Stranger:: Let us see now after this what follows. For when the year of each governor shall have expired, it will be necessary to appoint tribunals of persons, taken either by a selection from the rich or from all the people by lot, and to bring the rulers before them and to pass their accounts, and for any one to accuse them for not having acted, during his year, the pilot, according to the written regulations, nor according to the old customs of their forefathers; and for the very same things to take place in the case of those healing the sick; and that whoever of them should be convicted, certain persons should fix what the party must suffer in person or pay in purse.

Socrates Younger:: Would not he, who is ready of his own accord to be a ruler under such circumstances, most justly suffer in person and pay in purse?

Stranger:: Further still, it will be necessary to make a law on all these points, that, if any one be proved to be seeking out the art relating to piloting and ships in general, or to health, and the truth of the physician's theory about winds, heat and cold, contrary to the written regulations, or devising any thing whatever about affairs of this kind, he shall, an the first place, be called neither as one skilled in physicking or piloting, but a talker of matters on high, or some babbler; and that, in the next place, it shall be lawful for any one to write down an indictment against him for lawlessness, and to bring him before some court of justice, as corrupting the younger, and persuading the silly to put their hands to the arts of a pilot and a physician not according to the laws, and to rule self-willed over vessels and the sick; and that if any one shall be found persuading either young or old men, contrary to the laws, and the written regulations, it shall be lawful to punish him with the extreme of punishments. For no one ought to be wiser than the laws; nor on the other hand, should any one be ignorant of the arts of medicine and of healing, nor of piloting and shipping, according to the written regulations and the customs laid down of the country; for he who wishes may learn. If then, Socrates, this should take place about the sciences we mentioned, and we should look into any portion of the general's art, and the whole of any kind of hunting, and of painting, or of imitation in general, and carpentry, and the formation in general of instruments of any kind, and of agriculture, and the art relating to plants in general; or, again, into the care of breeding horses, according to written regulations, and herds of cattle of every kind, and prophecy, and all the portion that the ministering art embraces, the playing at games of dice, the whole of arithmetic, whether simple or relating to a plane, either in depth, or swiftness; if respecting all these things it were so done, what would appear produced according to written regulations, and not according to art?

Socrates Younger:: It is evident that all arts would be entirely subverted, nor would they exist again, through such a law forbidding one to investigate. So that life, which is now difficult, would at that time become utterly unable to be endured.

Stranger:: But what will you say to this? If we should compel each of the above-mentioned to take place according to written regulations, and should appoint as the guardian of these statutes a man either chosen by suffrage, or chance, but who, giving no thought to them, either for the sake of a certain gain, or private pleasure, should endeavor, although knowing nothing, to act contrary to these statutes, would not this be a still greater evil than the former?

Socrates Younger:: Most truly so.

Stranger:: For he, who should dare to act contrary to those laws, which have been laid down after much experience, or through certain advisers recommending each in a pleasant manner, and persuading the people to pass them, will commit an error many-fold greater than an error, and subvert every process much more than written statutes.

Socrates Younger:: How is he not about to do so?

Stranger:: Hence there is a second sailing, as is said, for those that establish laws and statutes respecting any thing whatever, that is, not to suffer any one person, or the multitude, to do any thing of any kind at any time contrary to them.

Socrates Younger:: Right.

Stranger:: Will not these statutes then, written by men intelligent as far as their power permits, be imitations of the truth of each of these?

Socrates Younger:: How not?

Stranger:: And yet, if we remember, we said that the man, who is in reality a statesman, would, being intelligent, do many things from art, in reference to his own course of action, without giving a thought to statutes, when other things seem to him better than what had been written by himself and enjoined upon some persons absent.

Socrates Younger:: We did say so.

Stranger:: Would not then any single man whatever, or any people whatever, by whom laws happen to be laid down, act in the same way as that true statesman, should they endeavor to do to the utmost of their power contrary to them the laws what is something different and better?

Socrates Younger:: Entirely so.

Stranger:: If then they should without knowledge act in this manner, would they not attempt to imitate what is true? and yet they would imitate all badly; but if with art, this is no longer an imitation, but is the very truth itself.

Socrates Younger:: Altogether so.

Stranger:: And yet it was before laid down as a thing acknowledged by us, that the mob is incapable of receiving any art whatever.

Socrates Younger:: It was so laid down.

Stranger:: If then there is a certain kingly art, the mob of the rich, and the whole of the people, could never receive this science of the statesman.

Socrates Younger:: For how can they?

Stranger:: It is requisite then, as it seems, that such-like polities, if they are about to imitate correctly, to the best of their power, the true polity under a single person ruling with art, must never, the laws having been laid down by them, do any thing contrary to the written statutes and customs of the country.

Socrates Younger:: You speak most beautifully.

Stranger:: When therefore the rich imitate this polity, we then denominate such a polity an aristocracy; but when they give no thought to the laws, an oligarchy.

Socrates Younger:: So it nearly seems.

Stranger:: And again, when one man rules according to the laws, imitating the person endued with science, we call him a king, not distinguishing byname the person ruling alone with science, or with opinion according to the laws.

Socrates Younger:: We nearly appear to do so.

Stranger:: If then a person possessing in reality science rules alone, he is called altogether by the same name, a king, and no other will be mentioned in addition: through which the five names of the polities just now mentioned become only one.

Socrates Younger:: So it appears.

Stranger:: But when one man rules neither according to the laws nor the customs of the country, but pretends, as the person possessing science, that the best is to be done, contrary to the written statutes, and there exist a certain desire and ignorance as the leaders of this imitation, must we not call each man of this kind a tyrant?

Socrates Younger:: How not?

Stranger:: Thus then we say has been produced a tyrant, a king, an oligarchy, an aristocracy, and a democracy, from mankind indignantly bearing with such a single monarch, and not believing that any one would ever be worthy of such an office, so as to be both willing and able to rule with virtue and science, and to distribute properly to all persons things just and holy; but disposed to maim, and kill, and maltreat whomsoever he might wish: yet, if such a person should arise, as we have mentioned, he would be beloved and live at home happily, guiding throughout, like a pilot, alone a polity accurately correct.

Socrates Younger:: How not?

Stranger:: But now, as we truly say, since there is no such king produced in states, as is produced by nature in a swarm of bees, excelling straightway alone in body and soul, we must, as it seems, come together and write down statutes, treading in the footsteps of a polity the most true.

Socrates Younger:: It nearly appears so.

Stranger:: And do we wonder then, Socrates, that in suchlike polities evils, such as do happen, and will happen, are produced, when the foundation placed under them exists by statutes and customs, and not with the foundation of science, which performs its actions in a different way than what a polity does, which, making use of imprudence, will be evident to every one, that it will destroy every thing produced by that imprudence. Or ought we not to wonder rather at this, how strong a thing a city naturally is? For, though cities have for time without end been suffering thus, yet some of them are still remaining, and are not overturned. Many however sometimes, like sinking vessels, are perishing, have perished, and will perish, through the incorrect conduct of the pilots and sailors, who, having obtained the greatest ignorance respecting the greatest concerns, do still, although they know nothing about state affairs, think they have obtained this knowledge the most clearly of all.

Socrates Younger:: Most true.

Stranger:: Which then of these incorrect polities, where all are full of difficulties, is the least difficult to live in, and which the most oppressive, it is meet for us to look into a little; although it is what is called a by-deed as regards our present inquiry; yet, perhaps, on the whole, we all of us do all things for the sake of a thing of this kind.

Socrates Younger:: It is meet. How not?

Stranger:: Of three things then, say that the same is remarkably difficult, and at the same time most easy.

Socrates Younger:: How say you?

Stranger:: Not otherwise than, as I said before, that a monarchy, the government of a few, and of many, are those three polities mentioned by us at the commencement of the discourse, which has now flowed upon us.

Socrates Younger:: They were.

Stranger:: Bisecting then each of these, we shall produce six, separating from these the correct polity, as a seventh.

Socrates Younger:: How so?

Stranger:: Out of monarchy there came, we said, the regal and the tyrannic; and out of that composed not of the many, the well-omened aristocracy and oligarchy. But out of that composed of the many, we then laid it down under the name of a simple democracy; but we must now lay it down as two-fold.

Socrates Younger:: How so? And after what manner do we make this division?

Stranger:: Not at all different from the others; even although the name of this is now two-fold. But to govern according to the laws, and contrary to them, is common both to this and the rest.

Socrates Younger:: It is so.

Stranger:: Then indeed, when we were seeking a correct polity, this bisection was of no use, as we have shown above; but since we have separated it from the others, and have considered the others as necessary, the being contrary or according to law causes a bisection in each of these.

Socrates Younger:: So it appears from what has now been said.

Stranger:: A monarchy then, yoked to correct writings, which we call laws, is the best of all the six polities; but when it is without law, it is grievous, and most burthensome to live under.

Socrates Younger:: It nearly appears so.

Stranger:: But the polity of the not-many we have considered as a medium between both, as a few is a medium between one and many; but on the other hand, the polity of the many, as being weak in all things, and unable, as compared with the others, to do any thing great, either for good or evil, through the offices in this polity being divided into small parts amongst many. Hence, of all the polities acting according to law, this is the worst, but the best of all such as act contrary to law. And where all are intemperate, it is the best to live in a democracy; but where all are temperate, this polity is the worst to live in. In the first polity is the first and best condition of life, with the exception of the seventh; for we must separate this from all the other polities, as a god from men.

Socrates Younger:: These things appear thus to be produced and happen; and that must be done, which you mention.

Stranger:: Ought we not then to take away the sharers in all these polities, with the exception of the scientific one, as being not truly statesman-like but seditious-like; and as presiding over the greatest resemblances, and being such themselves; and, as they are the greatest mimics and enchanters, to be called too the greatest sophists of sophists?

Socrates Younger:: This appellation seems nearly to be retorted most correctly on those called statesmen.

Stranger:: Be it so. This indeed is, as it were, a drama for us; just as it was lately said, that we saw a certain dancing-troop of Centaurs and Satyrs, which was to be separated from the statesman's art; and now this separation has been with so much difficulty effected.

Socrates Younger:: So it appears.

Stranger:: But another thing remains, still more difficult than this, through its being more allied to the kingly genus, and at the same time more difficult to understand. And we appear to me to be affected in a manner similar to those that wash gold.

Socrates Younger:: How so?

Stranger:: Those workmen first of all separate earth, stones, and many other things; but after this there are left substances, allied to gold, mixed together and of value, and to be separated only by fire, such as brass and silver, and sometimes a diamond; which being with difficulty separated by the experiments of fusion in the crucible, suffer us to see itself by itself that which is called pure gold.

Socrates Younger:: It is said that such things are so done.

Stranger:: After the same manner then it seems that things different from, and such as are foreign and not friendly to, the statesman's science, have been separated by us; but there have been left such as are of value and allied to it. Now of these are the military and judicial arts, and that oratory, which has a share of the kingly science, and does, by persuading men to do justice, conjointly regulate affairs in states; by separating all of which in a certain manner, most easily will a person show naked and alone by itself the character of which we are now in search.

Socrates Younger:: It is evident that we should endeavor to do this in some way.

Stranger:: As far as experiment goes, it will be evident. But let us endeavor to show it by means of music. Tell me, then—

Socrates Younger:: What?

Stranger:: Have we any teaching of music, and universally of the sciences, relating to handicraft trades?

Socrates Younger:: We have.

Stranger:: But what, shall we say that there is this too, a certain science respecting those very things, which teaches us whether we ought to learn any one of them whatever or not? Or how shall we say?

Socrates Younger:: We will say that there is?

Stranger:: Shall we not then confess, that this is different from the others?

Socrates Younger:: Yes.

Stranger:: But whether must we say that not one of them ought to rule over the other? or the others over this? or that this, as a guardian, ought to rule over all the others?

Socrates Younger:: That this science ought to rule over those; which teaches whether it is requisite to learn, or not.

Stranger:: You tell us then, that it ought to rule over both the taught and the teaching.

Socrates Younger:: Very much so.

Stranger:: And that the science which decides whether it is requisite to persuade or not, should rule over that which is able to persuade?

Socrates Younger:: How not?

Stranger:: To what science then shall we attribute that, which persuades the multitude and the crowd, through fable-talking, but not through teaching?

Socrates Younger:: I think it is evident that this is to be attributed to the science of the orator.

Stranger:: But on what science, on the other hand, shall we impose this, to decide whether it is meet to do any thing whatever to any persons by persuasion, or violence, or to abstain entirely.

Socrates Younger:: To that, which rules over the arts of persuasion and discourse.

Stranger:: But this, as I think, will not be any other than the power of the statesman.

Socrates Younger:: You have spoken most beautifully.

Stranger:: Thus then the science of the orator appears to have been very rapidly separated from that of the statesman, as being another species, but subservient to this.

Socrates Younger:: Yes.

Stranger:: But what on the other hand must we conceive respecting this power?

Socrates Younger:: What power?

Stranger:: Respecting that, by which we are to war with each of those against whom we may have chosen to war. Whether shall we say that this power is without art or with art?

Socrates Younger:: And how can we conceive that power to be without art, which the general's art and all warlike operations put into practice?

Stranger:: But must we consider that power, which is able and skilful in deliberating, whether we ought to engage in war, or separate peaceably, as different from this, or the same with it?

Socrates Younger:: To those following the preceding reasoning it is of necessity different.

Stranger:: Shall we not, then, assert that this the art of deliberation rules over that which carries on war, if we understand in a manner similar to what has been advanced before?

Socrates Younger:: So I say.

Stranger:: What power then shall we endeavor to show as the mistress of the whole art of war, so terrible and mighty, except the truly kingly science?

Socrates Younger:: None other.

Stranger:: We must not then lay down the science of generalship as that of the statesman, of which the former is the ministering assistant.

Socrates Younger:: It is not reasonable.

Stranger:: But come, let us contemplate the power of judges, who judge rightly.

Socrates Younger:: By all means.

Stranger:: Is it then capable of doing any thing more than merely judging respecting compacts, when, having received from a king the lawgiver, whatever has been laid down as legal, and looking both to those, and to what has been ordained to be just and unjust, it exhibits its own peculiar virtue, of never being overcome by certain bribes, or fear, or pity, or any other hatred, or love, so as to be willing to settle mutual accusations contrary to the ordinance of the legislator.

Socrates Younger:: The employment of this power is nearly nothing else, than what you have mentioned.

Stranger:: We find then, that the strength of judges is not kingly, but the guardianship of the laws, and ministering to the kingly science.

Socrates Younger:: It appears so.

Stranger:: This also must be understood by him, who looks into all the aforesaid sciences, that the statesman's science has not appeared to be one of them. For it is not meet for the truly kingly science to act itself, but to rule over those able to act; since it knows that the commencement and progress of things of the greatest consequence in states depends on opportunity and the want of it; but it is the province of the other sciences to do as they are ordered.

Socrates Younger:: Right?

Stranger:: Hence, since the sciences which we have just now discussed, neither rule over each other nor themselves, but that each is occupied with a certain proper employment of its own, they have justly obtained according to the peculiarity of their actions a peculiar name.

Socrates Younger:: So they seem.

Stranger:: But we having rightly comprehended its power under an appellation in common, should, it seems, most justly call that the science of the statesman, which rules over all these and takes care of the laws, and of every thing relating to the state, and weaves all things together most correctly.

Socrates Younger:: Entirely so.

Stranger:: Are we then willing to go through this science at present, according to the pattern of the weaving art, since all the genera pertaining to a state have become manifest to us?

Socrates Younger:: And very much so.

Stranger:: We must then, as it seems, define what is the kingly entwining, and what, after entwining, is the web it produces for us.

Socrates Younger:: It is evident.

Stranger:: It has become necessary, as it appears, to show forth a thing really difficult.

Socrates Younger:: It must however be told by all means.

Stranger:: For that a part of virtue differs in a certain manner from a species of virtue, is a point that may be very easily attacked by those, who contend in discourses against the opinions of the many.

Socrates Younger:: I do not understand you.

Stranger:: Think again in this way. For I suppose you consider fortitude to be one part of virtue.

Socrates Younger:: Entirely so.

Stranger:: And that temperance is different indeed from fortitude, but that this is also a part of what that is likewise.

Socrates Younger:: Yes.

Stranger:: On these points then we must dare to unfold a certain marvelous discourse.

Socrates Younger:: Of what kind?

Stranger:: That they have after a certain manner very greatly an enmity with each other, and are of an opposite faction in many of the things that exist.

Socrates Younger:: How say you?

Stranger:: An assertion by no means usual. For all the parts of virtue are said to be friendly to each other.

Socrates Younger:: Yes.

Stranger:: Let us consider then, applying very closely our mind, whether this is so without exception, or whether rather any part of them differs from their kindred.

Socrates Younger:: Inform me how we are to consider.

Stranger:: In all such things as we call beautiful, it is proper to investigate, but we refer them to two species contrary to each other.

Socrates Younger:: Speak more clearly.

Stranger:: Of acuteness then and swiftness, either in bodies or mind, or of the throwing out the voice, when such things exist themselves or in their resemblances, such as music and painting by imitating exhibit, have you ever been a praiser yourself, or, being not present, have you heard another person praising any one of these things?

Socrates Younger:: How not?

Stranger:: Do you likewise remember after what manner they do this in each of these cases?

Socrates Younger:: By no means.

Stranger:: Shall I then be able to point out to you through words, as I have it in my mind?

Socrates Younger:: Why not?

Stranger:: You seem to think a thing of this kind easy. Let us consider it then in genera somewhat contrary. For in many actions, and oftentimes on each occasion, when we admire the swiftness, vehemence, and acuteness of thought, body, or voice, we praise them, and at the same time employ one of the appellations of manliness.

Socrates Younger:: How so?

Stranger:: We say it is acute and manly, swift and manly, and in a similar manner vehement: and, universally, by applying the name which I say is common to all these natural qualities, we praise them.

Socrates Younger:: Yes.

Stranger:: But what, have we not often praised in many actions the species of quiet production?

Socrates Younger:: And very much so.

Stranger:: Do we not then, in saying the contrary to what we did about them, say this?

Socrates Younger:: How so?

Stranger:: As we speak on each occasion of things done quietly and moderately as regards the mind, and admire them; and as regards actions, slowly and softly; and further as respects voice, smoothly and gravely, and of all rhythmical movement, and the whole of music which makes use of slowness opportunely, do we not assign to all these the appellation of the moderate, and not of the manly?

Socrates Younger:: Most assuredly.

Stranger:: But when, on the other hand, both these take place unseasonably, we then in turn blame each of them by their names, distributing them back to their opposites.

Socrates Younger:: How so?

Stranger:: By calling things that are and seem to be more acute, and quick, and harsh than is seasonable, by the names of insolent and mad; but those that are more slow and soft, by the names of timid and slothful. And for the most part nearly we find that these, and the moderate and manly natures, having like hostile species obtained by lot their respective stations opposite to each other, never mingle together in actions about things of this kind; and still further we shall see, if we pursue the inquiry diligently, that they, who possess these in their souls, are at variance with each other.

Socrates Younger:: Where do you say?

Stranger:: In all the points which we have just now mentioned, and, it is likely, in many others. For I think that, on account of their alliance with each, by praising some things as their own property, but blaming the things of those who differ, as being foreign, they stand in great enmity with each other and on account of many things.

Socrates Younger:: They nearly appear to do so.

Stranger:: This difference then between these species is a kind of sport. But a disease the most baneful of all others happens to states about things of the greatest consequence.

Socrates Younger:: About what things are you speaking?

Stranger:: About the whole form of living, as it is reasonable I should. For they who are pre-eminently well-ordered are always prepared to live a quiet life, themselves by themselves, managing only their own concerns, and so associating with all at home, and being ready, in like manner, to be at peace, after a certain fashion, with foreign states; and through this desire, more unseasonable than is fitting, when they are doing that which they wish, they become unconsciously unwarlike, and affect the young men in a similar manner, and become ever the prey of parties attacking; of whom in not many years themselves, their children, and the whole city, often unconsciously, instead of being free, become the slaves.

Socrates Younger:: You speak of a severe and terrible suffering.

Stranger:: But what are they, who incline more to manliness? Do they not incite their own cities ever to some warfare, through a desire more vehement than is becoming of such a kind of life; and thus standing in hostile array against many and powerful nations, either entirely destroy their own country, or place it in slavery under the power of their foes?

Socrates Younger:: This too is the case.

Stranger:: How then shall we not say, that in these cases both these genera have ever against each other the greatest enmity and array?

Socrates Younger:: It can never be that we should say no.

Stranger:: Have we not then found out, what we were considering at the beginning, that certain parts of virtue differ not a little from each other naturally, and that they likewise cause those, who possess them, to do the same?

Socrates Younger:: They nearly appear to do so.

Stranger:: Let us handle again this too.

Socrates Younger:: What?

Stranger:: Whether any one of the sciences, that bring things together, does compose any act of its works, although it should be the vilest, willingly from things evil and useful? Or does every science always reject things evil to the utmost of its power, and receive such as are apt and useful? and that from these, both similar and dissimilar, it does, by collecting all into one, fabricate one certain power and form?

Socrates Younger:: How not?

Stranger:: The statesman's science, when it really exists according to nature, will never willingly form a state composed of good and bad men; but it is very evident, that it will first examine by means of play; and, after the examination, it will hand over to such as are able to instruct and to minister to this very purpose, itself commanding and presiding, just as the weaving art presides over the wool-combers, and those who prepare the rest of the materials for weaving, and following them up, gives its orders and stands over them, pointing out to each to complete their work, such as it conceives to be fitted for its own putting together.

Socrates Younger:: Entirely so.

Stranger:: In the very same way the kingly science appears to me to keep to itself the power of the presiding art, and not to permit all, who instruct and rear up according to law, to practice aught, except what any one would, by working out a manner suited to its own temperament, effect; and this alone it exhorts them to teach; but those who are unable to communicate a manner manly and moderate, and whatever else tends to virtue, and through the force of a depraved nature are impelled to ungodliness, and insolence, and injustice, it casts out, punishing them with death and exile and the greatest of dishonors.

Socrates Younger:: This is said to be the case.

Stranger:: But those who wallow in ignorance and have a very abject spirit, it yokes to the race of slaves.

Socrates Younger:: Most right.

Stranger:: With respect to the rest however, whose natures meeting with instruction are sufficient to reach to what is high-minded, and to receive through art a commingling with each other, of these it considers such, as incline more to manliness, to have a firmness of conduct like the strong thread in the web; but such as incline more to a well-ordered conduct it considers as making use of a thread supple and soft, and, according to the simile from weaving, suited to a thinner stuff; and it endeavors to bind and weave together the natures inclining in a contrary direction from each other in some such manner—

Socrates Younger:: In what manner?

Stranger:: In the first place, according to the alliance having fitted together the eternal part of their soul with a divine bond; and after that the divine portion that produces life with human—

Socrates Younger:: Why again have you said this?

Stranger:: When an opinion really true exists with firmness in the soul, respecting the beautiful, and just, and good, and the contraries to these, I say that a god-like opinion is produced in a divine genus.

Socrates Younger:: It is proper it should.

Stranger:: Do we not know that it befits the statesman and a good legislator alone to be able, with the discipline of the kingly science, to effect this very thing in those who take properly a share in instruction, and whom we have just now mentioned?

Socrates Younger:: This is reasonable.

Stranger:: But the person, Socrates, who cannot accomplish a thing of this kind, we must by no means call by the names now sought for.

Socrates Younger:: Most right.

Stranger:: What then? Is not a manly soul, when it lays hold of a truth of this kind, rendered mild? and would it not be willing in the highest degree to partake of things just? But not sharing it, will it not incline rather to a certain savage nature?

Socrates Younger:: How not?

Stranger:: But what, does not that, which is a part of a well-ordered nature, after receiving these opinions, become truly moderate and prudent, at least in a polity? But when it has not partaken of the things we are speaking of, does it not obtain most justly some disgraceful reputation for stupidity?

Socrates Younger:: Entirely so.

Stranger:: Must we not say that this entwining and binding together of the evil with themselves, and of the good with the evil, can never become stable, and that no science will ever employ it with any serious care on such as these?

Socrates Younger:: For how can it?

Stranger:: But that in those alone, who have been born with noble manners from the first, and educated according to nature, this bond is naturally implanted through the laws? and for these too there is a remedy through art; and, as we said before, that this is the more divine bond of the parts of virtue which are naturally dissimilar, and tending to contraries?

Socrates Younger:: Most true.

Stranger:: Since then this divine bond exists, there is scarcely any difficulty in either understanding the other bonds which are human, or for a person understanding to bring them to a completion.

Socrates Younger:: How so? And what are these bonds?

Stranger:: Those of intermarriages and of a communion of children, and those relating to private betrothals and espousals. For the majority are in these matters not properly bound together for the purpose of begetting children.

Socrates Younger:: Why?

Stranger:: The pursuit of wealth and power on such occasions who would seriously blame, as being worthy of notice?

Socrates Younger:: It is not.

Stranger:: But it will be more just to speak of those, who make the genera the object of their care, should they do any thing not according to propriety.

Socrates Younger:: It is at least reasonable.

Stranger:: They do not indeed at all act from right reason, but pursue a life easy for the present; and through their hugging those similar to themselves, and of not loving those that are dissimilar, they give up themselves for the greatest part to an unpleasant feeling.

Socrates Younger:: How so?

Stranger:: They that are well-ordered seek after manners like their own, and as far as they can marry from amongst such; and on the other hand send away to them their own daughters to be married. In the same manner acts the genus that delights in manliness, while going in the pursuit of its own nature; whereas it is requisite for both the genera to do entirely the contrary.

Socrates Younger:: How, and on what account?

Stranger:: Because manliness, having been propagated, unmixed for many generations with a temperate nature, is naturally at the beginning blooming with strength, but in the end bursts out altogether into madness.

Socrates Younger:: It is likely.

Stranger:: On the other hand, a soul very full of modesty, and unmixed with manly boldness, when it has been propagated in this manner for many generations, naturally becomes unseasonably sluggish, and at last perfectly mutilated.

Socrates Younger:: And this also is likely to happen.

Stranger:: I have said that it is not difficult to bind together these bonds, the fact being that both genera have one opinion respecting things beautiful and good. For this is the one and entire work of kingly weaving, never to suffer moderate manners to subsist apart from such as are manly; but, placing both in the same shuttle, to bring out from them a web smooth, and, as it is said, well-woven, by means of similar opinions, and honors, and dishonors, and glories, and the interchange of pledges, and to commit over to these in common the offices in the state.

Socrates Younger:: How?

Stranger:: Wherever there happens to be a need of one governor, by choosing a president who possesses both these manners; but where there is need of more than one, by mingling a portion of both of them. For the manners of temperate governors are very cautious, just, and conservative; but they are in want of a certain sourness, and a sharp and practical daring.

Socrates Younger:: These things also appear so to me.

Stranger:: On the other hand, manliness is with respect to justice and caution rather deficient in those virtues; but it has pre-eminently in actions a daring. It is however impossible for all things pertaining to states, both of a private and public nature, to well exist, unless both of these are present.

Socrates Younger:: How not?

Stranger:: Let us say then that this is the end of the web of the statesman's doing, so as for him to weave with straight-weaving the manners of manly and temperate men, when the kingly science shall by bringing together their common life, through a similarity in sentiment and friendship, complete the most magnificent and excellent of all webs, so as to be common, and enveloping all the rest in the state, both slaves and free-men, shall hold them together by this texture, and, as far as it is fitting for a state to become prosperous, shall rule and preside over it, deficient in that point not one jot.

Socrates Younger:: You have brought, O guest, most beautifully, on the other hand, the characters of the king and statesman to a finish.

# Statesman.

Translated by Jowett 3rd ed.

Persons Of The Dialogue.

THEODORUS. THE ELEATIC STRANGER.
SOCRATES. THE YOUNGER SOCRATES.

Socrates:: I owe you many thanks, indeed, Theodorus, for the acquaintance both of Theaetetus and of the Stranger.

Theodorus:: And in a little while, Socrates, you will owe me three times as many, when they have completed for you the delineation of the Statesman and of the Philosopher, as well as of the Sophist.

Socrates:: Sophist, statesman, philosopher! O my dear Theodorus, do my ears truly witness that this is the estimate formed of them by the great calculator and geometrician?

Theodorus:: What do you mean, Socrates?

Socrates:: I mean that you rate them all at the same value, whereas they are really separated by an interval, which no geometrical ratio can express.

Theodorus:: By Ammon, the god of Cyrene, Socrates, that is a very fair hit; and shows that you have not forgotten your geometry. I will retaliate on you at some other time, but I must now ask the Stranger, who will not, I hope, tire of his goodness to us, to proceed either with the Statesman or with the Philosopher, whichever he prefers.

Stranger:: That is my duty, Theodorus; having begun I must go on, and not leave the work unfinished. But what shall be done with Theaetetus?

Theodorus:: In what respect?

Stranger:: Shall we relieve him, and take his companion, the Young Socrates, instead of him? What do you advise?

Theodorus:: Yes, give the other a turn, as you propose. The young always do better when they have intervals of rest.

Socrates:: I think, Stranger, that both of them may be said to be in some way related to me; for the one, as you affirm, has the cut of my ugly face, the other is called by my name. And we should always be on the look-out to recognize a kinsman by the style of his conversation. I myself was discoursing with Theaetetus yesterday, and I have just been listening to his answers; my namesake I have not yet examined, but I must. Another time will do for me; to-day let him answer you.

Stranger:: Very good. Young Socrates, do you hear what the elder Socrates is proposing?

Socrates Younger:: I do.

Stranger:: And do you agree to his proposal?

Socrates Younger:: Certainly.

Stranger:: As you do not object, still less can I. After the Sophist, then, I think that the Statesman naturally follows next in the order of enquiry. And please to say, whether he, too, should be ranked among those who have science.

Socrates Younger:: Yes.

Stranger:: Then the sciences must be divided as before?

Socrates Younger:: I dare say.

Stranger:: But yet the division will not be the same?

Socrates Younger:: How then?

Stranger:: They will be divided at some other point.

Socrates Younger:: Yes.

Stranger:: Where shall we discover the path of the Statesman? We must find and separate off, and set our seal upon this, and we will set the mark of another class upon all diverging paths. Thus the soul will conceive of all kinds of knowledge under two classes.

Socrates Younger:: To find the path is your business, Stranger, and not mine.

Stranger:: Yes, Socrates, but the discovery, when once made, must be yours as well as mine.

Socrates Younger:: Very good.

Stranger:: Well, and are not arithmetic and certain other kindred arts, merely abstract knowledge, wholly separated from action?

*Socrates Younger::* True.

Stranger:: But in the art of carpentering and all other handicrafts, the knowledge of the workman is merged in his work; he not only knows, but he also makes things which previously did not exist.

Socrates Younger:: Certainly.

Stranger:: Then let us divide sciences in general into those which are practical and those which are purely intellectual.

Socrates Younger:: Let us assume these two divisions of science, which is one whole.

Stranger:: And are ‘statesman,’ ‘king,’ ‘master,’ or ‘householder,’ one and the same; or is there a science or art answering to each of these names? Or rather, allow me to put the matter in another way.

Socrates Younger:: Let me hear.

Stranger:: If any one who is in a private station has the skill to advise one of the public physicians, must not he also be called a physician?

Socrates Younger:: Yes.

Stranger:: And if any one who is in a private station is able to advise the ruler of a country, may not he be said to have the knowledge which the ruler himself ought to have?

Socrates Younger:: True.

Stranger:: But surely the science of a true king is royal science?

Socrates Younger:: Yes.

Stranger:: And will not he who possesses this knowledge, whether he happens to be a ruler or a private man, when regarded only in reference to his art, be truly called ‘royal’?

Socrates Younger:: He certainly ought to be.

Stranger:: And the householder and master are the same?

Socrates Younger:: Of course.

Stranger:: Again, a large household may be compared to a small state: will they differ at all, as far as government is concerned?

Socrates Younger:: They will not.

Stranger:: Then, returning to the point which we were just now discussing, do we not clearly see that there is one science of all of them; and this science may be called either royal or political or economical; we will not quarrel with any one about the name.

Socrates Younger:: Certainly not.

Stranger:: This, too, is evident, that the king cannot do much with his hands, or with his whole body, towards the maintenance of his empire, compared with what he does by the intelligence and strength of his mind.

Socrates Younger:: Clearly not.

Stranger:: Then, shall we say that the king has a greater affinity to knowledge than to manual arts and to practical life in general?

Socrates Younger:: Certainly he has.

Stranger:: Then we may put all together as one and the same—statesmanship and the statesman—the kingly science and the king.

Socrates Younger:: Clearly.

Stranger:: And now we shall only be proceeding in due order if we go on to divide the sphere of knowledge?

Socrates Younger:: Very good.

Stranger:: Think whether you can find any joint or parting in knowledge.

Socrates Younger:: Tell me of what sort.

Stranger:: Such as this: You may remember that we made an art of calculation?

Socrates Younger:: Yes.

Stranger:: Which was, unmistakably, one of the arts of knowledge?

Socrates Younger:: Certainly.

Stranger:: And to this art of calculation which discerns the differences of numbers shall we assign any other function except to pass judgment on their differences?

Socrates Younger:: How could we?

Stranger:: You know that the master-builder does not work himself, but is the ruler of workmen?

Socrates Younger:: Yes.

Stranger:: He contributes knowledge, not manual labor?

Socrates Younger:: True.

Stranger:: And may therefore be justly said to share in theoretical science?

Socrates Younger:: Quite true.

Stranger:: But he ought not, like the calculator, to regard his functions as at an end when he has formed a judgment;—he must assign to the individual workmen their appropriate task until they have completed the work.

Socrates Younger:: True.

Stranger:: Are not all such sciences, no less than arithmetic and the like, subjects of pure knowledge; and is not the difference between the two classes, that the one sort has the power of judging only, and the other of ruling as well?

Socrates Younger:: That is evident.

Stranger:: May we not very properly say, that of all knowledge, there are two divisions—one which rules, and the other which judges?

Socrates Younger:: I should think so.

Stranger:: And when men have anything to do in common, that they should be of one mind is surely a desirable thing?

Socrates Younger:: Very true.

Stranger:: Then while we are at unity among ourselves, we need not mind about the fancies of others?

Socrates Younger:: Certainly not.

Stranger:: And now, in which of these divisions shall we place the king?—Is he a judge and a kind of spectator? Or shall we assign to him the art of command—for he is a ruler?

Socrates Younger:: The latter, clearly.

Stranger:: Then we must see whether there is any mark of division in the art of command too. I am inclined to think that there is a distinction similar to that of manufacturer and retail dealer, which parts off the king from the herald.

Socrates Younger:: How is this?

Stranger:: Why, does not the retailer receive and sell over again the productions of others, which have been sold before?

Socrates Younger:: Certainly he does.

Stranger:: And is not the herald under command, and does he not receive orders, and in his turn give them to others?

Socrates Younger:: Very true.

Stranger:: Then shall we mingle the kingly art in the same class with the art of the herald, the interpreter, the boatswain, the prophet, and the numerous kindred arts which exercise command; or, as in the preceding comparison we spoke of manufacturers, or sellers for themselves, and of retailers,—seeing, too, that the class of supreme rulers, or rulers for themselves, is almost nameless—shall we make a word following the same analogy, and refer kings to a supreme or ruling-for-self science, leaving the rest to receive a name from some one else? For we are seeking the ruler; and our enquiry is not concerned with him who is not a ruler.

Socrates Younger:: Very good.

Stranger:: Thus a very fair distinction has been attained between the man who gives his own commands, and him who gives another's. And now let us see if the supreme power allows of any further division.

Socrates Younger:: By all means.

Stranger:: I think that it does; and please to assist me in making the division.

Socrates Younger:: At what point?

Stranger:: May not all rulers be supposed to command for the sake of producing something?

Socrates Younger:: Certainly.

Stranger:: Nor is there any difficulty in dividing the things produced into two classes.

Socrates Younger:: How would you divide them?

Stranger:: Of the whole class, some have life and some are without life.

Socrates Younger:: True.

Stranger:: And by the help of this distinction we may make, if we please, a subdivision of the section of knowledge which commands.

Socrates Younger:: At what point?

Stranger:: One part may be set over the production of lifeless, the other of living objects; and in this way the whole will be divided.

Socrates Younger:: Certainly.

Stranger:: That division, then, is complete; and now we may leave one half, and take up the other; which may also be divided into two.

Socrates Younger:: Which of the two halves do you mean?

Stranger:: Of course that which exercises command about animals. For, surely, the royal science is not like that of a master-workman, a science presiding over lifeless objects;—the king has a nobler function, which is the management and control of living beings.

Socrates Younger:: True.

Stranger:: And the breeding and tending of living beings may be observed to be sometimes a tending of the individual; in other cases, a common care of creatures in flocks?

Socrates Younger:: True.

Stranger:: But the statesman is not a tender of individuals—not like the driver or groom of a single ox or horse; he is rather to be compared with the keeper of a drove of horses or oxen.

Socrates Younger:: Yes, I see, thanks to you.

Stranger:: Shall we call this art of tending many animals together, the art of managing a herd, or the art of collective management?

Socrates Younger:: No matter;—whichever suggests itself to us in the course of conversation.

Stranger:: Very good, Socrates; and, if you continue to be not too particular about names, you will be all the richer in wisdom when you are an old man. And now, as you say, leaving the discussion of the name,—can you see a way in which a person, by showing the art of herding to be of two kinds, may cause that which is now sought amongst twice the number of things, to be then sought amongst half that number?

Socrates Younger:: I will try;—there appears to me to be one management of men and another of beasts.

Stranger:: You have certainly divided them in a most straightforward and manly style; but you have fallen into an error which hereafter I think that we had better avoid.

Socrates Younger:: What is the error?

Stranger:: I think that we had better not cut off a single small portion which is not a species, from many larger portions; the part should be a species. To separate off at once the subject of investigation, is a most excellent plan, if only the separation be rightly made; and you were under the impression that you were right, because you saw that you would come to man; and this led you to hasten the steps. But you should not chip off too small a piece, my friend; the safer way is to cut through the middle; which is also the more likely way of finding classes. Attention to this principle makes all the difference in a process of enquiry.

Socrates Younger:: What do you mean, Stranger?

Stranger:: I will endeavor to speak more plainly out of love to your good parts, Socrates; and, although I cannot at present entirely explain myself, I will try, as we proceed, to make my meaning a little clearer.

Socrates Younger:: What was the error of which, as you say, we were guilty in our recent division?

Stranger:: The error was just as if some one who wanted to divide the human race, were to divide them after the fashion which prevails in this part of the world; here they cut off the Hellenes as one species, and all the other species of mankind, which are innumerable, and have no ties or common language, they include under the single name of 'barbarians,' and because they have one name they are supposed to be of one species also. Or suppose that in dividing numbers you were to cut off ten thousand from all the rest, and make of it one species, comprehending the rest under another separate name, you might say that here too was a single class, because you had given it a single name. Whereas you would make a much better and more equal and logical classification of numbers, if you divided them into odd and even; or of the human species, if you divided them into male and female; and only separated off Lydians or Phrygians, or any other tribe, and arrayed them against the rest of the world, when you could no longer make a division into parts which were also classes.

Socrates Younger:: Very true; but I wish that this distinction between a part and a class could still be made somewhat plainer.

Stranger:: O Socrates, best of men, you are imposing upon me a very difficult task. We have already digressed further from our original intention than we ought, and you would have us wander still further away. But we must now return to our subject; and hereafter, when there is a leisure hour, we will follow up the other track; at the same time, I wish you to guard against imagining that you ever heard me declare—

Socrates Younger:: What?

Stranger:: That a class and a part are distinct.

Socrates Younger:: What did I hear, then?

Stranger:: That a class is necessarily a part, but there is no similar necessity that a part should be a class; that is the view which I should always wish you to attribute to me, Socrates.

Socrates Younger:: So be it.

Stranger:: There is another thing which I should like to know.

Socrates Younger:: What is it?

Stranger:: The point at which we digressed; for, if I am not mistaken, the exact place was at the question, Where you would divide the management of herds. To this you appeared rather too ready to answer that there were two species of animals; man being one, and all brutes making up the other.

Socrates Younger:: True.

Stranger:: I thought that in taking away a part, you imagined that the remainder formed a class, because you were able to call them by the common name of brutes.

Socrates Younger:: That again is true.

Stranger:: Suppose now, O most courageous of dialecticians, that some wise and understanding creature, such as a crane is reputed to be, were, in imitation of you, to make a similar division, and set up cranes against all other animals to their own special glorification, at the same time jumbling together all the others, including man, under the appellation of brutes,—here would be the sort of error which we must try to avoid.

Socrates Younger:: How can we be safe?

Stranger:: If we do not divide the whole class of animals, we shall be less likely to fall into that error.

Socrates Younger:: We had better not take the whole?

Stranger:: Yes, there lay the source of error in our former division.

Socrates Younger:: How?

Stranger:: You remember how that part of the art of knowledge which was concerned with command, had to do with the rearing of living creatures,—I mean, with animals in herds?

Socrates Younger:: Yes.

Stranger:: In that case, there was already implied a division of all animals into tame and wild; those whose nature can be tamed are called tame, and those which cannot be tamed are called wild.

Socrates Younger:: True.

Stranger:: And the political science of which we are in search, is and ever was concerned with tame animals, and is also confined to gregarious animals.

Socrates Younger:: Yes.

Stranger:: But then we ought not to divide, as we did, taking the whole class at once. Neither let us be in too great haste to arrive quickly at the political science; for this mistake has already brought upon us the misfortune of which the proverb speaks.

Socrates Younger:: What misfortune?

Stranger:: The misfortune of too much haste, which is too little speed.

Socrates Younger:: And all the better, Stranger; we got what we deserved.

Stranger:: Very well: Let us then begin again, and endeavor to divide the collective rearing of animals; for probably the completion of the argument will best show what you are so anxious to know. Tell me, then—

Socrates Younger:: What?

Stranger:: Have you ever heard, as you very likely may—for I do not suppose that you ever actually visited them—of the preserves of fishes in the Nile, and in the ponds of the Great King; or you may have seen similar preserves in wells at home?

Socrates Younger:: Yes, to be sure, I have seen them, and I have often heard the others described.

Stranger:: And you may have heard also, and may have been assured by report, although you have not travelled in those regions, of nurseries of geese and cranes in the plains of Thessaly?

Socrates Younger:: Certainly.

Stranger:: I asked you, because here is a new division of the management of herds, into the management of land and of water herds.

Socrates Younger:: There is.

Stranger:: And do you agree that we ought to divide the collective rearing of herds into two corresponding parts, the one the rearing of water, and the other the rearing of land herds?

Socrates Younger:: Yes.

Stranger:: There is surely no need to ask which of these two contains the royal art, for it is evident to everybody.

Socrates Younger:: Certainly.

Stranger:: Any one can divide the herds which feed on dry land?

Socrates Younger:: How would you divide them?

Stranger:: I should distinguish between those which fly and those which walk.

Socrates Younger:: Most true.

Stranger:: And where shall we look for the political animal? Might not an idiot, so to speak, know that he is a pedestrian?

Socrates Younger:: Certainly.

Stranger:: The art of managing the walking animal has to be further divided, just as you might halve an even number.

Socrates Younger:: Clearly.

Stranger:: Let me note that here appear in view two ways to that part or class which the argument aims at reaching,—the one a speedier way, which cuts off a small portion and leaves a large; the other agrees better with the principle which we were laying down, that as far as we can we should divide in the middle; but it is longer. We can take either of them, whichever we please.

Socrates Younger:: Cannot we have both ways?

Stranger:: Together? What a thing to ask! but, if you take them in turn, you clearly may.

Socrates Younger:: Then I should like to have them in turn.

Stranger:: There will be no difficulty, as we are near the end; if we had been at the beginning, or in the middle, I should have demurred to your request; but now, in accordance with your desire, let us begin with the longer way; while we are fresh, we shall get on better. And now attend to the division.

Socrates Younger:: Let me hear.

Stranger:: The tame walking herding animals are distributed by nature into two classes.

Socrates Younger:: Upon what principle?

Stranger:: The one grows horns; and the other is without horns.

Socrates Younger:: Clearly.

Stranger:: Suppose that you divide the science which manages pedestrian animals into two corresponding parts, and define them; for if you try to invent names for them, you will find the intricacy too great.

Socrates Younger:: How must I speak of them, then?

Stranger:: In this way: let the science of managing pedestrian animals be divided into two parts, and one part assigned to the horned herd, and the other to the herd that has no horns.

Socrates Younger:: All that you say has been abundantly proved, and may therefore be assumed.

Stranger:: The king is clearly the shepherd of a polled herd, who have no horns.

Socrates Younger:: That is evident.

Stranger:: Shall we break up this hornless herd into sections, and endeavor to assign to him what is his?

Socrates Younger:: By all means.

Stranger:: Shall we distinguish them by their having or not having cloven feet, or by their mixing or not mixing the breed? You know what I mean.

Socrates Younger:: What?

Stranger:: I mean that horses and asses naturally breed from one another.

Socrates Younger:: Yes.

Stranger:: But the remainder of the hornless herd of tame animals will not mix the breed.

Socrates Younger:: Very true.

Stranger:: And of which has the Statesman charge,—of the mixed or of the unmixed race?

Socrates Younger:: Clearly of the unmixed.

Stranger:: I suppose that we must divide this again as before.

Socrates Younger:: We must.

Stranger:: Every tame and herding animal has now been split up, with the exception of two species; for I hardly think that dogs should be reckoned among gregarious animals.

Socrates Younger:: Certainly not; but how shall we divide the two remaining species?

Stranger:: There is a measure of difference which may be appropriately employed by you and Theaetetus, who are students of geometry.

Socrates Younger:: What is that?

Stranger:: The diameter; and, again, the diameter of a diameter.

Socrates Younger:: What do you mean?

Stranger:: How does man walk, but as a diameter whose power is two feet?

Socrates Younger:: Just so.

Stranger:: And the power of the remaining kind, being the power of twice two feet, may be said to be the diameter of our diameter.

Socrates Younger:: Certainly; and now I think that I pretty nearly understand you.

Stranger:: In these divisions, Socrates, I descry what would make another famous jest.

Socrates Younger:: What is it?

Stranger:: Human beings have come out in the same class with the freest and airiest of creation, and have been running a race with them.

Socrates Younger:: I remark that very singular coincidence.

Stranger:: And would you not expect the slowest to arrive last?

Socrates Younger:: Indeed I should.

Stranger:: And there is a still more ridiculous consequence, that the king is found running about with the herd, and in close competition with the bird-catcher, who of all mankind is most of an adept at the airy life.

Socrates Younger:: Certainly.

Stranger:: Then here, Socrates, is still clearer evidence of the truth of what was said in the enquiry about the Sophist.

Socrates Younger:: What?

Stranger:: That the dialectical method is no respecter of persons, and does not set the great above the small, but always arrives in her own way at the truest result.

Socrates Younger:: Clearly.

Stranger:: And now, I will not wait for you to ask me, but will of my own accord take you by the shorter road to the definition of a king.

Socrates Younger:: By all means.

Stranger:: I say that we should have begun at first by dividing land animals into biped and quadruped; and since the winged herd, and that alone, comes out in the same class with man, we should divide bipeds into those which have feathers and those which have not, and when they have been divided, and the art of the management of mankind is brought to light, the time will have come to produce our Statesman and ruler, and set him like a charioteer in his place, and hand over to him the reins of state, for that too is a vocation which belongs to him.

Socrates Younger:: Very good; you have paid me the debt,—I mean, that you have completed the argument, and I suppose that you added the digression by way of interest.

Stranger:: Then now, let us go back to the beginning, and join the links, which together make the definition of the name of the Statesman's art.

Socrates Younger:: By all means.

Stranger:: The science of pure knowledge had, as we said originally, a part which was the science of rule or command, and from this was derived another part, which was called command-for-self, on the analogy of selling-for-self; an important section of this was the management of living animals, and this again was further limited to the management of them in herds, and again in herds of pedestrian animals. The chief division of the latter was the art of managing pedestrian animals which are without horns; this again has a part which can only be comprehended under one term by joining together three names,—shepherding pure-bred animals. The only further subdivision is the art of man-herding,—this has to do with bipeds, and is what we were seeking after, and have now found, being at once the royal and political.

Socrates Younger:: To be sure.

Stranger:: And do you think, Socrates, that we really have done as you say?

Socrates Younger:: What?

Stranger:: Do you think, I mean, that we have really fulfilled our intention?—There has been a sort of discussion, and yet the investigation seems to me not to be perfectly worked out: this is where the enquiry fails.

Socrates Younger:: I do not understand.

Stranger:: I will try to make the thought, which is at this moment present in my mind, clearer to us both.

Socrates Younger:: Let me hear.

Stranger:: There were many arts of shepherding, and one of them was the political, which had the charge of one particular herd?

Socrates Younger:: Yes.

Stranger:: And this the argument defined to be the art of rearing, not horses or other brutes, but the art of rearing man collectively?

Socrates Younger:: True.

Stranger:: Note, however, a difference which distinguishes the king from all other shepherds.

Socrates Younger:: To what do you refer?

Stranger:: I want to ask, whether any one of the other herdsmen has a rival who professes and claims to share with him in the management of the herd?

Socrates Younger:: What do you mean?

Stranger:: I mean to say that merchants, husbandmen, providers of food, and also training-masters and physicians, will all contend with the herdsmen of humanity, whom we call Statesmen, declaring that they themselves have the care of rearing or managing mankind, and that they rear not only the common herd, but also the rulers themselves.

Socrates Younger:: Are they not right in saying so?

Stranger:: Very likely they may be, and we will consider their claim. But we are certain of this,—that no one will raise a similar claim as against the herdsman, who is allowed on all hands to be the sole and only feeder and physician of his herd; he is also their match-maker and accouter; no one else knows that department of science. And he is their merry-maker and musician, as far as their nature is susceptible of such influences, and no one can console and soothe his own herd better than he can, either with the natural tones of his voice or with instruments. And the same may be said of tenders of animals in general.

Socrates Younger:: Very true.

Stranger:: But if this is as you say, can our argument about the king be true and unimpeachable? Were we right in selecting him out of ten thousand other claimants to be the shepherd and rearer of the human flock?

Socrates Younger:: Surely not.

Stranger:: Had we not reason just now to apprehend, that although we may have described a sort of royal form, we have not as yet accurately worked out the true image of the Statesman? and that we cannot reveal him as he truly is in his own nature, until we have disengaged and separated him from those who hang about him and claim to share in his prerogatives?

Socrates Younger:: Very true.

Stranger:: And that, Socrates, is what we must do, if we do not mean to bring disgrace upon the argument at its close.

Socrates Younger:: We must certainly avoid that.

Stranger:: Then let us make a new beginning, and travel by a different road.

Socrates Younger:: What road?

Stranger:: I think that we may have a little amusement; there is a famous tale, of which a good portion may with advantage be interwoven, and then we may resume our series of divisions, and proceed in the old path until we arrive at the desired summit. Shall we do as I say?

Socrates Younger:: By all means.

Stranger:: Listen, then, to a tale which a child would love to hear; and you are not too old for childish amusement.

Socrates Younger:: Let me hear.

Stranger:: There did really happen, and will again happen, like many other events of which ancient tradition has preserved the record, the portent which is traditionally said to have occurred in the quarrel of Atreus and Thyestes. You have heard, no doubt, and remember what they say happened at that time?

Socrates Younger:: I suppose you to mean the token of the birth of the golden lamb.

Stranger:: No, not that; but another part of the story, which tells how the sun and the stars once rose in the west, and set in the east, and that the god reversed their motion, and gave them that which they now have as a testimony to the right of Atreus.

Socrates Younger:: Yes; there is that legend also.

Stranger:: Again, we have been often told of the reign of Cronos.

Socrates Younger:: Yes, very often.

Stranger:: Did you ever hear that the men of former times were earth-born, and not begotten of one another?

Socrates Younger:: Yes, that is another old tradition.

Stranger:: All these stories, and ten thousand others which are still more wonderful, have a common origin;

many of them have been lost in the lapse of ages, or are repeated only in a disconnected form; but the origin of them is what no one has told, and may as well be told now; for the tale is suited to throw light on the nature of the king.

Socrates Younger:: Very good; and I hope that you will give the whole story, and leave out nothing.

Stranger:: Listen, then. There is a time when God himself guides and helps to roll the world in its course; and there is a time, on the completion of a certain cycle, when he lets go, and the world being a living creature, and having originally received intelligence from its author and creator, turns about and by an inherent necessity revolves in the opposite direction.

Socrates Younger:: Why is that?

Stranger:: Why, because only the most divine things of all remain ever unchanged and the same, and body is not included in this class. Heaven and the universe, as we have termed them, although they have been endowed by the Creator with many glories, partake of a bodily nature, and therefore cannot be entirely free from perturbation. But their motion is, as far as possible, single and in the same place, and of the same kind; and is therefore only subject to a reversal, which is the least alteration possible. For the lord of all moving things is alone able to move of himself; and to think that he moves them at one time in one direction and at another time in another is blasphemy. Hence we must not say that the world is either self-moved always, or all made to go round by God in two opposite courses; or that two Gods, having opposite purposes, make it move round. But as I have already said (and this is the only remaining alternative) the world is guided at one time by an external power which is divine and receives fresh life and immortality from the renewing hand of the Creator, and again, when let go, moves spontaneously, being set free at such a time as to have, during infinite cycles of years, a reverse movement: this is due to its perfect balance, to its vast size, and to the fact that it turns on the smallest pivot.

*Socrates Younger::* Your account of the world seems to be very reasonable indeed.

Stranger:: Let us now reflect and try to gather from what has been said the nature of the phenomenon which we affirmed to be the cause of all these wonders. It is this.

Socrates Younger:: What?

Stranger:: The reversal which takes place from time to time of the motion of the universe.

Socrates Younger:: How is that the cause?

Stranger:: Of all changes of the heavenly motions, we may consider this to be the greatest and most complete.

Socrates Younger:: I should imagine so.

Stranger:: And it may be supposed to result in the greatest changes to the human beings who are the inhabitants of the world at the time.

Socrates Younger:: Such changes would naturally occur.

Stranger:: And animals, as we know, survive with difficulty great and serious changes of many different kinds when they come upon them at once.

Socrates Younger:: Very true.

Stranger:: Hence there necessarily occurs a great destruction of them, which extends also to the life of man; few survivors of the race are left, and those who remain become the subjects of several novel and remarkable phenomena, and of one in particular, which takes place at the time when the transition is made to the cycle opposite to that in which we are now living.

*Socrates Younger::* What is it?

Stranger:: The life of all animals first came to a standstill, and the mortal nature ceased to be or look older, and was then reversed and grew young and delicate; the white locks of the aged darkened again, and the cheeks of the bearded man became smooth, and recovered their former bloom; the bodies of youths in their prime grew softer and smaller, continually by day and night returning and becoming assimilated to the nature of a newly-born child in mind as well as body; in the succeeding stage they wasted away and wholly disappeared. And the bodies of those who died by violence at that time quickly passed through the like changes, and in a few days were no more seen.

Socrates Younger:: Then how, Stranger, were the animals created in those days; and in what way were they begotten of one another?

Stranger:: It is evident, Socrates, that there was no such thing in the then order of nature as the procreation of animals from one another; the earth-born race, of which we hear in story, was the one which existed in those days—they rose again from the ground; and of this tradition, which is now-a-days often unduly discredited, our ancestors, who were nearest in point of time to the end of the last period and came into being at the beginning of this, are to us the heralds. And mark how consistent the sequel of the tale is; after the return of age to youth, follows the return of the dead, who are lying in the earth, to life; simultaneously with the reversal of the world the wheel of their generation has been turned back, and they are put together and rise and live in the opposite order, unless God has carried any of them away to some other lot. According to this tradition they of necessity sprang from the earth and have the name of earth-born, and so the above legend clings to them.

Socrates Younger:: Certainly that is quite consistent with what has preceded; but tell me, was the life which you said existed in the reign of Cronos in that cycle of the world, or in this? For the change in the course of the stars and the sun must have occurred in both.

Stranger:: I see that you enter into my meaning;—no, that blessed and spontaneous life does not belong to the present cycle of the world, but to the previous one, in which God superintended the whole revolution of the universe; and the several parts of the universe were distributed under the rule of certain inferior deities, as is the way in some places still. There were demigods, who were the shepherds of the various species and herds of animals, and each one was in all respects sufficient for those of whom he was the shepherd; neither was there any violence, or devouring of one another, or war or quarrel among them; and I might tell of ten thousand other blessings, which belonged to that dispensation. The reason why the life of man was, as tradition says, spontaneous, is as follows: In those days God himself was their shepherd, and ruled over them, just as man, who is by comparison a divine being, still rules over the lower animals. Under him there were no forms of government or separate possession of women and children; for all men rose again from the earth, having no memory of the past. And although they had nothing of this sort, the earth gave them fruits in abundance, which grew on trees and shrubs unbidden, and were not planted by the hand of man. And they dwelt naked, and mostly in the open air, for the temperature of their seasons was mild; and they had no beds, but lay on soft couches of grass, which grew plentifully out of the earth. Such was the life of man in the days of Cronos, Socrates; the character of our present life, which is said to be under Zeus, you know from your own experience. Can you, and will you, determine which of them you deem the happier?

Socrates Younger:: Impossible.

Stranger:: Then shall I determine for you as well as I can?

Socrates Younger:: By all means.

Stranger:: Suppose that the nurslings of Cronos, having this boundless leisure, and the power of holding intercourse, not only with men, but with the brute creation, had used all these advantages with a view to philosophy, conversing with the brutes as well as with one another, and learning of every nature which was gifted with any special power, and was able to contribute some special experience to the store of wisdom, there would be no difficulty in deciding that they would be a thousand times happier than the men of our own day. Or, again, if they had merely eaten and drunk until they were full, and told stories to one another and to the animals—such stories as are now attributed to them—in this case also, as I should imagine, the answer would be easy. But until some satisfactory witness can be found of the love of that age for knowledge and discussion, we had better let the matter drop, and give the reason why we have unearthed this tale, and then we shall be able to get on. In the fullness of time, when the change was to take place, and the earth-born race had all perished, and every soul had completed its proper cycle of births and been sown in the earth her appointed number of times, the pilot of the universe let the helm go, and retired to his place of view; and then Fate and innate desire reversed the motion of the world. Then also all the inferior deities who share the rule of the supreme power, being informed of what was happening, let go the parts of the world which were under their control. And the world turning round with a sudden shock, being impelled in an opposite direction from beginning to end, was shaken by a mighty earthquake, which wrought a new destruction of all manner of animals. Afterwards, when sufficient time had elapsed, the tumult and confusion and earthquake ceased, and the universal creature, once more at peace, attained to a calm, and settled down into his own orderly and accustomed course, having the charge and rule of himself and of all the creatures which are contained in him, and executing, as far as he remembered them, the instructions of his Father and Creator, more precisely at first, but afterwards with less exactness. The reason of the falling off was the admixture of matter in him; this was inherent in the primal nature, which was full of disorder, until attaining to the present order. From God, the constructor, the world received all that is good in him, but from a previous state came elements of evil and unrighteousness, which, thence derived, first of all passed into the world, and were then transmitted to the animals. While the world was aided by the pilot in nurturing the animals, the evil was small, and great the good which he produced, but after the separation, when the world was let go, at first all proceeded well enough; but, as time went on, there was more and more forgetting, and the old discord again held sway and burst forth in full glory; and at last small was the good, and great was the admixture of evil, and there was a danger of universal ruin to the world, and to the things contained in him. Wherefore God, the orderer of all, in his tender care, seeing that the world was in great straits, and fearing that all might be dissolved in the storm and disappear in infinite chaos, again seated himself at the helm; and bringing back the elements which had fallen into dissolution and disorder to the motion which had prevailed under his dispensation, he set them in order and restored them, and made the world imperishable and immortal. And this is the whole tale, of which the first part will suffice to illustrate the nature of the king. For when the world turned towards the present cycle of generation, the age of man again stood still, and a change opposite to the previous one was the result. The small creatures which had almost disappeared grew in stature, and the newly-born children of the earth became grey and died and sank into the earth again. All things changed, imitating and following the condition of the universe, and of necessity agreeing with that in their mode of conception and generation and nurture; for no animal was any longer allowed to come into being in the earth through the agency of other creative beings, but as the world was ordained to be the lord of his own progress, in like manner the parts were ordained to grow and generate and give nourishment, as far as they could, of themselves, impelled by a similar movement. And so we have arrived at the real end of this discourse; for although there might be much to tell of the lower animals, and of the condition out of which they changed and of the causes of the change, about men there is not much, and that little is more to the purpose. Deprived of the care of God, who had possessed and tended them, they were left helpless and defenseless, and were torn in pieces by the beasts, who were naturally fierce and had now grown wild. And in the first ages they were still without skill or resource; the food which once grew spontaneously had failed, and as yet they knew not how to procure it, because they had never felt the pressure of necessity. For all these reasons they were in a great strait; wherefore also the gifts spoken of in the old tradition were imparted to man by the gods, together with so much teaching and education as was indispensable; fire was given to them by Prometheus, the arts by Hephaestus and his fellow-worker, Athene, seeds and plants by others. From these is derived all that has helped to frame human life; since the care of the Gods, as I was saying, had now failed men, and they had to order their course of life for themselves, and were their own masters, just like the universal creature whom they imitate and follow, ever changing, as he changes, and ever living and growing, at one time in one manner, and at another time in another. Enough of the story, which may be of use in showing us how greatly we erred in the delineation of the king and the statesman in our previous discourse.

*Socrates Younger::* What was this great error of which you speak?

Stranger:: There were two; the first a lesser one, the other was an error on a much larger and grander scale.

Socrates Younger:: What do you mean?

Stranger:: I mean to say that when we were asked about a king and statesman of the present cycle and generation, we told of a shepherd of a human flock who belonged to the other cycle, and of one who was a god when he ought to have been a man; and this was a great error. Again, we declared him to be the ruler of the entire State, without explaining how: this was not the whole truth, nor very intelligible; but still it was true, and therefore the second error was not so great as the first.

Socrates Younger:: Very good.

Stranger:: Before we can expect to have a perfect description of the statesman we must define the nature of his office.

Socrates Younger:: Certainly.

Stranger:: And the myth was introduced in order to show, not only that all others are rivals of the true shepherd who is the object of our search, but in order that we might have a clearer view of him who is alone worthy to receive this appellation, because he alone of shepherds and herdsmen, according to the image which we have employed, has the care of human beings.

Socrates Younger:: Very true.

Stranger:: And I cannot help thinking, Socrates, that the form of the divine shepherd is even higher than that of a king; whereas the statesmen who are now on earth seem to be much more like their subjects in character, and much more nearly to partake of their breeding and education.

Socrates Younger:: Certainly.

Stranger:: Still they must be investigated all the same, to see whether, like the divine shepherd, they are above their subjects or on a level with them.

Socrates Younger:: Of course.

Stranger:: To resume:—Do you remember that we spoke of a command-for-self exercised over animals, not singly but collectively, which we called the art of rearing a herd?

Socrates Younger:: Yes, I remember.

Stranger:: There, somewhere, lay our error; for we never included or mentioned the Statesman; and we did not observe that he had no place in our nomenclature.

Socrates Younger:: How was that?

Stranger:: All other herdsmen 'rear' their herds, but this is not a suitable term to apply to the Statesman; we should use a name which is common to them all.

Socrates Younger:: True, if there be such a name.

Stranger:: Why, is not 'care' of herds applicable to all? For this implies no feeding, or any special duty; if we say either ‘tending’ the herds, or ‘managing’ the herds, or ‘having the care’ of them, the same word will include all, and then we may wrap up the Statesman with the rest, as the argument seems to require.

Socrates Younger:: Quite right; but how shall we take the next step in the division?

Stranger:: As before we divided the art of ‘rearing’ herds accordingly as they were land or water herds, winged and wingless, mixing or not mixing the breed, horned and hornless, so, we may divide by these same differences the ‘tending’ of herds, comprehending in our definition the kingship of to-day and the rule of Cronos.

Socrates Younger:: That is clear; but I still ask, what is to follow.

Stranger:: If the word had been ‘managing’ herds, instead of feeding or rearing them, no one would have argued that there was no care of men in the case of the politician, although it was justly contended, that there was no human art of feeding them which was worthy of the name, or at least, if there were, many a man had a prior and greater right to share in such an art than any king.

*Socrates Younger::* True.

Stranger:: But no other art or science will have a prior or better right than the royal science to care for human society and to rule over men in general.

Socrates Younger:: Quite true.

Stranger:: In the next place, Socrates, we must surely notice that a great error was committed at the end of our analysis.

Socrates Younger:: What was it?

Stranger:: Why, supposing we were ever so sure that there is such an art as the art of rearing or feeding bipeds, there was no reason why we should call this the royal or political art, as though there were no more to be said.

Socrates Younger:: Certainly not.

Stranger:: Our first duty, as we were saying, was to remodel the name, so as to have the notion of care rather than of feeding, and then to divide, for there may be still considerable divisions.

Socrates Younger:: How can they be made?

Stranger:: First, by separating the divine shepherd from the human guardian or manager.

Socrates Younger:: True.

Stranger:: And the art of management which is assigned to man would again have to be subdivided.

Socrates Younger:: On what principle?

Stranger:: On the principle of voluntary and compulsory.

Socrates Younger:: Why?

Stranger:: Because, if I am not mistaken, there has been an error here; for our simplicity led us to rank king and tyrant together, whereas they are utterly distinct, like their modes of government.

Socrates Younger:: True.

Stranger:: Then, now, as I said, let us make the correction and divide human care into two parts, on the principle of voluntary and compulsory.

Socrates Younger:: Certainly.

Stranger:: And if we call the management of violent rulers tyranny, and the voluntary management of herds of voluntary bipeds politics, may we not further assert that he who has this latter art of management is the true king and statesman?

Socrates Younger:: I think, Stranger, that we have now completed the account of the Statesman.

Stranger:: Would that we had, Socrates, but I have to satisfy myself as well as you; and in my judgment the figure of the king is not yet perfected; like statuaries who, in their too great haste, having overdone the several parts of their work, lose time in cutting them down, so too we, partly out of haste, partly out of a magnanimous desire to expose our former error, and also because we imagined that a king required grand illustrations, have taken up a marvelous lump of fable, and have been obliged to use more than was necessary. This made us discourse at large, and, nevertheless, the story never came to an end. And our discussion might be compared to a picture of some living being which had been fairly drawn in outline, but had not yet attained the life and clearness which is given by the blending of colors. Now to intelligent persons a living being had better be delineated by language and discourse than by any painting or work of art: to the duller sort by works of art.

Socrates Younger:: Very true; but what is the imperfection which still remains? I wish that you would tell me.

Stranger:: The higher ideas, my dear friend, can hardly be set forth except through the medium of examples; every man seems to know all things in a dreamy sort of way, and then again to wake up and to know nothing.

Socrates Younger:: What do you mean?

Stranger:: I fear that I have been unfortunate in raising a question about our experience of knowledge.

Socrates Younger:: Why so?

Stranger:: Why, because my ‘example’ requires the assistance of another example.

Socrates Younger:: Proceed; you need not fear that I shall tire.

Stranger:: I will proceed, finding, as I do, such a ready listener in you: when children are beginning to know their letters—

Socrates Younger:: What are you going to say?

Stranger:: That they distinguish the several letters well enough in very short and easy syllables, and are able to tell them correctly.

Socrates Younger:: Certainly.

Stranger:: Whereas in other syllables they do not recognize them, and think and speak falsely of them.

Socrates Younger:: Very true.

Stranger:: Will not the best and easiest way of bringing them to a knowledge of what they do not as yet know be—

*Socrates Younger::* Be what?

Stranger:: To refer them first of all to cases in which they judge correctly about the letters in question, and then to compare these with the cases in which they do not as yet know, and to show them that the letters are the same, and have the same character in both combinations, until all cases in which they are right have been placed side by side with all cases in which they are wrong. In this way they have examples, and are made to learn that each letter in every combination is always the same and not another, and is always called by the same name.

Socrates Younger:: Certainly.

Stranger:: Are not examples formed in this manner? We take a thing and compare it with another distinct instance of the same thing, of which we have a right conception, and out of the comparison there arises one true notion, which includes both of them.

Socrates Younger:: Exactly.

Stranger:: Can we wonder, then, that the soul has the same uncertainty about the alphabet of things, and sometimes and in some cases is firmly fixed by the truth in each particular, and then, again, in other cases is altogether at sea; having somehow or other a correct notion of combinations; but when the elements are transferred into the long and difficult language (syllables) of facts, is again ignorant of them?

Socrates Younger:: There is nothing wonderful in that.

Stranger:: Could any one, my friend, who began with false opinion ever expect to arrive even at a small portion of truth and to attain wisdom?

Socrates Younger:: Hardly.

Stranger:: Then you and I will not be far wrong in trying to see the nature of example in general in a small and particular instance; afterwards from lesser things we intend to pass to the royal class, which is the highest form of the same nature, and endeavor to discover by rules of art what the management of cities is; and then the dream will become a reality to us.

Socrates Younger:: Very true.

Stranger:: Then, once more, let us resume the previous argument, and as there were innumerable rivals of the royal race who claim to have the care of states, let us part them all off, and leave him alone; and, as I was saying, a model or example of this process has first to be framed.

Socrates Younger:: Exactly.

Stranger:: What model is there which is small, and yet has any analogy with the political occupation? Suppose, Socrates, that if we have no other example at hand, we choose weaving, or, more precisely, weaving of wool—this will be quite enough, without taking the whole of weaving, to illustrate our meaning?

Socrates Younger:: Certainly.

Stranger:: Why should we not apply to weaving the same processes of division and subdivision which we have already applied to other classes; going once more as rapidly as we can through all the steps until we come to that which is needed for our purpose?

Socrates Younger:: How do you mean?

Stranger:: I shall reply by actually performing the process.

Socrates Younger:: Very good.

Stranger:: All things which we make or acquire are either creative or preventive; of the preventive class are antidotes, divine and human, and also defenses; and defenses are either military weapons or protections; and protections are veils, and also shields against heat and cold; and shields against heat and cold are shelters and coverings; and coverings are blankets and garments; and garments are some of them in one piece, and others of them are made in several parts; and of these latter some are stitched, others are fastened and not stitched; and of the not stitched, some are made of the sinews of plants, and some of hair; and of these, again, some are cemented with water and earth, and others are fastened together by themselves. And these last defenses and coverings which are fastened together by themselves are called clothes, and the art which superintends them we may call, from the nature of the operation, the art of clothing, just as before the art of the Statesman was derived from the State; and may we not say that the art of weaving, at least that largest portion of it which was concerned with the making of clothes, differs only in name from this art of clothing, in the same way that, in the previous case, the royal science differed from the political?

*Socrates Younger::* Most true.

Stranger:: In the next place, let us make the reflection, that the art of weaving clothes, which an incompetent person might fancy to have been sufficiently described, has been separated off from several others which are of the same family, but not from the co-operative arts.

Socrates Younger:: And which are the kindred arts?

Stranger:: I see that I have not taken you with me. So I think that we had better go backwards, starting from the end. We just now parted off from the weaving of clothes, the making of blankets, which differ from each other in that one is put under and the other is put around: and these are what I termed kindred arts.

Socrates Younger:: I understand.

Stranger:: And we have subtracted the manufacture of all articles made of flax and cords, and all that we just now metaphorically termed the sinews of plants, and we have also separated off the process of felting and the putting together of materials by stitching and sewing, of which the most important part is the cobbler's art.

Socrates Younger:: Precisely.

Stranger:: Then we separated off the currier's art, which prepared coverings in entire pieces, and the art of sheltering, and subtracted the various arts of making water-tight which are employed in building, and in general in carpentering, and in other crafts, and all such arts as furnish impediments to thieving and acts of violence, and are concerned with making the lids of boxes and the fixing of doors, being divisions of the art of joining; and we also cut off the manufacture of arms, which is a section of the great and manifold art of making defenses; and we originally began by parting off the whole of the magic art which is concerned with antidotes, and have left, as would appear, the very art of which we were in search, the art of protection against winter cold, which fabricates woolen defenses, and has the name of weaving.

*Socrates Younger::* Very true.

Stranger:: Yes, my boy, but that is not all; for the first process to which the material is subjected is the opposite of weaving.

Socrates Younger:: How so?

Stranger:: Weaving is a sort of uniting?

Socrates Younger:: Yes.

Stranger:: But the first process is a separation of the clotted and matted fibers?

Socrates Younger:: What do you mean?

Stranger:: I mean the work of the carder's art; for we cannot say that carding is weaving, or that the carder is a weaver.

Socrates Younger:: Certainly not.

Stranger:: Again, if a person were to say that the art of making the warp and the woof was the art of weaving, he would say what was paradoxical and false.

Socrates Younger:: To be sure.

Stranger:: Shall we say that the whole art of the fuller or of the mender has nothing to do with the care and treatment of clothes, or are we to regard all these as arts of weaving?

Socrates Younger:: Certainly not.

Stranger:: And yet surely all these arts will maintain that they are concerned with the treatment and production of clothes; they will dispute the exclusive prerogative of weaving, and though assigning a larger sphere to that, will still reserve a considerable field for themselves.

Socrates Younger:: Very true.

Stranger:: Besides these, there are the arts which make tools and instruments of weaving, and which will claim at least to be co-operative causes in every work of the weaver.

Socrates Younger:: Most true.

Stranger:: Well, then, suppose that we define weaving, or rather that part of it which has been selected by us, to be the greatest and noblest of arts which are concerned with woolen garments—shall we be right? Is not the definition, although true, wanting in clearness and completeness; for do not all those other arts require to be first cleared away?

*Socrates Younger::* True.

Stranger:: Then the next thing will be to separate them, in order that the argument may proceed in a regular manner?

Socrates Younger:: By all means.

Stranger:: Let us consider, in the first place, that there are two kinds of arts entering into everything which we do.

Socrates Younger:: What are they?

Stranger:: The one kind is the conditional or co-operative, the other the principal cause.

Socrates Younger:: What do you mean?

Stranger:: The arts which do not manufacture the actual thing, but which furnish the necessary tools for the manufacture, without which the several arts could not fulfill their appointed work, are co-operative; but those which make the things themselves are causal.

Socrates Younger:: A very reasonable distinction.

Stranger:: Thus the arts which make spindles, combs, and other instruments of the production of clothes, may be called cooperative, and those which treat and fabricate the things themselves, causal.

Socrates Younger:: Very true.

Stranger:: The arts of washing and mending, and the other preparatory arts which belong to the causal class, and form a division of the great art of adornment, may be all comprehended under what we call the fuller's art.

Socrates Younger:: Very good.

Stranger:: Carding and spinning threads and all the parts of the process which are concerned with the actual manufacture of a woolen garment form a single art, which is one of those universally acknowledged,—the art of working in wool.

Socrates Younger:: To be sure.

Stranger:: Of working in wool, again, there are two divisions, and both these are parts of two arts at once.

Socrates Younger:: How is that?

Stranger:: Carding and one half of the use of the comb, and the other processes of wool-working which separate the composite, may be classed together as belonging both to the art of wool-working, and also to one of the two great arts which are of universal application—the art of composition and the art of division.

*Socrates Younger::* Yes.

Stranger:: To the latter belong carding and the other processes of which I was just now speaking; the art of discernment or division in wool and yarn, which is effected in one manner with the comb and in another with the hands, is variously described under all the names which I just now mentioned.

Socrates Younger:: Very true.

Stranger:: Again, let us take some process of wool-working which is also a portion of the art of composition, and, dismissing the elements of division which we found there, make two halves, one on the principle of composition, and the other on the principle of division.

Socrates Younger:: Let that be done.

Stranger:: And once more, Socrates, we must divide the part which belongs at once both to wool-working and composition, if we are ever to discover satisfactorily the aforesaid art of weaving.

Socrates Younger:: We must.

Stranger:: Yes, certainly, and let us call one part of the art the art of twisting threads, the other the art of combining them.

Socrates Younger:: Do I understand you, in speaking of twisting, to be referring to manufacture of the warp?

Stranger:: Yes, and of the woof too; how, if not by twisting, is the woof made?

Socrates Younger:: There is no other way.

Stranger:: Then suppose that you define the warp and the woof, for I think that the definition will be of use to you.

Socrates Younger:: How shall I define them?

Stranger:: As thus: A piece of carded wool which is drawn out lengthwise and breadth-wise is said to be pulled out.

Socrates Younger:: Yes.

Stranger:: And the wool thus prepared, when twisted by the spindle, and made into a firm thread, is called the warp, and the art which regulates these operations the art of spinning the warp.

Socrates Younger:: True.

Stranger:: And the threads which are more loosely spun, having a softness proportioned to the intertexture of the warp and to the degree of force used in dressing the cloth,—the threads which are thus spun are called the woof, and the art which is set over them may be called the art of spinning the woof.

Socrates Younger:: Very true.

Stranger:: And, now, there can be no mistake about the nature of the part of weaving which we have undertaken to define. For when that part of the art of composition which is employed in the working of wool forms a web by the regular intertexture of warp and woof, the entire woven substance is called by us a woolen garment, and the art which presides over this is the art of weaving.

Socrates Younger:: Very true.

Stranger:: But why did we not say at once that weaving is the art of entwining warp and woof, instead of making a long and useless circuit?

Socrates Younger:: I thought, Stranger, that there was nothing useless in what was said.

Stranger:: Very likely, but you may not always think so, my sweet friend; and in case any feeling of dissatisfaction should hereafter arise in your mind, as it very well may, let me lay down a principle which will apply to arguments in general.

Socrates Younger:: Proceed.

Stranger:: Let us begin by considering the whole nature of excess and defect, and then we shall have a rational ground on which we may praise or blame too much length or too much shortness in discussions of this kind.

Socrates Younger:: Let us do so.

Stranger:: The points on which I think that we ought to dwell are the following:—

Socrates Younger:: What?

Stranger:: Length and shortness, excess and defect; with all of these the art of measurement is conversant.

Socrates Younger:: Yes.

Stranger:: And the art of measurement has to be divided into two parts, with a view to our present purpose.

Socrates Younger:: Where would you make the division?

Stranger:: As thus: I would make two parts, one having regard to the relativity of greatness and smallness to each other; and there is another, without which the existence of production would be impossible.

Socrates Younger:: What do you mean?

Stranger:: Do you not think that it is only natural for the greater to be called greater with reference to the less alone, and the less less with reference to the greater alone?

Socrates Younger:: Yes.

Stranger:: Well, but is there not also something exceeding and exceeded by the principle of the mean, both in speech and action, and is not this a reality, and the chief mark of difference between good and bad men?

Socrates Younger:: Plainly.

Stranger:: Then we must suppose that the great and small exist and are discerned in both these ways, and not, as we were saying before, only relatively to one another, but there must also be another comparison of them with the mean or ideal standard; would you like to hear the reason why?

Socrates Younger:: Certainly.

Stranger:: If we assume the greater to exist only in relation to the less, there will never be any comparison of either with the mean.

Socrates Younger:: True.

Stranger:: And would not this doctrine be the ruin of all the arts and their creations; would not the art of the Statesman and the aforesaid art of weaving disappear? For all these arts are on the watch against excess and defect, not as unrealities, but as real evils, which occasion a difficulty in action; and the excellence or beauty of every work of art is due to this observance of measure.

Socrates Younger:: Certainly.

Stranger:: But if the science of the Statesman disappears, the search for the royal science will be impossible.

Socrates Younger:: Very true.

Stranger:: Well, then, as in the case of the Sophist we extorted the inference that not-being had an existence, because here was the point at which the argument eluded our grasp, so in this we must endeavor to show that the greater and less are not only to be measured with one another, but also have to do with the production of the mean; for if this is not admitted, neither a statesman nor any other man of action can be an undisputed master of his science.

*Socrates Younger::* Yes, we must certainly do again what we did then.

Stranger:: But this, Socrates, is a greater work than the other, of which we only too well remember the length. I think, however, that we may fairly assume something of this sort:—

Socrates Younger:: What?

Stranger:: That we shall some day require this notion of a mean with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

Socrates Younger:: True; and what is the next step?

Stranger:: The next step clearly is to divide the art of measurement into two parts, as we have said already, and to place in the one part all the arts which measure number, length, depth, breadth, swiftness with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes.

Socrates Younger:: Here are two vast divisions, embracing two very different spheres.

Stranger:: There are many accomplished men, Socrates, who say, believing themselves to speak wisely, that the art of measurement is universal, and has to do with all things. And this means what we are now saying; for all things which come within the province of art do certainly in some sense partake of measure. But these persons, because they are not accustomed to distinguish classes according to real forms, jumble together two widely different things, relation to one another, and to a standard, under the idea that they are the same, and also fall into the converse error of dividing other things not according to their real parts. Whereas the right way is, if a man has first seen the unity of things, to go on with the enquiry and not desist until he has found all the differences contained in it which form distinct classes; nor again should he be able to rest contented with the manifold diversities which are seen in a multitude of things until he has comprehended all of them that have any affinity within the bounds of one similarity and embraced them within the reality of a single kind. But we have said enough on this head, and also of excess and defect; we have only to bear in mind that two divisions of the art of measurement have been discovered which are concerned with them, and not forget what they are.

*Socrates Younger::* We will not forget.

Stranger:: And now that this discussion is completed, let us go on to consider another question, which concerns not this argument only but the conduct of such arguments in general.

Socrates Younger:: What is this new question?

Stranger:: Take the case of a child who is engaged in learning his letters: when he is asked what letters make up a word, should we say that the question is intended to improve his grammatical knowledge of that particular word, or of all words?

Socrates Younger:: Clearly, in order that he may have a better knowledge of all words.

Stranger:: And is our enquiry about the Statesman intended only to improve our knowledge of politics, or our power of reasoning generally?

Socrates Younger:: Clearly, as in the former example, the purpose is general.

Stranger:: Still less would any rational man seek to analyze the notion of weaving for its own sake. But people seem to forget that some things have sensible images, which are readily known, and can be easily pointed out when any one desires to answer an enquirer without any trouble or argument; whereas the greatest and highest truths have no outward image of themselves visible to man, which he who wishes to satisfy the soul of the enquirer can adapt to the eye of sense, and therefore we ought to train ourselves to give and accept a rational account of them; for immaterial things, which are the noblest and greatest, are shown only in thought and idea, and in no other way, and all that we are now saying is said for the sake of them. Moreover, there is always less difficulty in fixing the mind on small matters than on great.

*Socrates Younger::* Very good.

Stranger:: Let us call to mind the bearing of all this.

Socrates Younger:: What is it?

Stranger:: I wanted to get rid of any impression of tediousness which we may have experienced in the discussion about weaving, and the reversal of the universe, and in the discussion concerning the Sophist and the being of not-being. I know that they were felt to be too long, and I reproached myself with this, fearing that they might be not only tedious but irrelevant; and all that I have now said is only designed to prevent the recurrence of any such disagreeables for the future.

Socrates Younger:: Very good. Will you proceed?

Stranger:: Then I would like to observe that you and I, remembering what has been said, should praise or blame the length or shortness of discussions, not by comparing them with one another, but with what is fitting, having regard to the part of measurement, which, as we said, was to be borne in mind.

Socrates Younger:: Very true.

Stranger:: And yet, not everything is to be judged even with a view to what is fitting; for we should only want such a length as is suited to give pleasure, if at all, as a secondary matter; and reason tells us, that we should be contented to make the ease or rapidity of an enquiry, not our first, but our second object; the first and highest of all being to assert the great method of division according to species—whether the discourse be shorter or longer is not to the point. No offence should be taken at length, but the longer and shorter are to be employed indifferently, according as either of them is better calculated to sharpen the wits of the auditors. Reason would also say to him who censures the length of discourses on such occasions and cannot away with their circumlocution, that he should not be in such a hurry to have done with them, when he can only complain that they are tedious, but he should prove that if they had been shorter they would have made those who took part in them better dialecticians, and more capable of expressing the truth of things; about any other praise and blame, he need not trouble himself—he should pretend not to hear them. But we have had enough of this, as you will probably agree with me in thinking. Let us return to our Statesman, and apply to his case the aforesaid example of weaving.

Socrates Younger:: Very good;—let us do as you say.

Stranger:: The art of the king has been separated from the similar arts of shepherds, and, indeed, from all those which have to do with herds at all. There still remain, however, of the causal and co-operative arts those which are immediately concerned with States, and which must first be distinguished from one another.

Socrates Younger:: Very good.

Stranger:: You know that these arts cannot easily be divided into two halves; the reason will be very evident as we proceed.

Socrates Younger:: Then we had better do so.

Stranger:: We must carve them like a victim into members or limbs, since we cannot bisect them. For we certainly should divide everything into as few parts as possible.

Socrates Younger:: What is to be done in this case?

Stranger:: What we did in the example of weaving—all those arts which furnished the tools were regarded by us as cooperative.

Socrates Younger:: Yes.

Stranger:: So now, and with still more reason, all arts which make any implement in a State, whether great or small, may be regarded by us as co-operative, for without them neither State nor Statesmanship would be possible; and yet we are not inclined to say that any of them is a product of the kingly art.

Socrates Younger:: No, indeed.

Stranger:: The task of separating this class from others is not an easy one; for there is plausibility in saying that anything in the world is the instrument of doing something. But there is another class of possessions in a city, of which I have a word to say.

*Socrates Younger::* What class do you mean?

Stranger:: A class which may be described as not having this power; that is to say, not like an instrument, framed for production, but designed for the preservation of that which is produced.

Socrates Younger:: To what do you refer?

Stranger:: To the class of vessels, as they are comprehensively termed, which are constructed for the preservation of things moist and dry, of things prepared in the fire or out of the fire; this is a very large class, and has, if I am not mistaken, literally nothing to do with the royal art of which we are in search.

Socrates Younger:: Certainly not.

Stranger:: There is also a third class of possessions to be noted, different from these and very extensive, moving or resting on land or water, honorable and also dishonorable.

The whole of this class has one name, because it is intended to be sat upon, being always a seat for something.

Socrates Younger:: What is it?

Stranger:: A vehicle, which is certainly not the work of the Statesman, but of the carpenter, potter, and coppersmith.

Socrates Younger:: I understand.

Stranger:: And is there not a fourth class which is again different, and in which most of the things formerly mentioned are contained,—every kind of dress, most sorts of arms, walls and enclosures, whether of earth or stone, and ten thousand other things? all of which being made for the sake of defense, may be truly called defenses, and are for the most part to be regarded as the work of the builder or of the weaver, rather than of the Statesman.

Socrates Younger:: Certainly.

Stranger:: Shall we add a fifth class, of ornamentation and drawing, and of the imitations produced by drawing and music, which are designed for amusement only, and may be fairly comprehended under one name?

*Socrates Younger::* What is it?

Stranger:: Plaything is the name.

Socrates Younger:: Certainly.

Stranger:: That one name may be fitly predicated of all of them, for none of these things have a serious purpose—amusement is their sole aim.

Socrates Younger:: That again I understand.

Stranger:: Then there is a class which provides materials for all these, out of which and in which the arts already mentioned fabricate their works;—this manifold class, I say, which is the creation and offspring of many other arts, may I not rank sixth?

Socrates Younger:: What do you mean?

Stranger:: I am referring to gold, silver, and other metals, and all that wood-cutting and shearing of every sort provides for the art of carpentry and plaiting; and there is the process of barking and stripping the cuticle of plants, and the currier's art, which strips off the skins of animals, and other similar arts which manufacture corks and papyri and cords, and provide for the manufacture of composite species out of simple kinds—the whole class may be termed the primitive and simple possession of man, and with this the kingly science has no concern at all.

Socrates Younger:: True.

Stranger:: The provision of food and of all other things which mingle their particles with the particles of the human body, and minister to the body, will form a seventh class, which may be called by the general term of nourishment, unless you have any better name to offer. This, however, appertains rather to the husbandman, huntsman, trainer, doctor, cook, and is not to be assigned to the Statesman's art.

Socrates Younger:: Certainly not.

Stranger:: These seven classes include nearly every description of property, with the exception of tame animals. Consider;—there was the original material, which ought to have been placed first; next come instruments, vessels, vehicles, defenses, playthings, nourishment; small things, which may be included under one of these—as for example, coins, seals and stamps, are omitted, for they have not in them the character of any larger kind which includes them; but some of them may, with a little forcing, be placed among ornaments, and others may be made to harmonize with the class of implements. The art of herding, which has been already divided into parts, will include all property in tame animals, except slaves.

*Socrates Younger::* Very true.

Stranger:: The class of slaves and ministers only remains, and I suspect that in this the real aspirants for the throne, who are the rivals of the king in the formation of the political web, will be discovered; just as spinners, carders, and the rest of them, were the rivals of the weaver. All the others, who were termed co-operators, have been got rid of among the occupations already mentioned, and separated from the royal and political science.

Socrates Younger:: I agree.

Stranger:: Let us go a little nearer, in order that we may be more certain of the complexion of this remaining class.

Socrates Younger:: Let us do so.

Stranger:: We shall find from our present point of view that the greatest servants are in a case and condition which is the reverse of what we anticipated.

Socrates Younger:: Who are they?

Stranger:: Those who have been purchased, and have so become possessions; these are unmistakably slaves, and certainly do not claim royal science.

Socrates Younger:: Certainly not.

Stranger:: Again, freemen who of their own accord become the servants of the other classes in a State, and who exchange and equalize the products of husbandry and the other arts, some sitting in the market-place, others going from city to city by land or sea, and giving money in exchange for money or for other productions—the money-changer, the merchant, the ship-owner, the retailer, will not put in any claim to statecraft or politics?

Socrates Younger:: No; unless, indeed, to the politics of commerce.

Stranger:: But surely men whom we see acting as hirelings and serfs, and too happy to turn their hand to anything, will not profess to share in royal science?

Socrates Younger:: Certainly not.

Stranger:: But what would you say of some other serviceable officials?

Socrates Younger:: Who are they, and what services do they perform?

Stranger:: There are heralds, and scribes perfected by practice, and divers others who have great skill in various sorts of business connected with the government of states—what shall we call them?

Socrates Younger:: They are the officials, and servants of the rulers, as you just now called them, but not themselves rulers.

Stranger:: There may be something strange in any servant pretending to be a ruler, and yet I do not think that I could have been dreaming when I imagined that the principal claimants to political science would be found somewhere in this neighborhood.

Socrates Younger:: Very true.

Stranger:: Well, let us draw nearer, and try the claims of some who have not yet been tested: in the first place, there are diviners, who have a portion of servile or ministerial science, and are thought to be the interpreters of the gods to men.

Socrates Younger:: True.

Stranger:: There is also the priestly class, who, as the law declares, know how to give the gods gifts from men in the form of sacrifices which are acceptable to them, and to ask on our behalf blessings in return from them. Now both these are branches of the servile or ministerial art.

Socrates Younger:: Yes, clearly.

Stranger:: And here I think that we seem to be getting on the right track; for the priest and the diviner are swollen with pride and prerogative, and they create an awful impression of themselves by the magnitude of their enterprises; in Egypt, the king himself is not allowed to reign, unless he have priestly powers, and if he should be of another class and has thrust himself in, he must get enrolled in the priesthood. In many parts of Hellas, the duty of offering the most solemn propitiatory sacrifices is assigned to the highest magistracies, and here, at Athens, the most solemn and national of the ancient sacrifices are supposed to be celebrated by him who has been chosen by lot to be the King Archon.

Socrates Younger:: Precisely.

Stranger:: But who are these other kings and priests elected by lot who now come into view followed by their retainers and a vast throng, as the former class disappears and the scene changes?

Socrates Younger:: Whom can you mean?

Stranger:: They are a strange crew.

Socrates Younger:: Why strange?

Stranger:: A minute ago I thought that they were animals of every tribe; for many of them are like lions and centaurs, and many more like satyrs and such weak and shifty creatures;—Protean shapes quickly changing into one another’s forms and natures; and now, Socrates, I begin to see who they are.

Socrates Younger:: Who are they? You seem to be gazing on some strange vision.

Stranger:: Yes; every one looks strange when you do not know him; and just now I myself fell into this mistake—at first sight, coming suddenly upon him, I did not recognize the politician and his troop.

Socrates Younger:: Who is he?

Stranger:: The chief of Sophists and most accomplished of wizards, who must at any cost be separated from the true king or Statesman, if we are ever to see daylight in the present enquiry.

Socrates Younger:: That is a hope not lightly to be renounced.

Stranger:: Never, if I can help it; and, first, let me ask you a question.

Socrates Younger:: What?

Stranger:: Is not monarchy a recognized form of government?

Socrates Younger:: Yes.

Stranger:: And, after monarchy, next in order comes the government of the few?

Socrates Younger:: Of course.

Stranger:: Is not the third form of government the rule of the multitude, which is called by the name of democracy?

Socrates Younger:: Certainly.

Stranger:: And do not these three expand in a manner into five, producing out of themselves two other names?

Socrates Younger:: What are they?

Stranger:: There is a criterion of voluntary and involuntary, poverty and riches, law and the absence of law, which men now-a-days apply to them; the two first they subdivide accordingly, and ascribe to monarchy two forms and two corresponding names, royalty and tyranny.

*Socrates Younger::* Very true.

Stranger:: And the government of the few they distinguish by the names of aristocracy and oligarchy.

Socrates Younger:: Certainly.

Stranger:: Democracy alone, whether rigidly observing the laws or not, and whether the multitude rule over the men of property with their consent or against their consent, always in ordinary language has the same name.

Socrates Younger:: True.

Stranger:: But do you suppose that any form of government which is defined by these characteristics of the one, the few, or the many, of poverty or wealth, of voluntary or compulsory submission, of written law or the absence of law, can be a right one?

Socrates Younger:: Why not?

Stranger:: Reflect; and follow me.

Socrates Younger:: In what direction?

Stranger:: Shall we abide by what we said at first, or shall we retract our words?

Socrates Younger:: To what do you refer?

Stranger:: If I am not mistaken, we said that royal power was a science?

Socrates Younger:: Yes.

Stranger:: And a science of a peculiar kind, which was selected out of the rest as having a character which is at once judicial and authoritative?

Socrates Younger:: Yes.

Stranger:: And there was one kind of authority over lifeless things and another over living animals; and so we proceeded in the division step by step up to this point, not losing the idea of science, but unable as yet to determine the nature of the particular science?

Socrates Younger:: True.

Stranger:: Hence we are led to observe that the distinguishing principle of the State cannot be the few or many, the voluntary or involuntary, poverty or riches; but some notion of science must enter into it, if we are to be consistent with what has preceded.

Socrates Younger:: And we must be consistent.

Stranger:: Well, then, in which of these various forms of States may the science of government, which is among the greatest of all sciences and most difficult to acquire, be supposed to reside? That we must discover, and then we shall see who are the false politicians who pretend to be politicians but are not, although they persuade many, and shall separate them from the wise king.

Socrates Younger:: That, as the argument has already intimated, will be our duty.

Stranger:: Do you think that the multitude in a State can attain political science?

Socrates Younger:: Impossible.

Stranger:: But, perhaps, in a city of a thousand men, there would be a hundred, or say fifty, who could?

Socrates Younger:: In that case political science would certainly be the easiest of all sciences; there could not be found in a city of that number as many really first-rate draught-players, if judged by the standard of the rest of Hellas, and there would certainly not be as many kings. For kings we may truly call those who possess royal science, whether they rule or not, as was shown in the previous argument.

Stranger:: Thank you for reminding me; and the consequence is that any true form of government can only be supposed to be the government of one, two, or, at any rate, of a few.

Socrates Younger:: Certainly.

Stranger:: And these, whether they rule with the will, or against the will, of their subjects, with written laws or without written laws, and whether they are poor or rich, and whatever be the nature of their rule, must be supposed, according to our present view, to rule on some scientific principle; just as the physician, whether he cures us against our will or with our will, and whatever be his mode of treatment,—incision, burning, or the infliction of some other pain,—whether he practices out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, so long as he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other art of command.

Socrates Younger:: Quite true.

Stranger:: Then that can be the only true form of government in which the governors are really found to possess science, and are not mere pretenders, whether they rule according to law or without law, over willing or unwilling subjects, and are rich or poor themselves—none of these things can with any propriety be included in the notion of the ruler.

Socrates Younger:: True.

Stranger:: And whether with a view to the public good they purge the State by killing some, or exiling some; whether they reduce the size of the body corporate by sending out from the hive swarms of citizens, or, by introducing persons from without, increase it; while they act according to the rules of wisdom and justice, and use their power with a view to the general security and improvement, the city over which they rule, and which has these characteristics, may be described as the only true State. All other governments are not genuine or real, but only imitations of this, and some of them are better and some of them are worse; the better are said to be well governed, but they are mere imitations like the others.

Socrates Younger:: I agree, Stranger, in the greater part of what you say; but as to their ruling without laws—the expression has a harsh sound.

Stranger:: You have been too quick for me, Socrates; I was just going to ask you whether you objected to any of my statements. And now I see that we shall have to consider this notion of there being good government without laws.

Socrates Younger:: Certainly.

Stranger:: There can be no doubt that legislation is in a manner the business of a king, and yet the best thing of all is not that the law should rule, but that a man should rule supposing him to have wisdom and royal power. Do you see why this is?

Socrates Younger:: Why?

Stranger:: Because the law does not perfectly comprehend what is noblest and most just for all and therefore cannot enforce what is best. The differences of men and actions, and the endless irregular movements of human things, do not admit of any universal and simple rule. And no art whatsoever can lay down a rule which will last for all time.

Socrates Younger:: Of course not.

Stranger:: But the law is always striving to make one like an obstinate and ignorant tyrant, who will not allow anything to be done contrary to his appointment, or any question to be asked—not even in sudden changes of circumstances, when something happens to be better than what he commanded for some one.

Socrates Younger:: Certainly; the law treats us all precisely in the manner which you describe.

Stranger:: A perfectly simple principle can never be applied to a state of things which is the reverse of simple.

Socrates Younger:: True.

Stranger:: Then if the law is not the perfection of right, why are we compelled to make laws at all? The reason of this has next to be investigated.

Socrates Younger:: Certainly.

Stranger:: Let me ask, whether you have not meetings for gymnastic contests in your city, such as there are in other cities, at which men compete in running, wrestling, and the like?

Socrates Younger:: Yes; they are very common among us.

Stranger:: And what are the rules which are enforced on their pupils by professional trainers or by others having similar authority? Can you remember?

Socrates Younger:: To what do you refer?

Stranger:: The training-masters do not issue minute rules for individuals, or give every individual what is exactly suited to his constitution; they think that they ought to go more roughly to work, and to prescribe generally the regimen which will benefit the majority.

Socrates Younger:: Very true.

Stranger:: And therefore they assign equal amounts of exercise to them all; they send them forth together, and let them rest together from their running, wrestling, or whatever the form of bodily exercise may be.

*Socrates Younger::* True.

Stranger:: And now observe that the legislator who has to preside over the herd, and to enforce justice in their dealings with one another, will not be able, in enacting for the general good, to provide exactly what is suitable for each particular case.

Socrates Younger:: He cannot be expected to do so.

Stranger:: He will lay down laws in a general form for the majority, roughly meeting the cases of individuals; and some of them he will deliver in writing, and others will be unwritten; and these last will be traditional customs of the country.

Socrates Younger:: He will be right.

Stranger:: Yes, quite right; for how can he sit at every man's side all through his life, prescribing for him the exact particulars of his duty? Who, Socrates, would be equal to such a task? No one who really had the royal science, if he had been able to do this, would have imposed upon himself the restriction of a written law.

Socrates Younger:: So I should infer from what has now been said.

Stranger:: Or rather, my good friend, from what is going to be said.

Socrates Younger:: And what is that?

Stranger:: Let us put to ourselves the case of a physician, or trainer, who is about to go into a far country, and is expecting to be a long time away from his patients—thinking that his instructions will not be remembered unless they are written down, he will leave notes of them for the use of his pupils or patients.

Socrates Younger:: True.

Stranger:: But what would you say, if he came back sooner than he had intended, and, owing to an unexpected change of the winds or other celestial influences, something else happened to be better for them,—would he not venture to suggest this new remedy, although not contemplated in his former prescription? Would he persist in observing the original law, neither himself giving any new commandments, nor the patient daring to do otherwise than was prescribed, under the idea that this course only was healthy and medicinal, all others noxious and heterodox? Viewed in the light of science and true art, would not all such enactments be utterly ridiculous?

Socrates Younger:: Utterly.

Stranger:: And if he who gave laws, written or unwritten, determining what was good or bad, honorable or dishonorable, just or unjust, to the tribes of men who flock together in their several cities, and are governed in accordance with them; if, I say, the wise legislator were suddenly to come again, or another like to him, is he to be prohibited from changing them?—would not this prohibition be in reality quite as ridiculous as the other?

Socrates Younger:: Certainly.

Stranger:: Do you know a plausible saying of the common people which is in point?

Socrates Younger:: I do not recall what you mean at the moment.

Stranger:: They say that if any one knows how the ancient laws may be improved, he must first persuade his own State of the improvement, and then he may legislate, but not otherwise.

Socrates Younger:: And are they not right?

Stranger:: I dare say. But supposing that he does use some gentle violence for their good, what is this violence to be called? Or rather, before you answer, let me ask the same question in reference to our previous instances.

Socrates Younger:: What do you mean?

Stranger:: Suppose that a skilful physician has a patient, of whatever sex or age, whom he compels against his will to do something for his good which is contrary to the written rules; what is this compulsion to be called? Would you ever dream of calling it a violation of the art, or a breach of the laws of health? Nothing could be more unjust than for the patient to whom such violence is applied, to charge the physician who practices the violence with wanting skill or aggravating his disease.

Socrates Younger:: Most true.

Stranger:: In the political art error is not called disease, but evil, or disgrace, or injustice.

Socrates Younger:: Quite true.

Stranger:: And when the citizen, contrary to law and custom, is compelled to do what is juster and better and nobler than he did before, the last and most absurd thing which he could say about such violence is that he has incurred disgrace or evil or injustice at the hands of those who compelled him.

Socrates Younger:: Very true.

Stranger:: And shall we say that the violence, if exercised by a rich man, is just, and if by a poor man, unjust? May not any man, rich or poor, with or without laws, with the will of the citizens or against the will of the citizens, do what is for their interest? Is not this the true principle of government, according to which the wise and good man will order the affairs of his subjects? As the pilot, by watching continually over the interests of the ship and of the crew,—not by laying down rules, but by making his art a law,—preserves the lives of his fellow-sailors, even so, and in the self-same way, may there not be a true form of polity created by those who are able to govern in a similar spirit, and who show a strength of art which is superior to the law? Nor can wise rulers ever err while they observing the one great rule of distributing justice to the citizens with intelligence and skill, are able to preserve them, and, as far as may be, to make them better from being worse.

Socrates Younger:: No one can deny what has been now said.

Stranger:: Neither, if you consider, can any one deny the other statement.

Socrates Younger:: What was it?

Stranger:: We said that no great number of persons, whoever they may be, can attain political knowledge, or order a State wisely, but that the true government is to be found in a small body, or in an individual, and that other States are but imitations of this, as we said a little while ago, some for the better and some for the worse.

Socrates Younger:: What do you mean? I cannot have understood your previous remark about imitations.

Stranger:: And yet the mere suggestion which I hastily threw out is highly important, even if we leave the question where it is, and do not seek by the discussion of it to expose the error which prevails in this matter.

Socrates Younger:: What do you mean?

Stranger:: The idea which has to be grasped by us is not easy or familiar; but we may attempt to express it thus:—Supposing the government of which I have been speaking to be the only true model, then the others must use the written laws of this—in no other way can they be saved; they will have to do what is now generally approved, although not the best thing in the world.

Socrates Younger:: What is this?

Stranger:: No citizen should do anything contrary to the laws, and any infringement of them should be punished with death and the most extreme penalties; and this is very right and good when regarded as the second best thing, if you set aside the first, of which I was just now speaking. Shall I explain the nature of what I call the second best?

Socrates Younger:: By all means.

Stranger:: I must again have recourse to my favorite images; through them, and them alone, can I describe kings and rulers.

Socrates Younger:: What images?

Stranger:: The noble pilot and the wise physician, who 'is worth many another man'—in the similitude of these let us endeavor to discover some image of the king.

Socrates Younger:: What sort of an image?

Stranger:: Well, such as this:—Every man will reflect that he suffers strange things at the hands of both of them; the physician saves any whom he wishes to save, and any whom he wishes to maltreat he maltreats—cutting or burning them, and at the same time requiring them to bring him payments, which are a sort of tribute, of which little or nothing is spent upon the sick man, and the greater part is consumed by him and his domestics; and the finale is that he receives money from the relations of the sick man or from some enemy of his, and puts him out of the way. And the pilots of ships are guilty of numberless evil deeds of the same kind; they intentionally play false and leave you ashore when the hour of sailing arrives; or they cause mishaps at sea and cast away their freight; and are guilty of other rogueries. Now suppose that we, bearing all this in mind, were to determine, after consideration, that neither of these arts shall any longer be allowed to exercise absolute control either over freemen or over slaves, but that we will summon an assembly either of all the people, or of the rich only, and that anybody who likes, whatever may be his calling, or even if he have no calling, may offer an opinion either about seamanship or about diseases—whether as to the manner in which physic or surgical instruments are to be applied to the patient, or again about the vessels and the nautical implements which are required in navigation, and how to meet the dangers of winds and waves which are incidental to the voyage, how to behave when encountering pirates, and what is to be done with the old-fashioned galleys, if they have to fight with others of a similar build—and that, whatever shall be decreed by the multitude on these points, upon the advice of persons skilled or unskilled, shall be written down on triangular tablets and columns, or enacted although unwritten to be national customs; and that in all future time vessels shall be navigated and remedies administered to the patient after this fashion.

*Socrates Younger::* What a strange notion!

Stranger:: Suppose further, that the pilots and physicians are appointed annually, either out of the rich, or out of the whole people, and that they are elected by lot; and that after their election they navigate vessels and heal the sick according to the written rules.

Socrates Younger:: Worse and worse.

Stranger:: But hear what follows:—When the year of office has expired, the pilot or physician has to come before a court of review, in which the judges are either selected from the wealthy classes or chosen by lot out of the whole people; and anybody who pleases may be their accuser, and may lay to their charge, that during the past year they have not navigated their vessels or healed their patients according to the letter of the law and the ancient customs of their ancestors; and if either of them is condemned, some of the judges must fix what he is to suffer or pay.

Socrates Younger:: He who is willing to take a command under such conditions, deserves to suffer any penalty.

Stranger:: Yet once more, we shall have to enact that if any one is detected enquiring into piloting and navigation, or into health and the true nature of medicine, or about the winds, or other conditions of the atmosphere, contrary to the written rules, and has any ingenious notions about such matters, he is not to be called a pilot or physician, but a cloudy prating sophist;—further, on the ground that he is a corrupter the young, who would persuade them to follow the art of medicine or piloting in an unlawful manner, and to exercise an arbitrary rule over their patients or ships, any one who is qualified by law may inform against him, and indict him in some court, and then if he is found to be persuading any, whether young or old, to act contrary to the written law, he is to be punished with the utmost rigor; for no one should presume to be wiser than the laws; and as touching healing and health and piloting and navigation, the nature of them is known to all, for anybody may learn the written laws and the national customs. If such were the mode of procedure, Socrates, about these sciences and about generalship, and any branch of hunting, or about painting or imitation in general, or carpentry, or any sort of handicraft, or husbandry, or planting, or if we were to see an art of rearing horses, or tending herds, or divination, or any ministerial service, or draught-playing, or any science conversant with number, whether simple or square or cube, or comprising motion,—I say, if all these things were done in this way according to written regulations, and not according to art, what would be the result?

Socrates Younger:: All the arts would utterly perish, and could never be recovered, because enquiry would be unlawful. And human life, which is bad enough already, would then become utterly unendurable.

Stranger:: But what, if while compelling all these operations to be regulated by written law, we were to appoint as the guardian of the laws some one elected by a show of hands, or by lot, and he caring nothing about the laws, were to act contrary to them from motives of interest or favor, and without knowledge,—would not this be a still worse evil than the former?

Socrates Younger:: Very true.

Stranger:: To go against the laws, which are based upon long experience, and the wisdom of counselors who have graciously recommended them and persuaded the multitude to pass them, would be a far greater and more ruinous error than any adherence to written law?

Socrates Younger:: Certainly.

Stranger:: Therefore, as there is a danger of this, the next best thing in legislating is not to allow either the individual or the multitude to break the law in any respect whatever.

Socrates Younger:: True.

Stranger:: The laws would be copies of the true particulars of action as far as they admit of being written down from the lips of those who have knowledge?

Socrates Younger:: Certainly they would.

Stranger:: And, as we were saying, he who has knowledge and is a true Statesman, will do many things within his own sphere of action by his art without regard to the laws, when he is of opinion that something other than that which he has written down and enjoined to be observed during his absence would be better.

Socrates Younger:: Yes, we said so.

Stranger:: And any individual or any number of men, having fixed laws, in acting contrary to them with a view to something better, would only be acting, as far as they are able, like the true Statesman?

Socrates Younger:: Certainly.

Stranger:: If they had no knowledge of what they were doing, they would imitate the truth, and they would always imitate ill; but if they had knowledge, the imitation would be the perfect truth, and an imitation no longer.

Socrates Younger:: Quite true.

Stranger:: And the principle that no great number of men are able to acquire a knowledge of any art has been already admitted by us.

Socrates Younger:: Yes, it has.

Stranger:: Then the royal or political art, if there be such an art, will never be attained either by the wealthy or by the other mob.

Socrates Younger:: Impossible.

Stranger:: Then the nearest approach which these lower forms of government can ever make to the true government of the one scientific ruler, is to do nothing contrary to their own written laws and national customs.

Socrates Younger:: Very good.

Stranger:: When the rich imitate the true form, such a government is called aristocracy; and when they are regardless of the laws, oligarchy.

Socrates Younger:: True.

Stranger:: Or again, when an individual rules according to law in imitation of him who knows, we call him a king; and if he rules according to law, we give him the same name, whether he rules with opinion or with knowledge.

Socrates Younger:: To be sure.

Stranger:: And when an individual truly possessing knowledge rules, his name will surely be the same—he will be called a king; and thus the five names of governments, as they are now reckoned, become one.

Socrates Younger:: That is true.

Stranger:: And when an individual ruler governs neither by law nor by custom, but following in the steps of the true man of science pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance are the motives of the imitation, may not such an one be called a tyrant?

Socrates Younger:: Certainly.

Stranger:: And this we believe to be the origin of the tyrant and the king, of oligarchies, and aristocracies, and democracies,—because men are offended at the one monarch, and can never be made to believe that any one can be worthy of such authority, or is able and willing in the spirit of virtue and knowledge to act justly and holily to all; they fancy that he will be a despot who will wrong and harm and slay whom he pleases of us; for if there could be such a despot as we describe, they would acknowledge that we ought to be too glad to have him, and that he alone would be the happy ruler of a true and perfect State.

Socrates Younger:: To be sure.

Stranger:: But then, as the State is not like a beehive, and has no natural head who is at once recognized to be the superior both in body and in mind, mankind are obliged to meet and make laws, and endeavor to approach as nearly as they can to the true form of government.

Socrates Younger:: True.

Stranger:: And when the foundation of politics is in the letter only and in custom, and knowledge is divorced from action, can we wonder, Socrates, at the miseries which there are, and always will be, in States? Any other art, built on such a foundation and thus conducted, would ruin all that it touched. Ought we not rather to wonder at the natural strength of the political bond? For States have endured all this, time out of mind, and yet some of them still remain and are not overthrown, though many of them, like ships at sea, founder from time to time, and perish and have perished and will hereafter perish, through the badness of their pilots and crews, who have the worst sort of ignorance of the highest truths—I mean to say, that they are wholly unacquainted with politics, of which, above all other sciences, they believe themselves to have acquired the most perfect knowledge.

Socrates Younger:: Very true.

Stranger:: Then the question arises which of these untrue forms of government is the least oppressive to their subjects, though they are all oppressive; and which is the worst of them? Here is a consideration which is beside our present purpose, and yet having regard to the whole it seems to influence all our actions: we must examine it.

Socrates Younger:: Yes, we must.

Stranger:: You may say that of the three forms, the same is at once the hardest and the easiest.

Socrates Younger:: What do you mean?

Stranger:: I am speaking of the three forms of government, which I mentioned at the beginning of this discussion—monarchy, the rule of the few, and the rule of the many.

Socrates Younger:: True.

Stranger:: If we divide each of these we shall have six, from which the true one may be distinguished as a seventh.

Socrates Younger:: How would you make the division?

Stranger:: Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and oligarchy; and democracy or the rule of the many, which before was one, must now be divided.

Socrates Younger:: On what principle of division?

Stranger:: On the same principle as before, although the name is now discovered to have a twofold meaning. For the distinction of ruling with law or without law, applies to this as well as to the rest.

Socrates Younger:: Yes.

Stranger:: The division made no difference when we were looking for the perfect State, as we showed before. But now that this has been separated off, and, as we said, the others alone are left for us, the principle of law and the absence of law will bisect them all.

Socrates Younger:: That would seem to follow, from what has been said.

Stranger:: Then monarchy, when bound by good prescriptions or laws, is the best of all the six, and when lawless is the most bitter and oppressive to the subject.

Socrates Younger:: True.

Stranger:: The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too minutely subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best; if they are well ordered, then this is the last which you should choose, as royalty, the first form, is the best, with the exception of the seventh, for that excels them all, and is among States what God is among men.

Socrates Younger:: You are quite right, and we should choose that above all.

Stranger:: The members of all these States, with the exception of the one which has knowledge, may be set aside as being not Statesmen but partisans,—upholders of the most monstrous idols, and themselves idols; and, being the greatest imitators and magicians, they are also the greatest of Sophists.

Socrates Younger:: The name of Sophist after many windings in the argument appears to have been most justly fixed upon the politicians, as they are termed.

Stranger:: And so our Satyric drama has been played out; and the troop of Centaurs and Satyrs, however unwilling to leave the stage, have at last been separated from the political science.

Socrates Younger:: So I perceive.

Stranger:: There remain, however, natures still more troublesome, because they are more nearly akin to the king, and more difficult to discern; the examination of them may be compared to the process of refining gold.

Socrates Younger:: What is your meaning?

Stranger:: The workmen begin by sifting away the earth and stones and the like; there remain in a confused mass the valuable elements akin to gold, which can only be separated by fire,—copper, silver, and other precious metal; these are at last refined away by the use of tests, until the gold is left quite pure.

Socrates Younger:: Yes, that is the way in which these things are said to be done.

Stranger:: In like manner, all alien and uncongenial matter has been separated from political science, and what is precious and of a kindred nature has been left; there remain the nobler arts of the general and the judge, and the higher sort of oratory which is an ally of the royal art, and persuades men to do justice, and assists in guiding the helm of States:—How can we best clear away all these, leaving him whom we seek alone and unalloyed?

Socrates Younger:: That is obviously what has in some way to be attempted.

Stranger:: If the attempt is all that is wanting, he shall certainly be brought to light; and I think that the illustration of music may assist in exhibiting him. Please to answer me a question.

Socrates Younger:: What question?

Stranger:: There is such a thing as learning music or handicraft arts in general?

Socrates Younger:: There is.

Stranger:: And is there any higher art or science, having power to decide which of these arts are and are not to be learned;—what do you say?

Socrates Younger:: I should answer that there is.

Stranger:: And do we acknowledge this science to be different from the others?

Socrates Younger:: Yes.

Stranger:: And ought the other sciences to be superior to this, or no single science to any other? Or ought this science to be the overseer and governor of all the others?

Socrates Younger:: The latter.

Stranger:: You mean to say that the science which judges whether we ought to learn or not, must be superior to the science which is learned or which teaches?

Socrates Younger:: Far superior.

Stranger:: And the science which determines whether we ought to persuade or not, must be superior to the science which is able to persuade?

Socrates Younger:: Of course.

Stranger:: Very good; and to what science do we assign the power of persuading a multitude by a pleasing tale and not by teaching?

Socrates Younger:: That power, I think, must clearly be assigned to rhetoric.

Stranger:: And to what science do we give the power of determining whether we are to employ persuasion or force towards any one, or to refrain altogether?

Socrates Younger:: To that science which governs the arts of speech and persuasion.

Stranger:: Which, if I am not mistaken, will be politics?

Socrates Younger:: Very good.

Stranger:: Rhetoric seems to be quickly distinguished from politics, being a different species, yet ministering to it.

Socrates Younger:: Yes.

Stranger:: But what would you think of another sort of power or science?

Socrates Younger:: What science?

Stranger:: The science which has to do with military operations against our enemies—is that to be regarded as a science or not?

Socrates Younger:: How can generalship and military tactics be regarded as other than a science?

Stranger:: And is the art which is able and knows how to advise when we are to go to war, or to make peace, the same as this or different?

Socrates Younger:: If we are to be consistent, we must say different.

Stranger:: And we must also suppose that this rules the other, if we are not to give up our former notion?

Socrates Younger:: True.

Stranger:: And, considering how great and terrible the whole art of war is, can we imagine any which is superior to it but the truly royal?

Socrates Younger:: No other.

Stranger:: The art of the general is only ministerial, and therefore not political?

Socrates Younger:: Exactly.

Stranger:: Once more let us consider the nature of the righteous judge.

Socrates Younger:: Very good.

Stranger:: Does he do anything but decide the dealings of men with one another to be just or unjust in accordance with the standard which he receives from the king and legislator,—showing his own peculiar virtue only in this, that he is not perverted by gifts, or fears, or pity, or by any sort of favor or enmity, into deciding the suits of men with one another contrary to the appointment of the legislator?

Socrates Younger:: No; his office is such as you describe.

Stranger:: Then the inference is that the power of the judge is not royal, but only the power of a guardian of the law which ministers to the royal power?

Socrates Younger:: True.

Stranger:: The review of all these sciences shows that none of them is political or royal. For the truly royal ought not itself to act, but to rule over those who are able to act; the king ought to know what is and what is not a fitting opportunity for taking the initiative in matters of the greatest importance, whilst others should execute his orders.

Socrates Younger:: True.

Stranger:: And, therefore, the arts which we have described, as they have no authority over themselves or one another, but are each of them concerned with some special action of their own, have, as they ought to have, special names corresponding to their several actions.

Socrates Younger:: I agree.

Stranger:: And the science which is over them all, and has charge of the laws, and of all matters affecting the State, and truly weaves them all into one, if we would describe under a name characteristic of their common nature, most truly we may call politics.

Socrates Younger:: Exactly so.

Stranger:: Then, now that we have discovered the various classes in a State, shall I analyze politics after the pattern which weaving supplied?

Socrates Younger:: I greatly wish that you would.

Stranger:: Then I must describe the nature of the royal web, and show how the various threads are woven into one piece.

Socrates Younger:: Clearly.

Stranger:: A task has to be accomplished, which, although difficult, appears to be necessary.

Socrates Younger:: Certainly the attempt must be made.

Stranger:: To assume that one part of virtue differs in kind from another, is a position easily assailable by contentious disputants, who appeal to popular opinion.

Socrates Younger:: I do not understand.

Stranger:: Let me put the matter in another way: I suppose that you would consider courage to be a part of virtue?

Socrates Younger:: Certainly I should.

Stranger:: And you would think temperance to be different from courage; and likewise to be a part of virtue?

Socrates Younger:: True.

Stranger:: I shall venture to put forward a strange theory about them.

Socrates Younger:: What is it?

Stranger:: That they are two principles which thoroughly hate one another and are antagonistic throughout a great part of nature.

Socrates Younger:: How singular!

Stranger:: Yes, very—for all the parts of virtue are commonly said to be friendly to one another.

Socrates Younger:: Yes.

Stranger:: Then let us carefully investigate whether this is universally true, or whether there are not parts of virtue which are at war with their kindred in some respect.

Socrates Younger:: Tell me how we shall consider that question.

Stranger:: We must extend our enquiry to all those things which we consider beautiful and at the same time place in two opposite classes.

Socrates Younger:: Explain; what are they?

Stranger:: Acuteness and quickness, whether in body or soul or in the movement of sound, and the imitations of them which painting and music supply, you must have praised yourself before now, or been present when others praised them.

Socrates Younger:: Certainly.

Stranger:: And do you remember the terms in which they are praised?

Socrates Younger:: I do not.

Stranger:: I wonder whether I can explain to you in words the thought which is passing in my mind.

Socrates Younger:: Why not?

Stranger:: You fancy that this is all so easy: Well, let us consider these notions with reference to the opposite classes of action under which they fall. When we praise quickness and energy and acuteness, whether of mind or body or sound, we express our praise of the quality which we admire by one word, and that one word is manliness or courage.

Socrates Younger:: How?

Stranger:: We speak of an action as energetic and brave, quick and manly, and vigorous too; and when we apply the name of which I speak as the common attribute of all these natures, we certainly praise them.

Socrates Younger:: True.

Stranger:: And do we not often praise the quiet strain of action also?

Socrates Younger:: To be sure.

Stranger:: And do we not then say the opposite of what we said of the other?

Socrates Younger:: How do you mean?

Stranger:: We exclaim How calm! How temperate! in admiration of the slow and quiet working of the intellect, and of steadiness and gentleness in action, of smoothness and depth of voice, and of all rhythmical movement and of music in general, when these have a proper solemnity. Of all such actions we predicate not courage, but a name indicative of order.

Socrates Younger:: Very true.

Stranger:: But when, on the other hand, either of these is out of place, the names of either are changed into terms of censure.

Socrates Younger:: How so?

Stranger:: Too great sharpness or quickness or hardness is termed violence or madness: too great slowness or gentleness is called cowardice or sluggishness; and we may we observe, that for the most part these qualities, and the temperance and manliness of the opposite characters, are arrayed as enemies on opposite sides, and do not mingle with one another in their respective actions; and if we pursue the enquiry, we shall find that men who have these different qualities of mind differ from one another.

Socrates Younger:: In what respect?

Stranger:: In respect of all the qualities which I mentioned, and very likely of many others. According to their respective affinities to either class of actions they distribute praise and blame,—praise to the actions which are akin to their own, blame to those of the opposite party—and out of this many quarrels and occasions of quarrel arise among them.

Socrates Younger:: True.

Stranger:: The difference between the two classes is often a trivial concern; but in a state, and when affecting really important matters, becomes of all disorders the most hateful.

Socrates Younger:: To what do you refer?

Stranger:: To nothing short of the whole regulation of human life. For the orderly class are always ready to lead a peaceful life, quietly doing their own business; this is their manner of behaving with all men at home, and they are equally ready to find some way of keeping the peace with foreign States. And on account of this fondness of theirs for peace, which is often out of season where their influence prevails, they become by degrees unwarlike, and bring up their young men to be like themselves; they are at the mercy of their enemies; whence in a few years they and their children and the whole city often pass imperceptibly from the condition of freemen into that of slaves.

Socrates Younger:: What a cruel fate!

Stranger:: And now think of what happens with the more courageous natures. Are they not always inciting their country to go to war, owing to their excessive love of the military life? they raise up enemies against themselves many and mighty, and either utterly ruin their native-land or enslave and subject it to its foes?

*Socrates Younger::* That, again, is true.

Stranger:: Must we not admit, then, that where these two classes exist, they always feel the greatest antipathy and antagonism towards one another?

Socrates Younger:: We cannot deny it.

Stranger:: And returning to the enquiry with which we began, have we not found that considerable portions of virtue are at variance with one another, and give rise to a similar opposition in the characters who are endowed with them?

Socrates Younger:: True.

Stranger:: Let us consider a further point.

Socrates Younger:: What is it?

Stranger:: I want to know, whether any constructive art will make any, even the most trivial thing, out of bad and good materials indifferently, if this can be helped? does not all art rather reject the bad as far as possible, and accept the good and fit materials, and from these elements, whether like or unlike, gathering them all into one, work out some nature or idea?

Socrates Younger:: To be sure.

Stranger:: Then the true and natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are the ministers of her purposes—she will herself give orders, and maintain authority; just as the art of weaving continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, commanding the subsidiary arts to execute the works which she deems necessary for making the web.

Socrates Younger:: Quite true.

Stranger:: In like manner, the royal science appears to me to be the mistress of all lawful educators and instructors, and having this queenly power, will not permit them to train men in what will produce characters unsuited to the political constitution which she desires to create, but only in what will produce such as are suitable. Those which have no share of manliness and temperance, or any other virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and insolence and injustice, she gets rid of by death and exile, and punishes them with the greatest of disgraces.

Socrates Younger:: That is commonly said.

Stranger:: But those who are wallowing in ignorance and baseness she bows under the yoke of slavery.

Socrates Younger:: Quite right.

Stranger:: The rest of the citizens, out of whom, if they have education, something noble may be made, and who are capable of being united by the statesman, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof—these, which are naturally opposed, she seeks to bind and weave together in the following manner:

Socrates Younger:: In what manner?

Stranger:: First of all, she takes the eternal element of the soul and binds it with a divine cord, to which it is akin, and then the animal nature, and binds that with human cords.

Socrates Younger:: I do not understand what you mean.

Stranger:: The meaning is, that the opinion about the honorable and the just and good and their opposites, which is true and confirmed by reason, is a divine principle, and when implanted in the soul, is implanted, as I maintain, in a nature of heavenly birth.

Socrates Younger:: Yes; what else should it be?

Stranger:: Only the Statesman and the good legislator, having the inspiration of the royal muse, can implant this opinion, and he, only in the rightly educated, whom we were just now describing.

Socrates Younger:: Likely enough.

Stranger:: But him who cannot, we will not designate by any of the names which are the subject of the present enquiry.

Socrates Younger:: Very right.

Stranger:: The courageous soul when attaining this truth becomes civilized, and rendered more capable of partaking of justice; but when not partaking, is inclined to brutality. Is not that true?

Socrates Younger:: Certainly.

Stranger:: And again, the peaceful and orderly nature, if sharing in these opinions, becomes temperate and wise, as far as this may be in a State, but if not, deservedly obtains the ignominious name of silliness.

Socrates Younger:: Quite true.

Stranger:: Can we say that such a connection as this will lastingly unite the evil with one another or with the good, or that any science would seriously think of using a bond of this kind to join such materials?

Socrates Younger:: Impossible.

Stranger:: But in those who were originally of a noble nature, and who have been nurtured in noble ways, and in those only, may we not say that union is implanted by law, and that this is the medicine which art prescribes for them, and of all the bonds which unite the dissimilar and contrary parts of virtue is not this, as I was saying, the divinest?

Socrates Younger:: Very true.

Stranger:: Where this divine bond exists there is no difficulty in imagining, or when you have imagined, in creating the other bonds, which are human only.

Socrates Younger:: How is that, and what bonds do you mean?

Stranger:: Rights of intermarriage, and ties which are formed between States by giving and taking children in marriage, or between individuals by private betrothals and espousals. For most persons form marriage connections without due regard to what is best for the procreation of children.

Socrates Younger:: In what way?

Stranger:: They seek after wealth and power, which in matrimony are objects not worthy even of a serious censure.

Socrates Younger:: There is no need to consider them at all.

Stranger:: More reason is there to consider the practice of those who make family their chief aim, and to indicate their error.

Socrates Younger:: Quite true.

Stranger:: They act on no true principle at all; they seek their ease and receive with open arms those who are like themselves, and hate those who are unlike them, being too much influenced by feelings of dislike.

Socrates Younger:: How so?

Stranger:: The quiet orderly class seek for natures like their own, and as far as they can they marry and give in marriage exclusively in this class, and the courageous do the same; they seek natures like their own, whereas they should both do precisely the opposite.

Socrates Younger:: How and why is that?

Stranger:: Because courage, when untempered by the gentler nature during many generations, may at first bloom and strengthen, but at last bursts forth into downright madness.

Socrates Younger:: Like enough.

Stranger:: And then, again, the soul which is over-full of modesty and has no element of courage in many successive generations, is apt to grow too indolent, and at last to become utterly paralyzed and useless.

Socrates Younger:: That, again, is quite likely.

Stranger:: It was of these bonds I said that there would be no difficulty in creating them, if only both classes originally held the same opinion about the honorable and good;—indeed, in this single work, the whole process of royal weaving is comprised—never to allow temperate natures to be separated from the brave, but to weave them together, like the warp and the woof, by common sentiments and honors and reputation, and by the giving of pledges to one another; and out of them forming one smooth and even web, to entrust to them the offices of State.

Socrates Younger:: How do you mean?

Stranger:: Where one officer only is needed, you must choose a ruler who has both these qualities—when many, you must mingle some of each, for the temperate ruler is very careful and just and safe, but is wanting in thoroughness and go.

Socrates Younger:: Certainly, that is very true.

Stranger:: The character of the courageous, on the other hand, falls short of the former in justice and caution, but has the power of action in a remarkable degree, and where either of these two qualities is wanting, there cities cannot altogether prosper either in their public or private life.

Socrates Younger:: Certainly they cannot.

Stranger:: This then we declare to be the completion of the web of political action, which is created by a direct intertexture of the brave and temperate natures, whenever the royal science has drawn the two minds into communion with one another by unanimity and friendship, and having perfected the noblest and best of all the webs which political life admits, and enfolding therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, and, in so far as to be happy is vouchsafed to a city, in no particular fails to secure their happiness.

Socrates Younger:: Your picture, Stranger, of the king and statesman, no less than of the Sophist, is quite perfect.

## Statesman

Translated by C. J. Rowe.

Socrates, Visitor, Theodorus, Socrates Younger

Socrates:: I’m really much indebted to you, Theodorus, for introducing me to Theaetetus, and also to our visitor.

Theodorus:: And perhaps, Socrates, your debt will be three times as great, when they complete both the statesman and the philosopher for you.

Socrates:: Well, yes and no: shall we say, my dear Theodorus, that we’ve heard the best arithmetician and geometer putting it like that?

Theodorus:: How do you mean, Socrates?

Socrates:: Because you assumed that each of the three were to be assigned equal worth, when in fact they differ in value by more than can be expressed in terms of mathematical proportion.

Theodorus:: Well said, Socrates, by our god Ammon; a just rebuke— you’ve remembered your arithmetic very well, to bring me up on my mistake like that. As for you, I’ll get my own back for this on another occasion. But turning to our guest—don’t you give up at all on obliging us, but, whether you choose the statesman first or the philosopher, make your choice and go through him in his turn.

Stranger:: That, Theodorus, is what we must do, since we have tried our hand once, and we must not desist until we come to the end of what we have in hand. But I have a question: what should I do about Theaetetus here?

Theodorus:: In what respect?

Stranger:: Should we give him a rest and substitute for him young Socrates here, who trains with him? Or what’s your advice?

Theodorus:: As you say, make the substitution; since they are young, they'll put up with any sort of exertion more easily if they take a rest.

Socrates:: What's more, my friend, both of them seem somehow to have a certain kinship with me. One of them you all say is like me in the way he looks; as for the other, he is called and designated by the same name as I am, and that produces a certain relatedness. Well, we must always be eager to recognize those akin to us by talking to them. With Theaetetus I myself got together in discussion yesterday, and I have just now heard him answering questions, whereas neither applies in Socrates' case; we must take a look at him too. He'll answer me on another occasion; for now let him answer you.

Stranger:: I'll go along with that. Socrates, do you hear what Socrates says?

Socrates Younger:: Yes.

Stranger:: Then do you agree to it?

Socrates Younger:: Absolutely.

Stranger:: It seems there is no obstacle on your side, and perhaps there should be even less on mine. Well then, after the sophist, it seems to me that the two of us must search for the statesman. Now tell me: should we posit in the case of this person too that he is one of those who possess knowledge, or what assumption should we make?

Socrates Younger:: That's what we should assume.

Stranger:: In that case we must divide the various sorts of knowledge, as we did when we were considering the previous individual?

Socrates Younger:: Perhaps so.

Stranger:: But it's not in the same place, Socrates, that I think I see a cut.

Socrates Younger:: Why not?

Stranger:: It's in a different place.

Socrates Younger:: Yes, apparently.

Stranger:: So in what direction will one discover the path that leads to the statesman? For we must discover it, and after having separated it from the rest we must impress one character on it; and having stamped a single different form on the other turnings we must make our minds think of all sorts of knowledge there are as falling into two classes.

Socrates Younger:: That, I think, is actually for you to do, visitor, not for me.

Stranger:: But, Socrates, it must also be a matter for you, when it becomes clear to us what it is.

Socrates Younger:: You're right.

Stranger:: Well then: isn't it the case that arithmetic and some other sorts of expertise that are akin to it don't involve any practical actions, but simply provide knowledge?

Socrates Younger:: That's so.

Stranger:: Whereas for their part the sorts of expertise involved in carpentry and manufacture as a whole have their knowledge as it were naturally bound up with practical actions, and use it to complete those material objects they cause to come into being from not having been before?

Socrates Younger:: What of that?

Stranger:: Well, divide all cases of knowledge in this way, calling the one sort practical knowledge, the other purely theoretical.

Socrates Younger:: I grant you these as two classes of that single thing, knowledge, taken as a whole.

Stranger:: Then shall we posit the statesman and king and slave-master, and the manager of a household as well, as one thing, when we refer to them by all these names, or are we to say that they are as many sorts of expertise as the names we use to refer to them? Or rather, let me take this way, and you follow me.

Socrates Younger:: What way is that?

Stranger:: This one. If someone who is himself in private practice is capable of advising a doctor in public employment, isn't it necessary for him to be called by the same professional title as the person he advises?

Socrates Younger:: Yes.

Stranger:: Well then, won't we say that the person who is clever at giving advice to a king of a country, although he is himself a private individual, himself has the expert knowledge that the ruler himself ought to have possessed?

Socrates Younger:: We will.

Stranger:: But the knowledge that belongs to the true king is the knowledge of kingship?

Socrates Younger:: Yes.

Stranger:: And isn't it the case that the person who possesses this, whether he happens to be a ruler or a private citizen, in all circumstances, in virtue of his possession of the expertise itself, will correctly be addressed as an expert in kingship?

Socrates Younger:: That's fair.

Stranger:: Next, a household manager and a slave-master are the same thing.

Socrates Younger:: Of course.

Stranger:: Well then, surely there won't be any difference, so far as ruling is concerned, between the character of a large household, on the one hand, and the bulk of a small city on the other?

Socrates Younger:: None.

Stranger:: So, in answer to the question we were asking ourselves just now, it’s clear that there is one sort of expert knowledge concerned with all these things; whether someone gives this the name of expertise in kingship, or statesmanship, or household management, let’s not pick any quarrel with him.

Socrates Younger:: I agree—why should we?

Stranger:: But this much is clear, that the power of any king to maintain his rule has little to do with the use of his hands or his body in general in comparison with the understanding and force of his mind.

Socrates Younger:: Clearly.

Stranger:: Then do you want us to assert that the king is more closely related to the theoretical sort of knowledge than to the manual or generally practical sort?

Socrates Younger:: Of course.

Stranger:: In that case we shall put all these things together—the statesman’s knowledge and the statesman, the king’s knowledge and the king— as one, and regard them as the same?

Socrates Younger:: Clearly.

Stranger:: Well, would we be proceeding in the right order, if after this we divided theoretical knowledge?

Socrates Younger:: Certainly.

Stranger:: So look closely to see if we can detect some break in it.

Socrates Younger:: Of what sort? Tell me.

Stranger:: Of this sort. We agreed, I think, that there is such a thing as an art of calculation?

Socrates Younger:: Yes.

Stranger:: And I suppose it belongs absolutely among the theoretical sorts of expertise.

Socrates Younger:: Quite.

Stranger:: Because once it recognizes that there is a difference between numbers, there surely isn't any further job we'll assign to it than judging what it has recognized?

Socrates Younger:: No, certainly not.

Stranger:: And all master-builders too—they don't act as workers themselves, but manage workers.

Socrates Younger:: Yes.

Stranger:: In so far—I suppose—as what the master-builder provides is understanding rather than manual labor.

Socrates Younger:: Just so.

Stranger:: It would be right to say, then, that he has a share in the theoretical sort of knowledge?

Socrates Younger:: Certainly.

Stranger:: But it belongs to him, I think, once he has given his professional judgment, not to be finished or to take his leave, in the way that the expert in calculation took his, but to assign whatever is the appropriate task to each group of workers until they complete what has been assigned to them.

Socrates Younger:: That's correct.

Stranger:: So both all sorts of knowledge like this and all those that go along with the art of calculation are theoretical, but these two classes of knowledge differ from each other in so far as one makes judgments, while the other directs?

Socrates Younger:: They appear to do so.

Stranger:: So if we divided off two parts of theoretical knowledge as a whole, referring to one as directive and the other as making judgments, would we say that it had been divided suitably?

Socrates Younger:: Yes, at least according to my view.

Stranger:: But if people are doing something together, it is enough if they agree with one another.

Socrates Younger:: Quite.

Stranger:: So for as long as we are sharing in the present task, we should say goodbye to what everybody else may think.

Socrates Younger:: Of course.

Stranger:: So tell me: in which of these two sorts of expertise should we locate the expert in kingship? In the one concerned with making judgments, as if he were some sort of spectator, or shall we rather locate him as belonging to the directive sort of expertise, seeing that he is master of others?

Socrates Younger:: In the second, of course.

Stranger:: Then we should need to look at directive expertise in its turn, to see if it divides somewhere. And to me it seems that it does so somewhere in this direction: in the way that the expertise of the retail-dealer is distinguished from that of the 'self-seller' or producer who sells his own products, so the class of kings appears set apart from the class of heralds.

Socrates Younger:: How so?

Stranger:: The retailer, I think, takes over someone else's products, which have previously been sold, and sells them on, for a second time.

Socrates Younger:: Absolutely.

Stranger:: Well then, the class of heralds takes over directions that have been thought up by someone else, and itself issues them for a second time to another group.

Socrates Younger:: Very true.

Stranger:: So—shall we mix together the expertise of the king with that of the interpreter, the person who gives the time to the rowers, the seer, the herald, and many other sorts of expertise related to these, just because they all have the feature of issuing directions? Or do you want us to make up a name in line with the analogy we were using just now, since in fact the class of ‘self-directors’ happens pretty much to be without a name of its own? Should we divide these things this way, locating the class of kings as belonging to the ‘self-directing’ sort of expertise, and taking no notice of all the rest, leaving someone else to propose another name for them? For we set up our investigation in order to find the person who rules, not his opposite.

Socrates Younger:: Absolutely.

Stranger:: Well then, since this is at a certain distance from those others, distinguished by difference in relation to kinship, we must in turn divide it too, if we still find some cut yielding to us in it?

Socrates Younger:: Certainly.

Stranger:: And what’s more, we seem to have one: follow on and make the cut with me.

Socrates Younger:: Where?

Stranger:: All those in control of others that we can think of as employing directions—we shall find them issuing their directions, won’t we, for the sake of something’s coming into being?

Socrates Younger:: Of course.

Stranger:: And it’s not at all difficult to separate into two all of those things that come into being.

Socrates Younger:: How?

Stranger:: I imagine that, of all of them taken together, some are inanimate and some are animate.

Socrates Younger:: Yes.

Stranger:: And it’s by these very things that we’ll cut the part of the theoretical which is directive, if indeed we wish to cut it.

Socrates Younger:: How?

Stranger:: By assigning part of it to the production of inanimate things, part to that of animate things; and in this way it will all immediately be divided into two.

Socrates Younger:: I agree absolutely.

Stranger:: So then let’s leave one of these parts to one side, and take up the other; and then let’s divide the whole of it into two parts.

Socrates Younger:: Which of the two parts do you say we should take up?

Stranger:: I suppose it must be the one that issues directions in relation to living creatures. For surely it is not the case that the expert knowledge that belongs to a king is ever something that oversees inanimate things, as if it were the knowledge of the master-builder; it is something nobler, which always has its power among living creatures and in relation to just these.

Socrates Younger:: Correct.

Stranger:: Now, as one can observe, either the production and rearing of living creatures is done singly, or it is a caring for creatures together in herds.

Socrates Younger:: Correct.

Stranger:: But we’ll certainly not find the statesman rearing individual creatures, like some ox-driver or groom, but rather resembling a horse-breeder or cowherd.

Socrates Younger:: It certainly seems so, now you say it.

Stranger:: Well then: when it comes to rearing living creatures, are we to call the shared rearing of many creatures together a sort of ‘herd-rearing’ or ‘collective rearing’?

Socrates Younger:: Whichever turns out to fit, in the course of the argument.

Stranger:: Well said, Socrates; and if you persevere in not paying serious attention to names, you will be seen to be richer in wisdom as you advance to old age. But now we must do just as you instruct. Do you see how by showing the collective rearing of herds to be twin in form one will make what is now being sought in double the field then be sought in half of that?

Socrates Younger:: I shall try my hardest. It seems to me that there is a different sort of rearing of human beings, and in turn another sort where animals are concerned.

Stranger:: Yes, absolutely, you’ve made a very keen and courageous division! But let’s try to avoid this happening to us again.

Socrates Younger:: What sort of thing?

Stranger:: Let’s not take off one small part on its own, leaving many large ones behind, and without reference to real classes; let the part bring a real class along with it. It’s a really fine thing to separate off immediately what one is searching for from the rest, if one gets it right—as you thought you had the right division, just before, and hurried the argument on, seeing it leading to human beings; but in fact, my friend, it’s not safe to make thin cuts; it’s safer to go along cutting through the middle of things, and that way one will be more likely to encounter real classes. This makes all the difference in relation to philosophical investigations.

Socrates Younger:: What do you mean by this, visitor?

Stranger:: I must try to tell you still more clearly, Socrates, out of good will towards your natural endowments. In the present circumstances, I have to say, it is impossible to show what I mean with absolute completeness; but I must bring it just a little further forward for the sake of clarity.

Socrates Younger:: Well then, what sort of thing are you saying we weren’t doing right just now in our divisions?

Stranger:: This sort of thing: it’s as if someone tried to divide the human race into two and made the cut in the way that most people here carve things up, taking the Greek race away as one, separate from all the rest, and to all the other races together, which are unlimited in number, which don’t mix with one another, and don’t share the same language—calling this collection by the single appellation ‘barbarian’. Because of this single appellation, they expect it to be a single family or class too. Another example would be if someone thought that he was dividing number into two real classes by cutting off the number ten-thousand from all the rest, separating it off as a single class, and in positing a single name for all the rest supposed here too that through getting the name this class too came into existence, a second single one apart from the other. But I imagine the division would be done better, more by real classes and more into two, if one cut number by means of even and odd, and the human race in its turn by means of male and female, and only split off Lydians or Phrygians or anyone else and ranged them against all the rest when one was at a loss as to how to split in such a way that each of the halves split off was simultaneously a real class and a part.

Socrates Younger:: Quite right; but this very thing—how is one to see it more plainly, that class and part are not the same but different from each other?

Stranger:: An excellent response, Socrates, but what you demand is no light thing. We have already wandered far away from the discussion we proposed, and you are telling us to wander even more. Well, as for now, let’s go back to where we were, which seems the reasonable thing to do; and these other things we'll pursue like trackers on another occasion, when we have the time. However, there is one thing you must absolutely guard against, and that is ever to suppose that you have heard from me a plain account of the matter.

Socrates Younger:: Which?

Stranger:: That class and part are different from each other.

Socrates Younger:: What should I say I have heard from you?

Stranger:: That whenever there is a class of something, it is necessarily also a part of whatever thing it is called a class of, but it is not at all necessary that a part is a class. You must always assert, Socrates, that this is what I say rather than the other way round.

Socrates Younger:: I shall do just that.

Stranger:: Tell me, then, about the next thing.

Socrates Younger:: What's that?

Stranger:: The point from which our digression brought us to where we are now. I think it was pretty much the point at which you were asked how to divide herd-rearing, and you said with great keenness that there were two classes of living creatures, one human, and a second single one consisting of all the rest—the animals—together.

Socrates Younger:: True.

Stranger:: And to me you appeared then to think that in taking away a part you had left behind the rest as in its turn a single class, consisting of all of them, because you had the same name, 'animals', to apply to them all.

Socrates Younger:: This too was as you say.

Stranger:: And yet, my courageous friend, maybe, if by chance there is some other animal which is rational, as for example the crane seems to be, or some other such creature, and which perhaps distributes names on the same principles as you, it might oppose cranes as one class to all other living creatures and give itself airs, taking all the rest together with human beings and putting them into the same category, which it would call by no other name except—perhaps—'animals'. So let's try to be very wary of everything of this sort.

Socrates Younger:: How?

Stranger:: By not dividing the class of living creatures as a whole, in order to lessen the risk of its happening to us.

Socrates Younger:: Yes, we must certainly avoid it.

Stranger:: Yes; and we were going wrong in this way just at that point.

Socrates Younger:: How so?

Stranger:: Of that theoretical knowledge which was directive we had a part, I think, of the class concerned with rearing living creatures, one which was concerned with creatures living in herds. True?

Socrates Younger:: Yes.

Stranger:: Well then, living creatures as a whole together had in effect already at that point been divided by the categories of domesticated and wild; for those that have a nature amenable to domestication are called tame, and those who resist it are called wild.

Socrates Younger:: Right.

Stranger:: But the knowledge we are hunting had to be and still is concerned with tame things, and must be looked for with reference to herd animals.

Socrates Younger:: Yes.

Stranger:: Well then, let’s not divide in the way we did then, looking at everything, or in a hurry, just in order to get quickly to statesmanship. It has already put us in the proverbial situation.

Socrates Younger:: What situation is that?

Stranger:: That by not quietly getting on with dividing properly we have got to our destination more slowly.

Socrates Younger:: Yes, visitor, and a fine situation it is!

Stranger:: If you say so. In any case, let’s go back and try again from the beginning to divide collective rearing; perhaps, as we go through it in detail, the argument itself will be better able to reveal to you what you are so keen to find. Tell me this.

Socrates Younger:: What?

Stranger:: This—I wonder if perhaps you’ve heard about it from others? You certainly haven’t yourself any direct acquaintance, I know, with the instances of domesticated fish-rearing in the Nile and in the King’s ponds. In ornamental fountains, at any rate, you may perhaps have seen them.

Socrates Younger:: Absolutely—I’ve both seen these and heard about the others from many people.

Stranger:: And again, examples of goose-rearing and crane-rearing—even if you haven’t travelled over the plains of Thessaly, you’ve certainly heard about these and believe that they exist.

Socrates Younger:: Of course.

Stranger:: Look, it’s for this purpose that I’ve asked you all this: of the rearing of herd animals, some has to do with creatures living in water, some also with creatures that live on dry land.

Socrates Younger:: It does.

Stranger:: Do you agree, then, that we must split the expert knowledge of collective rearing into two in this way, allocating one of its two parts to each of these, calling one aquatic rearing, the other dry-land rearing?

Socrates Younger:: I do.

Stranger:: And we certainly shan't ask, in this case, to which of the two sorts of expertise kingship belongs; it's quite clear to anyone.

Socrates Younger:: Quite.

Stranger:: Everybody would divide the dry-land rearing sort of herd-rearing.

Socrates Younger:: How?

Stranger:: By separating it by reference to the winged and what goes on foot.

Socrates Younger:: Very true.

Stranger:: Well then—mustn't we look for statesmanship in relation to what goes on foot? Or don't you think that practically even the simplest of minds supposes so?

Socrates Younger:: I do.

Stranger:: And the expertise to do with the management of creatures that go on foot—we must show it being cut into two, like an even number.

Socrates Younger:: Clearly.

Stranger:: Now it seems that there are two routes to be seen stretching out in the direction of the part towards which our argument has hurried, one of them quicker, dividing a small part off against a large one, while the other more closely observes the principle we were talking about earlier, that one should cut in the middle as much as possible, but is longer. We can go down whichever of the two routes we like.

Socrates Younger:: What if I were to ask if it is impossible to follow both?

Stranger:: An extraordinary suggestion, if you mean both at once; but clearly it is possible to take each in turn.

Socrates Younger:: Then I opt for taking both, in turn.

Stranger:: That's easy, since the part that remains is short; if we had been at the beginning or in the middle of our journey, the instruction would have been difficult to carry out. As it is, since you think we should take this option, let's go down the longer route first; while we are fresher we'll travel it more easily. Observe the division.

Socrates Younger:: Tell me what it is.

Stranger:: Of tame things that live in herds, we find those that go on foot naturally divided into two.

Socrates Younger:: By what?

Stranger:: By the fact that some of them come into being without horns, some with horns.

Socrates Younger:: Evidently.

Stranger:: Well then, divide the management of creatures that go on foot by assigning it to each of these two parts, using a descriptive phrase for the results of the division. For if you want to give them names, it will be more complicated than necessary.

Socrates Younger:: How then should it be put?

Stranger:: Like this: by saying that when the knowledge that has to do with the management of creatures that go by foot is divided into two, one part is allocated to the horned part of the herd, the other to the hornless part.

Socrates Younger:: Let it be put like that; in any case it's sufficiently clear.

Stranger:: Now, as for the next step, it’s perfectly obvious to us that the king tends a sort of docked herd—of hornless creatures.

Socrates Younger:: How couldn’t it be clear?

Stranger:: So by breaking this up let’s try to assign what falls to him.

Socrates Younger:: Yes, certainly.

Stranger:: Well, do you want to divide it by the split-hooved and the so-called ‘single-hooved’, or by interbreeding and non-interbreeding? I think you grasp the point.

Socrates Younger:: What’s that?

Stranger:: That horses and donkeys are naturally such as to breed from one another.

Socrates Younger:: Yes.

Stranger:: Whereas what is still left of the smooth-headed herd of tame creatures is unmixed in breeding, one with another.

Socrates Younger:: Quite.

Stranger:: So: does the statesman, then, seem to take care of an interbreeding or of some non-interbreeding sort?

Socrates Younger:: Clearly, of the non-mixing sort.

Stranger:: This, then, it seems, we must separate into two, as we did in the previous cases.

Socrates Younger:: Indeed we must.

Stranger:: Now those creatures that are tame and live in herds have pretty well all now been cut into their pieces, except for two classes. For it is not worth our while to count the class of dogs as among creatures living in herds.

Socrates Younger:: No indeed. But what are we to use to divide the two classes?

Stranger:: Something that is absolutely appropriate for Theaetetus and you to use in your distributions, since it's geometry the two of you engage in.

Socrates Younger:: What is it?

Stranger:: The diagonal, one could say, and then again the diagonal of the diagonal.

Socrates Younger:: What do you mean?

Stranger:: The nature which the family or class of us humans possesses surely isn't endowed for the purpose of going from place to place any differently from the diagonal that has the power of two feet?

Socrates Younger:: No.

Stranger:: And what's more the nature of the remaining class has in its turn the power of the diagonal of our power, if indeed it is endowed with two times two feet.

Socrates Younger:: Of course it is—and I actually almost understand what you want to show.

Stranger:: And there's more—do we see, Socrates, that there's something else resulting in our divisions that would itself have done well as a comic turn?

Socrates Younger:: What's that?

Stranger:: That our human class has shared the field and run together with the noblest and also most easy-going class of existing things?

Socrates Younger:: I see it turning out very oddly indeed.

Stranger:: Well, isn't it reasonable to expect the slowest—or sow-est—to come in last?

Socrates Younger:: Yes, I can agree with that.

Stranger:: And don't we notice that the king looks even more ridiculous, when he continues to run, along with his herd, and has traversed convergent paths, with the man who for his part is best trained of all for the easy-going life?

Socrates Younger:: Absolutely right.

Stranger:: Yes, Socrates, and what we said before, in our inquiry about the sophist, is now plainer.

Socrates Younger:: What was that?

Stranger:: That such a method of argument as ours is not more concerned with what is more dignified than with what is not, and neither does it at all despise the smaller more than the greater, but always reaches the truest conclusion by itself.

Socrates Younger:: It seems so.

Stranger:: Well then, after this, so that you don’t get in before me and ask what the shorter way is—the one we spoke of earlier—to the definition of the king, shall I go first and show you the way?

Socrates Younger:: Very much so.

Stranger:: Then I say that in this case one must immediately distribute what goes on foot by opposing the two-footed to the four-footed class, and when one sees the human still sharing the field with the winged alone, one must go on to cut the two-footed herd by means of the non-feathered and the feathered; and when it has been cut, and the expertise of human-herding has then and there been brought into the light, one must lift the expert in statesmanship and kingship like a charioteer into it and install him there, handing over the reins of the city as belonging to him, and because this expert knowledge is his.

Socrates Younger:: That’s well done, and you’ve paid me the account I asked for as if it were a debt, adding the digression as a kind of interest, making up the sum.

Stranger:: Come on, then: let’s go back to the beginning and gather together from there to the end our account of the name of the expertise of the statesman.

Socrates Younger:: Absolutely.

Stranger:: Well then: of theoretical knowledge, we had at the beginning a directive part; and of this, the section we wanted was by analogy said to be ‘self-directing’. Then again, rearing of living creatures, not the smallest of the classes of self-directing knowledge, was split off from it; then a herd-rearing form from rearing of living creatures, and from that, in turn, rearing of what goes on foot; and from that, as the relevant part, was cut off the expertise of rearing the hornless sort. Of this in turn the part must be woven together as not less than triple, if one wants to bring it together into a single name, calling it expert knowledge of rearing of non-interbreeding creatures. The segment from this, a part relating to a two-footed flock, concerned with rearing of human beings, still left on its own—this very part is now what we were looking for, the same thing we call both kingly and statesmanlike.

Socrates Younger:: Absolutely.

Stranger:: Is it really the case, Socrates, that we have actually done this, as you have just said?

Socrates Younger:: Done what?

Stranger:: Given a completely adequate response to the matter we raised. Or is our search lacking especially in just this respect, that our account of the matter has been stated in a certain way, but has not been finished off to complete perfection?

Socrates Younger:: How do you mean?

Stranger:: I shall try now to show, for both of us, still more clearly just what I am thinking of.

Socrates Younger:: Please go ahead.

Stranger:: Well then, of the many sorts of expertise to do with rearing herds that appeared in our view just now, statesmanship was one, and was care of some one sort of herd?

Socrates Younger:: Yes.

Stranger:: And our account defined it not as rearing of horses, or of other animals, but as knowledge of the collective rearing of human beings.

Socrates Younger:: Just so.

Stranger:: Then let us look at the difference between all herdsmen, on the one hand, and kings on the other.

Socrates Younger:: What's that?

Stranger:: Let us see if in the case of any other herdsman anyone who has the title of another expertise claims or pretends to share the rearing of the herd with him.

Socrates Younger:: How do you mean?

Stranger:: Like this: that merchants, farmers, millers and bakers, all of them, and gymnastic trainers too, and doctors as a class—all of these, as you well know, would loudly contend against the herdsmen concerned with things human whom we called statesmen that they care for human rearing, not merely for that of human beings in the herd, but for that of the rulers as well.

Socrates Younger:: Well, would they be right?

Stranger:: Perhaps. That we'll consider, but what we know is that with a cowherd no one will dispute about any of these things, but the herdsman is by himself rearer of the herd, by himself its doctor, by himself its matchmaker, as it were, and sole expert in the midwife's art when it comes to the births of offspring and confinements. Again, to the extent that the nature of his charges allows them to partake in play and music, no one else is more capable of comforting them and soothing them with his incantations, performing best, as he does, the music that belongs to his flock with instruments or with unaccompanied voice. And it’s the same way with all other herdsmen. True?

Socrates Younger:: Quite right.

Stranger:: So how will our account of the king appear to us right and complete, when we posit him as sole herdsman and rearer of the human herd, singling him out on his own from among tens of thousands of others who dispute the title with him?

Socrates Younger:: There’s no way in which it can.

Stranger:: Then our fears a little earlier were right, when we suspected that we should prove in fact to be describing some kingly figure, but not yet accurately to have finished the statesman off, until we remove those who crowd round him, pretending to share his herding function with him, and having separated him from them, we reveal him on his own, uncontaminated with anyone else?

Socrates Younger:: Yes, absolutely right.

Stranger:: Well then, Socrates, this is what we must do, if we are not going to bring disgrace on our argument at its end.

Socrates Younger:: That is something we must certainly avoid doing at all costs.

Stranger:: Then we must travel some other route, starting from another point.

Socrates Younger:: What route is that?

Stranger:: By mixing in, as one might put it, an element of play: we must bring in a large part of a great story, and as for the rest, we must then— as in what went before—take away part from part in each case and so arrive at the furthest point of the object of our search. So should we do it?

Socrates Younger:: Absolutely.

Stranger:: In that case, pay complete attention to my story, as children do; you certainly haven't left childish games behind for more than a few years.

Socrates Younger:: Please go ahead.

Stranger:: Then I'll begin. There have occurred in the past, and will occur in the future, many of the things that have been told through the ages; one is the portent relating to the quarrel between Atreus and Thyestes. I imagine you remember hearing what people say happened then.

Socrates Younger:: You're referring, perhaps, to the sign of the golden lamb.

Stranger:: Not at all; rather to that of the changing of the setting and rising of the sun and the other stars—it's said that they actually began setting in the region from which they now rise, and rising from the opposite region, and that then after having given witness in favor of Atreus the god changed everything to its present configuration.

Socrates Younger:: Yes indeed, they do say this as well.

Stranger:: And what's more, we've also heard from many about the kingship exercised by Cronus.

Socrates Younger:: Yes, from a great many.

Stranger:: And what of the report that earlier men were born from the earth and were not reproduced from each other?

Socrates Younger:: This too is one of the things that have been told through the ages.

Stranger:: Well, all these things together are consequences of the same state of affairs, and besides these thousands of others still more astonishing than they; but through the great lapse of time since then some have been obliterated, while others have been reported in a scattered way, each separate from one another. But as for the state of affairs that is responsible for all of these things, no one has related it, and we should relate it now; for once it has been described, it will be a fitting contribution towards our exposition of the king.

Socrates Younger:: I very much like what you say; go on, and leave nothing out.

Stranger:: Listen then. This universe the god himself sometimes accompanies, guiding it on its way and helping it move in a circle, while at other times he lets it go, when its circuits have completed the measure of the time allotted to it; then it revolves back in the opposite direction, of its own accord, being a living creature and having had intelligence assigned to it by the one who fitted it together in the beginning. This backward movement is inborn in it from necessity, for the following reason.

Socrates Younger:: What reason, exactly?

Stranger:: Remaining permanently in the same state and condition, and being permanently the same, belongs only to the most divine things of all, and by its nature body is not of this order. Now the thing to which we have given the name of 'heavens' and 'cosmos' certainly has a portion of many blessed things from its progenitor, but on the other hand it also has its share of body. In consequence it is impossible for it to be altogether exempt from change, although as far as is possible, given its capacities, it moves in the same place, in the same way, with a single motion; and this is why it has reverse rotation as its lot, which is the smallest possible variation of its movement. To turn itself by itself forever is, I dare say, impossible for anything except the one who guides all the things which, unlike him, are in movement; and for him to cause movement now in one way, now in the opposite way is not permitted. From all of these considerations, it follows that one must neither say that the cosmos is always itself responsible for its own turning, nor say at all that it is turned by god in a pair of opposed revolutions, nor again that it is turned by some pair of gods whose thoughts are opposed to each other; it is rather what was said just now, which is the sole remaining possibility, that at times it is helped by the guidance of another, divine, cause, acquiring life once more and receiving a restored immortality from its craftsman, while at other times, when it is let go, it goes on its own way under its own power, having been let go at such a time as to travel backwards for many tens of thousands of revolutions because of the very fact that its movement combines the effects of its huge size, perfect balance, and its resting on the smallest of bases.

Socrates Younger:: It certainly seems that everything you have gone through is very reasonable.

Stranger:: Then drawing on what's just been said, let's reflect on the state of affairs we said was responsible for all those astonishing things. In fact it's just this very thing.

Socrates Younger:: What's that?

Stranger:: That the movement of the universe is now in the direction of its present rotation, now in the opposite direction.

Socrates Younger:: How do you mean?

Stranger:: We must suppose that this change is, of the turnings that occur in the heavens, the greatest and the most complete turning of all.

Socrates Younger:: Yes, it certainly seems so.

Stranger:: We must suppose, then, that at that time the greatest changes also occur for us who live within the universe?

Socrates Younger:: That too seems likely.

Stranger:: And don’t we recognize that living creatures by their nature have difficulty in tolerating changes that are at once large, great in number, and of all different sorts?

Socrates Younger:: Certainly we do.

Stranger:: Necessarily, then, there occur at that time cases of destruction of other living creatures on a very large scale, and humankind itself survives only in small numbers. Many new and astonishing things happen to them, but the greatest is the one I shall describe, one that is in accordance with the retrogradation of the universe, at the time when its turning becomes the opposite of the one that now obtains.

Socrates Younger:: What kind of thing do you mean?

Stranger:: First, the visible age of each and every creature, whatever it was, stopped increasing, and everything that was mortal ceased moving in the direction of looking older; instead it changed back in the opposite direction, and grew as it were younger, more tender. The white hairs of the older men became black, and in turn the cheeks of those who had their beards became smooth again, returning each to his past bloom; the bodies of those in their puberty, becoming smoother and smaller each day and night, went back to the form of new-born children, which they came to resemble both in mind and in body, and from then on they proceeded to waste away until they simply disappeared altogether. As for those who died a violent death at that time, the body of the dead person underwent the same effects and quickly dissolved to nothing in a few days.

Socrates Younger:: But, visitor, how did living creatures come into being in that time? And in what way were they produced from each other?

Stranger:: Clearly, Socrates, reproduction from one another was not part of the nature of things then. It was the earth-born race, the one said to have existed once, that existed then, returning to life again from the earth; it was remembered by our first ancestors, who lived in the succeeding time but bordered on the ending of the previous period, growing up at the beginning of this one. They became our messengers for the accounts of the earth-born, which are nowadays wrongly disbelieved by many people. For I think we must reflect on what is implied by what we have said. If old men went back to being children, it follows that people should be put together again from the dead, there in the earth, and come back to life; they would be following the reversal of things, with coming-into-being turning round with it to the opposite direction, and since they would according to this argument necessarily come into existence as earth-born, they would thus acquire that name and have that account given of them— all those of them, that is, whom god did not take off to another destiny.

Socrates Younger:: Yes, quite; this does seem to follow on what went before. But as for the life which you say there was in the time of Cronus' power—was it in that period of rotation or in this one? For it clearly turns out that the change affecting the stars and the sun occurs in each period.

Stranger:: You have been keeping up with the argument well. As for what you asked, about everything's springing up of its own accord for human beings, it belongs least to the period that now obtains; it too belonged to the one before. For then the god began to rule and take care of the rotation itself as a whole, and as for the regions, in their turn, it was just the same, the parts of the world-order having everywhere been divided up by gods ruling over them. As for living things, divine spirits had divided them between themselves, like herdsmen, by kind and by herd, each by himself providing independently for all the needs of those he tended, so that none of them was savage, nor did they eat each other, and there was no war or internal dissent at all;

and as for all the other things that belong as consequences to such an arrangement, there would be tens of thousands of them to report. But to return to what we have been told about a human life without toil, the origin of the report is something like this. A god tended them, taking charge of them himself, just as now human beings, themselves living creatures, but different and more divine, pasture other kinds of living creatures more lowly than themselves; and given his tendance, they had no political constitutions, nor acquired wives and children, for all of them came back to life from the earth, remembering nothing of the past. While they lacked things of this sort, they had an abundance of fruits from trees and many other plants, which grew not through cultivation but because the earth sent them up of its own accord. For the most part they would feed outdoors, naked and without bedding; for the blend of the seasons was without painful extremes, and they had soft beds from abundant grass that sprang from the earth. What you are hearing about, then, Socrates, is the life of those who lived in the time of Cronus; as for this one, which they say is in the time of Zeus, the present one, you are familiar with it from personal experience. Would you be able and willing to judge which of the two is the more fortunate?

Socrates Younger:: Not at all.

Stranger:: Then do you want me to make some sort of decision for you?

Socrates Younger:: Absolutely.

Stranger:: Well then, if, with so much leisure available to them, and so much opportunity to get together in conversation not only with human beings but also with animals—if the nurslings of Cronus used all these advantages to do philosophy, talking both with animals and with each other, and inquiring from all sorts of creatures whether any one of them had some capacity of its own that enabled it to see better in some way than the rest with respect to the gathering of wisdom, the judgment is easy, that those who lived then were far, far more fortunate than those who live now. But if they spent their time gorging themselves with food and drink and exchanging stories with each other and with the animals of the sort that even now are told about them, this too, if I may reveal how it seems to me, at least, is a matter that is easily judged. But however that may be, let us leave it to one side, until such time as someone appears who is qualified to inform us in which of these two ways the desires of men of that time were directed in relation to the different varieties of knowledge and the need for talk; we must now state the point of our rousing our story into action, in order to move forward and bring what follows to its end. When the time of all these things had been completed and the hour for change had come, and in particular all the earth-born race had been used up, each soul having rendered its sum of births, falling to the earth as seed as many times as had been laid down for each, at that point the steersman of the universe, let go—as it were—of the bar of the steering-oars and retired to his observation-post; and as for the cosmos, its allotted and innate desire turned it back again in the opposite direction. So all the gods who ruled over the regions together with the greatest divinity, seeing immediately what was happening, let go in their turn the parts of the cosmos that belonged to their charge; and as it turned about and came together with itself, impelled with opposing movements, both the one that was beginning and the one that was now ending, it produced a great tremor in itself, which in its turn brought about another destruction of all sorts of living things. After this, when sufficient time had elapsed, it began to cease from noise and confusion and attained calm from its tremors; it set itself in order, into the accustomed course that belongs to it, itself taking charge of and mastering both the things within it and itself, because it remembered so far as it could the teaching of its craftsman and father. At the beginning it fulfilled his teaching more accurately, but in the end less keenly; the cause of this was the bodily element in its mixture, its companion since its origins long in the past, because this element was marked by a great disorder before it entered into the present world-order. For from the one who put it together the world possesses all fine things; from its previous condition, on the other hand, it both has for itself from that source everything that is bad and unjust in the heavens, and produces it in its turn in living things. So while it reared living things in itself in company with the steersman, it created only slight evils, and great goods; but in separation from him, during all the time closest to the moment of his letting go, it manages everything very well, but as time moves on and forgetfulness increases in it, the condition of its original disharmony also takes greater control of it, and, as this time ends, comes to full flower. Then the goods it mixes in are slight, but the admixture it causes of the opposite is great, and it reaches the point where it is in danger of destroying both itself and the things in it. It is for this reason that now the god who ordered it, seeing it in difficulties, and concerned that it should not, storm-tossed as it is, be broken apart in confusion and sink into the boundless sea of unlikeness, takes his position again at its steering-oars, and having turned round what had become diseased and been broken apart in the previous rotation, when the world was left to itself, orders it and by setting it straight renders it immortal and ageless. What has been described, then, is the end-point of everything; as for what is relevant to our showing the nature of the king, it is sufficient if we take up the account from what went before.

When the cosmos had been turned back again on the course that leads to the sort of coming-into-being which obtains now, the movement of the ages of living creatures once again stopped and produced new effects which were the opposite of what previously occurred. For those living creatures that were close to disappearing through smallness began to increase in size, while those bodies that had just been born from the earth already gray-haired began to die again and return into the earth. And everything else changed, imitating and following on the condition of the universe, and in particular, there was a change to the mode of conception, birth and rearing, which necessarily imitated and kept pace with the change to everything; for it was no longer possible for a living creature to grow within the earth under the agency of others' putting it together, but just as the world-order had been instructed to be master of its own motion, so too in the same way its parts were instructed themselves to perform the functions of begetting, birth and rearing so far as possible by themselves, under the agency of a similar impulse. We are now at the point that our account has all along been designed to reach. To go through the changes that have occurred in relation to the other animals, and from what causes, would involve a description of considerable length; those that relate to human beings will be shorter to relate and more to the point. Since we had been deprived of the god who possessed and pastured us, and since for their part the majority of animals—all those who had an aggressive nature—had gone wild, human beings, by themselves weak and defenseless, were preyed on by them, and in those first times were still without resources and without expertise of any sort; their spontaneous supply of food was no longer available to them, and they did not yet know how to provide for themselves, having had no shortage to force them to do so before. As a result of all of this they were in great difficulties. This is why the gifts from the gods, of which we have ancient reports, have been given to us, along with an indispensable requirement for teaching and education: fire from Prometheus, crafts from Hephaestus and his fellow craft-worker, seeds and plants from others. Everything that has helped to establish human life has come about from these things, once care from the gods, as has just been said, ceased to be available to human beings, and they had to live their lives through their own resources and take care for themselves, just like the cosmos as a whole, which we imitate and follow for all time, now living and growing in this way, now in the way we did then. As for the matter of our story, let it now be ended, and we shall put it to use in order to see how great our mistake was when we gave our account of the expert in kingship and statesmanship in our preceding argument.

Socrates Younger:: So how do you say we made a mistake, and how great was it?

Stranger:: In one way it was lesser, in another it was very high-minded, and much greater and more extensive than in the other case.

Socrates Younger:: How so?

Stranger:: In that when asked for the king and statesman from the period of the present mode of rotation and generation we replied with the shepherd from the opposite period, who cared for the human herd that existed then, and at that a god instead of a mortal—in that way we went very greatly astray. But in that we revealed him as ruling over the whole city together, without specifying in what manner he does so, in this way, by contrast, what we said was true, but incomplete and unclear, which is why our mistake was lesser than in the respect just mentioned.

Socrates Younger:: True.

Stranger:: So we should define the manner of his rule over the city; it’s in this way that we should expect our discussion of the statesman to reach its completion.

Socrates Younger:: Right.

Stranger:: It was just for these reasons that we introduced our story, in order that it might demonstrate, in relation to herd-rearing, not only that as things now stand everyone disputes this function with the person we are looking for, but also in order that we might see more plainly that other person himself whom alone, in accordance with the example of shepherds and cowherds, because he has charge of human rearing, it is appropriate to think worthy of this name, and this name alone.

Socrates Younger:: Correct.

Stranger:: But in my view, Socrates, this figure of the divine herdsman is still greater than that of a king, and the statesmen who belong to our present era are much more like their subjects in their natures and have shared in an education and nurture closer to theirs.

Socrates Younger:: I suppose you must be right.

Stranger:: Yet they will be neither less nor more worth looking for, whether their natures are of the latter or of the former sort.

Socrates Younger:: Quite.

Stranger:: Then let’s go back by the following route. The sort of expertise we said was ‘self-directing’ in the case of living creatures, but which took its care of them not as individuals but in groups, and which we then went on immediately to call herd-rearing—you remember?

Socrates Younger:: Yes.

Stranger:: Well, in a way we missed in our aim at this expertise; for we did not at all succeed in grasping the statesman along with the rest or name him, but he eluded us in our naming, and we did not notice.

Socrates Younger:: How so?

Stranger:: All the other sorts of herdsmen, I think, share the feature of rearing their several herds, but although the statesman does not we still applied the name to him, when we should have applied to all of them one of the names that belongs in common to them.

Socrates Younger:: What you say is true, if indeed there is such a name.

Stranger:: And how would—perhaps—'looking after' not have been common to them all, without any specification of it as 'rearing', or any other sort of activity? By calling it some sort of expertise in 'herd-keeping' or 'looking after', or 'caring for', as applying to them all, we could have covered the statesman too as well as the rest, given that this was the requirement our argument indicated.

Socrates Younger:: Correct. But in what way would the division following this be made?

Stranger:: In the same way as we previously divided herd-rearing by footed and wingless, and non-interbreeding and hornless—by dividing herd-keeping too by these same things, I think, we would have included in our account to the same degree both the present sort of kingship and that in the time of Cronus.

Socrates Younger:: It seems so; but again I ask what step follows this.

Stranger:: It's clear that if we had used the name 'herd-keeping' like this, no one would ever have contended with us on the grounds that there is no such thing as caring at all, in the way that it was then justly contended that there was no sort of expertise available that deserved this appellation of 'rearing', but that if there really were such a thing, many people had a prior and better claim to it than any of our kings.

Socrates Younger:: Correct.

Stranger:: But care of the whole human community together—no other sort of expertise would be prepared to say that it had a better and prior claim to being that than kingly rule, which is over all human beings.

Socrates Younger:: What you say is correct.

Stranger:: But after that, Socrates, do we see that at the very end of our account we again made a large mistake?

Socrates Younger:: What sort of mistake?

Stranger:: It was this, that even if we had been quite convinced that there was some expertise concerned with the rearing of the two-footed herd, we should certainly not for that reason immediately have called it the expertise of the king and statesman, as if that were the end of the matter.

Socrates Younger:: What should we have done?

Stranger:: First of all, as we are saying, we should have altered the name, aligning it more with caring for things than with rearing, and then we should have cut this; for it would still offer room for cuts of no small size.

Socrates Younger:: Where would they be?

Stranger:: I imagine, where we would have divided off the divine herdsman, on one side, and the human carer on the other.

Socrates Younger:: Correct.

Stranger:: But again we ought to have cut into two the art of the carer resulting from this apportionment.

Socrates Younger:: By using what distinction?

Stranger:: That between the enforced and the voluntary.

Socrates Younger:: Why so?

Stranger:: I think we made a mistake before in this way too, by behaving more simple-mindedly than we should have. We put king and tyrant into the same category, when both they themselves and the manner of their rule are very unlike one another.

Socrates Younger:: True.

Stranger:: But now should we set things to rights again, and, as I said, should we divide the expertise of the human carer into two, by using the categories of the enforced and the voluntary?

Socrates Younger:: Absolutely.

Stranger:: And should we perhaps call tyrannical the expertise that relates to subjects who are forced, and the herd-keeping that is voluntary and relates to willing two-footed living things that expertise which belongs to statesmanship, displaying, in his turn, the person who has this expertise and cares for his subjects in this way as being genuinely king and statesman?

Socrates Younger:: Yes, visitor, and it’s likely that in this way our exposition concerning the statesman would reach completion.

Stranger:: It would be a fine thing for us, Socrates. But this mustn’t be just your view alone; I too have got to share it in common with you. And as it is, according to my view our discussion does not yet seem to have given a complete shape to the king. Just as sculptors sometimes hurry when it is not appropriate to do so and actually lose time by making additions and increasing the size of the various parts of their work beyond what is necessary, so too in our case—I suppose that in order to give a grand as well as a quick demonstration of the mistake in the route we previously took, we thought it was appropriate to the king to give large-scale illustrations. We took upon ourselves an astonishing mass of material in the story we told, so forcing ourselves to use a greater part of it than necessary; thus we have made our exposition longer, and have in every way failed to apply a finish to our story, and our account, just like a portrait, seems adequate in its superficial outline, but not yet to have received its proper clarity, as it were with paints and the mixing together of colors. But it is not painting or any other sort of manual craft, but speech and discourse, that constitute the more fitting medium for exhibiting all living things, for those who are able to follow; for the rest, it will be through manual crafts.

Socrates Younger:: That much is correct; but show me how you say we have not yet given an adequate account.

Stranger:: It’s a hard thing, my fine friend, to demonstrate any of the more important subjects without using models. It looks as if each of us knows everything in a kind of dreamlike way, and then again is ignorant of everything when as it were awake.

Socrates Younger:: What do you mean?

Stranger:: I do seem rather oddly now to have stirred up the subject of what happens to us in relation to knowledge.

Socrates Younger:: How so?

Stranger:: It has turned out, my dear fellow, that the idea of a ‘model’ itself in its turn also has need of a model to demonstrate it.

Socrates Younger:: How so? Explain, and don’t hold back for my sake.

Stranger:: Explain I must, in view of your own readiness to follow. I suppose we recognize that when children are just acquiring skill in reading and writing—

Socrates Younger:: Recognize what?

Stranger:: That they distinguish each of the individual letters well enough in the shortest and easiest syllables, and come to be capable of indicating what is true in relation to them.

Socrates Younger:: Of course.

Stranger:: But then once again they make mistakes about these very same letters in other syllables, and think and say what is false.

Socrates Younger:: Absolutely.

Stranger:: Well then, isn't this the easiest and best way of leading them on to the things they're not yet recognizing?

Socrates Younger:: What way?

Stranger:: To take them first back to those cases in which they were getting these same things right, and having done that, to put these beside what they're not yet recognizing. By comparing them, we demonstrate that there is the same kind of thing with similar features in both combinations, until the things that they are getting right have been shown set beside all the ones that they don't know; once the things in question have been shown like this, and so become models, they bring it about that each of all the individual letters is called both different, on the basis that it is different from the others, and the same, on the basis that it is always the same as and identical to itself, in all syllables.

Socrates Younger:: Absolutely right.

Stranger:: Well then, have we grasped this point adequately, that we come to be using a model when a given thing, which is the same in something different and distinct, is correctly identified there, and having been brought together with the original thing, brings about a single true judgment about each separately and both together?

Socrates Younger:: It seems so.

Stranger:: Then would we be surprised if our minds by their nature experienced this same thing in relation to the individual ‘letters’ of everything, now, in some cases, holding a settled view with the aid of truth in relation to each separate thing, now, in others, being all at sea in relation to all of them—somehow or other getting the constituents of the combinations themselves right, but once again not knowing these same things when they are transferred into the long ‘syllables’ of things and the ones that are not easy?

Socrates Younger:: There would be absolutely nothing surprising in it.

Stranger:: Right, my friend: how could anyone begin from false belief and get to even a small part of the truth, and so acquire wisdom?

Socrates Younger:: I dare say it’s impossible.

Stranger:: Well, if that’s the way it is, the two of us would not at all be in the wrong in having first attempted to see the nature of models as a whole in the specific case of a further insignificant model, with the intention then of bringing to the case of the king, which is of the greatest importance, something of the same form from less significant things somewhere, in an attempt once more through the use of a model to recognize in an expert, systematic way what looking after people in the city is, so that it may be present to us in our waking state instead of in a dream?

Socrates Younger:: Absolutely right.

Stranger:: Then we must take up once again what we were saying before, to the effect that since tens of thousands of people dispute the role of caring for cities with the kingly class, what we have to do is to separate all these off and leave the king on his own; and it was just for this purpose that we said we needed a model.

Socrates Younger:: Very much so.

Stranger:: So what model, involving the same activities as statesmanship, on a very small scale, could one compare with it, and so discover in a satisfactory way what we are looking for? By Zeus, Socrates, what do you think? If there isn't anything else to hand, well, what about weaving? Do you want us to choose that? Not all of it, if you agree, since perhaps the weaving of cloth from wool will suffice; maybe it is this part of it, if we choose it, which would provide the testimony we want.

Socrates Younger:: I've certainly no objection.

Stranger:: Why then don't we now do the very same thing with weaving that we did in what preceded, dividing each thing by cutting it into parts, and then cutting them? We'll get back to what is useful in the present context after covering everything as briefly and quickly as we can.

Socrates Younger:: What do you mean?

Stranger:: I shall make my answer to you by just going through it.

Socrates Younger:: An excellent suggestion.

Stranger:: Well then: all the things we make and acquire are either for the sake of our doing something, or they prevent something's happening to us. Of preventives, some are charms, whether divine or human, warding things off, others forms of defense. Of forms of defense some are ways of arming for war, others forms of protection. Of forms of protection some are screens, others means of warding off cold and hot weather. Of the latter type of protectives some are shelters, others coverings; of coverings one sort consists of things spread under, a different sort of things put round. Of things put round, some are cut out in one piece, while a different sort are compound; of the compound some are perforated, others bound together without perforation; of the unperforated some are made of the 'sinews' of things growing from the earth, others of hair. Of those made of hair, some are stuck together by means of water and earth, others are bound together with themselves. It is to these preventives and coverings manufactured from materials that are being bound together with themselves that we give the name 'clothes'; as for the expertise that especially has charge of clothes—just as before we gave the name of 'statesmanship' to the sort of expertise that especially had charge of the state, so too now shall we call this sort 'the art of clothes-making', from the thing itself? And shall we say that weaving too, in so far as it represented the largest part of the manufacture of clothes, does not differ at all, except in name, from this art of clothes-making, just as in that other case we said that the art of kingship did not differ from that of statesmanship?

Socrates Younger:: Yes; absolutely correct.

Stranger:: As for what comes next, let's reflect that someone might perhaps suppose that weaving had been adequately described when put like this, being unable to grasp that it had not yet been divided off from those cooperative arts that border on it, while it had been parceled off from many other related ones.

Socrates Younger:: Tell me—which related ones?

Stranger:: You didn't follow what's been said, it seems; so it looks as if we must go back again, starting from the end. If you grasp the kinship in this case, we cut off one 'related' expertise from weaving just now, separating off the putting together of blankets by means of the distinction between putting round and putting under.

Socrates Younger:: I understand.

Stranger:: What's more, we took away all craftwork out of flax, esparto, and what we just now by analogy called 'sinews' of plants; again we divided off both the art of felting and the sort of putting together that uses perforation and sewing, of which the largest is the art of cobbling.

Socrates Younger:: Absolutely.

Stranger:: Still further, working with skins, which looks after coverings cut in a single piece, and those sorts of activities that look after shelters, all those involved in building and carpentry in general and, in other sorts of expertise, contriving shelter from inflowing water—all of these we took away. Also, all those sorts of expertise in forms of protection that offer preventive products in relation to thefts and violent acts, and those that have to do with carrying out the work of lid-making, and fixings to doorways, which are assigned as parts of the art of joinery. And we cut away the art of arms-manufacture, a segment of that great and varied capacity which is defense-production. Then again our first and immediate move was to divide off the whole of the art of magic which is concerned with protective charms, and we have left behind—as we might suppose—the very expertise we looked for, which protects us against cold weather, productive of a woolen defense, and called by the name of weaving.

Socrates Younger:: Yes, that seems to be so.

Stranger:: But put like this, my boy, it is not yet complete. The person who puts his hand first to the production of clothes seems to do the opposite of weaving.

Socrates Younger:: How so?

Stranger:: The business of weaving, I suppose, is a sort of intertwining.

Socrates Younger:: Yes.

Stranger:: But in fact what I'm talking about is a matter of breaking apart things that are combined or matted together.

Socrates Younger:: What is it you're referring to?

Stranger:: The function of the art of the carder. Or shall we dare to call the art of carding the art of weaving, and treat the carder as if he were a weaver?

Socrates Younger:: Certainly not.

Stranger:: And then too if someone calls the art of manufacturing warp and woof ‘weaving’, he is using a name that is not only odd but false.

Socrates Younger:: Quite.

Stranger:: And what about these cases? Are we to put down the whole of the art of fulling, and clothes-mending, as being no sort of care for clothes, nor as any sort of looking after them, or shall we refer to all of these too as arts of weaving?

Socrates Younger:: Certainly not.

Stranger:: Yet all of these will dispute the role of looking after and producing clothes with the capacity which is the art of weaving, conceding a very large part to it, but assigning large shares to themselves too.

Socrates Younger:: Certainly.

Stranger:: Then again, in addition to these, we must suppose that the sorts of expertise responsible for making the tools through which the products of weaving are completed will also lay claim to being at least a contributory cause of every woven article.

Socrates Younger:: Quite correct.

Stranger:: So will our account of that part of the art of weaving that we selected be sufficiently definite, if we proceed to set it down as finest and greatest of all those sorts of care that exist in relation to woolen clothing? Or would we be saying something true, but not clear or complete, until such time as we remove all of these too from around it?

Socrates Younger:: Correct.

Stranger:: Then after this we must do what we're saying we should do, in order that our account may proceed in due order.

Socrates Younger:: Quite.

Stranger:: Well then, let's look at two sorts of expertise that there are in relation to all the things that people do.

Socrates Younger:: Which are they?

Stranger:: One which is a contributory cause of production, one which is itself a cause.

Socrates Younger:: How so?

Stranger:: Those which do not make the thing itself, but which provide tools for those that do—tools which, if they were not present, what has been assigned to each expertise would never be accomplished: these are what I mean by contributory causes, while those that bring the thing itself to completion are causes.

Socrates Younger:: That seems to make sense.

Stranger:: Then as a next step shall we call contributory causes all those that are concerned with spindles and shuttles and whatever other tools share in the process of production in relation to garments, calling those that look after and make garments themselves causes?

Socrates Younger:: Quite correct.

Stranger:: Then among the causes, washing and mending and the whole business of looking after clothes in these sorts of ways—it's perfectly reasonable to encompass this part of the extensive field covered by the art of preparation by calling it all 'the art of the fuller'.

Socrates Younger:: Right.

Stranger:: Again, carding and spinning and everything relating to the making of clothes itself—which is the thing whose parts we're talking about—all constitute a single expertise among those everybody recognizes, namely wool-working.

Socrates Younger:: Of course.

Stranger:: Next, there are two segments of wool-working, and each of these is a part of two sorts of expertise at once.

Socrates Younger:: How so?

Stranger:: What has to do with carding, and half of the art of the shuttle, and all those activities that set apart from each other things that are together—all of this we can, I suppose, declare as one and as belonging to wool-working itself? And there were, we agreed, two great sorts of expertise in every sphere, that of combination and that of separation.

Socrates Younger:: Yes.

Stranger:: Well then, it's to the art of separation that belong that of carding and all the things just mentioned; for separation in the case of wool and the warp, which happens in different ways, in the first case through the shuttle, in the second through use of the hands, has acquired as many names as we referred to a moment ago.

Socrates Younger:: Absolutely.

Stranger:: Then again, by contrast, let's take a part that is simultaneously a part of combination and of wool-working and takes place in the latter; and whatever parts of separation there were here, let's let all of them go, cutting wool-working into two by means of the cut between separation and combination.

Socrates Younger:: Count it as divided.

Stranger:: Then in its turn, Socrates, you should divide the part that is simultaneously combination and wool-working, if indeed we are going to capture the aforesaid art of weaving.

Socrates Younger:: Then I must.

Stranger:: Indeed you must: and let’s say that part of it is twisting, part intertwining.

Socrates Younger:: Do I understand correctly? By twisting, you seem to me to be talking about what relates to the manufacture of the warp.

Stranger:: Not only of the warp, but of the woof too; or are we going to find some origin for the woof which doesn’t involve twisting?

Socrates Younger:: Certainly not.

Stranger:: Well, define each of these two things too; perhaps you might find defining them timely.

Socrates Younger:: Define them how?

Stranger:: Like this: among the products of carding, when its material is drawn out to a certain length and has acquired breadth, do we say that there’s a ‘flock’ of wool?

Socrates Younger:: Yes.

Stranger:: Of this, then, the yarn that has been twisted by the spindle and been made firm you’ll call the warp, and the expertise that guides its production ‘warp-spinning’.

Socrates Younger:: Correct.

Stranger:: But those threads that in their turn get a loose twisting, and have a softness appropriate to the twining in of the warp, but also to what is needed for drawing out in the dressing process, you’ll call these—the products of the spinning—the woof, and the expertise that is set over their production—let’s call it ‘woof-spinning’.

Socrates Younger:: Quite correct.

Stranger:: And as for the part of weaving that we put forward for investigation, I suppose that’s now clear to anyone. When the part of combination which is contained in wool-working produces something intertwined, by the regular intertwining of woof and warp, the whole product of the intertwining we refer to as a piece of woolen clothing, and we refer to the expertise that is over this as weaving.

Socrates Younger:: Quite correct.

Stranger:: Good; so why ever, then, didn’t we immediately reply that weaving was an intertwining of woof and warp, instead of going round in a circle defining a whole collection of things to no purpose?

Socrates Younger:: To me at least, visitor, nothing of what we have said seemed to have been said to no purpose.

Stranger:: And that isn’t at all surprising, I may say; but perhaps, my dear fellow, it might seem so. So against such a malady, in case it should come upon you later (that wouldn’t be at all surprising), listen to a point which it’s appropriate to make in all cases like this.

Socrates Younger:: Do make it.

Stranger:: First, then, let’s look at excess and deficiency in general, so that we may distribute praise and censure proportionately on each occasion, when things are said at greater length than necessary and when the opposite occurs in discussions like the present one.

Socrates Younger:: That’s what we must do, then.

Stranger:: If we talked about these very things, I think we'd be proceeding correctly.

Socrates Younger:: What things?

Stranger:: About length and brevity, and excess and deficiency in general. I suppose the art of measurement relates to all of these.

Socrates Younger:: Yes.

Stranger:: Then let’s divide it into two parts; that’s what we need towards our present objective.

Socrates Younger:: Please tell me how we should divide it.

Stranger:: This way: one part will relate to the association of greatness and smallness with each other, the other to what coming into being necessarily is.

Socrates Younger:: What do you mean?

Stranger:: Does it not seem to you that by its nature the greater has to be said to be greater than nothing other than the less, and the less in its turn less than the greater, and than nothing else?

Socrates Younger:: It does.

Stranger:: What about this: shan't we also say that there really is such a thing as what exceeds what is in due measure, and everything of that sort, in what we say or indeed in what we do? Isn't it just in that respect that those of us who are bad and those who are good most differ?

Socrates Younger:: It seems so.

Stranger:: In that case we must lay it down that the great and the small exist and are objects of judgment in these twin ways. It is not as we said just before, that we must suppose them to exist only in relation to each other, but rather as we have now said, that we should speak of their existing in one way in relation to each other, and in another in relation to what is in due measure. Do we want to know why?

Socrates Younger:: Of course.

Stranger:: If someone will admit the existence of the greater and everything of the sort in relation to nothing other than the less, it will never be in relation to what is in due measure—you agree?

Socrates Younger:: That's so.

Stranger:: Well, with this account of things we shall destroy—shan't we?— both the various sorts of expertise themselves and their products, and in particular we shall make the one we're looking for now, statesmanship, disappear, and the one we said was weaving. For I imagine all such sorts of expertise guard against what is more and less than what is in due measure, not as something which is not, but as something which is and is troublesome in relation to what they do. It is by preserving measure in this way that they produce all the good and fine things they do produce.

Socrates Younger:: Of course.

Stranger:: If, then, we make the art of statesmanship disappear, our search after that for the knowledge of kingship will lack any way forward?

Socrates Younger:: Very much so.

Stranger:: Is it the case then that just as with the sophist we compelled what is not into being as well as what is, when our argument escaped us down that route, so now we must compel the more and less, in their turn, to become measurable not only in relation to each other but also in relation to the coming into being of what is in due measure? For if this has not been agreed, it is certainly not possible for either the statesman or anyone else who possesses knowledge of practical subjects to acquire an undisputed existence.

Socrates Younger:: Then now too we must do the same as much as we can.

Stranger:: This task, Socrates, is even greater than the former one—and we remember what the length of that was. Still, it's very definitely fair to propose the following hypothesis about the subject in question.

Socrates Younger:: What's that?

Stranger:: That at some time we shall need what I referred to just now for the sort of demonstration that would be commensurate with the precise truth itself. But so far as concerns what is presently being shown, quite adequately for our immediate purposes, the argument we are using seems to me to come to our aid in magnificent fashion. Namely, we should surely suppose that it is similarly the case that all the various sorts of expertise exist, and at the same time that greater and less are measured not only in relation to each other but also in relation to the coming into being of what is in due measure. For if the latter is the case, then so is the former, and also if it is the case that the sorts of expertise exist, the other is the case too. But if one or the other is not the case, then neither of them will ever be.

Socrates Younger:: This much is right; but what's the next move after this?

Stranger:: It's clear that we would divide the art of measurement, cutting it in two in just the way we said, positing as one part of it all those sorts of expertise that measure the number, lengths, depths, breadths and speeds of things in relation to what is opposed to them, and as the other, all those that measure in relation to what is in due measure, what is fitting, the right moment, what is as it ought to be—everything that removes itself from the extremes to the middle.

Socrates Younger:: Each of the two sections you refer to is indeed a large one, and very different from the other.

Stranger:: Yes, Socrates; and what many sophisticated people sometimes say, supposing themselves to be expressing something clever, to the effect that there is in fact an art of measurement relating to everything that comes into being—that's actually the very thing we have just said. For it is indeed the case, in a certain way, that all the products of the various sorts of expertise share in measurement. But because of their not being accustomed to carrying on their investigations by dividing according to real classes, the people in question throw these things together at once, despite the degree of difference between them, thinking them alike—and then again they also do the opposite of this by dividing other things not according to parts, when the rule is that when one perceives first the community between the members of a group of many things, one should not desist until one sees in it all those differences that are located in classes, and conversely, with the various unlikenesses, when they are seen in multitudes, one should be incapable of pulling a face and stopping before one has penned all the related things within one likeness and actually surrounded them in some real class. So let this be enough for us to say about these things, and about modes of defect and excess; and let's just keep hold of the fact that two distinct classes of measurement have been discovered in relation to them, and remember what we say they are.

Socrates Younger:: We'll remember.

Stranger:: Well then, after this point, let's admit another one that relates both to the very things we are inquiring into and to the whole business of discussions of this sort.

Socrates Younger:: What's that?

Stranger:: What if someone put the following question about our pupils sitting together learning their letters. When one of them is asked what letters make up some word or other, are we to say that for him on that occasion the inquiry takes place more for the sake of the single question set before him, or for the sake of his becoming more able to answer all questions relating to letters?

Socrates Younger:: Clearly for the sake of his being able to answer all.

Stranger:: What then about our inquiry now about the statesman? Has it been set before us more for the sake of that very thing, or for the sake of our becoming better dialecticians in relation to all subjects?

Socrates Younger:: That's clear too—for the sake of our becoming better dialecticians generally.

Stranger:: I certainly don't suppose that anyone with any sense would want to hunt down the definition of weaving for the sake of weaving itself. But I think the majority of people fail to recognize that for some of the things there are, there are certain perceptible likenesses which are there to be easily understood, and which it is not at all hard to point out when one wants to make an easy demonstration, involving no trouble and without recourse to verbal means, to someone who asks for an account of one of these things. Conversely, for those things that are greatest and most valuable, there is no image at all which has been worked in plain view for the use of mankind, the showing of which will enable the person who wants to satisfy the mind of an inquirer to satisfy it adequately, just by fitting it to one of the senses. That is why one must practice at being able to give and receive an account of each thing; for the things that are without body, which are finest and greatest, are shown clearly only by verbal means and by nothing else, and everything that is now being said is for the sake of these things. But practice in everything is easier in smaller things, rather than in relation to the greater.

Socrates Younger:: Very well said.

Stranger:: Well then, let's remind ourselves of the reasons why we've said all this on these subjects.

Socrates Younger:: Why did we say it all?

Stranger:: Not least because of the difficulty we found in accepting the length of our talk about weaving—and about the reversal of the universe, and about the being of the non-being which is the sphere of the sophist; we reflected that it had a rather great length, and in all these cases we rebuked ourselves, out of fear that what we were saying would turn out to be superfluous as well as long. So, the thing for you to say is that the foregoing was for the sake of all those cases, in order that we shan’t suffer any of this sort of misgiving on any future occasion.

Socrates Younger:: I shall do as you say. Tell me what comes next.

Stranger:: Well, I say that you and I must be careful to remember what we have now said, and to distribute censure and praise of both shortness and length, whatever subjects we happen to be talking about on each occasion, by judging lengths not in relation to each other but, in accordance with the part of the art of measurement we previously said we must remember, in relation to what is fitting.

Socrates Younger:: Correct.

Stranger:: Well, that’s right, but we mustn’t refer everything to this. For one thing, we shan’t have any need for a length that fits in relation to pleasure, except perhaps as an incidental consideration. And again, as for what contributes towards the inquiry into the subject set before us, what we have said commits us to making a second and not a first priority of the question how we might find it most easily and quickly, and to give by far the greatest and primary value to the pursuit itself of the ability to divide by classes. In particular, if an account is very long but renders the hearer better at discovering things, our business is to take this one seriously and not feel at all irritated at its length, and similarly if a shorter one, in its turn, has the same effect. Then again, over and above this, if in relation to such discussions someone finds fault with the length of what is said and will not put up with going round in circles, we must not let such a person go just like that without a backward glance—with his having made the simple complaint that what has been said has taken a long time. We should think it right that he should also demonstrate, in addition, that if it had been shorter it would make the partners in the discussion better dialecticians and better at discovering how to display in words the things there are. We shall take no notice at all of the other sorts of censure and praise, relating to some other criteria, nor even seem to hear such things at all when they are said. Now enough of these things, if I have your agreement too; let's go back again to the statesman, and bring the model of weaving, which we talked about before, to bear on it.

Socrates Younger:: Well said—let's do what you say.

Stranger:: Well then, the king has been separated off from the many sorts of expertise that share his field—or rather from all of them concerned with herds; there remain, we are saying, those sorts of expertise in the city itself that are contributory causes and those that are causes, which we must first divide from each other.

Socrates Younger:: Correct.

Stranger:: So do you recognize that it is difficult to cut them into two? The cause, I think, will become more evident if we proceed.

Socrates Younger:: Well, then that's what we should do.

Stranger:: Then let's divide them limb by limb, like a sacrificial animal, since we can't do it into two. For we must always cut into the nearest number so far as we can.

Socrates Younger:: So how are we to do it in this case?

Stranger:: Just as before: the sorts of expertise that provided tools relating to weaving—all of these, of course, we put down then as contributory causes.

Socrates Younger:: Yes.

Stranger:: We must do the same thing now too, but to a still greater degree than we did then. For we must put down as being contributory causes all the sorts of expertise that produce any tool in the city, whether small or large. Without these there would never come to be a city, nor statesmanship, but on the other hand we shan't, I think, put down any of them as the product of the expertise of the king.

Socrates Younger:: No, we shan't.

Stranger:: And yet we're trying to do a difficult thing in separating this class of things from the rest; in fact it is possible for someone to treat anything you like as a tool of something and seem to have said something credible. Nevertheless, among the things people possess in a city, let's treat the following as being of a different sort.

Socrates Younger:: Different in what way?

Stranger:: Because it does not have the same capacity that tools have. For it is not put together with the purpose of causing the coming into being of something, as a tool is, but for the sake of preserving what craftsmen have produced.

Socrates Younger:: What do you mean?

Stranger:: That varied class of things which is worked for things liquid and solid, and for things that are prepared on the fire and things that are not—what we refer to with the single name of 'vessel': a common class, and one that, I think, simply does not belong at all to the sort of expert knowledge we are looking for.

Socrates Younger:: Certainly not.

Stranger:: We must then observe a third very extensive class of things that people possess, different from these others, which is found on land and on water, moves about a lot and is fixed, and is accorded high value and none, but has a single name, because it is all for the sake of some supporting or other, always being a seat for something.

Socrates Younger:: What do you mean?

Stranger:: I suppose we call it by the name of 'vehicle'; not at all a product of the art of statesmanship, but much more of those of carpentry, pottery, and bronze-working.

Socrates Younger:: I see.

Stranger:: And what is fourth? Should we say that it is something different from these, something that includes the larger part of the things we mentioned before, all clothing, most armor, and walls, all those encirclements made out of earth, or out of stone, and tens of thousands of other things? Since all of them together are worked for the purpose of defending, it would be most apposite to call the whole class that of 'defense', and it would be thought to be a product much more of the expertise of the builder and the weaver, most of it, more correctly than it would be thought to belong to that of the statesman.

Socrates Younger:: Absolutely.

Stranger:: Would we want to put down as a fifth class things to do with decoration, painting, and those representations that are completed by the use of painting, and of music, which have been executed solely to give us pleasures, and which would appropriately be embraced by a single name?

Socrates Younger:: What name?

Stranger:: I think we talk about something we call a 'plaything'.

Socrates Younger:: Of course.

Stranger:: Well, this one name will be fittingly given to all of them; for not one of them is for the sake of a serious purpose, but all are done for amusement.

Socrates Younger:: This too I pretty well understand.

Stranger:: And what provides materials for all these things, from which and in which all of the sorts of expertise that have now been mentioned work, a varied class that is itself the offspring of many other sorts of expertise—shall we not put it down as a sixth?

Socrates Younger:: What exactly are you referring to?

Stranger:: Gold and silver, and everything that is mined, and all that the art of tree-felling and any lopping cuts and provides for the art of the carpenter and the basket-weaver—and again the art of stripping off the outer covering of plants, and the one that removes skins from bodies of living things, the art of the skinner; and all the sorts of expertise there are in relation to such things, which by producing cork, and papyrus, and materials for bindings make possible the working up of classes of composite things from classes of things that are not put together. Let us call it all one thing, the first-born and incomposite possession of mankind, which is in no way a product of the knowledge of kingship.

Socrates Younger:: Right.

Stranger:: Then again that sort of possession that consists in nutrition, and all those things which when they are blended into the body, their own parts with parts of the body, have a capacity for promoting its care, we must say is a seventh, calling it all together ‘nurture’, unless we have some more attractive term to propose. And if we place it under the arts of the farmer, the hunter, the trainer in the gymnasium, the doctor and the cook, we shall be assigning it more correctly than if we give it to the art of the statesman.

Socrates Younger:: Of course.

Stranger:: Well then, we have, I think, pretty well dealt, in these seven classes, with all the things that have to do with possessions, with the exception of tame living creatures. Look at our list: it would be most appropriate if we put down the ‘first-born’ class of things at the beginning, and after this ‘tool’, ‘vessel’, ‘vehicle’, ‘defense’, ‘plaything’, ‘nourishment’. If anything of no great importance has escaped us, we leave it to one side, because it is capable of fitting into one or other of these, for example the class consisting of currency, seals, and any sort of engraving. For these do not have any great shared class among them, but if some of them are dragged off into decoration, others into tools, it will be forcibly done, but nevertheless they’ll wholly agree to it. As for what relates to possession of tame living creatures, apart from slaves, the art of herd-rearing which we divided into its parts before will clearly be seen to have caught them all.

Socrates Younger:: Absolutely.

Stranger:: Then what remains is the class of slaves and all those people who are subordinate to others, among whom, I strongly suspect, those who dispute with the king about the ‘woven fabric’ itself will come into view, just as in the case of weaving we found those concerned with spinning and carding and all the other things we mentioned disputing with the weavers over their product. All the others, who have been described as ‘contributory causes’, have been disposed of along with the products we have just listed, as each was separated off from the practical activity which is the sphere of the art of kingship and statesmanship.

Socrates Younger:: So it seems, at any rate.

Stranger:: Come along, then: let’s get up close to those people that are left and take a look at them, so that we may get a firmer knowledge of them.

Socrates Younger:: That’s what we should do.

Stranger:: Well, those who are subordinate to the greatest degree, looked at from our present perspective, we find possessing a function and condition which are the opposite of what we suspected just now.

Socrates Younger:: Who are they?

Stranger:: Those who are bought, and acquired as possessions by this means; people whom we can indisputably call slaves, and who least pretend to kingly expertise.

Socrates Younger:: Quite.

Stranger:: What then of all those among free men who voluntarily place themselves in the service of those we have been discussing, conveying their products—the products of farming and the other sorts of expertise— between them, and establishing equality between these products; some in market-places, others moving from one city to another, whether by sea or by land, exchanging currency both for everything else and for itself— people to whom we give the names of ‘money-changers’, ‘merchants’, ‘ship-owners’, and ‘retailers’: surely they won’t lay claim at all to the art of statesmanship?

Socrates Younger:: It may be, perhaps, that they will—to the sort that has to do with commercial matters.

Stranger:: But those we see placing themselves with complete readiness at the service of all, for hire, as day-laborers—these we shall never find pretending to kingly expertise.

Socrates Younger:: Quite so.

Stranger:: What in that case are we to say about those who perform services of the following sorts for us whenever we need them?

Socrates Younger:: What services do you mean, and who is it you’re talking about?

Stranger:: Among others, the tribe of heralds, and all those who become accomplished at writing by having repeatedly given their services in this respect, and certain others who are very clever at working through many different tasks relating to public offices: what shall we call these?

Socrates Younger:: What you called them just now—subordinates, and not themselves rulers in cities.

Stranger:: But I certainly wasn't dreaming, I think, when I said that somewhere here there would appear those who particularly lay claim to the art of statesmanship. And yet it would seem very odd indeed to look for them in some portion of the subordinate arts.

Socrates Younger:: Yes, quite.

Stranger:: Then let's get still closer to those we haven't yet cross-examined. There are those who have a part of a subordinate sort of expert knowledge in relation to divination; for they are, I believe, considered to be interpreters from gods to men.

Socrates Younger:: Yes.

Stranger:: And then too the class of priests, in its turn, has—as custom tells us—expert knowledge about the giving through sacrifices of gifts from us to the gods which are pleasing to them, and about asking from them through prayers for the acquisition of good things for us. I imagine that both of these things are parts of a subordinate art.

Socrates Younger:: It appears so, at any rate.

Stranger:: Well now, it seems to me that at this point we are, as it were, getting close to some sort of trail leading to our destination. For the type of priests and seers is filled full of self-importance and gets a lofty reputation because of the magnitude of what they undertake, so that in Egypt it is not even permitted for a king to hold office without also exercising that of priest. If in fact he happens to have acceded to power at the beginning by force from another class, it is later necessary for him to be initiated into the class of priests. And again among the Greeks too, in many places, it is to the greatest offices that one would find being assigned the performance of the greatest of the sacrifices in relation to such things. And in fact what I'm saying receives the clearest illustration in your case; for they say that the most solemn and ancestral of the ancient sacrifices are assigned here to the person who becomes king by lot.

Socrates Younger:: Most certainly.

Stranger:: Well then, we must look both at these king-priests by lot, and their subordinates, and also at a certain other very large crowd of people which has just become visible to us, now that the previous ones have been separated off.

Socrates Younger:: But who are the people you mean?

Stranger:: Some very odd people indeed.

Socrates Younger:: How, exactly?

Stranger:: It's a class mixed out of all sorts, or so it seems to me as I look at it just now. For many of the men resemble lions and centaurs and other such things, and very many resemble satyrs and those animals that are weak but versatile; and they quickly exchange their shapes and capacity for action for each other's. And yet now> Socrates, I think I have identified the men in question.

Socrates Younger:: Please explain; you seem to have something odd in view.

Stranger:: Yes; it's a universal experience that not recognizing something makes it odd. And this is exactly what happened to me just now: at the moment when I first saw the chorus of those concerned with the affairs of cities I failed to recognize them.

Socrates Younger:: What chorus?

Stranger:: That of the greatest magician of all the sophists, and the most versed in their expertise. Although removing him from among those who really are in possession of the art of statesmanship and kingship is a very difficult thing to do, remove him we must if we are going to see plainly what we are looking for.

Socrates Younger:: We must certainly not let this slip.

Stranger:: Certainly not, if you ask my view. So tell me this.

Socrates Younger:: What?

Stranger:: We recognize monarchy, don't we, as one of the varieties of rule in cities?

Socrates Younger:: Yes.

Stranger:: After monarchy one would, I think, list the holding of power by the few.

Socrates Younger:: Of course.

Stranger:: And isn't a third type of constitution rule by the mass of the people, called by the name of 'democracy'?

Socrates Younger:: Most certainly.

Stranger:: So there are three of them—but don't they in a certain way become five, giving birth from among them to two other names in addition to themselves?

Socrates Younger:: What are these?

Stranger:: I think that as things are people refer to the aspects of force and consent, poverty and wealth, and law and lawlessness as they occur in them, and use these to divide each of the first two types into two. So they call monarchy by two names, on the grounds that it exhibits two forms, the one 'tyrannical', the other 'kingly' monarchy.

Socrates Younger:: Of course.

Stranger:: And any city which has come to be controlled by a few people they call by the names of 'aristocracy' and 'oligarchy'.

Socrates Younger:: Most certainly.

Stranger:: With democracy, on the other hand, whether in fact it’s by force or with their consent that the mass rules over those who possess the wealth, and whether by accurately preserving the laws or not, in all these cases no one is in the habit of changing its name.

Socrates Younger:: True.

Stranger:: What then? Do we suppose that any of these constitutions is correct, when it is defined by these criteria—one, few and many, wealth and poverty, force and consent, and whether it turns out to be accompanied by written laws or without laws?

Socrates Younger:: Why, what actually prevents it?

Stranger:: Look at it more clearly, following this way.

Socrates Younger:: Which?

Stranger:: Shall we abide by what we said when we first began, or shall we be in discord with it?

Socrates Younger:: What was that?

Stranger:: We said, I think, that kingly rule was one of the sorts of expert knowledge.

Socrates Younger:: Yes.

Stranger:: And not just one of them all, but we chose out from the rest particularly one that was concerned in a sense with making judgments and controlling.

Socrates Younger:: Yes.

Stranger:: And then from the controlling sort, we took one that was set over inanimate products, and one set over living creatures; and it’s by splitting things up in just this way that we have been progressing all the time to the point where we are now. We haven’t forgotten that it’s knowledge, but as for what sort of knowledge it is, we’re not yet able to give a sufficiently accurate answer.

Socrates Younger:: Your account is correct.

Stranger:: Then do we see just this very point, that the criterion in the things in question must not be few, nor many, nor consent nor the lack of it, nor poverty nor wealth, but some sort of knowledge, if indeed we are going to be consistent with what we said before?

Socrates Younger:: But that we can't possibly fail to do.

Stranger:: Necessarily, then, we must now consider in which, if any, of these types of rule expert knowledge about ruling human beings turns out to occur—practically the most difficult and the most important thing of which to acquire knowledge. For we must catch sight of it, in order to consider which people we must remove from the wise king's company, who pretend to possess of the art of statesmanship, and persuade many people that they do, but in fact do not have it at all.

Socrates Younger:: Yes, we must indeed do this, as our argument has already told us.

Stranger:: Well, does it seem that a mass of people in the city are capable of acquiring this expertise?

Socrates Younger:: How could they?

Stranger:: But in a city of a thousand men, is it possible for a hundred or so, or again fifty, to acquire it adequately?

Socrates Younger:: In that case, it would be quite the easiest of all the sorts of expertise there are; for we know that among a thousand men there would never be so many top petteia-players in relation to those among the rest of the Greeks, let alone kings. For it is that man who actually possesses the expert knowledge of kingship, whether he rules or not, who must in any case be called an expert in kingship, according to what we said before.

Stranger:: You've remembered well. As a consequence of this, I think, we must look for correct rule in relation to some one person, or two, or altogether few—when it is correct.

Socrates Younger:: We certainly must.

Stranger:: Yes, but these people, whether they rule over willing or unwilling subjects, whether according to written laws or without them, and whether they rule as rich men or poor, we must suppose—as is now our view—to be carrying out whatever sort of rule they do on the basis of expertise. Doctors provide the clearest parallel. We believe in them whether they cure us with our consent or without it, by cutting or burning or applying some other painful treatment, and whether they do so according to written rules or apart from written rules, and whether as poor men or rich. In all these cases we are no less inclined at all to say they are doctors, so long as they are in charge of us on the basis of expertise, purging or otherwise reducing us, or else building us up—it is no matter, if only each and every one of those who care for our bodies acts for our bodies' good, making them better than they were, and so preserves what is in their care. It's in this way, as I think, and in no other that we'll lay down the criterion of medicine and of any other sort of rule whatsoever; it is the only correct criterion.

Socrates Younger:: Yes, just so.

Stranger:: It must then be the case, it seems, that of constitutions too the one that is correct in comparison with the rest, and alone a constitution, is the one in which the rulers would be found truly possessing expert knowledge, and not merely seeming to do so, whether they rule according to laws or without laws, over willing or unwilling subjects, and whether the rulers are poor or wealthy—there is no principle of correctness according to which any of these must be taken into any account at all.

Socrates Younger:: Right.

Stranger:: And whether they purge the city for its benefit by putting some people to death or else by exiling them, or whether again they make it smaller by sending out colonies somewhere like swarms of bees, or build it up by introducing people from somewhere outside and making them citizens—so long as they act to preserve it on the basis of expert knowledge and what is just, making it better than it was so far as they can, this is the constitution which alone we must say is correct, under these conditions and in accordance with criteria of this sort. All the others that we generally say are constitutions we must say are not genuine, and not really constitutions at all, but imitations of this one; those we say are 'law-abiding' have imitated it for the better, the others for the worse.

Socrates Younger:: The rest of it, visitor, seems to have been said in due measure; but that ideal rule may exist even without laws was something harder for a hearer to accept.

Stranger:: You got in just a little before me with your question, Socrates. For I was about to ask you whether you accept all of this, or whether in fact you find any of the things we have said difficult to take. But as it is it's already apparent that we'll want a discussion of this matter of the correctness of those who rule without laws.

Socrates Younger:: Quite.

Stranger:: Now in a certain sense it is clear that the art of the legislator belongs to that of the king; but the best thing is not that the laws should prevail, but rather the kingly man who possesses wisdom. Do you know why?

Socrates Younger:: What then is the reason?

Stranger:: That law could never accurately embrace what is best and most just for all at the same time, and so prescribe what is best. For the dissimilarities between human beings and their actions, and the fact that practically nothing in human affairs ever remains stable, prevent any sort of expertise whatsoever from making any simple decision in any sphere that covers all cases and will last for all time. I suppose this is something we agree about?

Socrates Younger:: Certainly.

Stranger:: But we see law bending itself more or less towards this very thing; it resembles some self-willed and ignorant person, who allows no one to do anything contrary to what he orders, nor to ask any questions about it, not even if, after all, something new turns out for someone which is better, contrary to the prescription which he himself has laid down.

Socrates Younger:: True; the law does absolutely as you have just said with regard to each and every one of us.

Stranger:: Then it is impossible for what is perpetually simple to be useful in relation to what is never simple?

Socrates Younger:: Very likely.

Stranger:: Why then is it ever necessary to make laws, given that law is not something completely correct? We must find out the cause of this.

Socrates Younger:: Certainly.

Stranger:: Now with you, too, people train in groups in the way they do in other cities, whether for running or for anything else, for competitive purposes?

Socrates Younger:: Yes, very frequently.

Stranger:: Well, now let's recall to mind the instructions that expert trainers give when they're in charge of people in such circumstances.

Socrates Younger:: What are you thinking of?

Stranger:: That they don't suppose there is room for them to make their prescriptions piece by piece to suit each individual, giving the instruction appropriate to the physical condition of each; they regard it as necessary to make rougher prescriptions about what will bring physical benefit, as suits the majority of cases and a large number of people.

Socrates Younger:: Right.

Stranger:: And it's just for this reason that, as it is, they give equally heavy exercises to the group as a whole, starting them off together and stopping them together in their running, wrestling, and the rest of their physical exercises.

Socrates Younger:: That's so.

Stranger:: Then let's suppose the same about the legislator too, the person who will direct his herds in relation to justice and their contracts with one another: he will never be capable, in prescribing for everyone together, of assigning accurately to each individual what is appropriate for him.

Socrates Younger:: What you say certainly sounds reasonable.

Stranger:: Instead he will, I think, set down the law for each and every one according to the principle of 'for the majority of people, for the majority of cases, and roughly, somehow, like this', whether expressing it in writing or in unwritten form, legislating by means of ancestral customs.

Socrates Younger:: Correct.

Stranger:: Yes, it certainly is. For how would anyone ever be capable, Socrates, of sitting beside each individual perpetually throughout his life and accurately prescribing what is appropriate to him? Since in my view, if he were capable of this, any one of those who had really acquired the expert knowledge of kingship would hardly put obstacles in his own way by writing down these laws we talked about.

Socrates Younger:: It certainly follows from what we have now said, visitor.

Stranger:: Yes, but more, my good friend, from the things that are going to be said.

Socrates Younger:: And what are they?

Stranger:: Things like the following. Are we to say—that is, between us— that if a doctor, or else some gymnastic trainer, were going to be out of the country and away from his charges for what he thought would be a long time, and thought that the people being trained, or his patients, would not remember the instructions he had given them, he would want to write down reminders for them—or what are we to say?

Socrates Younger:: As you suggested.

Stranger:: But what if he came back unexpectedly, having been away for less time than he thought he would be? Do you think he wouldn't propose other prescriptions, contrary to the ones he had written down, when things turned out to be different, and better, for his patients because of winds or else some other of the things that come from Zeus which had come about contrary to expectation, in some way differently from the usual pattern? Would he obstinately think that neither he nor the patient should step outside those ancient laws that had once been laid down—he himself by giving other instructions, the patient by daring to do different things contrary to what was written down—on the grounds that these were the rules of the art of medicine and of health, and that things that happened differently were unhealthy and not part of his expertise? Or would all such things, if they happened in the context of truly expert knowledge, cause altogether the greatest ridicule, in all spheres, for acts of legislation of this sort?

Socrates Younger:: Absolutely right.

Stranger:: And as for the person who has written down what is just and unjust, fine and shameful, good and bad, or has laid down unwritten laws on these subjects, for all those herds of human beings that graze, city by city, according to the laws of those who wrote them down in each case— if the person who wrote them on the basis of expertise, or someone else resembling him, arrives, is it really not to be permitted to him to give different instructions contrary to these? Or wouldn't this prohibition appear in truth no less ridiculous than the other one?

Socrates Younger:: Of course.

Stranger:: Well then, do you know what the majority of people say in such a case?

Socrates Younger:: It doesn't come to mind for the moment, just like that.

Stranger:: Well, it sounds fine enough. What they say is that if someone recognizes laws that are better, contrary to those established by people before him, then he must introduce them by persuading his city to accept them in each case, but not otherwise.

Socrates Younger:: Well then? Is that not a correct view?

Stranger:: Perhaps. But first things first: if someone forces through what is better without the use of persuasion, tell me, what will be the name to give to the use of force in this case? No—not yet; answer me first in relation to the previous cases.

Socrates Younger:: What do you mean?

Stranger:: If then—to continue with our example—someone does not persuade his patient, but has a correct grasp of the relevant expertise, and forces child, or man, or woman, to do what is better, contrary to what has been written down, what will be the name to give to this use of force? Surely anything rather than what we called an unhealthy mistake contrary to the expertise in question? And the last thing the person who was the object of such force can correctly say about such a thing is that he had unhealthy things done to him by the doctors who used force on him, things that did not belong to their expertise?

Socrates Younger:: What you say is very true.

Stranger:: And what do we really suppose to be the sort of mistake we're talking about, the one in contravention of the expertise of the statesman? Isn't it what is shameful, what is bad, and unjust?

Socrates Younger:: I agree, absolutely.

Stranger:: Then those who have been forced, contrary to what has been written down and to ancestral custom, to do different things that are more just, better and finer than the things they did before—tell me, if people in this kind of situation for their part censure this kind of use of force, isn't it true that, if their censure isn't to be the most laughable of all, they must say anything on each occasion rather than that those who have been forced have had shameful, unjust and bad things done to them by those who did the forcing?

Socrates Younger:: What you say is very true.

Stranger:: But are the things forced on them just, if the person who did the forcing is rich, and unjust if he happens to be poor? Or if, whether by using persuasion or not, whether as a rich or a poor man, or according to written law or contrary to it, he does what is not to the benefit of the citizens or what is to their benefit, must that be the criterion, and must it have to do with these things—the truest criterion of correct government of a city, the one according to which the wise and good man will govern the interests of the ruled? Just as a steersman, always watching out for what is to the benefit of the ship and the sailors, preserves his fellow sailors not by putting things down in writing but offering his expertise as law, so too in this same manner a constitution would be correct, would it not, if it issued from those who are able to rule in this way, offering the strength of their expertise as more powerful than the laws? And there is no mistake, is there, for wise rulers, whatever they do, provided that they watch for one great thing, that by always distributing to those in the city what is most just, as judged by the intelligent application of their expertise, they are able both to preserve them and so far as they can to bring it about that they are better than they were?

Socrates Younger:: It is certainly not possible to contradict what has just been said.

Stranger:: And neither should one contradict those other things we said.

Socrates Younger:: What are you referring to?

Stranger:: That a mass of any people whatsoever would never be able to acquire this sort of expert knowledge and so govern a city with intelligence; and that we must look for that one constitution, the correct one, in relation to a small element in the population, few in number, or even a single individual, putting down the other constitutions as imitations, as was said a little earlier, some of them imitating this one for the better, the others for the worse.

Socrates Younger:: What do you mean by this? What are you saying? For I did not understand the point about imitations when it was made just now either.

Stranger:: And it’s no small matter, if one stirs up this subject and then proceeds to leave it where it is instead of going through it and showing the mistake that now occurs in relation to it.

Socrates Younger:: What mistake is that?

Stranger:: This sort of thing we must hunt for, since it is not altogether what we are used to or easy to see; but all the same let’s try to get hold of it. Tell me: given that this constitution we have talked about is on our view the only correct one, do you recognize that the others ought to employ the written documents that belong to this one, and save themselves in that way, doing what is now praised, although it is not the most correct thing to do?

Socrates Younger:: What are you referring to?

Stranger:: The principle that no one in the city should dare to do anything contrary to the laws, and that the person who dares to do so should be punished by death and all the worst punishments. This is very correct and fine as a second choice, when one changes the principle we discussed just now, which is our first choice; but let us go over the way in which what we have called ‘second-best’ has come about. Do you agree?

Socrates Younger:: Absolutely.

Stranger:: Well then, let’s go back to the likenesses to which we must always compare our kingly rulers.

Socrates Younger:: Which likenesses?

Stranger:: The noble steersman and the doctor who is ‘worth many others’. Let us look at the matter by fashioning a kind of figure, using these as material.

Socrates Younger:: A figure of what kind?

Stranger:: Of the following sort: let’s suppose that we all thought of them as doing the most terrible things to us. For the one as much as the other saves whichever of us he wishes to save; and whichever of us they wish to mutilate, they do it by cutting and burning us and directing us to pay them expenses as if they were taxes, of which they spend little or none on the patient, while they themselves and their household use the rest; and the final step is for them to take money from relatives or some enemies of the patient as pay for killing him. And steersmen, in their turn, bring about thousands of other things of a similar sort, leaving people stranded on voyages because of some conspiracy or other, causing shipwrecks on the seas and throwing people overboard, and doing other malicious things. Let's suppose then that we thought this, and came to a conclusion about them in a sort of council, no longer to allow either of these sorts of expertise to have autonomous control either of slaves or of free men, but to call together an assembly with ourselves as members, consisting either of the people all together or only of the rich. The rule would be that both laymen and craftsmen other than steersmen and doctors would be permitted to contribute an opinion, whether about sailing or about diseases, as to the basis on which drugs and the tools of the doctor's art should be used on patients, and even how to employ ships themselves, and the tools of the sailor's art for operating them, for facing not only the dangers affecting the voyage itself from winds and sea, but encounters with pirates, and perhaps, if it should turn out to be necessary, for fighting a sea battle with long ships against others of the same type. And once there was a record, on *kurbeis* or blocks of stone of some sort, of what the majority had decided, whether with the advice of some doctors and steersmen or of those who had no specialized knowledge of medicine or steersmanship, then all our sailing and caring for patients for all future time would have to be done according to this, along with certain other rules established as unwritten ancestral customs.

Socrates Younger:: What you've described is distinctly odd.

Stranger:: Yes—and let's suppose that a further conclusion was that we should set up officers annually who belong to the mass of people, whether from the rich or from the whole people, whoever has office assigned to him by lot; and that those who take office should execute it by steering the ships and healing patients according to the written rules.

Socrates Younger:: This is even harder to take.

Stranger:: Then consider too what follows after this. When the year ends for each and every one of the officers, there will be a requirement to set up courts, either of the rich on the basis of preselection or again those chosen by lot from the whole people together, and to bring before these judges those who have held office, in order to examine their conduct. Anyone who wishes will be permitted to charge an officer that he failed to steer the ships during the year according to the written rules or according to the ancient customs of our ancestors. There will be these same requirements also in the case of those healing the sick, and for any officers condemned by the vote, the judges will have to assess what penalty they should suffer or what financial restitution they should make.

Socrates Younger:: Well, anyone who willingly and voluntarily undertakes to hold office under such conditions would fully deserve to suffer any penalty whatever and to pay back any amount.

Stranger:: And further still it will be necessary to establish a law against all the following things. Suppose anyone is found inquiring into steersmanship and seafaring, or health and truth in the doctor’s art, in relation to winds and heat and cold, above and beyond the written rules, and making clever speculations of any kind in relation to such things. In the first place one must not call him an expert doctor or an expert steersman, but a stargazer, some babbling sophist. The next provision will be that anyone who wishes from among those permitted to do so shall indict him and bring him before some court or other as corrupting other people younger than himself and inducing them to engage in the arts of the steersman and the doctor not in accordance with the laws, but instead by taking autonomous control of ships and patients. If he is found guilty of persuading anyone, whether young or old, contrary to the laws and the written rules, the most extreme penalties shall be imposed on him. For (so the law will say) there must be nothing wiser than the laws; no one is ignorant about what belongs to the art of the doctor, or about health, or what belongs to the art of the steersman, or seafaring, since it is possible for anyone who wishes to understand things that are written down and things established as ancestral customs. Suppose then these things came about, Socrates, in the way we say, both in relation to these sorts of expert knowledge, and to generalship, and all the art of hunting, of whatever kind; to painting, or any part whatever of all the art of imitation; to carpentry, the whole of tool-making, of whatever kind, or again farming and the whole of the expertise that deals with plants. Or again, suppose we imagined a sort of horse-rearing that took place according to written rules, or all of herd-keeping, or the art of divination, or every part included in the art of the subordinate, or petteia, or all the science of numbers, whether perhaps dealing with them on their own, or in two dimensions, or in solids, or in speeds. If all of these were practiced in this way, and they were done on the basis of written rules and not on the basis of expertise, what on earth would be the result?

Socrates Younger:: It’s clear both that we should see all the various sorts of expertise completely destroyed, and that they would never be restored, either, because of this law prohibiting inquiry; so that life, which even now is difficult, in such a time would be altogether unlivable.

Stranger:: But what about the following consideration? Suppose we required each of the things mentioned to be done according to written rules, and we required the person elected or appointed to office by lot, on the basis of chance, to oversee these written rules of ours: what then if this person were to take no notice of what is written down, in order either to profit in some way or to do some personal favor, and were to take it upon himself to do different things, contrary to these, when he possesses no knowledge? Would this not be an evil still greater than the previous one?

Socrates Younger:: Yes, very true.

Stranger:: Yes, for if, I imagine, contrary to the laws that have been established on the basis of much experiment, with some advisers or other having given advice on each subject in an attractive way, and having persuaded the majority to pass them—if someone were brazen enough to act contrary to these, he would be committing a mistake many times greater than the other, and would overturn all expert activity to a still greater degree than do the written rules.

Socrates Younger:: Yes—how would he not?

Stranger:: For these reasons, then, the second-best method of proceeding, for those who establish laws and written rules about anything whatever, is to allow neither individual nor mass ever to do anything contrary to these—anything whatsoever.

Socrates Younger:: Correct.

Stranger:: Well, imitations of the truth of each and every thing would be these, wouldn't they—the things issuing from those who know which have been written down so far as they can be?

Socrates Younger:: Of course.

Stranger:: Now we said—if we remember—that the knowledgeable person, the one who really possesses the art of statesmanship, would do many things in relation to his own activity by using his expertise, without taking any notice of the written laws, when other things appear to him to be better, contrary to those that have been written down by him and given as orders to people who are not currently with him.

Socrates Younger:: Yes, that's what we said.

Stranger:: Well, any individual whatever or any large collection of people whatever, for whom there are actually written laws established, who undertake to do anything at all that is different, contrary to these, on the grounds that it is better, will be doing, won't they, the same thing as that true expert, so far as they can?

Socrates Younger:: Absolutely.

Stranger:: Well then, if they were to do such a thing without having expert knowledge, they would be undertaking to imitate what is true, but would imitate it altogether badly; but if they did it on the basis of expertise, this is no longer imitation but that very thing that is most truly what it sets out to be?

Socrates Younger:: I agree completely—I think.

Stranger:: But it is established as agreed between us—we agreed to it before, at any rate—that no large collection of people is capable of acquiring any sort of expertise whatever.

Socrates Younger:: Yes, it remains agreed.

Stranger:: Then if some sort of kingly expertise exists, neither the collection of people that consists of the rich, nor all the people together, could ever acquire this expert knowledge of statesmanship.

Socrates Younger:: How could they?

Stranger:: The requirement, then, as it seems, for all constitutions of this sort, if they are going to produce a good imitation of that true constitution of one man ruling with expertise, so far as they can, is that—given that they have their laws—they must never do anything contrary to what is written or to ancestral customs.

Socrates Younger:: Very well said.

Stranger:: In that case, when the rich imitate it, then we shall call such a constitution an ‘aristocracy’; when they take no notice of the laws, we shall call it an ‘oligarchy’.

Socrates Younger:: Possibly.

Stranger:: And, in turn, when one person rules according to laws, so imitating the person with expert knowledge, we shall call him a king, not distinguishing by name the one ruling on his own with expert knowledge or the one doing so on the basis of opinion, according to laws.

Socrates Younger:: Possibly we shall.

Stranger:: Well then, if in fact some one person rules who really possesses expert knowledge, in every case he will be called by the same name of king and not by any other one. As a result of this the five names of what are now called constitutions have become only one.

Socrates Younger:: It seems so, at any rate.

Stranger:: And what of the case when some one ruler acts neither according to laws nor according to customs, but pretends to act like the person with expert knowledge, saying that after all one must do what is contrary to what has been written down if it is best, and there is some desire or other combined with ignorance controlling this imitation? Surely in those circumstances we must call every such person a tyrant?

Socrates Younger:: Of course.

Stranger:: Then it is in this way that the tyrant has come about, we say, and the king, and oligarchy, and aristocracy, and democracy—because people found themselves unable to put up with the idea of that single individual of ours as monarch, and refused to believe that there would ever come to be anyone who deserved to rule in such a way, so as to be willing and able to rule with virtue and expert knowledge, distributing what is just and right correctly to all. They think that a person in such a position always mutilates, kills and generally maltreats whichever of us he wishes; although if there were to come to be someone of the sort we are describing, he would be prized and would govern a constitution that would alone be correct in the strict sense, steering it through in happiness.

Socrates Younger:: Quite.

Stranger:: But as things are, when—as we say—a king does not come to be in cities as a king-bee is born in a hive, one individual immediately superior in body and mind, it is necessary—so it seems—for people to come together and write things down, chasing after the traces of the truest constitution.

Socrates Younger:: Possibly.

Stranger:: Do we wonder, then, Socrates, at all the evils that turn out to occur in such constitutions, and all those that will turn out for them, when a foundation of this sort underlies them, one of carrying out their functions according to written rules and customs without knowledge—which if used by another expertise would manifestly destroy everything that comes about through it? Or should we rather wonder at something else, namely at how strong a thing a city is by its nature? For in fact cities have suffered such things now for time without limit, but nevertheless some particular ones among them are enduring and are not overturned. Yet many from time to time sink like ships, and perish, and have perished, and will perish in the future through the depravity of their steersmen and sailors, who have acquired the greatest ignorance about the greatest things—although they have no understanding at all about what belongs to the art of statesmanship, they think they have completely acquired this sort of expert knowledge, most clearly of them all.

Socrates Younger:: Very true.

Stranger:: So which of these ‘incorrect’ constitutions is least difficult to live with, given that they are all difficult, and which the heaviest to bear? Should we take a brief look at this, although a discussion of it will be a side-issue in relation to the subject now set before us? And yet, at any rate in general, perhaps everything that all of us do is for the sake of this sort of thing.

Socrates Younger:: We should certainly look at it.

Stranger:: Well then, what you should say is that, if there are three sorts of constitution, the same one is at the same time exceptionally difficult and easiest.

Socrates Younger:: What are you saying?

Stranger:: Just this: monarchy, I’m saying, rule by a few and rule by many—there were these three sorts of constitution we were talking about at the beginning of the discussion with which we have now been deluged.

Socrates Younger:: Yes, there were.

Stranger:: Well then, let’s divide these, each single one into two, and make six, separating off the correct one from these on its own, as a seventh.

Socrates Younger:: How so?

Stranger:: Out of monarchy let’s make kingly and tyrannical rule; out of the sort that doesn’t involve many, we said there was the auspiciously named aristocracy, and oligarchy, while out of the sort that does involve many, there was democracy, which we then called single and put it down as such, but now in turn we must put this too down as double.

Socrates Younger:: How, then? And dividing it by what criterion?

Stranger:: By one that is no different from the other cases, even if its name, 'democracy', is now double; but certainly ruling according to laws and contrary to laws belongs both to this and to the others.

Socrates Younger:: Yes, it does.

Stranger:: Well, at the time when we were looking for the correct constitution, this cut was not useful, as we demonstrated in what we said before; but since we have now set that correct constitution to one side, and have put down the rest as necessary, in the case of these, certainly, the criterion of contrary to and abiding by laws cuts each of them in two.

Socrates Younger:: It seems so, given what has now been said.

Stranger:: Well then, when monarchy is yoked in good written rules, which we call laws, it is best of all six; but if it is without laws, it is difficult and heaviest to live with.

Socrates Younger:: Possibly.

Stranger:: And as for the rule of those who are not many, just as few is in the middle between one and a large number, let's suppose it to be middling in both ways; while that of the mass, in its turn, we may suppose to be weak in all respects and capable of nothing of any importance either for good or for bad as judged in relation to the others, because under it offices are distributed in small portions among many people. For this reason, if all the types of constitution are law-abiding, it turns out to be the worst of them, but if all are contrary to law, the best; and if all are uncontrolled, living in a democracy takes the prize, but if they are ordered, life in it is least livable, and in first place and best by far will be life in the first, except for the seventh. For of all of them, that one we must separate out from the other constitutions, like a god from men.

Socrates Younger:: This seems both to follow, and to be, as you say; and we must do as you suggest.

Stranger:: So then we must also remove those who participate in all these constitutions, except for the one based on knowledge, as being, not statesmen, but experts in faction; we must say that, as presiding over insubstantial images, on the largest scale, they are themselves of the same sort, and that as the greatest imitators and magicians they turn out the be the greatest sophists among sophists.

Socrates Younger:: This term ‘sophist’ looks as if it has been only too correctly turned round against the so-called experts in statesmanship.

Stranger:: So: this is our play, as it were—as we said just now that there was some band of centaurs and satyrs in view, one that we had to set apart from the expertise of the statesman; and now it has been set apart, as we have seen, with great difficulty.

Socrates Younger:: It appears so.

Stranger:: Yes, but there is something else remaining that is still more difficult than this, by reason of its being both more akin to the kingly class, and closer to it, and harder to understand; and we seem to me to be in a situation similar to that of those who refine gold.

Socrates Younger:: How so?

Stranger:: I imagine that these craftsmen also begin by separating out earth, and stones, and many different things; and after these, there remain commingled with the gold those things that are akin to it, precious things and only removable with the use of fire: copper, silver, and sometimes adamant, the removal of which through repeated smelting and testing leaves the ‘unalloyed’ gold that people talk about there for us to see, itself alone by itself.

Socrates Younger:: Yes, they certainly do say these things happen in this way.

Stranger:: Well, it seems that in the same way we have now separated off those things that are different from the expert knowledge of statesmanship, and those that are alien and hostile to it, and that there remain those that are precious and related to it. Among these, I think, are generalship, the art of the judge, and that part of rhetoric which in partnership with kingship persuades people of what is just and so helps in steering through the business of cities. As for these, in what way will one most easily portion them off and show, stripped and alone by himself, that person we are looking for?

Socrates Younger:: It's clear that we must try to do this somehow.

Stranger:: Well, if it depends on our trying, we'll find him; music will help us reveal him. Answer me this.

Socrates Younger:: What?

Stranger:: I imagine we recognize such a thing as the learning of music, and in general of the sorts of expert knowledge involving work with the hands?

Socrates Younger:: We do.

Stranger:: And what of this—the matter of whether we should learn any one of these or not? Shall we say that this too, in its turn, is a sort of knowledge, concerned with these very things, or what shall we say?

Socrates Younger:: Yes, we'll say that it is.

Stranger:: Then shall we agree that this sort of knowledge is distinct from those?

Socrates Younger:: Yes.

Stranger:: And shall we agree that no one of them should control any other, or that the others should control this one, or that this one should manage and control all the others together?

Socrates Younger:: This one should control them.

Stranger:: In that case you, at any rate, declare it to be your opinion that the one that decides whether one should learn or not should be in control, so far as we are concerned, over the one that is the object of learning and does the teaching?

Socrates Younger:: Very much so.

Stranger:: And also, in that case, that the one which decides whether one should persuade or not should control the one which is capable of persuading?

Socrates Younger:: Of course.

Stranger:: Well then: to which sort of expert knowledge shall we assign what is capable of persuading mass and crowd, through the telling of stories, and not through teaching?

Socrates Younger:: This too is clear, I think: it must be given to rhetoric.

Stranger:: And the matter of whether to do through persuasion whatever it may be in relation to some people or other, or else by the use of some sort of force, or indeed to do nothing at all: to what sort of expert knowledge shall we attach this?

Socrates Younger:: To the one that controls the art of persuasion and speaking.

Stranger:: This would be none other, I think, than the capacity of the statesman.

Socrates Younger:: Very well said.

Stranger:: This matter of rhetoric too seems to have been separated quickly from statesmanship, as a distinct class, but subordinate to it.

Socrates Younger:: Yes.

Stranger:: What should we think about the following sort of capacity, in its turn?

Socrates Younger:: Which one?

Stranger:: The one that decides how to make war against each group of people against whom we choose to make war. The question is whether we shall say that this is or is not a matter of expertise.

Socrates Younger:: And how could we suppose it not to involve expertise: that capacity which is exercised by generalship and all activity concerned with war?

Stranger:: And are we to understand as different from this the expertise that is able and knows how to reach a considered decision about whether we should make war, or whether we should withdraw in friendly fashion? Or are we to take it to be the same as this one?

Socrates Younger:: Anyone who was following what was said before must suppose that it is distinct.

Stranger:: Shall we then declare our view that it controls it, if in fact we are going to take things in line with what we said before?

Socrates Younger:: I say yes.

Stranger:: Then what mistress will we even try to propose for so terrifying and important an expertise, the whole of that concerned with war, except the true art of kingship?

Socrates Younger:: No other.

Stranger:: In that case we shall not set down the expert knowledge of generals as statesmanship, since it is subordinate.

Socrates Younger:: It seems unlikely that we shall.

Stranger:: Come on then; let’s look at the capacity that belongs to those judges who judge correctly.

Socrates Younger:: Absolutely.

Stranger:: Well then, does its capacity extend to anything more than taking over from the legislator-king all those things that are established as lawful in relation to contracts, and judging by reference to these the things that have been prescribed as just and unjust, providing its own individual excellence by virtue of the fact that it would not be willing to decide the complaints of one citizen against another contrary to the prescription of the legislator through being overcome by presents of some sort, or fears, or feelings of compassion, or again by any enmity or friendship?

Socrates Younger:: No, the function of this capacity extends, roughly speaking, to what you have said.

Stranger:: In that case we discover the power of judges too not to be that belonging to the king, but to be a guardian of the laws and a subordinate of that other capacity.

Socrates Younger:: It seems so, at any rate.

Stranger:: If then one looks at all the sorts of expert knowledge that have been discussed, it must be observed that none of them has been declared to be statesmanship. For what is really kingship must not itself perform practical tasks, but control those with the capacity to perform them, because it knows when it is the right time to begin and set in motion the most important things in cities, and when it is the wrong time; and the others must do what has been prescribed for them.

Socrates Younger:: Correct.

Stranger:: For this reason, then, the sorts of expertise we have just examined control neither each other nor themselves, but each is concerned with some individual practical activity of its own, and in accordance with the individual nature of the activities in question has appropriately acquired a name that is individual to it.

Socrates Younger:: That seems so, at any rate.

Stranger:: Whereas the one that controls all of these, and the laws, and cares for every aspect of things in the city, weaving everything together in the most correct way—this, embracing its capacity with the appellation belonging to the whole, we would, it seems, most appropriately call statesmanship.

Socrates Younger:: Yes, absolutely.

Stranger:: At this point we'll want, won't we, to pursue it further by reference to the model of the art of weaving, now that all the classes of things in the city have become clear to us?

Socrates Younger:: Yes, very much so.

Stranger:: Then it seems that we should discuss the intertwining that belongs to kingship—of what kind it is, and in what way it intertwines to render us what sort of fabric.

Socrates Younger:: Clearly.

Stranger:: What it seems we have to deal with, in that case, is certainly a difficult thing to show.

Socrates Younger:: But in any case we have to discuss it.

Stranger:: To say that part of virtue is in a certain sense different in kind from virtue provides an all too easy target for those expert in disputing statements, if we view things in relation to what the majority of people think.

Socrates Younger:: I don't understand.

Stranger:: I'll put it again, like this. I imagine you think that courage, for us, constitutes one part of virtue.

Socrates Younger:: Certainly.

Stranger:: And also that moderation is something distinct from courage, but at the same time that this too is one part of what the other is part of.

Socrates Younger:: Yes.

Stranger:: Well, we must take our courage in our hands and declare something astonishing in relation to these two.

Socrates Younger:: What?

Stranger:: That, in some sort of way, they are extremely hostile to each other and occupy opposed positions in many things.

Socrates Younger:: What do you mean?

Stranger:: Not in any way the sort of thing people are used to saying. For certainly, I imagine, all the parts of virtue are said to be amicably disposed towards each other, if anything is.

Socrates Younger:: Yes.

Stranger:: Then should we look, with extremely close attention, to see whether this is unqualifiedly the case, or whether emphatically some aspects of them admit of dissent in some respect with what is related to them?

Socrates Younger:: Yes; please say how we should do so.

Stranger:: We should look at the matter in relation to all those things that we call fine, but then go on to place them in two classes which are opposed to each other.

Socrates Younger:: Put it still more clearly.

Stranger:: Sharpness and speed, whether in bodies, or in minds, or in the movement of the voice, whether belonging to the things themselves or as represented in images of them—all those imitations that music, and painting too, provide: have you ever either praised any of these yourself, or been present to hear someone else praising them?

Socrates Younger:: Of course.

Stranger:: And do you remember how they do it in every one of such cases?

Socrates Younger:: I don’t at all.

Stranger:: Then would I be able, I wonder, to show it to you in words just as I have it before my mind?

Socrates Younger:: Why not?

Stranger:: You seem to think this kind of thing easy; but in any case let's consider it in the two opposite sorts of case. Often, and in many activities, whenever we admire speed and vigor and sharpness, of mind and body, and again of voice, we speak in praise of it by using a single appellation, that of 'courage'.

Socrates Younger:: How so?

Stranger:: I think we say 'sharp and courageous'—that's a first example; and 'fast and courageous', and similarly with 'vigorous'. In every case it's by applying the name I'm talking about in common to all these sorts of thing that we praise them.

Socrates Younger:: Yes.

Stranger:: But again—in many activities, don't we often praise the class of things that happen gently?

Socrates Younger:: Yes, very much so.

Stranger:: Well then, don't we express this by saying the opposite of what we say of the other things?

Socrates Younger:: How?

Stranger:: In that, I think, we say on each occasion that they are 'quiet and moderate', admiring things done in the mind, and in the sphere of actions themselves, that are slow and soft, and also things the voice does that turn out smooth and deep—and all rhythmic movement, and the whole of music when it employs slowness at the right time. We apply to them all the name, not of courage, but of orderliness.

Socrates Younger:: Very true.

Stranger:: And when, conversely, both of these sets of qualities occur at the wrong time, we change round and censure each of them, assigning them to opposite effect by the names we use.

Socrates Younger:: How?

Stranger:: By calling them ‘excessive and manic’ when they turn out sharper than is timely, and appear too fast and hard, and calling things that are too deep and slow and soft ‘cowardly and lethargic’. It’s pretty much a general rule that we find that these qualities, and the moderate type as a whole, and the ‘courage’ of the opposite qualities do not mix with each other in the relevant activities, as if they were sorts of thing that had a warring stance allotted to them. Moreover we shall see that those who possess them in their souls are at odds with each other, if we go looking for them.

Socrates Younger:: Where do you mean us to look?

Stranger:: Both in all the spheres we mentioned just now, and no doubt in many others. For I think because of their affinity to either set of qualities, they praise some things as belonging to their own kin, and censure those of their opponents as alien, engaging in a great deal of hostility towards each other, about a great many things.

Socrates Younger:: Very likely.

Stranger:: Well, this disagreement, of these classes of people, is a sort of play; but in relation to the most important things, it turns out to be a disease which is the most hateful of all for cities.

Socrates Younger:: In relation to what, do you mean?

Stranger:: In relation to the organization of life as a whole. For those who are especially orderly are always ready to live the quiet life, carrying on their private business on their own by themselves. They both associate with everyone in their own city on this basis, and similarly with cities outside their own, being ready to preserve peace of some sort in any way they can. As a result of this passion of theirs, which is less timely than it should be, when they do what they want nobody notices that they are being unwarlike and making the young men the same, and that they are perpetually at the mercy of those who attack them. The consequence is that within a few years they themselves, their children, and the whole city together often become slaves instead of free men before they have noticed it.

Socrates Younger:: What you describe is a painful and terrifying thing to go through.

Stranger:: But what about those who incline more towards courage? Isn't it the case that they are always drawing their cities into some war or other because of their desire for a life of this sort, which is more vigorous than it should be, and that they make enemies of people who are both numerous and powerful, and so either completely destroy their own fatherlands, or else make them slaves and subjects of their enemies?

Socrates Younger:: This too is true.

Stranger:: How then can we deny that in these things both of these classes of people always admit of much hostility and dissent between them, even to the greatest degree?

Socrates Younger:: There's no way we shall deny it.

Stranger:: Then we have found, haven't we, what we were originally looking into, that parts of virtue of no small importance are by nature at odds with each other, and moreover cause those who possess them to be in this same condition?

Socrates Younger:: Very likely they do.

Stranger:: Then let's take the following point in its turn.

Socrates Younger:: What's that?

Stranger:: Whether, I suppose, any of the sorts of expert knowledge that involve putting things together voluntarily puts together any at all of the things it produces, even of the lowliest kind, out of bad and good things, or whether every sort of expert knowledge everywhere throws away the bad so far as it can, and takes what is suitable and good, bringing all of this—both like and unlike—together into one, and so producing some single kind of thing with a single capacity.

Socrates Younger:: Of course.

Stranger:: In that case, neither will what we have decided is by nature truly the art of statesmanship ever voluntarily put together a city out of good and bad human beings. It's quite clear that it will first put them to the test in play, and after the test it will in turn hand them over to those with the capacity to educate them and serve it towards this particular end. It will itself lay down prescriptions for the educators and direct them, in the same way that weaving follows along with the carders, and those who prepare the other things it needs for its own work, prescribing for and directing them, giving indications to each group to finish their products in whatever way it thinks suitable for its own interweaving.

Socrates Younger:: Yes, absolutely.

Stranger:: In just this very way, it seems to me, the art of kingship—since it is this that itself possesses the capacity belonging to the directing art— will not permit the educators and tutors, who function according to law, to do anything in the exercise of their role that will not ultimately result in some disposition which is appropriate to its own mixing role. It calls on them to teach these things alone; and those of their pupils that are unable to share in a disposition that is courageous and moderate, and whatever else belongs to the sphere of virtue, but are thrust forcibly away by an evil nature into godlessness, excess and injustice, it throws out by killing them, sending them into exile, and punishing them with the most extreme forms of dishonor.

Socrates Younger:: At least it is put something like that.

Stranger:: And again those who wallow in great ignorance and baseness it brings under the yoke of the class of slaves.

Socrates Younger:: Quite correct.

Stranger:: Then as for the others, whose natures are capable of becoming composed and stable in the direction of nobility, if they acquire education, and, with the help of expertise, of admitting commingling with each other— of these, it tries to bind together and intertwine the ones who strain more towards courage, its view being that their firm disposition is as it were like the warp, and the ones who incline towards the moderate, who produce an ample, soft, and—to continue the image—woof-like thread, two natures with opposite tendencies; and it does so in something like the following way.

Socrates Younger:: What way is that?

Stranger:: First, by fitting together that part of their soul that is eternal with a divine bond, in accordance with its kinship with the divine, and after the divine, in turn fitting together their mortal aspect with human bonds.

Socrates Younger:: Again, what do you mean by this?

Stranger:: I call divine, when it comes to be in souls, that opinion about what is fine, just and good, and the opposites of these, which is really true and is guaranteed; it belongs to the class of the more than human.

Socrates Younger:: That’s certainly a fitting view to take.

Stranger:: Then do we recognize that it belongs to the statesman and the good legislator alone to be capable of bringing this very thing about, by means of the music that belongs to the art of kingship, in those who have had their correct share of education—the people we were speaking of just now?

Socrates Younger:: That's certainly reasonable.

Stranger:: Yes, and let's never call anyone who is incapable of doing this sort of thing by the names we are now investigating.

Socrates Younger:: Quite correct.

Stranger:: Well then—is a 'courageous' soul that grasps this sort of truth not tamed, and wouldn't it be especially willing, as a result, to share in what is just, whereas if it fails to get a share of it, doesn't it rather slide away towards becoming like some kind of beast?

Socrates Younger:: Quite.

Stranger:: And what of the case of the 'moderate' sort of nature? If it gets a share of these opinions, doesn't it become genuinely moderate and wise, so far as wisdom goes in the context of life in a city, while if it fails to get a portion of the things we're talking about, doesn't it very appropriately acquire a disgraceful reputation, for simplemindedness?

Socrates Younger:: Absolutely.

Stranger:: And let's not say, shall we, that this sort of interweaving and bonding, in the case of vicious men in relation to each other and good men in relation to the vicious, ever turns out to be lasting, nor that any sort of expert knowledge would ever seriously use it in relation to people like this?

Socrates Younger:: No; how would it?

Stranger:: What I propose we should say is that it only takes root, through laws, in those dispositions that were both born noble in the first place and have been nurtured in accordance with their nature; and that it is for these that this remedy exists, by virtue of expertise. As we said, this bonding together is more divine, uniting parts of virtue that are by nature unlike each other, and tend in opposite directions.

Socrates Younger:: Very true.

Stranger:: Yes, and the remaining bonds, which are human, once this divine one exists, are perhaps not difficult at all either to understand, or to effect once one has understood them.

Socrates Younger:: How then, and what are they?

Stranger:: Those that consist in intermarriages and the sharing of children, and in those matters relating to private giving-away in marriage. For most people, in the way they handle these things, do not bind themselves together correctly with respect to the procreation of children.

Socrates Younger:: Why so?

Stranger:: Is there any reason why anyone should seriously concern themselves with censuring the pursuit of wealth and forms of influence in such contexts, as if it were worth discussing?

Socrates Younger:: None.

Stranger:: No; it would be more appropriate for us to discuss those people who pay attention to family-types, and ask whether they are acting erroneously in some way.

Socrates Younger:: Yes, that’s reasonable.

Stranger:: Well, they act out of entirely the wrong sort of consideration: they go for what is immediately easiest, welcoming those who are much like them, and not liking those who are unlike them, assigning the largest part of their decisions to their feelings of antipathy.

Socrates Younger:: How?

Stranger:: The moderate, I think, look out for people with the disposition they themselves possess, and so far as they can they both marry from among these and marry off the daughters they are giving away back to people of this sort. The type related to courage does just the same thing, seeking after the nature that belongs to itself, when both types ought to do completely the opposite of this.

Socrates Younger:: How, and why?

Stranger:: Because it is in the nature of courage that when it is reproduced over many generations without being mixed with a moderate nature, it comes to a peak of power at first, but in the end it bursts out completely in fits of madness.

Socrates Younger:: That's likely.

Stranger:: And in its turn the soul that is too full of reserve and has no admixture of courageous initiative, and is reproduced over many generations in this way, by nature grows more sluggish than is timely and then in the end is completely crippled.

Socrates Younger:: It's likely that this too turns out as you say.

Stranger:: It was these bonds that I meant when I said that there was no difficulty at all in tying them together once the situation existed in which both types had a single opinion about what was fine and good. For this is the single and complete task of kingly weaving-together, never to allow moderate dispositions to stand away from the courageous. Rather, by working them closely into each other as if with a shuttle, through sharing of opinions, through honors, dishonor, esteem, and the giving of pledges to one another, it draws together a smooth and 'fine-woven' fabric out of them, as the expression is, and always entrusts offices in cities to these in common.

Socrates Younger:: How?

Stranger:: By choosing the person who has both qualities to put in charge wherever there turns out to be a need for a single officer, and by mixing together a part of each of these groups where there is a need for more than one. For the dispositions of moderate people when in office are markedly cautious, just, and conservative, but they lack bite, and a certain sharp and practical keenness.

Socrates Younger:: This too certainly seems to be the case.

Stranger:: And the dispositions of the courageous, in their turn, are inferior to the others in relation to justice and caution, but have an exceptional degree of keenness when it comes to action. Everything in cities cannot go well, either on the private or on the public level, unless both of these groups are there to give their help.

Socrates Younger:: Quite.

Stranger:: Then let us say that this marks the completion of the fabric which is the product of the art of statesmanship: the weaving together, with regular intertwining, of the dispositions of brave and moderate people—when the expertise belonging to the king brings their life together in agreement and friendship and makes it common between them, completing the most magnificent and best of all fabrics and covering with it all the other inhabitants of cities, both slave and free; and holds them together with this twining and rules and directs without, so far as it belongs to a city to be happy, falling short of that in any respect.

Socrates:: Another most excellent portrait, visitor, this one that you have completed for us, of the man who possesses the art of kingship: the statesman.

# Statesman.

Translated by J. B. Skemp.

Socrates, Stranger, Theodorus, Socrates Younger

Socrates:: Theodorus, I am really very much indebted to you for my introduction to Theaetetus and to our guest from Elea.

Theodorus:: Good, but you are likely to be three times as much in my debt, Socrates, when they have done their task and defined the statesman and the philosopher as well as the Sophist for you.

Socrates:: Three times as much? Really, my dear Theodorus, must it go on record that we heard our greatest mathematician and geometer say that?

Theodorus:: What do you mean, Socrates?

Socrates:: Are we to say that we heard you reckoning all these three as of equal value when their real values differ to an extent that defies all your mathematical expressions of proportion?

Theodorus:: By Ammon, god of Libya, well said, Socrates, and a fair hit! Your dropping on my blunder in calculation like this shows that you have really remembered your mathematics! But I will have my revenge for this some other time. Now, sir, we turn to you. Pray do not tire of favoring us with your assistance but go on to define the statesman or the philosopher, whichever you prefer to seek.

Stranger:: Yes, we must do that, Theodorus. We have set ourselves to the task and now we must not withdraw from it till all our definitions are complete. But we must also consider Theaetetus here—what ought I to do about him?

Theodorus:: In what way?

Stranger:: Shall we give him a rest from philosophical wrestling and take on his fellow gymnast, the young Socrates, in his place—or have you any other suggestion?

Theodorus:: No, take on young Socrates this time, as you suggest. They are both young and will be better able to carry through stiff exercise by being rested in turn.

Socrates:: Furthermore, sir, they might both be said to have some sort of kinship with me. Theaetetus, according to you, is like me in looks and Socrates bears the same name. Sharing a name entails kinship in some sense, and, of course, we ought always to seize opportunities of discovering those who may be our kinsfolk by conversing with them. Yesterday I joined in discussion with Theaetetus; today I have listened to him answering you. I have not heard Socrates speak either in discussion or in reply. He too must be tested. So he shall reply to me another time, but this afternoon let him answer you.

Stranger:: Very good! Socrates, you hear what Socrates says?

Socrates Younger:: Yes.

Stranger:: Do you agree to his proposal?

Socrates Younger:: Yes, certainly.

Stranger:: Evidently you are putting no obstacles in the way of our advance, and I think I am still less entitled to do so. Well, then, after finding the Sophist, the task we now have to face together is to search out the statesman, or so it seems to me. Tell me, then, Socrates, whether he too must be classified as one of those who possess some kind of expert knowledge, or must we begin with some other kind of definition?

Socrates Younger:: No, he is to be defined as a kind of expert.

Stranger:: Well then, must we distinguish the forms of knowledge as we did when looking for his predecessor?

Socrates Younger:: It would seem so.

Stranger:: But the line of cleavage required now appears to differ from the previous one, Socrates.

Socrates Younger:: What then?

Stranger:: It follows another division.

Socrates Younger:: It may well be so.

Stranger:: Where shall a man find the way of the statesman then? For we must distinguish this path from all the rest by setting upon it the special sign of its distinctive form. All roads divergent from it we must mark out also as one common class. Thus we must bring our minds to conceive of all forms of knowledge as falling under one or the other of these two classes—statecraft and knowledge other than statecraft.

Socrates Younger:: This must be your task, sir. It is not for me to attempt it.

Stranger:: Yes, but it will be your achievement as well, Socrates, when all becomes clear to us both.

Socrates Younger:: It is kind of you to say so.

Stranger:: Then consider the science of number and certain other sciences closely akin to it. Are they not unconcerned with any form of practical activity, yielding us pure knowledge only?

Socrates Younger:: That is the case.

Stranger:: But it is quite otherwise with carpentry and manufacture in general. These possess science embodied as it were in a practical activity and inseparable from it. Their products do not exist before the arts come into operation and their operation is an integral part of the emergence of the product from its unworked state.

Socrates Younger:: True. What of it?

Stranger:: You must use this distinction to divide the totality of sciences into two classes. Name the one ‘applied,' the other ‘pure.'

Socrates Younger:: I agree. Let your distinction be drawn, and let all science be divided into these two parts.

Stranger:: Are we then to regard the statesman, the king, the slave-master, and the master of a household as essentially one though we use all these names for them, or shall we say that four distinct sciences exist, each of them corresponding to one of the four titles? But let me put this in another way easier to follow.

Socrates Younger:: And what is that?

Stranger:: I will tell you. Suppose we find a medical man who is not himself practicing as a public medical officer but who nevertheless is competent to advise a doctor actually serving in that capacity? Must not the expert knowledge the adviser possesses be described by the same title as that of the functionary whom he is advising?

Socrates Younger:: Yes.

Stranger:: Well then, consider a man who, though himself a private citizen, is capable of giving expert advice to the ruler of a country. Shall we not say that he possesses the same science as the ruler himself possesses—or, rather ought to have possessed?

Socrates Younger:: We shall indeed say so.

Stranger:: But the science possessed by the true king is the science of kingship?

Socrates Younger:: Yes.

Stranger:: The possessor of this science then, whether he is in fact in power or has only the status of a private citizen, will properly be called a ‘statesman' since his knowledge of the art qualifies him for the title whatever his circumstances.

Socrates Younger:: Yes, he is undoubtedly entitled to that name.

Stranger:: Then consider a further point. The slave-master and the master of a household are identical.

Socrates Younger:: Yes.

Stranger:: Furthermore, is there much difference between a large household organization and a small-sized city, so far as the exercise of authority over it is concerned?

Socrates Younger:: None.

Stranger:: Well then, our point is clearly made. One science covers all these several spheres and we will not quarrel with a man who prefers any one of the particular names for it; he can call it royal science, political science, or science of household management.

Socrates Younger:: It makes no difference.

Stranger:: Now comes another point that can hardly be controversial. What a king can do to maintain his rule by using his hands or his bodily faculties as a whole is very slight in comparison with what he can do by mental power and force of personality.

Socrates Younger:: Manifestly.

Stranger:: So a king's art is closer to theoretical knowledge than to manual work or indeed to practical work in general?

Socrates Younger:: Yes.

Stranger:: You agree then that we may speak either of statesmanship and the statesman or of kingship and the king, these terms being convertible, since they are identical in force?

Socrates Younger:: Certainly.

Stranger:: Let us go on to the next stage and see if we can proceed to a division of the kinds of theoretical knowledge.

Socrates Younger:: Good.

Stranger:: Look attentively then and see if we cannot discover a natural cleavage within such knowledge.

Socrates Younger:: Tell me where it is.

Stranger:: See, it is here. There exists, we agree, an art of counting.

Socrates Younger:: Yes.

Stranger:: That belongs quite definitely to the class of theoretical sciences, I presume.

Socrates Younger:: Of course.

Stranger:: Now when the art of counting has ascertained a numerical difference we do not assign it any further task save that of pronouncing on what has been ascertained, do we?

Socrates Younger:: No.

Stranger:: Now consider a master builder. No master builder is a manual worker—he directs the work of others.

Socrates Younger:: Yes.

Stranger:: He provides the knowledge but not the manual labor.

Socrates Younger:: True.

Stranger:: So he might fairly be said to possess one of the theoretical forms of science.

Socrates Younger:: He might indeed.

Stranger:: But it is characteristic of him that when he has delivered a verdict on the facts he has not ended his task in the way the calculator has. The master builder must give the appropriate directions to each of the workmen and see that they complete the work assigned.

Socrates Younger:: That is so.

Stranger:: Therefore all this class of sciences are quite as ‘theoretical' as calculation and its kindred sciences are, but the two groups differ from one another in that the latter are content to give a verdict, but the former issue a command for performance of further actions.

Socrates Younger:: This is clearly the difference between them.

Stranger:: Well then, may we claim that it is a sound division to split the whole of theoretical science into two parts and to call one critical and the other directive?

Socrates Younger:: Yes—I would agree to it at any rate.

Stranger:: I hope so, for it is much to be desired that those sharing a task should be of one mind.

Socrates Younger:: Indeed it is.

Stranger:: So long as we ourselves share this happy agreement we can let the judgments of the rest of the world look after themselves.

Socrates Younger:: Yes.

Stranger:: Well then, in which of these groups of sciences do we find a place for the king? In the critical class—as though he were a mere spectator of truth? Is he not rather in the other, directive class? Does not his position in control of men imply this?

Socrates Younger:: Of course he is in the second group.

Stranger:: Good, but we must now look further at the directive class and see if we find a cleavage in it somewhere. I think I have lighted on one. There is a difference between kings and heralds analogous to the difference between the art of the producer-salesman and of that of the retailer.

Socrates Younger:: How so?

Stranger:: Retailers take over what someone else has made and then sell a second time what was first sold to them.

Socrates Younger:: Quite so.

Stranger:: Similarly heralds receive commands which have been thought out and issued by someone else; then they issue them at second hand to others.

Socrates Younger:: Very true.

Stranger:: Well then, are we going to confound the science of kingship with the science of the interpreter, the coxswain, the prophet, or the herald, or with any of this large group of kindred sciences, simply because all of them are concerned, as admittedly they are, with issuing orders? We thought out an analogy just now. Cannot we think out a name as well, seeing that unfortunately there is no normal description of the general class of ‘givers of firsthand orders'? We will make the cleavage at this point and name a ‘predirective' class into which we will put the race of kings. The other class, now distinct, we can neglect, leaving it to someone else to invent a further common name for the tribes it covers. It is for the king we are searching—not for his opposite.

Socrates Younger:: Exactly.

Stranger:: Well then, his group has been distinguished from the others, the decisive factor being that the kingly group issues its own commands while the other group merely passes commands on. Now we must subdivide the kingly group if we find it susceptible of a division.

Socrates Younger:: We must look for one.

Stranger:: Yes, and I think I have found one. Keep close to me and share the work of dividing.

Socrates Younger:: Where is the division?

Stranger:: Take any ruler we may observe at his work of issuing orders. Is not the purpose of his action the production of something?

Socrates Younger:: Of course.

Stranger:: Products in general need not detain us; they are easily divided into two classes.

Socrates Younger:: How?

Stranger:: Considering them as a whole we find some lifeless, the rest alive.

Socrates Younger:: Yes.

Stranger:: By this distinction we can divide, if we wish to do so, the directive group of theoretical sciences.

Socrates Younger:: How?

Stranger:: We assign one section to superintendence of the production of lifeless things, the other to superintendence of the production of living things. This effects an exhaustive division of the group.

Socrates Younger:: Yes, it does.

Stranger:: Let us put aside the one section and, taking the other as our unit, divide it into two.

Socrates Younger:: Which of the two sections do you suggest that we take for subdivision?

Stranger:: Surely the section concerned with the issue of directives about living creatures. It goes without saying that the king is never concerned with directives concerning lifeless things in the way the master builder is. Kingship is a nobler thing; it works among living creatures and its functions have to do with these alone.

Socrates Younger:: True.

Stranger:: Now the breeding and nurturing of living creatures can be seen to be of two kinds. They may either be reared singly or in flocks collectively.

Socrates Younger:: They may.

Stranger:: But we shall certainly not find the statesman to be a man in charge of one creature like some cowman or groom. He is much more like the man in charge of a whole herd of cows or of a stud of horses.

Socrates Younger:: That is quite clear, once it is put as you have put it now.

Stranger:: How shall we describe the section of the art of rearing living things which has to do with rearing them collectively? Shall we call it ‘herd nurture' or ‘collective nurture'?

Socrates Younger:: We can use whichever name better helps our argument.

Stranger:: Excellently said, Socrates. If you hold fast to this principle of avoiding contention over names you will be seen to be rich with an ever greater store of wisdom as you come to old age. We will apply this sound principle to the present case and do as you bid me. Do you see how we can divide the nurture of herds into twin sections, so as to cordon off the object of our search in one of them and leave him an area only half the size of the one he is free to roam in at present?

Socrates Younger:: I will try my hardest to cordon him off. I think the division is to be made between nurture of men and nurture of beasts.

Stranger:: You were keenness itself and you fenced the king off like a man, but I think we must not let this happen again if we can help it.

Socrates Younger:: Why, what has happened? What have we done?

Stranger:: We must beware lest we break off one small fragment of a class and then contrast it with all the important sections left behind. We must only divide where there is a real cleavage between specific forms. The section must always possess a specific form. It is splendid if one really can divide off the class sought for immediately from all the rest—that is, if the structure of reality authorizes such immediate division. You had such direct tactics in mind just now and hastened the argument to its conclusion. You saw that our search led us to men, and so you thought you had found the real division. But, it is dangerous, Socrates, to chop reality up into small portions. It is always safer to go down the middle to make our cuts. The real cleavages among the forms are more likely to be found thus, and the whole art of these definitions consists in finding these cleavages.

Socrates Younger:: What do you mean, sir?

Stranger:: I will try to be still clearer, Socrates, for you are the kind of person it is a pleasure to teach. A fully satisfactory demonstration is not possible now, circumstances being what they are, but we must try for the sake of clearness to push the explanation a stage further.

Socrates Younger:: Thank you, but what kind of mistake do you say that we made in our division just now?

Stranger:: The kind of mistake a man would make who, seeking to divide the class of human beings into two, divided them into Greeks and barbarians. This is a division most people in this part of the world make. They separate the Greeks from all other nations making them a class apart; thus they group all other nations together as a class, ignoring the fact that it is an indeterminate class made up of peoples who have no intercourse with each other and speak different languages. Lumping all this non-Greek residue together, they think it must constitute one real class because they have a common name ‘barbarian' to attach to it. Take another example. A man might think that he was dividing number into its true classes if he cut off the number ten thousand from all others and set it apart as one class. He might go on to invent a single name for the whole of the rest of number, and then claim that because it possessed the invented common name it was in fact the other true class of number—'number other than ten thousand.' Surely it would be better and closer to the real structure of the forms to make a central division of number into odd and even or of humankind into male and female. A division setting Lydians or Phrygians or any other peoples in contradistinction to all the rest can only be made when a man fails to arrive at a true division into two groups each of which after separation is not only a portion of the whole class to be divided but also a real subdivision of it.

Socrates Younger:: Quite so, sir, but this is just the difficulty. How can one learn to distinguish more clearly between a mere portion and a true subdivision and recognize them as being really different?

Stranger:: My dear Socrates, this is no light order. We have already strayed rather too far from the argument set as our task, and here you are asking that we stray still further! For the moment let us go back to the argument as is only right. We will get on the track of your problem some other time when we are free to do so and then we will follow it out to the end. But there is one caution I will add here. Do not suppose that in what I say now I have given you a full explanation of the principle.

Socrates Younger:: What principle do you mean?

Stranger:: The principle that a portion and a subdivision of a class are not identical.

Socrates Younger:: Can you be more explicit?

Stranger:: Where a true subdivision of a wider class is made, this subdivision must necessarily also be a portion of the total class of which it is declared a subdivision. But the converse is not true, since a portion is not necessarily a true subdivision. You can claim my authority, Socrates, for asserting this and for denying the contrary.

Socrates Younger:: This ruling will be followed.

Stranger:: Good! Now help me to settle the next question.

Socrates Younger:: What is that?

Stranger:: Consider the class which caused us to stray from the argument and brought us to this point. I think that the trouble began at the moment when you were asked how we were to divide the science of tending herds and you answered with alacrity that there are two classes of living creatures, one of them being mankind, and the other the rest of the animals lumped together.

Socrates Younger:: True.

Stranger:: It became clear to me then that you were breaking off a mere portion, and that because you were able to give the common name ‘animals' to what was left, namely to all creatures other than man, you thought that these creatures do in actual fact make up one class.

Socrates Younger:: Yes, that was so.

Stranger:: But, my gallant young friend, pray consider this! This kind of classification might be undertaken by any other creature capable of rational thought—for instance cranes are reputed to be rational in this way and there may be others. They might invest themselves with a unique and proper dignity and classify the race of cranes as being distinct from all other creatures; the rest they might well lump together, men included, giving them the common appellation of ‘the beasts.' So let us try to be on the watch against mistakes of that kind.

Socrates Younger:: How can we avoid them?

Stranger:: By not attempting too general a division of the class of living creatures. We shall be less liable to such errors if we avoid this.

Socrates Younger:: Indeed we must not do it.

Stranger:: No, for it was here our mistake was made just now.

Socrates Younger:: What precisely was it?

Stranger:: The directive section of theoretical science, in so far as it directs the rearing of living creatures was our concern, but we added ‘the rearing of them in *herds.'* That is so, is it not?

Socrates Younger:: Yes.

Stranger:: This last element of the definition, ‘rearing in herds,' implied a prior division of all living creatures according to wildness and tameness. Types amenable to training and control we call tame animals; those resisting control, wild animals.

Socrates Younger:: True.

Stranger:: Now it will be conceded that the science we are hunting down has always been and still is one that works among tame creatures; furthermore, it is to be looked for among tame creatures which are gregarious.

Socrates Younger:: Yes.

Stranger:: Let us avoid making divisions in the way we did just now, in a desperate hurry and with our attention fixed only on the whole class. Only thus shall we reach the statesman in good time. This statesman's art has already landed us in the situation the proverb warns us against!

Socrates Younger:: Which proverb is this?

Stranger:: ‘More haste' in our work of correct division has meant ‘less speed' for us.

Socrates Younger:: But it has been a happy mischance, sir.

Stranger:: That may be so, but now let us try again from the beginning to divide the science of collective rearing. It may well be that the argument itself as we proceed with it will show you more clearly the very thing you are in such eagerness to discover. Answer me this.

Socrates Younger:: What?

Stranger:: I want to know if you happen to have heard people speak of something you can hardly have seen for yourself—herds of tame fishes. I know you have not been to see them in the aquariums in the Nile or in the Great King's ponds. But you might possibly have seen such fishes in ornamental fountains yourself.

Socrates Younger:: Of course I have seen them, and I have heard many people speak of the others.

Stranger:: It is the same with the flocks of tame cranes and tame geese in Thessaly—you have never toured the Thessalian plains but you have at least heard of them and you believe that such flocks exist.

Socrates Younger:: Yes, of course.

Stranger:: My reason for asking you all this is to show that creatures reared in herds may be of two kinds. Some live in water; others live on land.

Socrates Younger:: Yes. I agree.

Stranger:: Have I your agreement, then, that we have to divide herd rearing on this principle into two sections? May we assign one subdivision to each of these subsidiary sciences and call the one ‘water herd rearing,' the other ‘land herd rearing'?

Socrates Younger:: Again, I agree.

Stranger:: One need hardly ask to which of these sciences the kingly art belongs—the answer is obvious.

Socrates Younger:: Of course.

Stranger:: The next subdivision of the land herd rearing section of herd rearing can be made by anyone.

Socrates Younger:: How?

Stranger:: By dividing it between walkers and fliers.

Socrates Younger:: Oh yes, of course.

Stranger:: Well then, is not the statesman's art to be sought among the arts dealing with walking herds? Do you not think that practically everyone, even the most witless, would judge this to be so?

Socrates Younger:: Yes, I do.

Stranger:: Then we must effect a subdivision of land herd tendance into two parts, just as we recently divided number into two.

Socrates Younger:: Clearly.

Stranger:: But see what has happened. In the region into which the argument has moved we see two paths lying before us inviting us to our goal. One path reaches the goal more quickly but divides off a small class from a large one. The other is a longer way round but it observes the principle we enunciated before, that we should always divide down the middle where possible. We can go on by whichever of these paths we prefer.

Socrates Younger:: Is it impossible to take them both?

Stranger:: To take both at once is impossible—that is an amazing suggestion, Socrates! But obviously you can take first one, then the other.

Socrates Younger:: Then I vote for taking first one way, then the other.

Stranger:: That is easy, for there is not much farther to go. At the outset or halfway your command would have been difficult for us to obey, but since we are nearly there and you desire it, let us take the longer path first; we shall get to its end more easily now while we are fresher. See this division then.

Socrates Younger:: Tell me what it is.

Stranger:: We find a division of tame herded walking creatures ready-made in nature.

Socrates Younger:: What is it?

Stranger:: Some have horns; the rest have none.

Socrates Younger:: That is evident.

Stranger:: Divide then the science of rearing walking herds into two sections, assigning each its sphere, but use a general description in doing so. For if you are anxious about naming each, the business will be complicated needlessly.

Socrates Younger:: How shall we state the matter then?

Stranger:: We will say this. The science of rearing walking herds has been divided into two. The one section of it is assigned to rearing horned herds, and the other to rearing hornless herds.

Socrates Younger:: The division shall stand in these terms. In any case there can be no further question about it.

Stranger:: See now, our king stands out clearly once more; he is shepherd of a hornless herd.

Socrates Younger:: Unmistakably so!

Stranger:: Let us divide up this herd into its component parts then, and try to assign to the king the place really belonging to him.

Socrates Younger:: By all means.

Stranger:: Where shall we divide it? By distinguishing whole-hoofed and cloven-hoofed, or interbreeding and non-interbreeding? Which do you prefer? You understand what I mean, I suppose?

Socrates Younger:: About what?

Stranger:: You know that horses and asses are capable of interbreeding?

Socrates Younger:: Yes.

Stranger:: But all other tame hornless herds are incapable of interbreeding.

Socrates Younger:: Of course.

Stranger:: What of the statesman then? Is the herd he has in his charge capable of interbreeding with another or incapable?

Socrates Younger:: Incapable, of course.

Stranger:: This group we must now divide again into two as before, it would seem.

Socrates Younger:: Yes, we must.

Stranger:: But the class of tame, gregarious living creatures has already been reduced to its component elements save for the division of two of these from each other. For dogs cannot claim to be counted in the class of gregarious animals.

Socrates Younger:: No they cannot, but by what means are we to separate the remaining pair?

Stranger:: By a method very appropriate for application by Theaetetus and yourself, seeing that both of you are geometers.

Socrates Younger:: What is that?

Stranger:: I would say, ‘by the diagonal and secondly by the diagonal of the diagonal.'

Socrates Younger:: What do you mean?

Stranger:: What say you of our human constitution? How is this human race of ours endowed? So far as its peripatetic potential is concerned, is it not very like the diagonal? Has it not a potency of two feet?

Socrates Younger:: So it has.

Stranger:: Moreover the character of the remaining component of the class is in turn of the potency possessed by the diagonal of our human diagonal, since its native peripatetic potential is one of two feet twice over.

Socrates Younger:: Of course it is, and I think I see what you are meaning to say.

Stranger:: Good! Now here is another conclusion which we have reached by our divisions which is not without its interest for the comedians. Do we see it, Socrates?

Socrates Younger:: What is it?

Stranger:: For neighbor and competitor in the race this humanity of ours has the most portly and the most easygoing of all the creatures.

Socrates Younger:: Yes, I see. What a funny coincidence!

Stranger:: Still, isn't it reasonable after all? The slowest shuffle in—or snuffle in—last.

Socrates Younger:: Yes, of course you're right.

Stranger:: But there is another thing to notice. What a funny situation the king is in! He has kept pace with his herd and so he has been running a race with the man who is of all men best trained for living an easy life!

Socrates Younger:: Yes, just so.

Stranger:: This is a still clearer illustration of the principle we laid down in our inquiry concerning the Sophist.

Socrates Younger:: What was that?

Stranger:: That in a philosophical search for a definition, like the present one, the presence or absence of dignity in the object under definition is an irrelevance. Lowly and exalted must receive equal consideration and the argument must proceed by proper stages in its own right to reach the truest conclusion obtainable.

Socrates Younger:: That seems to be right.

Stranger:: Well now, am I to lead you, without waiting for you to ask me, along the shorter of the roads which we discovered as leading to the definition of the king?

Socrates Younger:: Do so, please.

Stranger:: In my opinion then, we must start from the point we reached by separating out herded creatures on land and this time divide these forthwith into two-footed and four-footed. We shall then see the human race sharing the occupation of the two-footed class with the winged tribes and none else; having observed this, we shall divide the two-footed herds into winged and wingless. Then the science of shepherding mankind will have been brought to light. Now we must bring our statesman and king and set him over this class like a charioteer, and hand over to him the reins of government of the state, for they belong to him and his alone is this art of government.

Socrates Younger:: Your debt to me, sir, is nobly discharged by the definition you have made—and you have more than paid the debt, for you have thrown in the digression by way of interest.

Stranger:: Come then, let us gather up the threads of our argument and work out from start to finish our definition of what is called ‘political science.'

Socrates Younger:: Let us do so by all means.

Stranger:: We made a first division of theoretical science by taking the directive part of it. Of this we took the part which we described by analogy with the producer-salesman as ‘predirective.' From this predirective science we cut off that which directs the rearing of living things, a very important part of the whole. Animal rearing was divided and we chose out of it rearing in herds, and, next to this, rearing of herds of creatures that live on land. Dividing this again, we chose rearing of hornless herds. We then took a part of this, and if one must employ its name, it will be a name three words long—'non-interbreeding herd tendance.' As for the further divisions, only the class ‘man tendance' is left in the two-footed section of the last-named class—and so we reach the object of our search, namely, statesmanship or kingship, which is another name for statesmanship.

Socrates Younger:: Yes, we really have reached our conclusion.

Stranger:: Do you really think so, Socrates? Do you think our task as complete as you make out?

Socrates Younger:: Why do you ask?

Stranger:: Have we dealt fully with the problem we were given a to solve? Is there not a fault and a very grave one in our treatment of it, the fault of arriving at a definition of a king but failing to work through to a really complete and adequate definition?

Socrates Younger:: What do you mean?

Stranger:: I will try to make my meaning clearer—to myself as well as to you.

Socrates Younger:: Do so, please.

Stranger:: We found just now many arts of herd tendance of which statesmanship is one particular instance. Statesmanship is in charge of the rearing of a particular kind of herd.

Socrates Younger:: Yes.

Stranger:: Our argument defined it as the science of the collective rearing of men—as distinct from the rearing of horses or other animals.

Socrates Younger:: Quite so.

Stranger:: But we have to notice one respect in which a king differs from all other herdsmen.

Socrates Younger:: What is that?

Stranger:: Do we find any other herdsman challenged by a rival who practices another art and yet claims that he shares with the herdsman the duty of feeding the herd?

Socrates Younger:: How do you mean?

Stranger:: You see how merchants, farmers, and all who prepare the grain for food—yes, and teachers of gymnastics and doctors as well—would all dispute the title ‘feeders of mankind' with the herdsman we have called ‘statesman.' These others would all contend that they are in charge of the feeding of mankind—and of feeding the leaders themselves as well as the mass of the herd.

Socrates Younger:: Would they not be quite right?

Stranger:: Maybe. We will examine this point further, but we can say at once with certainty that no one else disputes a cowherd's position in any of these matters. He feeds his herd himself, and he is also its doctor. He is its matchmaker too, one might say, and none but he understands the midwife's duties when confinements occur and babies have to be brought into the world. Furthermore, in so far as his charges feel a need for games and music, who so good as he to cheer them, who so gifted to charm and soothe them? For he is master of the music best suited to his herd, be it rendered on the pipes or in song unaccompanied. And so it is in the case of every other herdsman, is it not?

Socrates Younger:: Certainly it is.

Stranger:: How then can the definition of the king reached in our discussion show up as correct and flawless in the light of these new facts? We are claiming that he alone is herdsman and shepherd of the human flock, but we are merely singling him out as such from a host of competitors.

Socrates Younger:: Certainly this will not do.

Stranger:: Then we were quite right to feel anxious a little while ago when the suspicion came over us that though the figure we described was a kingly one we had not yet achieved a real portrait of the statesman. We might well hesitate, for we cannot reveal him finally in his proper quality till we have removed and put apart from him the throng of rivals that crowds around him and claims to share his herdsmanship.

Socrates Younger:: Yes, we were quite right to hesitate.

Stranger:: So we must aim at a complete description, Socrates, unless we are to bring disgrace on our argument in the end.

Socrates Younger:: Yes, for we must avoid that at all costs.

Stranger:: Then we must begin all over again from another starting point and travel by another road.

Socrates Younger:: What kind of road must this be?

Stranger:: We have to bring in some pleasant stories to relieve the strain. There is a mass of ancient legend a large part of which we must now use for our purposes; after that we must go on as before, dividing always and choosing one part only, until we arrive at the summit of our climb and the object of our journey. Shall we begin?

Socrates Younger:: Yes, certainly.

Stranger:: Come then, listen closely to my story as a child would. After all, you are not so very many years too old for stories.

Socrates Younger:: Do continue, please.

Stranger:: These old stories have been told before and will be told again. Among them is the one about the portent that settled the famous quarrel between Atreus and Thyestes. I expect you have heard the story and remember the details of it as they are described to us.

Socrates Younger:: You refer, I suppose, to the strange sign of the golden lamb.

Stranger:: Oh no, not to that, but to the alteration in rising and setting of the sun and the other planets. The story tells us that on this famous occasion these all set where they now rise and rose where they now set. Afterward, however, when he had testified by this miracle to the justice of Atreus's claims, Zeus restored all these heavenly bodies to their present system of motion.

Socrates Younger:: Yes, that comes into the story too.

Stranger:: Then again, we have heard of the reign of Cronus from many storytellers.

Socrates Younger:: From most of them, I should say.

Stranger:: Yes, and what else? Are we not told that men of that former age were earthborn and not born of human parents?

Socrates Younger:: That is also one of the old stories.

Stranger:: All these stories originate from the same event in cosmic history, and so do hosts of others yet more marvelous than these. However, as this great event took place so long ago, some of them have faded from man's memory; others survive but they have become scattered and have come to be told in a way which obscures their real connection with one another. No one has related the great event of history which gives the setting of all of them; it is this event which we must now recount. Once it has been related, its relevance to our present demonstration of the nature of a king will become apparent.

Socrates Younger:: Excellent, sir. Please go on, and leave nothing unsaid.

Stranger:: Listen then, and you shall hear. There is an era in which God himself assists the universe on its way and guides it by imparting its rotation to it. There is also an era in which he releases his control. He does this when its circuits under his guidance have completed the due limit of the time thereto appointed. Thereafter it begins to revolve in the contrary sense under its own impulse—for it is a living creature and has been endowed with reason by him who framed it in the beginning. Now this capacity for rotation in reverse is of necessity native to it for a reason I must tell.

Socrates Younger:: Of what nature is it?

Stranger:: Ever to be the same, steadfast and abiding, is the prerogative of the divinest of things only. The nature of the bodily does not entitle it to this rank. Now the heaven, or the universe as we have chosen to call it, has received many blessed gifts from him who brought it into being, but it has also been made to partake of bodily form. Hence it is impossible that it should abide forever free from change, and yet, as far as may be, its movement is uniform, invariable, and in one place. Thus it is that it has received from God a rotation in reverse—the least possible variation of its proper motion. To revolve ever in the same sense belongs to none but the lord and leader of all things that move, and even he cannot move the universe now in the one sense now in the other—for this would flout eternal decrees. For all these reasons there are many doctrines we are forbidden to affirm concerning this universe. We must not say that it moves itself, perpetually revolving in one and the same sense. We may not say that it is God who turns it in its entirety throughout all time in two opposed alternating revolutions. We may not say that a pair of divinities make it revolve alternately in these opposed senses because the mind of the one god is contrary to the mind of the other. We must therefore affirm the doctrine stated above, which is the one remaining possibility. In the one era it is assisted on its way by the transcendent divine cause, receiving a renewal of life from its creator, an immortality of his contriving. In the other era, when it has been released, it moves by its innate force and it has stored up so much momentum at the time of its release that it can revolve in the reverse sense for thousands of revolutions, because its size is so great, its balance so perfect, and the pivot on which it turns so very small.

Socrates Younger:: Your whole account seems to me very consistent and very probable.

Stranger:: Let us think about this together. Let us study this great cosmic fact underlying all these miraculous stories in the light of what we have just said. It is this great fact that I have been speaking about.

Socrates Younger:: What is it?

Stranger:: The fact that the revolution of the heaven is sometimes in its present sense, sometimes in the reverse sense.

Socrates Younger:: How would you state its significance?

Stranger:: This change of motion we must regard as the most important and the most complete of all ‘turnings-back' occurring in the celestial orbits.

Socrates Younger:: It would seem so.

Stranger:: We must believe then, that at the time such changes take place in the universe we human beings living within that universe have to undergo the most drastic changes also.

Socrates Younger:: That is to be expected.

Stranger:: Do we not know from experience that when great changes of any kind come upon them at once, all living beings feel the strain intensely and can hardly stand it?

Socrates Younger:: We do indeed.

Stranger:: So it must needs be that in the cosmic crisis there is widespread destruction of living creatures other than man and that only a remnant of the human race survives. Many strange new experiences befall this remnant, but there is one of deeper import than all. It follows on God's first taking over the rewinding of the universe, at the moment when the revolution counter to the one now prevalent begins to operate.

Socrates Younger:: What is it?

Stranger:: First of all, every living creature, whatever the stage of life it had attained, ceased to grow any older. All mortal beings halted on their way to bent and hoary age, and each began to grow backward, as it were, toward youth and ever greater immaturity. The white hairs of the older men began to grow dark again; the cheeks of bearded men grew smooth once more and restored to each the long-lost bloom of his youth. The bodies of the young men lost the signs of manhood and, growing smaller every day and every night, they returned again to the condition of newborn children, being made like to them in mind as well as in body. Next they faded into nonexistence and one by one they were gone. Moreover the bodies of those who died by violence in that time of crisis exhibited these same changes—and did so with such rapidity that in their case disappearance took place within a few days.

Socrates Younger:: But how did living creatures come into being in that era, sir? How did they produce their offspring?

Stranger:: Clearly, Socrates, it was no part of man's natural endowment in that era to beget children by intercourse. Our legends tell us that once upon a time there was an earthborn race. Now it was this race which at that moment of crisis began to return to life out of the earth. The memory of it has lived on, for it was handed down to us by the earliest of our forebears. These earliest forebears were the children of earthborn parents; they lived in the period directly following the end of the era of the earthborn, at the close of the former period of cosmic rotation and the beginning of the present one. These ancestors of ours passed on to us these stories of the earthborn, and it is an unsound judgment to disbelieve them as so many do nowadays. For I think that we must consider what follows in the cosmic story. It is only to be expected that along with the reversal of the old men's course of life and their return to childhood, a new race of men should arise too—a new race formed from men dead and long laid in earth but now formed in her womb anew and thence returning to life once more. Such resurrection of the dead was in keeping with the cosmic change, all creation being now turned in the reverse direction. This race was, as it needs must be, ‘born from the earth'; hence comes the name and hence the legend. Birth out of the ground was the law for all of them, save for some few whom God translated to another destiny.

Socrates Younger:: Yes, this is fully in keeping with what went before, but tell me about the life of man in the reign of Cronus of which you speak. Did this life obtain in the former world era or in this one? For clearly a change of direction of sun and planets occurs at both points in history at which the universe changes its sense of rotation.

Stranger:: You have followed the story closely. As for your inquiry concerning the age when all good things come without man's a labor, the answer is that this also most certainly belongs to the former era, not to the present one. In that era God was supreme governor in charge of the actual rotation of the universe as a whole, but divine also, and in like manner was the government of its several regions, for these were all portioned out to be provinces under the surveillance of tutelary deities. Over every herd of living creatures throughout all their tribes was set a heavenly daemon to be its shepherd. Each of them was all in all to his flock—providing for the needs of all his charges. So it befell that savagery was nowhere to be found nor preying of creature on creature, nor did war rage nor any strife whatsoever. There were numberless consequences of this divine ordering of the world, but we must leave them all aside save those concerning man, for we must go on to explain the origin of our traditions concerning man's life in that paradise. A god was their shepherd and had charge of them and fed them even as men now have charge of the other creatures inferior to them—for men are closer to the divine than they. When God was shepherd there were no political constitutions and no taking of wives and begetting of children. For all men rose up anew into life out of the earth, having no memory of the former things. Instead they had fruits without stint from trees and bushes; these needed no cultivation but sprang up of themselves out of the ground without man's toil. For the most part they disported themselves in the open needing neither clothing nor couch, for the seasons were blended evenly so as to work them no hurt, and the grass which sprang up out of the earth in abundance made a soft bed for them. This is the story, Socrates, of the life of men under the government of Cronus. Our present life—said to be under the government of Zeus—you are alive to experience for yourself. But which of these two makes for greater happiness do you think? Can you give a verdict? And will you do so?

Socrates Younger:: No, I cannot decide.

Stranger:: Do you want me to make a tentative decision for you?

Socrates Younger:: Yes, please do.

Stranger:: The crucial question is—did the nurslings of Cronus make a right use of their time? They had abundance of leisure and were at an advantage in being able to converse with the animals as well as with one another. Did they use all these advantages to promote philosophical inquiry? As they associated with one another and with the animals, did they seek to learn from each several tribe of creatures whether its special faculties enabled it to apprehend some distinctive truth not available to the rest which it could bring as its contribution to swell the common treasure store of wisdom? If they really did all this, it is easy to decide that the happiness of the men of that era was a thousand fold greater than ours. But if, when they had taken their fill of eating and of drinking, the discussions they had with each other and with the animals were of the kind that the surviving stories make them out to have been, then, according to my judgment at any rate, it is equally clear what our verdict must be. But be that as it may, let us leave this question aside till we find someone who can inform us accurately whether or not their hearts were set on gaining knowledge and on the true commerce of minds. But this much must be stated here, so that we may be free to proceed to the rest of the story, for it was precisely to see the age of Cronus in its true setting that we brought the whole story to life again.

For when this whole order of things had come to its destined end, there must needs be universal change once more. For the earthborn seed had by now become quite exhausted—each soul had run through its appointed number of births and had returned as seed to the earth as many times as had been ordained for it. And now the pilot of the ship of the universe—for so we may speak of it—let go the handle of its rudder and retired to his conning tower in a place apart. Then destiny and its own inborn urge took control of the world again and reversed the revolution of it. Then the gods of the provinces, who had ruled under the greatest god, knew at once what was happening and relinquished the oversight of their regions. A shudder passed through the world at the reversing of its rotation, checked as it was between the old control and the new impulse which had turned end into beginning for it and beginning into end. This shock set up a great quaking which caused—in this crisis of the world just as in the former one—destruction of living creatures of all kinds. Then, after the interval needed for its recovery, it gained relief at last from its clamors and confusion, and attaining quiet after great upheaval it returned to its ordered course and continued in it, having control and government of itself and of all within it and remembering, so far as it was able, the instruction it had received from God, its maker and its father. At first it remembered his instructions more clearly, but as time went on its recollection grew dim. The bodily element in its constitution was responsible for its failure. This bodily factor belonged to it in its most primeval condition, for before it came into its present order as a universe it was an utter chaos of disorder. It is from God's act when he set it in its order that it has received all the virtues it possesses, while it is from its primal chaotic condition that all the wrongs and evils arise in it—evils which it engenders in turn in the living creatures within it. When it is guided by the divine pilot, it produces much good and but little evil in the creatures it raises and sustains. When it must travel on without God, things go well enough in the years immediately after he abandons control, but as time goes on and forgetfulness of God arises in it, the ancient condition of chaos also begins to assert its sway. At last, as this cosmic era draws to its close, this disorder comes to a head. The few good things it produces it corrupts with so gross a taint of evil that it hovers on the very brink of destruction, both of itself and of the creatures in it.

The God looks upon it again, he who first set it in order. Beholding it in its troubles, and anxious for it lest it sink racked by storms and confusion, and be dissolved again in the bottomless abyss of unlikeness, he takes control of the helm once more. Its former sickness he heals; what was disrupted in its former revolution under its own impulse he brings back into the way of regularity, and, so ordering and correcting it, he achieves for it its agelessness and deathlessness.

This is the full tale told, but to meet our need—the delineation of the king—it is enough if we take up the earlier part of our tale. When the most recent cosmic crisis occurred and the cosmic order now existing was established, the course of man's life stood still once more and then began to manifest changes in the opposite sense to the changes accompanying the other cosmic crisis. Creatures which were well nigh disappearance because of their smallness began to grow again; those who were just born from the earth, stalwart in their prime of life, now grew snowy-haired and then died and returned to the earth again. Following the change in the universe, all other things had to change, and, in particular, a new law governing conception, birth, and nurture was made binding on the whole universe—and therefore on all the creatures, for they must needs imitate its ways. For it was no longer possible for creatures to be brought to birth in the earth by the formative action of external agents. It has now been ordained that the universe must take sole responsibility and control of its course. And so by a like ruling, the same impulse bade its constituent elements achieve by their own power, so far as they might, conception, procreation, and rearing of young. We have now come to the point which the whole of this story of ours has been seeking to reach. It would take long to tell of all the changes that befell the various creatures and show whence these arose and how they were effected, but man's story is shorter and more relevant for us now. Bereft of the guardian care of the daemon who had governed and reared us up, we had become weak and helpless, and we began to be ravaged by wild beasts—for the many evil-natured beasts had by now turned savage. Men lacked all tools and all crafts in the early years. The earth no longer supplied their food spontaneously and they did not yet know how to win it for themselves; in the absence of necessity they had never been made to learn this. For all these reasons they were in direst straits. It was to meet this need that the gifts of the gods famous in ancient story were given, along with such teaching and instruction as was indispensable. Fire was the gift of Prometheus, the secrets of the crafts were made known by Hephaestus and his partner in craftsmanship, and seeds and plants were made known by other gods. From these gifts everything has come which has furnished human life since the divine guardianship of men ceased—

in the way our story has just described—and men had to manage their lives and fend for themselves in the same way as the whole universe was forced to do. Thus likened to the universe and following its destiny through all time, our life and our begetting are now on this wise now on that.

Here let our work of storytelling come to its end, but now we must use the story to discern the extent of the mistake we made in our earlier argument in our delineation of the king or statesman.

Socrates Younger:: How did we go wrong then? Do you think that we are seriously off the track?

Stranger:: One mistake was not so serious, but the other was a mistake on the grand scale. It is graver and more far-reaching than I thought it was.

Socrates Younger:: In what way?

Stranger:: We were asked to define the king and statesman of this present era, and of humanity as we know it, but in fact we took from the contrary cosmic era the shepherd of the human flock as it then was, and described him as the statesman. He is a god, not a mortal. We went as far astray as that. Furthermore, we showed him as ruler of all the life of the state but did not specify the manner of his rule. Here too, what was said was true, but it cannot be regarded as the whole truth or as a clear and sufficient description. We have gone wrong in this also, though not as badly wrong as on the other issue.

Socrates Younger:: True.

Stranger:: Obviously then we must try to define the way in which the statesman controls the state. We can be reasonably confident that in doing this we shall achieve the complete definition of the statesman.

Socrates Younger:: Very good.

Stranger:: But our aim when we actually introduced the story was to show two things at once concerning the ‘nurture of the herd.' We were anxious to show the host of rivals with whose claims to be ‘nurturers of the herd' the statesman whom we now seek has to compete, but we were still more anxious to follow out our analogy and to see the statesman himself in a clearer light as being alone entitled to be called ‘shepherd of the people,' feeding humankind in the way shepherds feed their sheep and cowherds their cattle.

Socrates Younger:: True.

Stranger:: It appears to me now, Socrates, that the divine shepherd is so exalted a figure that no king can be said to attain to his eminence. Those who rule these states of ours in this present era are like their subjects, far closer to them in training and in nurture than ever shepherd could be to flock.

Socrates Younger:: Yes, that is certainly so.

Stranger:: But whether they are human or superhuman creatures, we are still as committed as we were—neither more so nor less—to the task of seeking to reveal their true nature.

Socrates Younger:: Of course.

Stranger:: We must go back again for reconsideration of one of our divisions. We said that there is a ‘predirective' art concerned with living creatures, and with these in herds rather than as individuals. Without further division, we described this as ‘the science of the *rearing* of herds.' You recall this, do you not?

Socrates Younger:: Yes, I do.

Stranger:: It was at a point in our tracking down of this art that we began to lose the scent. We did not catch the statesman at all in this definition or name him properly. He eluded us without our knowing it while we were intent on the process of naming.

Socrates Younger:: How did he do it?

Stranger:: There is no other herdsman who is not charged with the bodily nurture of his herd. This characteristic is absent in the statesman and yet we called him a herdsman. We should have used a wider name, covering all guardians, whether nurturers or not.

Socrates Younger:: You are right if there is in fact such a name.

Stranger:: Surely ‘concern' is available as such a class name; it implies no specific limitation to bodily nurture or to any other specific activity. If we had named the art ‘concern for herds,' ‘attention to herds,' or ‘charge of herds'—all of them terms which cover all species—we could have included the statesman with the rest, for the run of the argument was indicating to us that we ought to do this.

Socrates Younger:: True, but how would the subsequent division have proceeded?

Stranger:: On the same lines as before. We divided ‘nurture of herds' into nurture of land animals, wingless, non-interbreeding, and hornless. We could have divided ‘care of herds' in the same way and our definition would then have included both the shepherd king of the reign of Cronus and the ruler of our present era.

Socrates Younger:: That seems clear, but I still want to know what follows.

Stranger:: It is clear that if we had used this correct term ‘concern for herds' we should not have had to face the unreasonable objection that some make, that ruling is in *no* sense an art of tendance, as well as the other reasonable objection we met that there is no specific art of nurture of *human beings* and that if there were, there would be many more directly involved in its exercise than any ruler is.

Socrates Younger:: True.

Stranger:: But if it is a question of an art of ‘responsible charge' of a whole community, what art has a better or prior claim than statesmanship to fulfill this function? What other art can claim to be the art of bearing sovereign rule, the art which bears sovereign rule over all men?

Socrates Younger:: None can.

Stranger:: Yes, Socrates, but do we realize that we fell into another considerable error at the very end of our definition?

Socrates Younger:: What was that?

Stranger:: However clearly we had determined in our minds that there exists an art of nurture of two-footed herds, we were not entitled without further examination to name this art kingship or statesmanship, thereby implying that a full definition of it had been obtained.

Socrates Younger:: What should we have done then?

Stranger:: First of all, as we have just been saying, the class name has to be modified from ‘nurture' to ‘concern.' Secondly, this ‘concern' must be subdivided, for several further divisions are possible.

Socrates Younger:: Which are they?

Stranger:: By one division we should have set apart the divine shepherd and the human tender of men.

Socrates Younger:: True.

Stranger:: By another division we should have divided into two the art assigned to this human tender of men.

Socrates Younger:: By what division?

Stranger:: By distinguishing enforced tendance from tendance voluntarily accepted.

Socrates Younger:: Surely.

Stranger:: I think we really went wrong at this point in our earlier definitions; we made a confusion—a needlessly stupid one—of the king and the tyrant, and these are entirely different people, differing in the manner of their rule.

Socrates Younger:: Yes, they are.

Stranger:: Then let us be right this time, and, as I said, let us divide the art of concern for men into two—enforced tendance and tendance accepted voluntarily.

Socrates Younger:: Certainly.

Stranger:: Tendance of human herds by violent control is the tyrant's art; tendance freely accepted by herds of free bipeds we call statesmanship. Shall we now declare that he who possesses this latter art and practices this tendance is the true king and the true statesman?

Socrates Younger:: Yes, and I should think, sir, that at this point we have really completed our definition of the statesman.

Stranger:: That would be excellent, Socrates, but it is not enough for you to think so; I must think so too. Now as a matter of fact I think that the likeness of the statesman has not been perfectly drawn yet. Sculptors sometimes rush at their work in ill-timed enthusiasm and then elaborate the details of the work to such an extent that they have to bring in extra material to complete it and this in the end slows down their progress. Something like this happened earlier in our discussion, when we wanted to make it immediately clear where we were mistaken and to give a really impressive demonstration of the point. Supposing that where a king was concerned only large-scale illustrations could be suitable, we reared our massive myth and then had to use more myth material than the occasion warranted; thus our demonstration became too long and we did not give the myth a complete form after all. Our definition, too, seems to me like a portrait which is as yet an outline sketch and does not represent the original clearly because it has still to be painted in colors properly balanced with one another. Remember, however, that a definition couched in words is a better description of a living creature than a drawing or any model of it can be—a better description, I mean, for those capable of following such a definition; for those who cannot do so the model or visible illustration is appropriate enough.

Socrates Younger:: Yes, that is true, but pray make clear where you still find our description of the statesman inadequate.

Stranger:: It is difficult, my dear Socrates, to demonstrate anything of real importance without the use of examples. Every one of us is like a man who sees things in a dream and thinks that he knows them perfectly and then wakes up, as it were, to find that he knows nothing.

Socrates Younger:: What do you mean by this?

Stranger:: I have made a real fool of myself by choosing this moment to discuss our strange human plight where the winning of knowledge is concerned.

Socrates Younger:: What do you mean?

Stranger:: Example, my good friend, has been found to require an example.

Socrates Younger:: What is this? Say on and do not hesitate for my sake.

Stranger:: I will—in fact, I must, since you are so ready to follow. When young children have only just learned their letters—

Socrates Younger:: What is this?

Stranger:: We know that they distinguish particular letters only in the shortest and simplest syllables; in these, however, they do distinguish them and can tell you correctly what each of them is.

Socrates Younger:: Yes.

Stranger:: But if they see the same letters combined into other syllables, they fall into doubt once more, and judge them incorrectly by making wrong identifications.

Socrates Younger:: True.

Stranger:: What then is the easiest and best method of leading them to the knowledge they have not yet reached? I think I know it.

Socrates Younger:: What is it?

Stranger:: Take them to the syllables in which they have identified the letters correctly; then set them in front of the syllables they cannot decipher; then place known syllables and unknown syllables side by side and point out to them the similar nature of the letters occurring in both. In the end, by this method when the rightly identified letters have been shown to them and set alongside all the unknown letters—and by being shown thus the known letters have been used as *examples*—the teacher will achieve his aim, which is to have each letter rightly recognized and named in every syllable, for then the pupil will have identified each letter with itself and distinguished it from all the others.

Socrates Younger:: Certainly.

Stranger:: Have we not gathered enough information now to show how the method of example proceeds? It operates, does it not, when a factor identical with a factor in a less-known object is rightly believed to exist in some other bettor-known object in quite another sphere of life? This common factor in each object, when it has been made the basis of a parallel examination of them both, makes it possible for us to achieve a single true judgment about each of them as forming one of a pair.

Socrates Younger:: That appears to be how it works.

Stranger:: Would we be surprised, then, to find our own mind reacting in the same way to the letters with which the universe is spelled out? Truth sometimes guides the mind to a comprehension of every member of some groups of things and yet the same mind a moment later is hopelessly adrift in its attempt to cope with the members that make up another group. Somehow or other it makes a right judgment of a particular combination of elements but when it sees the same elements transferred to the long and very difficult syllables of everyday existence, it fails to recognize again the very elements it discerned a moment before.

Socrates Younger:: One cannot wonder at it.

Stranger:: It is impossible, is it not, to achieve real understanding in an approach to any part of the total area of true reality, however small, if one begins from a false opinion?

Socrates Younger:: I should say that it is quite impossible.

Stranger:: Well then, if this is the true state of the case, you and I could claim to be sound in our former method and in what we plan to do now. We have tried to discover the nature of example in general by studying a small and particular example of example. What we intend now is to discover scientifically by means of the method of example the nature of ‘tendance' as applied to the whole community, and we intend to do it by taking from lesser realms the quality identical with the kingly quality and to use its lesser manifestation there in order to discern its supreme manifestation in him.

Socrates Younger:: We will hope so.

Stranger:: So we must take up once again an earlier stage of our discussion. For seeing that there prove to be any number of competitors to dispute with the kingly class the duties of the tendance of states, we must surely set aside all competitors and leave only the king in possession. It was to help us to this end that we decided that we needed to employ an example.

Socrates Younger:: True.

Stranger:: Well then, what example is there on a really small scale which we can take and set beside kingship, and which, because it comprises an activity common to it and to kingship can be of real help to us in finding what we are looking for? By heaven, Socrates, I believe I know one. Do you agree that, if there is no other example ready to hand, it would be quite in order for us to select the art of weaving for the purpose. Would you be prepared for us to choose out weaving—if there is nothing else obviously suitable? Moreover, if you agree, we will not take the whole of weaving, for I think that a part of it, the art of weaving woolens, will prove adequate for us. I suspect that just this section of the weaver's art, if it were chosen as our example, would give the evidence we require concerning the statesman.

Socrates Younger:: It might well prove to be so.

Stranger:: No dallying, then! Why should we not divide weaving now just as we divided the other classes of things, dividing it into its true parts? We must run through each stage as briefly and quickly as we can so as to come back to what is relevant to our present discussion.

Socrates Younger:: What do you mean?

Stranger:: I can best explain by making the actual division for you.

Socrates Younger:: Excellent!

Stranger:: All we make and all we get has one of two aims—the aim of doing something, or the aim of preventing something being done. Preventives may be divided into (*a*) charms, divine or human, against evils and (*b*) protections—protections into (*a*) warlike armaments or defense works and (*b*) other means of fending off—nonmilitary means of fending off into (*a*) screens and (*b*) protections from storm and heat—protections from storm and heat into (*a*) housing and (*b*) shields for the person—shields for the person into (*a*) blankets spread below and (*b*) garments spread around. Garments that we put around us are of one piece or compounded of several. Those compounded of several are either stitched or combined by a method other than stitching; of the unstitched some are made of vegetable fibers, others are made of hair; of those made of hair, some are felted by water and earth, others are combined by their inherent substance. To these manufactured means of warding off which are coverings of the person and compacted in their own substance we give the name 'clothes.' The art specifically concerned with producing clothes we will describe from the name of its product as the 'clothes-working' art, just as we called the art of controlling a state statesmanship. We may also say that the art of weaving—or at any rate that very large section of it concerned with the production of clothes—is distinct in nothing but name from this 'art of clothes-working,' just as in the other case we regarded the arts of kingship and statesmanship as synonymous.

Socrates Younger:: Quite right.

Stranger:: Let us observe now that it might be supposed at this point that the definition of the art of weaving clothes, as drawn up in these terms, had been complete and sufficient. But if one supposed this, one would have failed to see that the art has not yet been distinguished from arts exercising a closely similar function to it, and that in spite of this many other arts which are akin to it have been severed from it.

Socrates Younger:: What are these kindred arts of which you are thinking?

Stranger:: Evidently you are not following what has been said. We must go back then, and begin from the other end, for if you really can apprehend affinities between arts you will find that some kindred arts are detached from weaving in our recent division. For instance, in the division of what is put under from what is put around we divided off the art of blanket-making from the art of clothes-making.

Socrates Younger:: Yes, I see.

Stranger:: Furthermore, we disjoined from weaving all fabrication of flax, of Spanish broom, and of all the natural products we termed vegetable fibers. We also disjoined from it felting and the art of fashioning by piercing and sewing—the art of which the shoemaker is the chief practitioner.

Socrates Younger:: We did.

Stranger:: Then in excluding the art of making garments of one piece we excluded the art of the skinner. Among arts of protective housing we excluded the art of stemming inroads of water along with house-building, erection in wood, and similar arts. We also excluded all the arts of fencing off, but these include the arts of providing means of preventing theft and other violence, arts connected with making lids and door fastenings normally assigned as sections of the arts of joinery. We also cut off the whole art of armor-making, which is an extensive and extremely various section of the art of producing defenses. Finally we separated off, right at the beginning of our definition, the magician's art and that of making spells to ward off evil.

The remainder when all these had been excluded was, we might fairly suppose, the art we had been seeking—the art concerned with producing works of woolen protection designed to ward off violences of climate, called by the name 'weaving.'

Socrates Younger:: Yes, that seems to be accurate.

Stranger:: But we have not yet achieved a complete description of the matter under discussion. For it is evident that the man responsible for the first stage in the production of clothes does just the opposite of weaving.

Socrates Younger:: How do you mean?

Stranger:: The process of weaving is, I take it, a form of plaiting together?

Socrates Younger:: Yes.

Stranger:: But the art I spoke of is an art of dissociating strands from a mass of material in which they are found close and matted.

Socrates Younger:: What is that?

Stranger:: The work done by the art of carding. Dare we call carding weaving, or speak of the carder as a weaver?

Socrates Younger:: Certainly not.

Stranger:: Now consider the art which produces warp and woof. If one calls that art 'weaving' it sounds odd, but it is more than that—it is false in fact.

Socrates Younger:: Of course.

Stranger:: Furthermore, consider the art of the fuller in all its forms, and that of darning. Are we going to deny that these are, in a sense, arts of tendance or care of clothes? But if we admit that they are such, does it follow that we shall call them all arts of weaving?

Socrates Younger:: By no means.

Stranger:: And yet, the claim to preside over the care and the production of clothes is a claim which all of these arts dispute with the weavers' mystery. They are ready to concede to weaving a very considerable part of the whole province of clothes-working, but at the same time they demand the assignment of no small part of it to themselves.

Socrates Younger:: That is very true.

Stranger:: Then in addition to these arts we have to consider the arts which produce the instruments by which the weaving process is carried out. We must suppose that all have their claim to be at least contributory to the making of every piece of fabric actually woven.

Socrates Younger:: That is so.

Stranger:: Do we still suppose that weaving—or rather our selected portion of it—will have been adequately defined if we declare it to be ‘the highest and most dignified of all the arts concerned with woolen clothing'? Would not this definition, though true as far as it goes, lack clearness and finality until we have dissociated all these other arts from weaving?

Socrates Younger:: It would.

Stranger:: Then our next duty is to make this separation, so that our definition may proceed by the right stages.

Socrates Younger:: Yes.

Stranger:: To begin with, let us observe that two groups of arts are involved in active operations of all kinds.

Socrates Younger:: What are they?

Stranger:: One class contributory to the production, the other actually producing.

Socrates Younger:: In what way?

Stranger:: I mean by ‘contributory' arts those which do not fashion the product itself but prepare the tools for the arts which actually produce it—they are arts without whose previous assistance the specific task of the productive arts could never be performed. The arts which fashion the product itself are the ‘productive' arts, strictly speaking.

Socrates Younger:: That is at any rate a reasonable distinction.

Stranger:: Then may we take the further step of distinguishing arts which manufacture spindles, shuttles, and all the other instruments of clothes manufacture as ‘contributory arts' from the directly ‘productive' arts which actually treat and produce the clothes?

Socrates Younger:: We certainly may.

Stranger:: Among these ‘productive' arts those of washing, darning, and general servicing of clothes—the relevant section of the very extensive art of adornment—may fairly be grouped together and we may call the whole group ‘the art of the fuller.'

Socrates Younger:: We may.

Stranger:: Carding and spinning and all the other special processes involved in the manufacture of woolen garments together form part of the art of wool manufacture. This time we have an art with a name familiar to everyone.

Socrates Younger:: Of course.

Stranger:: Wool-working has two principal sections; each of them is comprised of arts which are parts of a pair of arts.

Socrates Younger:: What do you mean?

Stranger:: Carding, half the operation of the shuttle and all the processes which pull strands of close material apart—let us class these together as one art and this art is manifestly part of wool-working. But we must remember too the pair of arts we found to be of universal scope, the art of combining and that of separating.

Socrates Younger:: Yes.

Stranger:: Well, carding and the other arts just mentioned come under separation. Thus it is *separation* of the raw wool and *separation* of the strands of warp—the former being done by hand, the latter by the shuttle—which have been given their respective names which we used a moment ago.

Socrates Younger:: Very true.

Stranger:: Now let us consider in turn the art of combination and look for the part of it which coincides with part of the art of wool-working. We must now omit all sections of wool-working which come under separation. Then we shall have divided wool-working by distinguishing the part which combines and the part which separates.

Socrates Younger:: Let us assume this division.

Stranger:: Then, Socrates, you will find that we have to subdivide the part of wool-working which combines, if we are to run our quarry to earth by finding the art of weaving which we made our objective.

Socrates Younger:: Then we must divide again.

Stranger:: We must. To name the divisions let us call one section of the art ‘twisting' and the other ‘plaiting.'

Socrates Younger:: Do I understand you? I take you to mean by ‘twisting' the art concerned with producing the threads of warp.

Stranger:: Yes, but not of the warp only—of the woof too. You surely do not imagine that we shall find it produced by some process other than twisting?

Socrates Younger:: No.

Stranger:: Now divide each of these two arts, for you may well find this division significant.

Socrates Younger:: At what point must I divide?

Stranger:: I will tell you. The finished product of the carding processes, when it has achieved certain recognized dimensions, we describe as a 'flock' of wool.

Socrates Younger:: Yes.

Stranger:: The thread twisted out of this by the spindle to form a firm yarn you will, no doubt, describe as 'warp' and the art directing its production as warp spinning.

Socrates Younger:: Yes.

Stranger:: But there are other threads from the flock which are only loosely twisted so as to be soft enough for intertwining with the warp but strong enough to stand up to the dressing process after being intertwined with it. These threads we call 'woof' and the art superintending their manufacture woof spinning.

Socrates Younger:: Quite so.

Stranger:: Well then, the section of the art of weaving which we selected is now clearly defined for all to see. When the section of the art of combination which is also a section of the art of wool-working produces a fabric by the due intertwining of warp and woof, we call the finished fabric a woolen garment and the art superintending its production the art of weaving.

Socrates Younger:: That is perfectly correct.

Stranger:: Good. But why did we not distinguish weaving straightaway as the art of intertwining warp and woof? Why did we set about it in this roundabout fashion defining so pointlessly a host of arts we met on the way?

Socrates Younger:: Oh no, sir! So far as I can see, there was nothing pointless in the whole course of our argument.

Stranger:: I am not surprised that you think so now, but someday you may think differently. I want to administer a prophylactic against this malady of doubt, should it one day come upon you as indeed from time to time it well may. There would be nothing surprising in its doing so! Listen, then, to a prophylactic argument applicable to all troublesome questions of this kind.

Socrates Younger:: Pray explain it, sir.

Stranger:: First let us examine excess and deficiency in general. In this way we shall obtain a standard of length applicable to what is said on any occasion in this kind of discussion—a standard by which we can accord praise to what is said or censure it, either as excessive or as deficient.

Socrates Younger:: Let us make the examination then.

Stranger:: We can only discuss the matter effectively by considering these qualities in their real nature.

Socrates Younger:: Which qualities?

Stranger:: Length and brevity, and excess and defect in general. We are agreed, I presume, that the art of measurement is involved in all these.

Socrates Younger:: Yes.

Stranger:: Let us divide it into two then. We must do so to get to the conclusion we are eager to reach.

Socrates Younger:: Please tell us where the division comes.

Stranger:: I will. We divide the art of measurement into a section concerned with the relative greatness or smallness of objects and another section concerned with their size in relation to the fixed norm to which they must approximate if they are to exist at all.

Socrates Younger:: What do you mean?

Stranger:: Do you not agree that in the nature of things ‘the greater' can be so called only in relation to the less and to nothing else, and, conversely, that ‘the less' can only be ‘less' than a greater? It cannot be ‘less' than anything else.

Socrates Younger:: It cannot. I quite agree.

Stranger:: On the other hand, will we not also be ready to assert that we do in fact hear words spoken and see acts done which at one time exceed the essentially right measure and at another time fall short of it? Is it not just this matter of attaining the due measure which marks off good men from bad in human society?

Socrates Younger:: It is evident.

Stranger:: Then we must posit two types and two standards of greatness and smallness. We must not assert as we did just now that the only standard possible is that of relative comparison. We have just seen how we must amend the statement. The standard of relative comparison will remain, but we must acknowledge a second standard, which is a standard of comparison with the due measure. Do we want to know why this must be admitted?

Socrates Younger:: Why is it needed?

Stranger:: If a man refuses to admit the possibility of a ‘greater' except in relation to a ‘lesser' he will rule out all possibility of relating it to a due measure, will he not?

Socrates Younger:: He will.

Stranger:: Are we really prepared for the consequences of this refusal? Are we going to abolish the arts and all their products? In particular, shall we deprive statecraft, which we are trying to define, and weaving, which we have just defined, of their very existence? For it seems clear to me that all such arts guard against exceeding the due measure or falling short of it. Certainly they do not treat such excess or defect as meaningless—on the contrary, they shun it as a very real peril. In fact it is precisely by this effort they make to maintain the due measure that they achieve effectiveness and beauty in all that they produce.

Socrates Younger:: That is very true.

Stranger:: But you must admit that if we dismiss statecraft as unreal, we shall have blocked all means of approach to any subsequent study of the science of kingly rule.

Socrates Younger:: Obviously.

Stranger:: Must we not do now what we had to do when discussing the Sophist? We had to insist then on the admission of an additional postulate, that 'what is "not *x*" nevertheless exists.' We had to introduce this postulate because the only alternative to asserting it which our argument left us was to allow the Sophist to escape definition altogether. In our present discussion too there is an additional postulate on which we must insist, and it is this. 'Excess and deficiency are measurable not only in relative terms but also in respect of attainment of a norm or due measure.' For if we cannot first gain assent to this postulate, we are bound to fail if we advance the claim that a man possesses statecraft, or indeed that a man possesses any other of the special forms of knowledge that function in human society.

Socrates Younger:: In that case we must certainly follow the precedent and admit the additional postulate in our present discussion too.

Stranger:: Our present task is greater than the previous one, Socrates, and we can hardly have forgotten what a very long time that took us. However, while discussing these problems, there is one thing to be said at the outset that it is perfectly right and proper to say here.

Socrates Younger:: What is this?

Stranger:: That when one day we come to give a full exposition of true accuracy in dialectic method, we shall find the need of this postulate concerning the due measure which we have just enunciated. However, the statement in the form that we have made it and with the demonstration—adequate for present purposes—which we have given of it, is a very great help to us, or so it seems to me. For it shows that two propositions stand or fall together. The first is that the arts exist; the second is that excess and deficiency are measurable not only relatively but in terms of the realization of a norm or due measure. Thus if measure in this second sense exists, so do the arts, and, conversely, if there are arts, then there is this second kind of measurement. To deny either is to deny both.

Socrates Younger:: So much is fully established, but what follows?

Stranger:: Clearly we should divide the art of measurement into two on the principle enunciated by dividing it at this point. One section will comprise all arts of measuring number, length, depth, breadth, or velocity of objects by relative standards. The other section comprises arts concerned with due occasion, due time, due performance, and all such standards as have removed their abode from the extremes and are now settled about the mean.

Socrates Younger:: Each of the subdivisions you have named is very extensive, and the one differs vastly from the other.

Stranger:: Does not the statement we have just made turn out to be precisely what many of our ‘erudite' friends say from time to time—and say with the air of men uttering a profound truth? We are saying like them that measurement is involved in all that is brought into being. For all activities directed by arts involve measurement in some form or other. But our friends, for all their erudition, have not been trained to study things by dividing them into real classes. As a result here we find them confusing these two types of measurement, which are in fact so different, just because they have judged them to be of like nature. There are other classes of things about which they commit the opposite error; they distinguish them but fail to distinguish according to the real distinctions. Now the following would be the right method. Whenever it is the essential *affinity* between a given group of forms which the philosopher perceives on first inspection, he ought not to forsake his task until he sees clearly as many true differences as exist within the whole complex unity—the differences which exist in reality and constitute the several species. Conversely, when he begins by contemplating all the *unlikenesses* of one kind or another which are to be found in various groups of forms, the true philosopher must not pull a wry face and give up in disgust, until he has gathered together all the forms which are in fact cognate and has penned them safely in their common fold by comprehending them all in their real general group. But let this suffice on these topics and on excess and deficiency in general. Let us, however, be careful to maintain the ground we have won. We have discovered beyond dispute two distinct forms of the art of measurement concerned with excess and deficiency and we must remember what we have declared them to be.

Socrates Younger:: We shall not forget.

Stranger:: So much for that theme. Now let us prepare to entertain another which has to do not only with our present inquiry but with all discussions of this kind as well.

Socrates Younger:: What is it?

Stranger:: Suppose someone asked us this question about our class of elementary schoolchildren learning to read. 'When a child is asked what letters spell a word—it can be any word you please—are we to regard this exercise as undertaken to discover the correct spelling of the particular word the teacher set or as designed rather to make the child better able to deal with all words he may be asked to spell?'

Socrates Younger:: Surely we reply that the purpose is to teach him to read them all.

Stranger:: How then does this principle apply to our present search for the statesman? Why did we set ourselves the problem? Is our chief purpose to find the statesman, or have we the larger aim of becoming better philosophers, more able to tackle all questions?

Socrates Younger:: Here, too, the answer is clear; we aim to be able to solve all problems.

Stranger:: Exactly, for I cannot think that any reasonable person would want to trace down the definition of the art of weaving just for its own sake. But there is a paradox here which, it seems to me, most thinkers have failed to notice. Likenesses which the senses can grasp are available in nature to those real existents which are in themselves easy to understand, so that when someone asks for an account of these existents one has no trouble at all—one can simply indicate the sensible likeness and dispense with any account in words. But to the highest and most important class of existents there are no corresponding visible resemblances, no work of nature clear for all to look upon. In these cases nothing visible can be pointed out to satisfy the inquiring mind; the instructor cannot cause the inquirer to perceive something with one or other of his senses and so make him really satisfied that he understands the thing under discussion. Therefore we must train ourselves to give and to understand a *rational* account of every existent thing. For the existents which have no visible embodiment, the existents which are of highest value and chief importance, are demonstrable only by reason and are not to be apprehended by any other means. All our present discussions have the aim of training us to apprehend this highest class of existents. For purposes of practice, however, it is easier in every case to work on lesser objects rather than on greater ones.

Socrates Younger:: You are quite right.

Stranger:: Let us then recall what led us to this long digression on these matters.

Socrates Younger:: What was it?

Stranger:: Was it not mainly due to the impatience we felt and expressed at the long-windedness, as we presumed to call it, of our definition of the art of weaving? We felt a like impatience with the long account of reversal of rotation in the universe and with our inquiry into the Sophist when we had to discuss the existence of not-being. We Conceived the notion that these discussions had been too lengthy, and we blamed ourselves for this because we feared that they had been irrelevant too. Please realize, therefore, that the principles we have just worked out together apply to all discussions of this kind and not just to this one, and that they are intended to prevent any like apprehensions in future.

Socrates Younger:: It shall be so, sir, but, pray, proceed.

Stranger:: I say then, that it is your duty and mine to observe the principles we have just laid down whenever we have to accord praise or blame to an argument on the score of its length or its brevity. The length of one discourse is not to be compared simply with the length of another. We said just now that we must never forget the second section of the art of measuring, and it is this standard we must always apply in judgments like these—the standard of suitability I mean.

Socrates Younger:: Quite so.

Stranger:: Yes, but even 'suitability' is not in every case an adequate criterion. For instance, we shall not look for such length in an argument as is 'suitable' for giving pleasure, except as a very incidental consideration. Again, ease and speed in reaching the answer to the problem propounded are most commendable, but our principle requires that this be only a secondary, not a primary reason for commending an argument. What we must value first and foremost, above all else, is the philosophical method itself, and this consists in ability to divide according to real forms. If, therefore, either a full-length statement of an argument or an unusually brief one leaves the hearer more able to find real forms, it is this presentation of it which must be diligently carried through; there must be no expression of annoyance at its length or at its brevity as the case may be. Furthermore, if we find a man who criticizes the length of an argument while a discussion like the present one is in progress and refuses to wait for the proper rounding-off of the process of reasoning, he is not to be permitted to escape thus with a mere grumble that 'these discussions are long drawn out'; he must be required to support his grumble with a proof that a briefer statement of the case would have left him and his fellow disputants better philosophers, more able to demonstrate real truth by reasoned argument. Blame and praise on other grounds, aimed at other merely incidental traits in our discourse, we must simply ignore and act as though we had not heard them at all. Now we may leave this topic, if I carry you with me in this judgment. Let us go back to the statesman, our real subject, and set beside him for comparison the art of weaving as we have just defined it.

Socrates Younger:: Excellent. Let us do as you say.

Stranger:: Well then, the kingly art has been set apart from most of those occupying the same region—from all, that is to say, which have to do with control of herds. But in the actual community of citizens there are other arts not yet distinguished from statesmanship. They comprise both contributory and directive productive arts, and these must first be distinguished.

Socrates Younger:: Very well.

Stranger:: Do you realize that in this case they resist division into two? I think that the reason will become evident to us as we go on to enumerate them.

Socrates Younger:: Let us do so then.

Stranger:: Seeing that we cannot bisect them, let us divide them according to their natural divisions as we would carve a sacrificial victim. For we must in every case divide into the minimum number of divisions that the structure permits.

Socrates Younger:: How shall we do it then, in the present instance?

Stranger:: As we did before. All the arts which provide tools for weaving we distinguished then as ‘contributory.'

Socrates Younger:: We did.

Stranger:: We must do the same now as then, but with even greater care. Every art which fashions any object, large or small, which ministers to the needs of an organized human community must be classed as ‘contributory.' For without the things provided by these arts there could be no community and so no art of rule, and yet we can hardly regard it as the duty of the kingly art to produce any of these things.

Socrates Younger:: No.

Stranger:: We are attempting a difficult thing when we try to distinguish this instrumental class of arts from the others. For anything whatever can be shown with some plausibility to be an instrumental means to something or other. However, there is a class of things a community must acquire to which we must proceed to give a different name.

Socrates Younger:: In what way different?

Stranger:: In that its function differs from that of instruments. It is not made, as an instrument is, with a view to the production of something but in order to preserve a thing once it has been produced.

Socrates Younger:: What kind of thing do you mean?

Stranger:: A class of objects wrought in the greatest variety of shapes and used for holding liquids or solids, some made for standing on the fire, some not able to do so. As a general name we term such an object a ‘container.' It is a ubiquitous class of objects, and again, I think, the arts manufacturing it have nothing whatever to do with the art of the ruler which we are now seeking.

Socrates Younger:: Nothing at all.

Stranger:: We must now recognize a third class of things to be acquired, also a very large one. Some things belonging to it are on land, others on water; some move from place to place, others do not; some are of high honor, others are not so distinguished. All share one name and form a class because each is made to support something or serve as a base for something.

Socrates Younger:: What common name have they?

Stranger:: 'Carriage,' I should say—and the production of such things is the work of the carpenter, the potter, or the chariot builder, not of the statesman.

Socrates Younger:: I understand.

Stranger:: What is our fourth class? Must we not distinguish from all these three a further class to which most of the things mentioned in our definition of weaving belong—the whole class of clothing, most armor, all walls, all earth or stonework defenses erected around a city, and many other such things. All exist for defensive protection and so the whole class can best be called 'defenses.' To provide these is in most cases the work of the builder or weaver, and never that of the statesman.

Socrates Younger:: Of course.

Stranger:: Might we agree to name a fifth class including all arts concerned in decoration and portraiture and every art which produces artistic representations whether in these visual arts or for the ear in poetry and music? The works all these arts produce are wrought simply to give pleasure, and all may properly be included under one description.

Socrates Younger:: What is that?

Stranger:: We use the expression 'diversion,' do we not?

Socrates Younger:: Yes, what of it?

Stranger:: Then this is the name we can apply to the products of this whole group of arts. None of them has a serious purpose; all are performed for pure amusement.

Socrates Younger:: I think I understand this too.

Stranger:: Consider now those arts which provide the stuffs which are wrought by the arts we have been talking about. This is a most various class of arts. Often such an art is itself working on the products of several yet more primitive arts. Shall we not name this the sixth kind?

Socrates Younger:: Of what are you thinking?

Stranger:: Gold and silver and all mined metals, all the pioneer work done by the woodman and the sawmill to provide material for carpentry and wickerwork, the currier's art which removes the skins of animals, the art of stripping bark which has the same function in the plant realm, and all arts kindred to these, the arts of making cork, papyrus, and rope. All these arts produce the main types of raw material for working up into the more complex kinds of objects which we use. Let us call this class of object by the general description, ‘basic material at the stage of its first working when it is not yet wrought into particular objects,' and the production of this is obviously no concern of the kingly science.

Socrates Younger:: True.

Stranger:: We come lastly to the getting of food and of all the substances the parts of which are capable of combining with the parts of the body to promote its health. This we will make a seventh class and call it ‘nourishment' unless we can find some better name for it. Provision of it is rightly to be assigned to the arts of farming, hunting, gymnastics, medicine, or butchering rather than to political science.

Socrates Younger:: Of course.

Stranger:: I think that possessions of practically every kind that we find belonging to men have been enumerated in these seven classes, with the single exception of tame living creatures. Listen while I run through the list. First place in it should really have been taken by ‘basic material at its first working'; after that come instruments, then vessels, carriages, defenses, diversions, and nourishments. We may neglect any class of merely slight importance which may have escaped us, for it can be made to fit in one or other of these main classes. For example, consider the class consisting of coins, seals, and every other kind of engraved dies. These have not, as a class, one of the great classes with which all coincide. Some have to be subsumed under ‘diversions,' some under ‘instruments'; it is a forced classification, but they can be made to fit into one or other of these classes somehow or other. As for tame animals other than slaves, all these clearly come under the art of nourishing herds which we have previously analyzed.

Socrates Younger:: Yes, they do.

Stranger:: The class that remains, then. is that of slaves and personal servants of all kinds. It is just here that I strongly suspect that those will be discovered who really dispute the fashioning of the web of state with the king in the way that we found spinners, carders, and the rest disputing the fashioning of clothes with the weavers. All the others, since they pursue what we have described as ‘contributory' arts, have been disposed of along with their occupations which we have enumerated just now, and thus they have all been severed from any share in the kingly art of ruling the state.

Socrates Younger:: So at any rate it would seem.

Stranger:: Come then, let us examine the rest and approach them more closely to scrutinize them more effectively.

Socrates Younger:: Let us do so.

Stranger:: The most extensive class of servants, as seen from our new vantage point, we find to be engaged in pursuits and sunk in a condition of life quite contrary to those we had suspected we might discover.

Socrates Younger:: To whom do you refer?

Stranger:: To those who are bought and sold and so become their master's property. No one would think of challenging our description of these as slaves or our contention that they cannot possibly claim any share in the practice of the art of ruling.

Socrates Younger:: That goes without saying.

Stranger:: But what of servants who are personally free? What of those among them who of their own volition place themselves and their services at the disposal of the various craftsmen we have named and effect a systematic distribution of agricultural and manufactured products maintaining an economic balance between them? Some of these do their work at home in the market square, but others are travelers from city to city, either overland or by sea routes. They exchange money for goods or one currency for another. Our names for them are money-changers, merchants, venturers, retailers. They cannot be said to dispute the province of the ruler, can they?

Socrates Younger:: I wonder if they might—in the realm of commerce, that is to say.

Stranger:: Certainly not. You can be sure that such men who can be hired for pay, who work for a daily wage and who are always ready to work for any employer, will never be found daring to claim any share in the art of ruling.

Socrates Younger:: No, of course not.

Stranger:: But there are those who render other kinds of service.

Socrates Younger:: What kinds of service? Whom do you mean?

Stranger:: Heralds and clerks, who often develop great facility from long performance of their form of service, and certain other very able minor civil servants who do all manner of administrative work for the elected officials. What shall we call these?

Socrates Younger:: What you just called them—civil servants, but not rulers exercising an independent authority in the state.

Stranger:: I was not cheated by a mere dream, I think, when I said that it was here that the king's serious challengers in the art of rule would reveal themselves. But how strange to have to look for them in a servant class!

Socrates Younger:: Very strange.

Stranger:: Now let us tackle those we have not yet put under examination. First come the soothsayers, practicing their particular form of expert ministration. For do we not recognize them as serving as interpreters of the gods to men?

Socrates Younger:: Yes.

Stranger:: Next come the priestly tribe. According to the orthodox view they understand how to offer our gifts to the gods in sacrifices in a manner pleasing to them, and they know, too, the right forms of prayer for petitioning the gods to bestow blessings on us. Both of these expert activities are parts of the art of ministration, are they not?

Socrates Younger:: Well, it would seem that they are.

Stranger:: In that case I think that we are coming at last upon the tracks of our quarry, so to speak. For the priest and the diviner have great social standing and a keen sense of their own importance. They win veneration and respect because of the high tasks they undertake. This is shown in the fact that in Egypt none can be king unless he belongs to the priestly caste, and if a man of some other caste succeeds in forcing his way to the throne, he must then be made a priest by special ordination. In many of the Greek cities also one finds that the duty of making the chief sacrifice on the state's behalf is laid upon the chief officers of state. You have a very striking example of it here in Athens, for I am led to understand that the most solemn ancestral sacrifices of this nation are the responsibility of the archon whom the lot designates as King-Archon.

Socrates Younger:: That is so.

Stranger:: Very well, we must study these kings chosen by lot and these priests with their ministerial assistants, very closely. But we must also look at another group—quite a large mob, in fact, which is coming clearly into view now that all these particular groups have been distinguished.

Socrates Younger:: And who are these you speak of?

Stranger:: A very queer crowd.

Socrates Younger:: What do you mean?

Stranger:: A race of many tribes—or so they seem to be at first sight. Some are like lions, some like centaurs, or similar monsters. A great many are satyrs or chameleons, beasts that are masters of quick change in order to conceal their weakness. Indeed they take each other's shapes and characters with bewildering rapidity. Yes, Socrates, and I think I have now identified these gentlemen.

Socrates Younger:: Tell me about them. You seem to look upon a strange sight.

Stranger:: Yes, strange until recognized! I was actually impressed by them myself at first sight. Coming suddenly on this strange cry of players acting their part in public life I did not know what to make of them.

Socrates Younger:: What players can these be?

Stranger:: The chief wizards among all the Sophists, the chief pundits of the deceiver's art. Such impersonators are hard to distinguish from the real statesmen and kings; yet we must distinguish them and thrust them aside if we are to see clearly the king we are seeking.

Socrates Younger:: Well, we must not abandon the search.

Stranger:: No, I agree. Tell me this now.

Socrates Younger:: Well?

Stranger:: Is not monarchy one of the possible forms of government as we know it?

Socrates Younger:: Yes.

Stranger:: Next to monarchy one would naturally mention the constitution in which it is the few who wield power.

Socrates Younger:: Yes.

Stranger:: Then the third type must be the rule of the many—democracy as it is called.

Socrates Younger:: Of course.

Stranger:: These are the three main constitutions, but do not the three in a sense become five by evolving two further types out of themselves?

Socrates Younger:: What are these?

Stranger:: If we consider the violence or consent, the poverty or riches, the law-abidingness or disregard of law which they exhibit we shall find that two of the three forms of government are really twofold and can therefore be divided. Monarchy then yields us two forms, called tyranny and constitutional monarchy, respectively.

Socrates Younger:: Yes.

Stranger:: Constitutions where the few wield power can always be similarly divided; the subdivisions are aristocracy and oligarchy.

Socrates Younger:: Quite so.

Stranger:: In the case of democracy we do not usually alter the name. Democracy is always 'democracy' whether the masses control the wealthy by force or by consent and whether or not it abides strictly by the laws.

Socrates Younger:: That is true.

Stranger:: What then? Do we imagine that any of these constitutions can be declared a 'true' constitution so long as the only criteria for judging it are whether one, few, or many rule, whether it be rich or poor, whether it rule by violence or consent, whether it have or lack a code of laws?

Socrates Younger:: But what prevents our judging it to be a true constitution by such criteria?

Stranger:: Try to follow what I am going to say and you will be bound to see more clearly.

Socrates Younger:: What line are you going to take?

Stranger:: Shall we abide by our original argument or are we now going against it?

Socrates Younger:: Which argument do you mean?

Stranger:: We decided, did we not, that the art of rule is one of the sciences?

Socrates Younger:: Yes.

Stranger:: Furthermore we agreed that it is a particular kind of science. Out of the whole class of sciences we selected the judging class and more particularly the directive class.

Socrates Younger:: We did.

Stranger:: We divided the directive into direction of lifeless things and direction of living beings, and by this process of subdivision we arrived by regular stages where we are now, never losing sight of the fact that statesmanship is a form of knowledge but unable as yet to say precisely what form of knowledge it is.

Socrates Younger:: You are quite right.

Stranger:: Do we realize, then, that the real criterion in judging constitutions must not be whether few or many rule, whether rule is by violence or consent, or whether the rulers are poor or rich? If we are going to abide by our previous conclusions, the criterion must be the presence or absence of an art directing the ruling.

Socrates Younger:: Yes, for we simply must abide by those conclusions.

Stranger:: Then we are forced to look at the issue in this light. In which, if any, of these constitutions do we find the art of ruling being practiced in the actual government of men? What art is more difficult to learn? But what art is more important to us? We must see it for what it is so as to be able to decide which are the other public figures we must remove from the true king's company, those personages who claim to be statesmen, who win over the mass of men to believe them to be statesmen, but are in actual fact nothing of the kind.

Socrates Younger:: We must indeed, for this was the task set for our discussion.

Stranger:: Do you think that any considerable number of men in a particular city will be capable of acquiring the art of statesmanship?

Socrates Younger:: That is quite out of the question.

Stranger:: In a city with a population of a thousand, could a hundred, say, acquire it satisfactorily—or could fifty, perhaps?

Socrates Younger:: Statesmanship would be the easiest of the arts if so many could acquire it. We know quite well that there would never be fifty first-class draughts players among a thousand inhabitants—that is, not if they were judged by proper inter-Hellenic standards. How much less can you expect to find fifty kings! For according to our former argument it is only the man possessed of the art of kingship who must be called a king, though he is just as much a king when he is not in power as when he is.

Stranger:: You have very rightly recalled that point. I think it follows that if the art of government is to be found in this world at all in its pure form, it will be found in the possession of one or two, or, at most, of a select few.

Socrates Younger:: Yes.

Stranger:: On this principle it is the men who possess the art of ruling and these only, whom we are to regard as rulers, whatever constitutional form their rule may take. It makes no difference whether their subjects be willing or unwilling; they may rule with or without a code of laws; they may be poor or wealthy. It is the same with doctors. We do not assess the medical qualification of a doctor by the degree of willingness on our part to submit to his knife or cautery or other painful treatment. Doctors are still doctors whether they work according to fixed prescriptions or without them and whether they be poor or wealthy. So long as they control our health on a scientific basis, they may purge and reduce us or they may build us up, but they still remain doctors. The one essential condition is that they act for the good of our bodies to make them better instead of worse, and treat men's ailments in every case as healers acting to preserve life. We must insist that in this disinterested scientific ability we see the distinguishing mark of true authority in medicine—and of true authority everywhere else as well.

Socrates Younger:: Quite So.

Stranger:: Then the constitution par excellence, the only constitution worthy of the name, must be the one in which the rulers are not men making a show of political cleverness but men really possessed of scientific understanding of the art of government. Then we must not take into consideration on any sound principle of judgment whether their rule be by laws or without them over willing or unwilling subjects or whether they themselves be rich men or poor men.

Socrates Younger:: No.

Stranger:: They may purge the city for its better health by putting some of the citizens to death or banishing others. They may lessen the citizen body by sending off colonies like bees swarming off from a hive, or they may bring people in from other cities and naturalize them so as to increase the number of citizens. So long as they work on a reasoned scientific principle following essential justice and act to preserve and improve the life of the state so far as may be, we must call them real statesmen according to our standards of judgment and say that the state they rule alone enjoys good government and has a real constitution. We must go on to say that all the other state fabrics called constitutions are not genuine, but counterfeit; they imitate the true constitution. Those which we call law-abiding copy it fairly closely, but the rest are more or less shocking caricatures of it.

Socrates Younger:: All the rest, sir, I believe to have been spoken in due measure—but the saying about ruling without laws is a hard saying for us to hear.

Stranger:: You are a little too quick for me, Socrates! I was just going to cross-examine you to see if you really accepted all I have said or felt some objection. I realize, however, from what you say that the point we are anxious to discuss in detail is this question whether a good governor can govern without laws.

Socrates Younger:: Yes, it is.

Stranger:: In one sense it is evident that the art of kingship does include the art of lawmaking. But the political ideal is not full authority for laws but rather full authority for a man who understands the art of kingship and has kingly ability. Do you understand why?

Socrates Younger:: No, please tell me why.

Stranger:: Law can never issue an injunction binding on all which really embodies what is best for each; it cannot prescribe with perfect accuracy what is good and right for each member of the community at any one time. The differences of human personality, the variety of men's activities, and the inevitable unsettlement attending all human experience make it impossible for any art whatsoever to issue unqualified rules holding good on all questions at all times. I suppose that so far we are agreed.

Socrates Younger:: Most emphatically.

Stranger:: But we find practically always that the law tends to issue just this invariable kind of rule. It is like a self-willed, ignorant man who lets no one do anything but what he has ordered and forbids all subsequent questioning of his orders even if the situation has shown some marked improvement on the one for which he originally legislated.

Socrates Younger:: Yes, that is just how the law treats us all.

Stranger:: It is impossible, then, for something invariable and unqualified to deal satisfactorily with what is never uniform and constant.

Socrates Younger:: I am afraid it is impossible.

Stranger:: But why then must there be a system of laws, seeing that law is not the ideal form of control? We must find out why a legal system is necessary.

Socrates Younger:: We must.

Stranger:: You have courses of training here in Athens, have you not, just as they have in other cities—courses in which pupils are trained in a group to fit themselves for athletic contests in running or in other sports?

Socrates Younger:: Of course. We have quite a number of them.

Stranger:: Let us call to mind the commands which professional trainers give to the athletes under their regimen in these courses.

Socrates Younger:: In what particular?

Stranger:: The view such trainers take is that they cannot do their work in detail and issue special commands adapted to the condition of each member of the group. When they lay down rules for physical welfare they find it necessary to give bulk instructions having regard to the general benefit of the average pupil.

Socrates Younger:: Quite so.

Stranger:: That is why we find them giving the same exercises to whole groups of pupils, starting or stopping all of them at the same time in their running, wrestling, or whatever it may be.

Socrates Younger:: Yes.

Stranger:: Similarly we must expect that the legislator who has to give orders to whole communities of human creatures in matters of right and of mutual contractual obligation will never be able in the laws he prescribes for the whole group to give every individual his due with absolute accuracy.

Socrates Younger:: Very probably not.

Stranger:: But we shall find him making the law for the generality of his subjects under average circumstances. Thus he will legislate for all individual citizens, but it will be by what may be called a ‘bulk' method rather than an individual treatment, and this method of ‘bulk' prescription will be followed by him whether he makes a written code of law or refrains from issuing such a code, preferring to legislate by using unwritten ancestral customs.

Socrates Younger:: Yes, and quite rightly so.

Stranger:: Of course he is right, Socrates. How could any law-giver be capable of prescribing every act of a particular individual and sit at his side, so to speak, all through his life and tell him just what to do? And if among the few who have really attained this true statesmanship there arose one who was free to give this detailed guidance to an individual, he would hardly put obstacles in his own way by deliberately framing legal codes of the kind we are criticizing.

Socrates Younger:: That certainly follows, sir, from what has been said.

Stranger:: I would rather say, Socrates, that it follows from what is going to be said.

Socrates Younger:: And what is that?

Stranger:: Let us put this case to ourselves. A doctor or trainer plans to travel abroad and expects to be away from his charges for quite a long time. The doctor might well think that his patients would forget any verbal instructions he gave and the trainer might think likewise. In these circumstances each might want to leave written reminders of his orders—do you not think so yourself, Socrates?

Socrates Younger:: Exactly So, sir.

Stranger:: Well now, suppose our doctor did not stay abroad as long as he had expected and so came back the sooner to his patients. Would he hesitate to substitute different prescriptions for the original ones if his patients' condition happened to be better than anticipated because of a climatic improvement or some other unusual and unexpected development of that kind? Would the doctor feel it his duty to maintain stubbornly that there must be no transgression of the strict letter of those original prescriptions of his? Would he refuse to issue new prescriptions or conditions, or condemn a patient who was venturing to act contrary to the prescriptions he had written out for him? Would the doctor declare all such action must be wrong because those former prescriptions were the true canons of medicine and of health and therefore that all contravention of them must lead to disease and be contrary to medical science? Surely any such claims, in circumstances where a science is involved and a real art is at work, would only make the man who made the claim and his precious prescriptions supremely ridiculous.

Socrates Younger:: Yes, it would indeed.

Stranger:: Imagine then the case of a scientific legislator. Suppose that by a written code or by support given to unwritten customs he has laid down what is just and honorable and what is not, and what benefits society and what hurts it. Suppose him to do this service for the several communities of the human flock who live in their cities as their appointed pasture shepherded by the codes their legislators have provided. If this man, who drew up his code by the art of statesmanship, wishes to amend it, or if another scientific legislator of this kind appears on the scene, will these be forbidden to enact new laws differing from the earlier ones? Surely such a prohibition would appear as ridiculous in the case of the legislator as it was in the case of the doctor, would it not?

Socrates Younger:: Of course.

Stranger:: But are you familiar with the argument one usually hears advanced when an issue like this is raised?

Socrates Younger:: No, I cannot remember it at the moment, at any rate.

Stranger:: It is quite a plausible argument, I grant that. They contend that if a man discovers better laws than those already enacted he is entitled to get them brought into effect, but only if in every instance he has first persuaded his own city to accept them.

Socrates Younger:: But what of this? Surely this is a sound contention.

Stranger:: It may be, but answer this question. Suppose a man fails to persuade his city and forces his better laws upon it, what name are we to apply to force so used? But no, do not answer me that question yet, for there are others to be answered first.

Socrates Younger:: What can they be?

Stranger:: Consider once more the case of the patient under the doctor's treatment. Suppose that the doctor fails to persuade the patient but has a mastery of medical knowledge, and suppose that he forces a particular course of treatment which goes against written prescription but is actually more salutary on a child patient, maybe, or on a man or a woman. What are we to call force of this kind? Whatever we decide to call it, we shall not call it ‘the sin against true medicine' or ‘a breach of the laws of health.' Surely the very last thing a patient who is so constrained is entitled to say is that the doctor's act in applying the constraint was contrary to good medicine and an aggravation of his disease.

Socrates Younger:: You are quite right.

Stranger:: By what name, then, do we call the sin against the art of statesmanship? Would it not be called dishonor, vice, injustice?

Socrates Younger:: Assuredly.

Stranger:: What, then, shall we say of citizens of a state who have been forced to do things which are contrary to written laws and ancestral customs but are nevertheless juster, more effective, and more noble than the directions of these traditional authorities? How shall we regard censure by these citizens of the force which has applied in these circumstances? Unless they wish to appear ridiculous in the extreme there is one thing they must refrain from saying. They must not assert in any such instance that in being subjected to compulsion they have suffered disgrace, injustice, or evil at the hands of those who compelled them.

Socrates Younger:: That is quite true.

Stranger:: Can it be the case that acts imposed under compulsion are right if the compeller is rich, but wrong if he is poor? Surely what matters is that with or without persuasion, rich or poor, according to a code or against it, the ruler does what is really beneficial. These are the real issues and all is well if he passes this test, the only genuine test of good government in a community and the only principle by which the understanding and upright ruler will administer the affairs of those whom he rules. The ship's captain fixes his attention on the real welfare at any given time of his ship and his crew. He lays down no written enactments but supplies a law in action by practical application of his knowledge of seamanship to the needs of the voyage. It is in this way that he preserves the lives of all in his ship. Would not a true constitution be just like this and work in the same way if the rulers really understood what government is and employed their art as a stronger power for good than any written laws? By rulers with this sound attitude of mind no wrong can possibly be done so long as they keep firmly to the one great principle, that they must always administer impartial justice to their subjects under the guidance of intelligence and the art of government. Then they will not only preserve the lives of their subjects but reform their characters too, so far as human nature permits of this.

Socrates Younger:: There can be no objection to your last remarks at any rate.

Stranger:: No, nor can there be to my earlier ones either.

Socrates Younger:: To which are you referring?

Stranger:: You remember that we said that in no community whatsoever could it happen that a large number of people received this gift of political wisdom and the power to govern by pure intelligence which would accompany it. Only in the hands of the select few or of the enlightened individual can we look for that right exercise of political power which is itself the one true constitution. For we must call all other constitutions mere imitations of this. Some are more perfect copies of it; others are grosser and less adequate imitations.

Socrates Younger:: What do you really mean by this? For I must admit that I did not really understand what you said before about these ‘imitations.'

Stranger:: But I must make you understand. It would be a serious failing to start a discussion of this issue and then simply drop it without exposing the error which is rampant today in all that is said about it.

Socrates Younger:: And what is this error?

Stranger:: That is what we must now seek out, though it involves a search over unfamiliar ground and the error is hard to discover. We may say, then, that there is only one constitution in the true sense—the one we have described. For the rest of them owe their very preservation to their following a code of laws enacted for this true state and to a strict adherence to a rule which we admit to be desirable though it falls short of the ideal.

Socrates Younger:: What rule is this?

Stranger:: The rule that none of the citizens may venture to do any act contrary to the laws, and that if any of them ventures to do such act, the penalty is to be death or the utmost rigor of punishment. This is the justest and most desirable course as a second best when the ideal we have just described has been set aside. We must now go on to say how this state of affairs we have just called second best is achieved in practice, must we not?

Socrates Younger:: Yes, we must.

Stranger:: Let us go back once again to the parallel cases with which we have constantly to compare the ruler who really is a statesman.

Socrates Younger:: Who are they?

Stranger:: Our good friend the ship's captain and the doctor ‘worth a dozen other men.' Let us picture to ourselves a situation in which they might find themselves and see how it all works out in their case.

Socrates Younger:: What situation?

Stranger:: Suppose we all suddenly decided that we are the victims of the worst possible outrages at their hands. Every doctor, you see, can preserve the life of any he will among us, and can hurt any he will by knife or cautery or by demanding fees which are nothing but imposed taxes—for only the tiniest proportion of them is spent on medicaments for the patient and all the rest goes to keep the doctor and his household. Their final enormity is to accept bribes from the patient's relations or from his enemies and put him to death. Ships' captains are guilty of a different set of crimes, but they are just as heinous. They will enter into a conspiracy to put out to sea with you and then leave you stranded, or else they will scuttle the ship and throw the passengers overboard—and these are not all their misdeeds. Suppose we formed this view of doctors and captains and then held a council at which the following decree was passed.

Neither medicine nor seamanship may be trusted in future with absolute control in its particular sphere, either over slaves or over free citizens. We therefore resolve to gather together an assembly of *all,* or of *the wealthy among,* the people. It shall be lawful for men of no calling or men of any other calling to advise this assembly on seamanship and medicine—that is to say, on the drugs and surgical instruments appropriate to the treatment of the sick, on ships and their tackle, on the handling of vessels, and on perils of the sea, including risks arising from wind and tide, risks arising from encountering pirates, and risks arising from maneuver of warships against enemy warships in the event of a naval engagement.

So much for the decree on these matters. The executive is to embody this decree of the assembly of the people—based, you remember, on the advice of a few doctors and sailors maybe, but certainly on the advice of many unqualified people too—in laws which they are to inscribe on tablets of wood and of stone, and in the case of some of the rules so resolved upon, they must see that they find their place among the unwritten ancestral customs. Thereafter forever medicine and navigation may only be practiced according to these laws and customs.

Socrates Younger:: A pretty state of affairs this!

Stranger:: But we have not done yet. Suppose that they resolve further to appoint magistrates chosen by lot annually from the citizen body, whether from the wealthy only or from all citizens. Some of these magistrates, once they are appointed, are to take command of ships and navigate them; others are to cure the sick according to the written code.

Socrates Younger:: This is getting worse!

Stranger:: But we have not done—see what follows. When the year of office of each of these magistrates expires, a court must be established and a jury chosen by lot, perhaps from among wealthier citizens whose names are on a list of previously selected jurors, perhaps from the people as a whole. The magistrates are to be summoned before this court and it is to subject them to audit. It is open to anyone to lay an accusation against them that during their year of office they failed to sail the ships according to the written laws or the ancient custom of our forebears. Similar charges may be brought concerning the healers of the sick. If the verdict goes against any of them, the court must assess the penalty or the fine the convicted parties must pay.

Socrates Younger:: Well then, the man who took office voluntarily in such a society would deserve any punishment and any fine that might be imposed.

Stranger:: Then there can be further misdemeanors, and we must enact a law to provide against them. It will be a law against independent research. If a man be found guilty of inquiry into seamanship or medicine in contravention of this law—of inquiry into nautical practice, for instance, or into climatic influences and bodily temperatures, and especially if he be guilty of airing theories of his own on such things, action must be taken to suppress him. First we must deny him the title of ‘doctor' or ‘captain.' Instead we must call him a man with his head in the clouds, one of these chattering Sophists. Furthermore it will be lawful for any citizen so desiring to indict him before a court of justice—or what passes for such a court—on the charge of corrupting the younger men and influencing them to go in for seamanship and medicine in an illegal manner by setting up as doctors or captains on their own authority. If he is found guilty of influencing young or old against the laws and written enactments, he shall suffer the utmost penalties. For there can be no claim to possess wisdom greater than the wisdom of the laws. No one need be ignorant of seamanship or medicine, of sailing regulations or health regulations. The laws are there written out for our conning; the ancient customs are firmly established in our midst. Any who really desire to learn may learn.

Suppose, Socrates, that all the arts are treated like this. How do you imagine that generalship and hunting in all its forms would be affected? What would happen to painting and other representational arts, or to building and manufacture of all types of implements under such conditions, and how could farming or any cultivation whatever be carried on? Imagine the rearing of horses and other animals tied down to legal prescription, or divination and similar ministerial functions so controlled. What would legally governed draughts be like or legal mathematics, whether simple arithmetic, plane geometry, stereometry, or kinematics? What would the world be like if everything worked on this principle, organized throughout according to written laws instead of according to the relevant arts?

Socrates Younger:: It is quite clear that the arts as we know them would be annihilated and that they could never be resurrected because of this law which puts an embargo on all research. The result would be that life, which is hard enough as it is, would be quite impossible then and not to be endured.

Stranger:: Yes, but there is a further possible degradation to consider. Suppose we compel each of these arts to function according to a legal code and place a magistrate in charge of this code either by election or by the fall of the lot, and make him rule according to it. Suppose then that he has no regard for the code and acts only from motives of ambition and favoritism. He embarks on a course of action contrary to law but does not act on any basis of scientific knowledge. Evil as the former state was, will not this latter one be still worse?

Socrates Younger:: It will indeed.

Stranger:: The laws which have been laid down represent the fruit of experience—one must admit that. Each of them has been put forward by some advocate who has been fortunate enough to hit on the right method of commending it and who has thus persuaded the public Assembly to enact it. Any man who dares by his action to infringe these laws is guilty of a wrong many times greater than the wrong done by strict laws, for such transgression, if tolerated, would do even more than a rigid code to pervert all ordered activity.

Socrates Younger:: Yes, of course it would.

Stranger:: Then so long as men enact laws and written codes governing any department of life, our second-best method of government is to forbid any individual or any group to perform any act in contravention of these laws.

Socrates Younger:: True.

Stranger:: Then laws would seem to be written copies of scientific truth in the various departments of life they cover, copies based as far as possible on the instructions received from those who really possess the scientific truth on these matters.

Socrates Younger:: Yes, of course.

Stranger:: And yet we must never lose sight of the truth we stated before. The man with the real knowledge, the true statesman, will in many instances allow his activities to be dictated by his art and pay no regard to written prescriptions. He will do this whenever he is convinced that there are measures which are better than the instructions he previously wrote and sent to people at a time when he could a not be there to control them personally.

Socrates Younger:: Yes, that was what we said.

Stranger:: So an individual or a group who possess a code of laws but try to introduce some change in them because they consider it an improvement are doing the same thing according to their lights as the true statesman.

Socrates Younger:: Yes.

Stranger:: But if they acted like this with minds unenlightened by knowledge, they would indeed try to copy the true original, but would copy it very badly. If on the other hand they possessed scientific knowledge, it would no longer be a case of copying at all; it would be the real and original statesmanship we are talking about.

Socrates Younger:: Yes—or so I should say.

Stranger:: Now it has been argued already and we have agreed that no large group of men is capable of acquiring any art, be it what you will.

Socrates Younger:: That stands as our agreed conclusion.

Stranger:: Granted then that an art of kingly rule exists, the wealthy group or the whole citizen body would never be able to acquire this scientific art of statesmanship.

Socrates Younger:: How could they?

Stranger:: It seems to follow that there is an invariable rule which these imitative constitutions must obey if they mean to reproduce as far as they can that one real constitution, which is government by a real statesman using real statecraft. They must all keep strictly to the laws once they have been laid down and never transgress written enactments or established national customs.

Socrates Younger:: Quite right.

Stranger:: When the wealthy seek to copy the ideal constitution we call the constitution which results ‘aristocracy,' but when they disregard the laws, the constitution produced is ‘oligarchy.'

Socrates Younger:: I suppose so.

Stranger:: But when one individual governs according to laws, imitating the truly wise ruler, we call him ‘king.' We make no difference in name between the individual ruler guided by political science and the individual ruler guided by a right opinion and acting according to the laws.

Socrates Younger:: That seems to be so.

Stranger:: And so if there really were an example of a truly wise ruler in power his name would undoubtedly be the same—'the king'—it could not be anything else. So the total of the names of the constitutions now under consideration comes to five only.

Socrates Younger:: So it seems.

Stranger:: But stay, what of the case where one man rules but does not govern his actions either by laws or by ancient customs, but claims falsely what only the truly wise ruler has a right to claim, and says that the 'best' course must be taken in defiance of written codes? If in fact it is only his passion and his ignorance that lead him to attempt to copy the true statesman in this defiance of law, must we not call him and all like him by the name of tyrant?

Socrates Younger:: Unquestionably.

Stranger:: So then we have the tyrant and the king, then oligarchy and aristocracy, then democracy, all of which arise when men turn down the idea of the one true and scientific ruler. Men doubt whether any man will ever be found fit to bear such perfect rule. They despair of finding any one man willing and able to rule with moral and intellectual insight and to render every man his due with strictest fairness. They feel sure that a man with such absolute power will be bound to employ it to the hurt and injury of his personal enemies and to put them out of the way. But it remains true that if the ideal ruler we have described were to appear on earth he would be acclaimed, and he would spend his days guiding in strictest justice and perfect felicity that one and only true commonwealth worthy of the name.

Socrates Younger:: That is so of course.

Stranger:: We must take things as they are, however, and kings do not arise in cities in the natural course of things in the way the royal bee is born in a beehive—one individual obviously outstanding in body and mind and capable of taking charge of things at once. And therefore it seems men gather together and work out written codes, chasing as fast as they can the fading vision of the true constitution.

Socrates Younger:: So it would seem.

Stranger:: Is it any wonder that under these makeshift constitutions of ours hosts of ills have arisen and more must be expected in the future? They all rest on the sandy foundation of action according to law and custom without real scientific insight. Another art that worked on such a foundation would obviously ruin all that it sought to build up. But something even more remarkable than these besetting ills is the sheer native strength a city possesses nevertheless. For all our cities, as we know, have been subject to such ills for many generations now, and yet some of them have not come to ruin but still stand firm. However, we see many instances of cities going down like sinking ships to their destruction. There have been such wrecks in the past and there surely will be others in the future, caused by the wickedness of captains and crews alike. For these are guilty men, whose sin is supreme ignorance of what matters most. They are men who know little or nothing of real political truth and yet they consider themselves to know it from end to end and suppose that they are better instructed in this art than in any other.

Socrates Younger:: Very true.

Stranger:: All these imperfect constitutions are difficult to live under, but we might ask ourselves which of them is hardest to bear and which is most tolerable. Ought we perhaps to examine this matter, though it is not directly relevant to our appointed theme? After all one must remember that, speaking quite generally, the aim of all the actions of men everywhere is to secure for themselves the most tolerable life they can.

Socrates Younger:: Then we can hardly help considering the question.

Stranger:: There is one of three constitutions which you must regard as being at once the hardest to live under and the easiest.

Socrates Younger:: How do you mean?

Stranger:: I just want to remind you that at the beginning of this supplementary discussion we enumerated three constitutions—the rule of one, the rule of the few, and the rule of the many.

Socrates Younger:: We did.

Stranger:: Dividing each of three into two let us make six, having first separated the true constitution from all, calling it the seventh.

Socrates Younger:: How shall we divide the three others?

Stranger:: Under the rule of one we get kingly rule and tyranny; under the rule of the few, as we said, come the auspicious form of it, aristocracy, and also oligarchy. As for the subdividing of democracy, though we gave both forms of it one name previously, we must now treat it as twofold.

Socrates Younger:: How is this? How can it be divided?

Stranger:: By the same division as the others, even though the word ‘democracy' proves to be doing double duty. Rule according to law is as possible under democracy as under the other constitutions.

Socrates Younger:: Yes, it is.

Stranger:: This division of democracy into two kinds was not serviceable previously as we indicated at the time, for we were seeking then to define a perfect constitution. Now, however, we have excluded the perfect constitution from our reckoning and have before us those that have to serve us as constitutions in default of it. In this group we find the principle of obedience to law or contravention of law dividing each type of ruler into two types.

Socrates Younger:: So it seems from the argument that was put forward just now.

Stranger:: The rule of one man, if it has been kept within the traces, so to speak, by the written rules we call laws, is the best of all the six. But when it is lawless it is hard, and the most grievous to have to endure.

Socrates Younger:: So it would seem.

Stranger:: As for the rule of a few, just as the few constitute a middle term between the one and the many, so we must regard the rule of the few as of middle potency for good or ill. The rule of the many is weakest in every way; it is not capable of any real good or of any serious evil as compared with the other two. This is because in a democracy sovereignty has been divided out in small portions among a large number of rulers. If therefore all three constitutions are law-abiding, democracy is the worst of the three, but if all three flout the laws, democracy is the best of them. Thus if all constitutions are unprincipled the best thing to do is to live in a democracy. But when constitutions are lawful and ordered, democracy is the least desirable, and monarchy, the first of the six, is by far the best to live under—unless of course the seventh is possible, for that must always be exalted, like a god among mortals, above all other constitutions.

Socrates Younger:: Things do seem to work out in this way, and so we must take your advice and act as you say.

Stranger:: Therefore all who take part in one of these governments—apart from the one based on real knowledge—are to be distinguished from the true statesman. They are not statesmen; they are party leaders, leaders of bogus governments and themselves as bogus as their systems. The supreme imitators and tricksters, they are of all Sophists the arch-Sophists.

Socrates Younger:: It seems to me that the wheel has come full circle, now that the title of Sophist goes to those who most deserve it, to the men who get themselves called political leaders.

Stranger:: So this fantastic pageant that seemed like some strange masque of centaurs or some band of satyrs stands revealed for what it is. At much pains we have succeeded at last in distinguishing them and setting them apart, as we must, from all true practice of statesmanship.

Socrates Younger:: So we see.

Stranger:: There remains another task, and it is even more difficult because the class to be set apart is closer akin to the kingly ruler and also in itself harder to discern clearly. It seems to me that we have reached a point where we have to act like gold refiners.

Socrates Younger:: How so?

Stranger:: We are told that at the first stage of their work they separate off earth and stones and much else from the ore. When these are gone there still remain those precious substances akin to gold which are so combined with it as to be separable only in the furnace; I mean bronze and silver and sometimes adamant as well. These are removed only with difficulty as the metal is tried in the refining fire until at last the process yields the sight of unalloyed gold separated off by itself.

Socrates Younger:: Yes, they do say that refining is done like that.

Stranger:: It looks as though we are in a like situation. We have separated off the elements which are quite different from statesmanship, the elements which are quite foreign and repugnant to it, but there still remain the precious elements which are akin to it. These include the art of generalship, the art of administering justice, and that department of the art of public speaking which is closely allied to the kingly art. This last persuades men to do what is right and therefore takes its share in controlling what goes on in a true community. How can we best separate these arts also from statesmanship and so bring out the nature of the statesman as such, in his essential character? That, after all, is our present object.

Socrates Younger:: Clearly we must make the attempt by one means or another.

Stranger:: If trying will do it, he shall be shown in his true character. Music will provide us with an example which will help us in our task. I will begin by putting a question to you.

Socrates Younger:: What is it?

Stranger:: There is such a thing as learning the principles of music or the principles of any of the crafts, is there not?

Socrates Younger:: Yes.

Stranger:: But are we willing to admit that there exists an art of a higher order also concerned with this process of acquiring special skills? This second art is the one whose province is to decide whether or not we *ought* to learn any particular art.

Socrates Younger:: Yes, we will attest the existence of an art of this higher order.

Stranger:: We must also agree then, that it is to be distinguished from all arts of the lower order.

Socrates Younger:: Yes.

Stranger:: Ought there to be no priority at all as between these two orders of art? On the other hand, if there is to be priority, must the lower order control the higher or the higher guide and control the lower?

Socrates Younger:: The higher order should control the lower.

Stranger:: Your decision is then, that the art which decides whether we learn a skill or not ought to have control of the art which actually teaches us that skill.

Socrates Younger:: Yes, certainly.

Stranger:: Then in the same way the art which decides whether persuasion should or should not be used ought to control the operation of the art of persuasion itself.

Socrates Younger:: Undoubtedly.

Stranger:: Which is the art to which we must assign the task of persuading the general mass of the population by telling them suitable stories rather than by giving them formal instruction?

Socrates Younger:: I should say that it is obvious that this is the province to be assigned to rhetoric.

Stranger:: But to which art must we assign the function of deciding whether in any particular situation we must proceed by persuasion, or by coercive measures against a group of men, or whether it is right to take no action at all?

Socrates Younger:: The art which can teach us how to decide that will be the art which controls rhetoric and the art of public speaking.

Stranger:: This activity can be none other than the work of the statesman, I suggest.

Socrates Younger:: Excellent! That is exactly what it is.

Stranger:: Oratory, it seems, has been quickly set apart from statesmanship. It is distinct from statesmanship, and yet its auxiliary.

Socrates Younger:: Yes.

Stranger:: Now we must consider the working of another art.

Socrates Younger:: Which is that?

Stranger:: Consider the taking of decisions on military strategy once war has been declared by the state on an enemy state. What shall we say about this? Is such decision governed by no art at all, or shall we say that there is most certainly an art involved here?

Socrates Younger:: How could we dream of saying that no art is concerned? Surely generalship and the whole art of warfare operates precisely in this field.

Stranger:: But which is the art which possesses the knowledge and capacity to form a reasoned decision whether to fight or settle a dispute on friendly terms? Is this the work of generalship or does it belong to another art?

Socrates Younger:: Consistency to our earlier argument requires us to say that it is a different one which is involved.

Stranger:: So if our views here are to be consistent with our earlier views on the place of rhetoric, we must decide that this second art controls generalship.

Socrates Younger:: I agree.

Stranger:: What art can we attempt to enthrone as queen over that mighty and dreadful art, the art of war in all its range, except the art of truly royal rule?

Socrates Younger:: None other.

Stranger:: Then we must not describe the art that generals practice as statesmanship, for it proves to be but a servant of statesmanship.

Socrates Younger:: Apparently that is so.

Stranger:: Now turn to another art and let us consider the activity of judges who make straight judgments.

Socrates Younger:: By all means.

Stranger:: Does its province extend beyond the sphere of the mutual contractual obligations of the citizens? It has to act in this sphere by judging what is just or unjust according to the standards set up for it and embodied in the legal rules which it has received from the kingly lawgiver. It shows its peculiar virtue by coming to an impartial decision on the conflicting claims it examines, by refusing to pervert the lawgiver's ordinance through yielding to bribery or threats or sentimental appeals, and by rising above all considerations of personal friendship or enmity.

Socrates Younger:: Yes, that is so. You have given us, sir, a succinct account of the juryman's function and of his duty.

Stranger:: We find, then, that the power of the judges is a lesser thing than the power of the king. The judge guards the law and serves the king.

Socrates Younger:: So it would seem.

Stranger:: If you will view the three arts we have spoken of as a group with a common character you will be bound to see that none of them has turned out to be itself the art of statesmanship. This is because it is not the province of the real kingly art to act for itself but rather to control the work of the arts which instruct us in the methods of action. The kingly art controls them according to its power to perceive the right occasions for undertaking and setting in motion the great enterprises of state. The other arts must do what they are told to do by the kingly art.

Socrates Younger:: Precisely so.

Stranger:: The three arts we have just treated in detail may not control one another. They may not even control themselves, in fact. Each has its special field of action and each is entitled to the name which designates its proper sphere.

Socrates Younger:: So it would seem.

Stranger:: There is an art which controls all these arts. It is concerned with the laws and with all that belongs to the life of the community. It weaves all into its unified fabric with perfect skill. It is a universal art and so we call it by a name of universal scope. That name is one which I believe to belong to this art and to this alone, the name of ‘statesmanship.'

Socrates Younger:: Yes, I agree absolutely.

Stranger:: Now that all the classes of arts active in the government of the state have been distinguished, shall we go on to scrutinize statesmanship and base our scrutiny of it on the art of weaving which provides our example for it?

Socrates Younger:: Most certainly.

Stranger:: Then we must describe the kingly weaving process. What is it like? How is it done? What is the fabric that results from its labors?

Socrates Younger:: These are just the questions we must answer.

Stranger:: The task of finding the answers is hard, but we cannot shirk it.

Socrates Younger:: No, we must find them at all costs.

Stranger:: To say that ‘one kind of goodness clashes with another kind of goodness' is to preach a doctrine which is an easy target for the disputatious who appeal to commonly accepted ideas.

Socrates Younger:: I do not follow you.

Stranger:: Then let me put the matter in this way. You regard courage as one part of virtue I suppose.

Socrates Younger:: Surely.

Stranger:: Moderation differs from courage but is a specific kind of goodness just as courage is.

Socrates Younger:: Yes.

Stranger:: We have now to be daring and make a startling statement about these two virtues.

Socrates Younger:: What is it?

Stranger:: This pair of virtues are in a certain sense enemies from of old, ranged in opposition to each other in many realms of life.

Socrates Younger:: What do you mean?

Stranger:: The doctrine is not a familiar one by any means. I suppose that the usual statement is that all the several parts of goodness are in mutual accord.

Socrates Younger:: Yes.

Stranger:: Then we must give our very special attention to the matter. Is the position quite so simple as that? Is there not, on the contrary, something inherent in them which keeps alive a family quarrel among them?

Socrates Younger:: Certainly we must consider this. Please tell us how we are to do so.

Stranger:: We must consider instances drawn from all levels of existence of things which we regard as excellent and yet classify as mutually opposed.

Socrates Younger:: Please explain still more clearly.

Stranger:: Take swiftness and speed as an instance—swiftness of mind and body and rapid vibration of sound in a voice. Such swiftness may be seen in an actual living person or it may be represented in music or painting. Have you ever praised examples of such swiftness or listened with approval when one of your friends praised them?

Socrates Younger:: Yes.

Stranger:: Do you happen to remember the way in which the approval is expressed in all these instances?

Socrates Younger:: No, I can't say that I remember that in the least.

Stranger:: I wonder if I could really manage to put my thoughts on the subject into words and make them clear to you.

Socrates Younger:: I am sure you could.

Stranger:: You seem to think it a light task! However, let us see the principle at work wherever those mutually opposite qualities are manifested. We admire speed and intensity and vivacity in many forms of action and under all kinds of circumstances. But whether the swiftness of mind or body or the vibrant power of the voice is being praised, we always find ourselves using one word to praise it—the word 'vigorous.'

Socrates Younger:: How so?

Stranger:: 'That is alert and vigorous,' we say in the first instance, in another case, 'That is speedy and vigorous,' or, in yet another case, 'That is intense and vigorous.' In all the instances we use this epithet 'vigorous,' as applying in common to the people or things concerned, in order to express our approval of this quality in them.

Socrates Younger:: True.

Stranger:: On the other hand, do we not quite often find ourselves approving gentleness and quietness when it is shown in many kinds of human behavior?

Socrates Younger:: Yes, very decidedly.

Stranger:: Do we not describe this behavior by using an epithet which is the exact opposite of 'vigorous,' which was the term we applied to the other group of things?

Socrates Younger:: How do you mean?

Stranger:: We constantly admire quietness and moderation, in processes of restrained thinking, in gentle deeds, in a smooth deep voice, in steady balance in movement, or in suitable restraint in artistic representation. Whenever we express such approval do we not use the expression 'controlled' to describe all these excellences rather than the word 'vigorous'?

Socrates Younger:: Very true.

Stranger:: But when we find either of these kinds of behavior appearing out of its due time, we have different names for each of them and in that case we express our censure by attributing quite contrary qualities when we mention them.

Socrates Younger:: How so?

Stranger:: If speed and swiftness are excessive and unseasonable and if the voice is harsh to the point of being violent we speak of all these as 'excessive' and even 'maniacal.' Unseasonable heaviness, slowness, or softness we call 'cowardly' or 'indolent.' One can generalize further. The very classes 'energy' and 'moderation' are ranged in mutual exclusiveness and in opposition to each other; it is not simply a case of conflict between those particular manifestations of them. They never meet in the activities of life without causing conflicts, and if we pursue the matter further, by studying people whose characters come to be dominated by either of them, we shall find inevitable conflict between them and people of the opposite type.

Socrates Younger:: In what sphere do these conflicts occur?

Stranger:: In all the things we have just considered, of course, but in many others too, I think. Men react to situations in one way or another according to the affinities of their own dispositions. They favor some forms of action as being akin to their own character, and they recoil from acts arising from opposite tendencies as being foreign to themselves. Thus men come into violent conflict with one another on many issues.

Socrates Younger:: Yes, they seem to do so.

Stranger:: Considered as a conflict of temperaments, this is a mere trifle, but when the conflict arises over matters of high public importance it becomes the most inimical of all the plagues which can threaten the life of a community.

Socrates Younger:: What kind of evils do you mean?

Stranger:: Of course I mean all which concern the organization of the community as a whole. Men who are notable for moderation are always ready to support ‘peace and tranquility.' They want to keep themselves to themselves and to mind their own business. They conduct all their dealings with their fellow citizens on this principle and are prone to take the same line in foreign policy and preserve peace at any price with foreign states. Because of their indulgence of this passion for peace at the wrong times, whenever they are able to carry their policy into effect they become unwarlike themselves without being aware of it and render their young men unwarlike as well. Thus they are at the mercy of the chance aggressor. He swoops down on them and the result is that within a very few years they and their children and all the community to which they belong wake up to find that their freedom is gone and that they are reduced to slavery.

Socrates Younger:: You have described a hard and bitter experience.

Stranger:: What then is the history of the party whose bent is rather toward strong action? Do we not find them forever dragging their cities into war and bringing them up against powerful foes on all sides just because they love a military existence too fiercely? And what is the result? Either they destroy their country altogether, or else they bring it into subjection to its enemies just as surely as the peace party did.

Socrates Younger:: Yes, that is true too.

Stranger:: Can we deny, then, that in these high matters the two types of character concerned are bound to become hostile to one another and so take up opposing party lines?

Socrates Younger:: We are bound to admit it.

Stranger:: We have discovered, then, the answer to the question into which we set out to inquire when we began this conversation. We find that important parts of goodness are at variance with one another and that they set at variance the men in whom they predominate.

Socrates Younger:: So it seems.

Stranger:: There is a further point to consider.

Socrates Younger:: What is it?

Stranger:: Does any art which works by combining materials deliberately choose to make any of its products, even the least important of them, out of a combination of good material with bad? Does not every art, whatever material it works in, reject bad material as far as possible and use what is good and serviceable? The materials may be alike or dissimilar, but surely it is desirable that they should be sound, so that the art may combine them to form one product and fashion them to a structure proper to their specific function.

Socrates Younger:: Yes.

Stranger:: Surely then the true and genuine statesmanship we are concerned with could never choose deliberately to construct the life of any community out of a combination of good characters with bad characters? Obviously it will first put the young children to the test in games. After this first test it will go on to entrust the young to competent educators trained to render this particular service, but it will retain direction and oversight of them all the time. This is exactly like weaving. The art of weaving hands over the materials it intends to use for the fabric to the carders and others concerned with preparatory processes, and yet it watches their work at every stage, retaining the direction and oversight itself and indicating to each auxiliary art such duties as it deems that each can usefully perform to make ready the threads for its own task of fashioning the web.

Socrates Younger:: Precisely.

Stranger:: This is the way I see the true statesman dealing with those who rear and educate children according to the educational laws. He keeps the power of direction to himself. The only form of training he will permit is the one by which the educator produces the type of character fitted for his own task of weaving the web of state. He bids the educator encourage the young in these activities and in no others. Some pupils cannot be taught to be courageous and moderate and to acquire the other virtuous tendencies, but are impelled to godlessness and to vaunting pride and injustice by the drive of an evil nature. These the king expels from the community. He puts them to death or banishes them or else he chastises them by the severest public disgrace.

Socrates Younger:: So one usually hears it stated.

Stranger:: Furthermore, he makes those who prove incapable of rising above ignorance and groveling subservience slaves to the rest of the community.

Socrates Younger:: Quite rightly.

Stranger:: The statesman will then take over all the rest—all those who, under the training process, do in fact achieve sufficient nobility of character to stand up to the royal weaving process and yet to submit to it while it combines them all scientifically into a unity. Those in whom courage predominates will be treated by the statesman as having the firm warp-like character as one might call it. The others will be used by him for what we may likewise call the supple, soft, woof-like strands of the web. He then sets about his task of combining and weaving together these two groups exhibiting their mutually opposed characters.

Socrates Younger:: How does he do it?

Stranger:: He first unites that element in their souls which is supernatural by a divine bond, since this element in them is akin to the divine. After this supernatural link will come the natural bond, human ties to supplement the divine ones.

Socrates Younger:: What do you mean by this? Once more I do not follow.

Stranger:: When there arises in the soul of men a right opinion concerning what is good, just, and profitable, and what is the opposite of these—an opinion based on absolute truth and settled as an unshakable conviction—I declare that such a conviction is a manifestation of the divine occurring in a race which is in truth of supernatural lineage.

Socrates Younger:: It could not be more suitably described.

Stranger:: Do we realize that it is the true statesman, in that he is the good and true lawgiver, who alone is able—for who else should possess the power—to forge by the wondrous inspiration of the kingly art this bond of true conviction uniting the hearts of the young folk of whom we were speaking just now—the young folk who have profited as they should from their education?

Socrates Younger:: That is certainly as one would expect.

Stranger:: The ruler who cannot weld that bond we will never honor with those glorious titles, ‘statesman' and ‘king.'

Socrates Younger:: Most rightly not.

Stranger:: Well then, will it not work out like this? The soul full of vigor and courage will be made gentle by its grasp of this truth and there is nothing as well calculated as this to make it a willing member of a community based on justice. If such a soul refused this gift, it will sink in the scale and become savage like a beast.

Socrates Younger:: True.

Stranger:: What of the moderate soul? Sharing this firm conviction of truth, will it not be truly moderate and prudent, or at any rate prudent enough, to meet its public duties? But if it refuses to share this conviction, it deserves to be called foolish and our reproach of it is entirely proper.

Socrates Younger:: It is indeed.

Stranger:: Do we agree then that this interweaving, this linking together, can never be lasting and permanent if vicious men are joined with other vicious men or good men with vicious? Surely no art would seriously try to forge such links where these faults of character exist?

Socrates Younger:: How could it?

Stranger:: But in those of noble nature from their earliest days whose nurture too has been all it should be, the laws can foster the growth of this common bond of conviction and only in these. This is the talisman appointed for them by the design of pure intelligence. This most godlike bond alone can unite the elements of goodness which are diverse in nature and would else be opposing in tendency.

Socrates Younger:: Most true.

Stranger:: There remain the other bonds, the human ones. When one sets to work with the divine link already forged it is not very difficult to see what these are and then to set about the forging of them.

Socrates Younger:: But what are these links and how can they be forged?

Stranger:: They are forged by establishing intermarriage between the two types so that the children of the mixed marriages are so to speak shared between them and by restricting private arrangements for marrying off daughters. Most men make unsuitable matches from the point of view of the begetting of children of the best type of character.

Socrates Younger:: What can you mean?

Stranger:: Would anyone think it worth while to censure in any respect the prevalent practice of pursuing wealth or influence when making such matches?

Socrates Younger:: No, there is nothing very wrong in it.

Stranger:: But when we are specially concerned with the very people who make much of being ‘well connected,' justice requires that we should be all the more outspoken if we find them acting unsuitably.

Socrates Younger:: That is reasonable.

Stranger:: They do not act on any sound or self-consistent principle. See how they pursue the immediate satisfaction of their desire by hailing with delight those who are like themselves and by disliking those who are different. Thus they assign far too great an importance to their own likes and dislikes.

Socrates Younger:: In what way?

Stranger:: The moderate natures look for a partner like themselves, and so far as they can, they choose their wives from women of this quiet type. When they have daughters to bestow in marriage, once again they look for this type of character in the prospective husband. The courageous class does just the same thing and looks for others of the same type. All this goes on, though both types should be doing exactly the opposite.

Socrates Younger:: How can they, and why should they?

Stranger:: Because if a courageous character is reproduced for many generations without any admixture of the moderate type, the natural course of development is that at first it becomes superlatively powerful but in the end it breaks out into sheer fury and madness.

Socrates Younger:: That is to be expected.

Stranger:: But the character which is too full of modest reticence and untinged by valor and audacity, if reproduced after its kind for many generations, becomes too dull to respond to the challenges of life and in the end becomes quite incapable of acting at all.

Socrates Younger:: Yes, this is also the result one would expect.

Stranger:: I repeat what I was saying. There is no difficulty in forging these human bonds if the divine bond has been forged first. That bond is a conviction about values and standards shared by both types of character. There is one absorbing preoccupation for the kingly weaver as he makes the web of state. He must never permit the gentle characters to be separated from the brave ones; to avoid this he must make the fabric close and firm by working common convictions in the hearts of each type of citizen and making public honors and triumphs subserve this end, and finally, each must be involved with the other in the solemn pledges of matrimony. When he has woven his web smooth and ‘close-woven,' as the phrase goes, out of men of these differing types, he must entrust the various offices of state to them to be shared in all cases between them.

Socrates Younger:: How can he do this?

Stranger:: When a single magistrate happens to be needed, the statesman must choose a man possessing both characteristics and set him in authority. Where several magistrates are wanted he must bring together some representatives of each type to share the duties. Magistrates of the moderate type are exceedingly cautious, fair, and tenacious of precedent, but they lack pungency and the drive which makes for efficiency.

Socrates Younger:: Yes, that certainly seems to be a fair summing up of the case.

Stranger:: The courageous type for their part have far less of the gifts of fairness and caution than their moderate brethren, but they have in a marked degree the drive that gets things done. A community can never function well either in the personal intercourse of its citizens or in its public activities unless both of these elements of character are present and active.

Socrates Younger:: Of course that is so.

Stranger:: Now we have reached the appointed end of the weaving of the web of state. It is fashioned by the statesman's weaving; the strands run true, and these strands are the gentle and the brave. Here these strands are woven together into a unified character. For this unity is won where the kingly art draws the life of both types into a true fellowship by mutual concord and by ties of friendship. It is the finest and best of all fabrics. It enfolds all who dwell in the city, bond or free, in its firm contexture. Its kingly weaver maintains his control and oversight over it, and it lacks nothing that makes for happiness so far as happiness is obtainable in a human community.

Socrates:: You have done what we requested of you, sir, and you have set beside your definition of the Sophist a picture drawn to perfection of the true king and statesman.

# The Politicus.

Translated by Thomas Taylor.

PERSONS OF THE DIALOGUE.

SOCRATES. A GUEST.

THEODORUS. And SOCRATES JUNIOR.

Socrates:: I am greatly indebted to you, Theodorus, for making me acquainted with Theætetus and this guest.

Theodorus:: Perhaps, Socrates, you will be indebted to me the triple of this, after these men have made you a politician and a philosopher.

Socrates:: Be it so. But shall we say we have heard this of you, who are most skilful in reasoning, and in things pertaining to geometry?

Theodorus:: What is that, Socrates?

Socrates:: That we should consider each of these men as of equal worth, though they are more remote from each other in honor than accords with the analogy of your art.

Theodorus:: By our God Ammon, Socrates, you have properly, justly, and promptly reproved me for my error in computation! But I shall speak with you about this at some other time. But do not you, O guest, in any respect be weary in gratifying us, but discuss for us, in order, either a politician first, or, if it is more agreeable to you, a philosopher.

Stranger:: We shall do so, Theodorus, as soon as we attempt this discussion, nor shall we desist till we arrive at the end of it. But what ought I to do respecting Theætetus here?

Theodorus:: About what?

Stranger:: Shall we suffer him to rest, and take in his stead Socrates here, as our associate in the discussion? Or how do you advise?

Theodorus:: As you say, take Socrates in his stead: for, both being young men, they will easily by resting be able to endure every kind of labor.

Socrates:: And indeed, O guest, both of them appear to be allied to me in a certain respect. For you say that one of them (Theætetus) appears to resemble me in the formation of his face; and the other possesses a certain alliance, through having the same name as myself. But it is requisite that we who are allied should always readily recognize this alliance by discourse. With Theætetus, therefore, I yesterday joined in discourse, and today I have heard him answering this guest: but neither of them has yet discoursed with Socrates here. It is, however, proper that he should be considered. Let him then answer me some other time, but at present let him answer you.

Stranger:: Let it be so, Socrates. Do you hear this, Socrates junior?

Socrates Younger:: I do.

Stranger:: Do you, therefore, assent to what he says?

Socrates Younger:: Entirely so.

Stranger:: It appears, therefore, that you will be no impediment to our discussion; and perhaps it is requisite that much less should I be an impediment. But after a sophist, it is necessary, as it appears to me, that we should investigate a politician. Tell me, therefore, whether this character should be placed among the number of those that possess a scientific knowledge. Or how shall we say?

Socrates Younger:: That it ought.

Stranger:: We must, therefore, make a division of the sciences, just as we made a division in our investigation of the sophist.

Socrates Younger:: Perhaps so.

Stranger:: But yet it appears to me, Socrates, that we should not divide in the same manner.

Socrates Younger:: Undoubtedly not.

Stranger:: But after another manner.

Socrates Younger:: It appears so.

Stranger:: Who then can find the political path? For it is requisite to find it, and, separating it from other things, to impress it with one idea, and, marking the other deflections, with another species, to make our soul conceive that all the sciences are comprehended in two species.

Socrates Younger:: I think, O guest, that this is your business, and not mine.

Stranger:: But indeed, Socrates, it is also requisite that it should be yours when it becomes apparent to us.

Socrates Younger:: You speak well.

Stranger:: Are not, therefore, the arithmetic, and certain other arts allied to this, divested of action, and do they not afford knowledge alone?

Socrates Younger:: Yes.

Stranger:: But those arts which pertain to architecture, and the whole of manual operation, possess, as it were, science connate with actions, and at the same time give completion to bodies produced by them, which before this had not a being.

Socrates Younger:: Undoubtedly.

Stranger:: After this manner, therefore, divide all sciences, calling one practic, and the other gnostic alone.

Socrates Younger:: Let there be, therefore, one whole science, and two species of it.

Stranger:: Whether, therefore, shall we consider and denominate a politician, a king, a despot, and the governor of a family, as one and the same thing? Or shall we say there are as many arts pertaining to these as there are names? Or rather follow me hither.

Socrates Younger:: Whither?

Stranger:: To the consideration of this. If any private person is able to advise sufficiently a public physician, is it not necessary to call him by the name of that art which he who is advised professes?

Socrates Younger:: Yes.

Stranger:: And if any private person is able to give advice to a king, shall we not say that such a one possesses that science which the king himself ought to possess?

Socrates Younger:: We shall.

Stranger:: But is not the science of a true king royal?

Socrates Younger:: Yes.

Stranger:: And may not he who possesses this science, whether he is a private man, or a ruler, be in every respect rightly called, according to this art, royal?

Socrates Younger:: He may, justly.

Stranger:: And are not the governor of a family and a despot the same?

Socrates Younger:: Undoubtedly.

Stranger:: But what? Is it of any consequence with respect to empire, whether the city is of a small or of an ample size?

Socrates Younger:: It is of no consequence.

Stranger:: It is evident, therefore (which is the thing we were just now inquiring), that there is one science respecting all these. But we do not think it is of any consequence whether any one denominates this science royal, or political, or economic.

Socrates Younger:: For of what consequence can it be?

Stranger:: This too is evident, that every king is able to do but a little with his hands, and the whole of his body, towards the possession of empire, but much by the wisdom and strength of his soul.

Socrates Younger:: It is evident.

Stranger:: Are you willing, therefore, we should say that a king is more allied to the gnostic than to the manual, and, in short, to the practic science?

Socrates Younger:: Undoubtedly.

Stranger:: We must, therefore, combine into the same the political science and a politician, the royal science and a royal man, as all these are one thing.

Socrates Younger:: It is evident.

Stranger:: Let us, therefore, proceed in an orderly manner, and after this divide the gnostic science.

Socrates Younger:: Entirely so.

Stranger:: Attend, then, and inform me whether we can apprehend any way of escape in this.

Socrates Younger:: Tell me of what kind.

Stranger:: Of this kind. There is a certain logistic art.

Socrates Younger:: There is.

Stranger:: And this I think entirely belongs to the gnostic arts.

Socrates Younger:: Undoubtedly.

Stranger:: But the logistic art knows the difference in numbers. Shall we, therefore, attribute to it any further employment than that of distinguishing and judging about things known?

Socrates Younger:: Why?

Stranger:: For no architect works himself, but rules over workmen.

Socrates Younger:: It is so.

Stranger:: And he imparts indeed knowledge, but not manual operation.

Socrates Younger:: He does.

Stranger:: He may justly, therefore, be said to participate of the gnostic science.

Socrates Younger:: Entirely so.

Stranger:: But I think this belongs to the office of a judge, not to possess the end, nor to be liberated, in the same manner as the reckoner is liberated, but to order every manual operator that portion of work which is adapted to him, till that which they are commanded to do receives its completion.

Socrates Younger:: Right.

Stranger:: Are not, therefore, all such things as these gnostic, and likewise such as are consequent to the logistic art? And do not these two genera differ from each other in judgment and mandate?

Socrates Younger:: They appear to do so.

Stranger:: If, therefore, we should divide the whole of the gnostic science into two parts, denominating the one mandatory, and the other judicial, may we not say that we have made an elegant division?

Socrates Younger:: Yes, according to my opinion.

Stranger:: But those that do any thing in common are delighted when they accord with each other.

Socrates Younger:: Undoubtedly.

Stranger:: As far, therefore, as we accord in this particular we shall bid farewell to the opinions of others.

Socrates Younger:: Entirely so.

Stranger:: Come, then, inform me in which of these arts we must place a royal character. Must we place him in the judicial art, as a certain spectator? Or rather, shall we place him in the commanding art, acting as a despot?

Socrates Younger:: Undoubtedly, rather in this.

Stranger:: Let us again consider whether the commanding art admits of distinction. For it appears to me, that as the art of a huckster differs from his art who sells his own goods, so the royal genus from the genus of public criers.

Socrates Younger:: How so?

Stranger:: Hucksters, first receiving the saleable works of others, afterwards sell them again themselves.

Socrates Younger:: Entirely so.

Stranger:: In like manner, the tribe of criers, receiving the mandates of others, again imparts them to others.

Socrates Younger:: Most true.

Stranger:: What then? Shall we mingle the royal into the same with the interpretative, commanding, prophetic, and præconic genus, and with many other arts allied to these, all which have this in common that they command? Or are you willing that, as we just now assimilated, we should at present assimilate a name? since this genus of those who command their own concerns is nearly without a name. And thus we shall so divide these as to place the royal genus among the number of those that command their own concerns, neglecting every other particular, which any one may denominate as he pleases. For our method was adopted for the sake of a ruler, and not for the sake of the contrary.

Socrates Younger:: Entirely so.

Stranger:: Since, therefore, this is sufficiently separated from those, and is brought by division from that which is foreign to that which is domestic, it is necessary that this again should be divided, if we have yet any compliant section in this.

Socrates Younger:: Entirely so.

Stranger:: And, indeed, it appears that we have. But follow me in dividing.

Socrates Younger:: Whither?

Stranger:: Do we not find that all such as rule by command issue out their commands for the sake of the generation of something?

Socrates Younger:: Undoubtedly.

Stranger:: And, indeed, it is not in every respect difficult to give a two-fold division to all generated natures.

Socrates Younger:: After what manner?

Stranger:: Some among all of them are animated, and others are inanimate.

Socrates Younger:: They are so.

Stranger:: If we wish to cut the commanding division into these parts of the gnostic science, we should accordingly cut them.

Socrates Younger:: According to what?

Stranger:: One part of it should be assigned to the genera of inanimate natures, and the other to the genera of such as are animated. And thus the whole will receive a two-fold division.

Socrates Younger:: Entirely so.

Stranger:: One part, therefore, we must omit, and resume the other; the whole of which we must again divide into two parts.

Socrates Younger:: But inform me which of these is to be resumed.

Stranger:: By all means, that which rules over animals. For it is not the province of the royal science to command things inanimate, like the architectonic science; but, being of a more generous nature, it always possesses its power in animals, and about things pertaining to them.

Socrates Younger:: Right.

Stranger:: With respect to the generation and nurture of animals, attention to the latter is confined to one animal, but the care belonging to the former extends in common to the whole herd.

Socrates Younger:: Right.

Stranger:: But we do not find that the attention of the politic science is of a private nature, like that of an ox-driver, or an equerry; but it is rather similar to the attention paid by him who feeds horses and oxen.

Socrates Younger:: This appears to be the case.

Stranger:: Whether, therefore, with respect to the nurture of animals, shall we denominate the nurture of a flock the common nurture of many, or a certain common nutrition?

Socrates Younger:: Both may be adopted in discourse.

Stranger:: You have answered well, Socrates. And if you avoid paying serious attention to names, you will appear in old-age to be more rich in intellectual prudence. Let us, therefore, now do as you advise. But do you understand how some one, by showing that the nurture of a herd is two-fold, will render that which is now investigated in things double, to be sought after in halves?

Socrates Younger:: I endeavor to do so: and it appears to me that there is one kind of nurture of men, and another of brutes.

Stranger:: You have divided in every respect promptly and valiantly. We must however to the utmost of our power be careful that we may not suffer this again.

Socrates Younger:: What?

Stranger:: That, we do not take away one small part in opposition to many and great parts, nor yet take it away without species, but always in conjunction with species. For it is most beautiful to separate immediately the object of inquiry from other things, if the separation is rightly made; just as you a little before hastily thought respecting division, in consequence of perceiving the discourse tending to mankind. Though indeed, my friend, it is not safe to divide with subtlety: but it is more safe to proceed dividing through media; for thus we shall more readily meet with ideas. But the whole of this confers to the objects of our investigation.

Socrates Younger:: How do you mean, O guest?

Stranger:: I will endeavor to speak yet more clearly, on account of the benevolence of your nature, Socrates. It is impossible, therefore, to evince the things now proposed in such a manner that nothing shall be wanting: but yet we must endeavor to rise a little higher in our speculation, for the sake of perspicuity.

Socrates Younger:: In what respect then do you say we have not just now rightly divided?

Stranger:: In this respect, that if any one should attempt to give a two-fold division to the human genus, he would divide just as many of the present day divide. For these separate the Grecian genus apart from all others, as one thing; and denominate all other kinds of men, which are innumerable, unmixt, and discordant with each other, by one appellation, that of Barbarians; and through this one appellation, the genus itself appears to them to be one. But this is just as if some one, thinking that number should be divided into two species, should cut off ten thousand from all numbers, as one species, and, giving one name to all the rest, should think that this genus will become separate and different from the other through the appellation. He however will divide in a more beautiful manner, and more according to species, and a two-fold division, who cuts number into the even and odd, and the human species into male and female; and who then separates the Lydians or Phrygians, or certain other nations, from all others, when he is incapable of finding the genus and at the same time part of each of the divided members.

Socrates Younger:: Most right. But inform me, O guest, how anyone may more clearly know that genus and part are not the same, but different from each other.

Stranger:: O Socrates, best of men, you enjoin me no trifling thing. And, indeed, we have now wandered further from our proposed discourse than is fit; and yet you order us to wander still more. Now, therefore, let us again return thither, whence we have digressed, as it is fit we should; and hereafter we will at leisure investigate the question proposed by you. However, do not by any means think that you have heard this clearly determined from me.

Socrates Younger:: What?

Stranger:: That species and part are different from each other.

Socrates Younger:: Why so?

Stranger:: When any thing is a species of something, it is also necessary that it should be a part of the thing of which it is said to be the species: but it is by no means necessary that a part should be a species. Always consider me, therefore, Socrates, as asserting this rather than that.

Socrates Younger:: Be it so.

Stranger:: But inform me after this.

Socrates Younger:: What?

Stranger:: Respecting that whence we have digressed hither. For I think that we principally digressed in consequence of your being asked how the nurture of a herd should be divided, and very readily answering that there were two kinds of animals, the one human, and the other comprehending the whole of the brutal species.

Socrates Younger:: True.

Stranger:: And you then appeared to me, having taken away a part, to have thought that the remainder should be left as one genus of all brutes, because you could call all of them by the same name, viz. brutes.

Socrates Younger:: These things were so.

Stranger:: But this, O most valiant of men, is just as if some other prudent animal, as for instance a crane, should after your manner call cranes rational, thus exalting himself, and consider them as forming one genus among other animals, but, comprehending all the rest together with men, should perhaps denominate them nothing else than brutes. We should endeavor, therefore, to avoid every thing of this kind.

Socrates Younger:: How?

Stranger:: By not dividing every genus of animals, that we may be less exposed to this mistake.

Socrates Younger:: For there is no occasion.

Stranger:: We, therefore, then erred in this respect.

Socrates Younger:: In what respect?

Stranger:: That part of the gnostic science which is commanding was determined by us to be of that kind which is employed in the nurture of animals, viz. of gregarious animals. Was it not?

Socrates Younger:: It was.

Stranger:: The whole animal genus, therefore, was then divided into the tame and wild. For those animals that are naturally capable of being rendered gentle are called tame; but those that are not are denominated wild.

Socrates Younger:: Well said.

Stranger:: But the science which we are in search of, was and is in tame animals, and is to be investigated among such of these as are gregarious. Is it not so?

Socrates Younger:: Yes.

Stranger:: We must not. therefore, divide as then, looking to all animals, nor must we divide hastily, in order that we may rapidly comprehend the politic science. For this would cause us to suffer that which the proverb speaks of.

Socrates Younger:: What is that?

Stranger:: By dividing too hastily, we shall finish more slowly.

Socrates Younger:: And it would very properly cause us to suffer, O Guest.

Stranger:: Be it so then. But let us again from the beginning endeavor to divide the common nurture of animals. For perhaps the discourse itself being brought to a conclusion will more clearly unfold that which you desire. But tell me this.

Socrates Younger:: What?

Stranger:: What perhaps you have often heard from certain persons. For I do not think you have met with those who tame fish about the Nile, or the royal lakes. But perhaps you have been a spectator of the taming of these in fountains.

Socrates Younger:: I have been a spectator of this, and I have heard of the former from many.

Stranger:: You have likewise heard and believe that geese and cranes are fed by certain persons, though you have never wandered about the Thessalian plains.

Socrates Younger:: Undoubtedly.

Stranger:: I have asked you all these questions, because the nurture of herds of animals is partly aquatic and partly terrestrial.

Socrates Younger:: It is so.

Stranger:: Does it not, therefore, appear to you, as well as to me, that the science respecting the common nurture of animals should receive a two-fold division, and that one part should be denominated that which nourishes in moisture, and the other that which nourishes in dryness?

Socrates Younger:: It does appear to me.

Stranger:: But we do not in the same manner inquire to which of these arts the royal science belongs. For it is evident to every one.

Socrates Younger:: Undoubtedly.

Stranger:: For every one can divide the nurture of herds in dryness.

Socrates Younger:: How?

Stranger:: Into the volant and gradient.

Socrates Younger:: Most true.

Stranger:: That the political science, however, is to be investigated among gradient animals, is, as I may say, obvious to the most stupid. Or do you not think it is?

Socrates Younger:: I do.

Stranger:: But it is requisite that, dividing the art of feeding animals, like an even number, we should show that it is two-fold.

Socrates Younger:: This is evident.

Stranger:: Moreover, the part to which our discourse impels us appears to extend itself in two certain paths; the one being short, in consequence of separating a small from a large part; but the other long, from preserving that precept which we mentioned before, that we ought to divide through media, as this is the most, ample division. It is permitted us, therefore, to proceed in either of these paths, as is most agreeable to us.

Socrates Younger:: Is it then impossible to proceed in both?

Stranger:: Not in both at once, O wonderful youth! But it is evident that it is possible to proceed in them separately.

Socrates Younger:: I will choose, therefore, to proceed in each apart from the other.

Stranger:: It is easy so to do, since what remains is but short. In the beginning, indeed, and middle of our journey we should have found it difficult to comply with this mandate. But now, since it appears to be best, let us first proceed in the longer road. For, as we have but recently engaged in this affair, we shall more easily journey through it. But look to the division.

Socrates Younger:: Say what it is.

Stranger:: The pedestrian genus of such tame animals as are gregarious must be divided by us according to nature.

Socrates Younger:: Why?

Stranger:: Because they must be divided into such as are without horns, and into such as are horned.

Socrates Younger:: It appears so.

Stranger:: Dividing then the art of feeding pedestrian animals, describe the condition of each part. For, if you should be willing to name them, you would be involved in difficulties more than is becoming.

Socrates Younger:: How then is it proper to speak of them?

Stranger:: Thus. Since the science of feeding animals receives a two-fold division, one member of it consists in the horned part of the flock, but the other in that part which is without horns.

Socrates Younger:: Let these things be so said: for they are sufficiently shown to be so.

Stranger:: Again, therefore, it will appear to us, that a king feeds a certain herd of mutilated hornless animals.

Socrates Younger:: For how is it possible this should not be evident?

Stranger:: Breaking this, therefore, in pieces, we will endeavor to exhibit that which is transacted by a king.

Socrates Younger:: Entirely so.

Stranger:: Whether, therefore, are you willing we should divide this herd into what is called the fissured and the solid hoof? Or man we divide it into common and private generation? For you understand me.

Socrates Younger:: What kind of generation do you mean?

Stranger:: That of horses and asses, which naturally generate from each other.

Socrates Younger:: They do.

Stranger:: But the remaining species, belonging to the one herd of tame animals, do not promiscuously mingle with each other, but those only of the same kind copulate together.

Socrates Younger:: Undoubtedly.

Stranger:: But whether does the political science appear to take care of the common, or of the private generation of animals?

Socrates Younger:: It is evident that it takes care of the unmingled generation of animals.

Stranger:: It is evident, then, as it seems, that we should give a two-fold division to this, as we did to the preceding particulars.

Socrates Younger:: It is indeed necessary.

Stranger:: But we have already nearly separated into minute parts every tame and gregarious animal, except two genera. For it is not fit to rank the genus of dogs among gregarious cattle.

Socrates Younger:: It is not. But how shall we divide these two?

Stranger:: After that manner, which it is just you and Theætetus should adopt in distributing, since you have touched on geometry.

Socrates Younger:: What manner is that?

Stranger:: By the diameter, and again by the diameter of the diameter.

Socrates Younger:: How do you say?

Stranger:: Is the condition of the human genus in any other way naturally adapted to progression than as a diameter, in power a biped?

Socrates Younger:: In no other way.

Stranger:: But again, the condition of the remaining genus is, according to the power of our power, a diameter, since it naturally consists of twice two feet.

Socrates Younger:: Undoubtedly. And now I nearly understand what you wish to evince.

Stranger:: But besides these things, do we perceive, Socrates, a circumstance worthy of laughter, which happened to us in making the former division?

Socrates Younger:: What is that?

Stranger:: The human genus, mingled and concurring with a genus the most generous and tractable of all others.

Socrates Younger:: I perceive it, and likewise that it is a very absurd circumstance.

Stranger:: Is it not fit that the slowest things should arrive last of all?

Socrates Younger:: It is.

Stranger:: But we do not perceive this, that a king appears still more ridiculous when running together with the herd, and performing his course in conjunction with him who is exercised in the best manner with respect to a tractable life.

Socrates Younger:: Entirely so.

Stranger:: For now, Socrates, that is more apparent which was said by us in our investigation of a sophist.

Socrates Younger:: What is that?

Stranger:: That, in such a method of discourse as this, he neither pays more attention to what is venerable than what is not, nor does he prefer the small to the great, but always accomplishes that which is most true.

Socrates Younger:: It appears so.

Stranger:: After this, that you may not accuse me, as you have inquired what is the shorter way to the definition of a king, I will, in the first place, consider this.

Socrates Younger:: By all means, do so.

Stranger:: But I say that a gradient animal ought to have been divided by us above into the biped and quadruped genus; and perceiving that man then alone remained in conjunction with the volant genus, the biped herd should again have been divided into the winged and without wings. But this division being made, and being evinced by that art which is the nurse of men, a political and royal character should be placed over it, like a charioteer, and the reins of the city should be given to him, in consequence of this science being adapted to him.

Socrates Younger:: You have answered me beautifully, and as if you had been discharging a debt; and you have added a digression, by way of interest, and as the completion of your discourse.

Stranger:: Come, then, let us connect, by recurring from the beginning to the end, the discourse concerning the name of the politic art.

Socrates Younger:: By all means.

Stranger:: One part, therefore, of the gnostic science was asserted by us in the beginning to be of a commanding nature; and we said that the part of this science which commands from itself was assimilated to this. Again, we asserted that the nurture of animals was a part of the self-commanding science, and that this was not the smallest part. Likewise, that the nurture of herds was a species of the nurture of animals; and that the art which is nutritive of animals without horns, especially belongs to the art of feeding pedestrian animals. Again, it is necessary to connect not less than the triple of this part, if any one is desirous of comprehending it in one name, viz. the science of an unmingled genus of feeding. But a section from this, which alone remains, and which feeds men, as ranking among bipeds, is the part which we are now exploring, and which we denominate royal, and at the same time political.

Socrates Younger:: Entirely so.

Stranger:: Do you therefore think, Socrates, that we have really done well, as you say?

Socrates Younger:: In what?

Stranger:: I mean that the thing proposed by us has been in every respect and sufficiently discussed. Or has our investigation been particularly deficient in this, that it has given, indeed, a description of the thing, but such a one as is not perfectly finished?

Socrates Younger:: How do you say?

Stranger:: I will endeavor to explain my meaning more clearly.

Socrates Younger:: Do so.

Stranger:: Since, therefore, it has appeared that there are many pastoral arts, the politic science is one of these, and is the curator of one certain herd.

Socrates Younger:: It is.

Stranger:: Our discourse defined this to be neither the nurse of horses, nor of any other brutes, but to be the common nutritive science of men.

Socrates Younger:: It did so.

Stranger:: But let us contemplate the difference of all shepherds and kings.

Socrates Younger:: What is the difference?

Stranger:: If any one possessing the name of another art should assert and vindicate to himself the nutrition in common of the human herd, what should we say?

Socrates Younger:: How is this?

Stranger:: Just as if all merchants, husbandmen, and cooks, and besides these the professors of gymnastic, and the genus of physicians, should verbally oppose the shepherds of the human race, whom we have called politicians, and should assert that the care of nurturing men belonged to them, and that they were not only shepherds of the herds of men, but even of rulers themselves.

Socrates Younger:: And would not their assertion be right?

Stranger:: Perhaps so. And let us also consider this. For we know that no one would contend with a herdsman about things of this kind; since he is, doubtless, the nurse, the physician, and as it were brideman of a herd, and is alone skilled in the obstetric art respecting parturition and offspring. No one, besides, is better calculated, by such sport and music as the nature of cattle is capable of receiving, of consoling, and by alluring arts mitigating, with instruments, or the mere mouth, the herd committed to his care. And the same may be said of other shepherds. Or may it not?

Socrates Younger:: Most right.

Stranger:: How, then, will our discourse respecting a king appear to be right and entire, since we assert that he alone is the shepherd and nurse of the human herd, when at the same time ten thousand others contend for the same office?

Socrates Younger:: By no means.

Stranger:: Did we not, therefore, a little before very properly fear, when we suspected lest we should only introduce a certain royal figure, and should not perfectly define a political character, unless we comprehended those that are connected with this character, and who profess themselves to be equally shepherds; and, separating a king from them, alone exhibited him pure?

Socrates Younger:: Our fear, indeed, was most right.

Stranger:: This therefore, Socrates, must be done by us, unless we intend to disgrace our discourse at the end.

Socrates Younger:: But this must by no means take place.

Stranger:: Again, therefore, we must proceed in another way from another beginning.

Socrates Younger:: In what way?

Stranger:: By nearly inferring a jest. For it is requisite to employ a copious part of a long fable, and to act in the same manner with what remains of our discussion, as we did above, viz. always to take away a part from a part, till we arrive at the summit of our inquiry. Is it not proper to act in this manner?

Socrates Younger:: Entirely so.

Stranger:: Give me then, after the manner of boys, all your attention to the fable: for you are not very much removed from puerile years.

Socrates Younger:: Only relate it.

Stranger:: There were then, and still will be, many memorials of ancient affairs; and among others, there is one prodigious relation respecting the contention of Atreus and Thyestes. For you have heard and remember what is then said to have happened.

Socrates Younger:: Perhaps you speak of the prodigy respecting the golden ram.

Stranger:: By no means: but respecting the mutation of the rising and setting of the sun, and the other stars. For whence they now rise they did then set: and their rising was from a contrary place. Divinity, therefore, then giving a testimony to Atreus, changed the heavens into the present figure.

Socrates Younger:: This also is reported.

Stranger:: We have likewise heard from many respecting the kingdom of which Saturn was the founder.

Socrates Younger:: We have from very many.

Stranger:: And were not those ancient men born from the earth, and not generated from each other?

Socrates Younger:: This also is one of the things which are said to have happened formerly.

Stranger:: All these things, therefore, proceed from the same circumstance, and ten thousand others besides these, and which are still more wonderful. But, through length of time, some of them have become extinct, and others are related in a dispersed manner, separate from each other. But that circumstance which is the cause of this taking place has not been mentioned by any one. It must, however, now be related: for the relation will contribute to the demonstration of the nature of a king.

Socrates Younger:: You speak most beautifully. Speak, therefore, and do not omit any thing.

Stranger:: Hear, then. Divinity himself sometimes conducts this universe in its progression, and convolves it: but at another time he remits the reins of his government, when the periods of the universe have received a convenient measure of time. But the world is again spontaneously led round to things contrary, since it is an animal, and is allotted wisdom from him who cooperated with it from the first in harmonizing all its parts with the whole. This progression, however, to things contrary is naturally implanted in it through the following cause.

Socrates Younger:: Through what cause?

Stranger:: To subsist always according to the same, and in a similar manner, and to be the same, alone belongs to the most divine of all things: but the nature of body is not of this order. But that which we call heaven and the world, receives many and blessed gifts from its producing cause. However, as it participates of body, it cannot be entirely void of mutation: nevertheless, as far as it is able, it is moved in the same, and according to the same, with one lation. Hence it is allotted a circular motion, because there is the smallest mutation of its motion. But nearly nothing is able to revolve itself, except that which is the leader of all things that are moved. And it is not lawful that this should at one time move in one way, and at another time in a different way. From all this, therefore, it must be said, that the world neither always revolves itself, nor that the whole of it is always convolved by Divinity with two-fold and contrary convolutions: nor, again, that two certain Gods convolve it, whose decisions are contrary to each other. But that must be asserted which we just now said, and which alone remains, that at one time it is conducted by another divine cause, receiving again an externally acquired life, and a renewed immortality from the demiurgus; but that at another time, when he remits the reins of government, it proceeds by itself, and, being thus left for a time, performs many myriads of retrograde revolutions, because it is most great, and most equally balanced, and accomplishes its progressions with the smallest foot.

Socrates Younger:: All that you have said appears to be very probable.

Stranger:: From what has been said, therefore, we may now, by a reasoning process, apprehend that circumstance which we said was the cause of all wonderful things. For it is this very thing.

Socrates Younger:: What?

Stranger:: That the circular motion of the universe is at one time accomplished as at present, and at another time in a contrary manner.

Socrates Younger:: But how is this the cause of all wonderful things?

Stranger:: It is requisite to think that this mutation is the greatest and most perfect of all the celestial conversions.

Socrates Younger:: It is likely.

Stranger:: It is proper, therefore, to think that the greatest mutations then happen to us who are the inhabitants of the world.

Socrates Younger:: And this also is likely.

Stranger:: But do we not know that the nature of animals sustains with difficulty great, numerous, and all-various mutations?

Socrates Younger:: Undoubtedly.

Stranger:: Hence, the greatest corruptions of other animals then necessarily take place, and very few of the human race remain. And to these many other wonderful and novel circumstances at the same time happen; but this is the greatest, and follows that revolution of the universe in which a conversion is effected contrary to the present.

Socrates Younger:: What circumstance do you mean?

Stranger:: That which takes place the first of all, when, in whatever age a mortal animal is constituted, he is no longer seen advancing to old-age, but is again changed to the contrary, and naturally becomes, as it were, younger and more delicate. The white hairs, too, of those more advanced in years then became black, and the cheeks of those that had beards became smooth; and thus each was restored to the past flower of his age. The bodies, likewise, of such as were in the bloom of youth, becoming smoother and smaller every day and night, again returned to the nature of a child recently born: and such were assimilated to this nature, both in soul and body. And at length their bodies, rapidly wasting away, perished. But the dead bodies of those who at that time died through violence were in like manner immanifestly, and in a few days, corrupted.

Socrates Younger:: But what was then, O guest, the generation of animals, and after what manner were they produced from each other?

Stranger:: It is evident, Socrates, that at that time there was no generation of one thing from another. But, as it is said that there was once an earth-born race, this race was at that period restored back again from the earth. This information, too, was delivered to us by those our first progenitors, who lived immediately after the close of the last revolution. For they were public witnesses of the truth of our assertions, which at present are disbelieved, though improperly, by the multitude. For I think this particular ought to be attended to, as consequent to a part of the narration. For, if old men tended to the nature of boys, it follows, that such as were dead, but laid in the earth, must be again restored from thence, revive again, and follow that revolution of the universe, in which generation is convolved in a contrary order; and that the earth-born race, which according to this reason is necessarily produced, should thus be denominated and defined, viz. such of them as Divinity has transferred into another destiny.

Socrates Younger:: This very much follows from what has been said above. But with respect to the life which you say was under the power of Saturn, did it subsist in those revolutions, or in these? For it is evident that the mutation of the stars and the sun happens in both these revolutions.

Stranger:: You follow the discourse well. But, in answer to your question respecting all things being produced spontaneously for mankind, this by no means is the case in the present, but happened in the former revolution. For then Divinity was first the ruler and curator of the whole circulation; just as now the several parts of the world are locally distributed by ruling Gods. Divine dæmons, too, were allotted, after the manner of shepherds, animals according to genera and herds; each being sufficient for all things pertaining to the several particulars over which he presided. So that there was nothing rustic, no mutual rapine, no war, nor sedition of any kind; and ten thousand other things took place, which are the consequences of such a period. But what is said respecting the spontaneous life of these men is asserted because Divinity himself fed them, and was their curator; just as men who are of a more divine, are the shepherds of brutes, who are of a baser, nature. In consequence, too, of men being fed by Divinity, there were no polities, nor possessions of women and children. For all these were restored to life from the earth, and without having any recollection of former events. But all such things as these were absent. The inhabitants, too, had fruits in abundance from oaks, and many other trees, which did not grow through the assistance of agriculture, but were spontaneously given by the earth. And for the most part they were naked, slept without coverlids, and were fed in the open air. For the temperament of the seasons was innoxious to them. They had soft beds, too, from grass, which germinated in unenvying abundance from the earth. And thus, Socrates, you have heard what was the life of men under the reign of Saturn: but you yourself have seen what the condition of the present life is, which is said to be under Jupiter. But are you able, and likewise willing, to judge which of these is the more happy?

Socrates Younger:: By no means.

Stranger:: Are you willing, therefore, that I should after a manner judge for you?

Socrates Younger:: Entirely so.

Stranger:: If, therefore, those that were nurtured by Saturn in so much leisure, and with the power not only of converting with men, but with brutes, used all the above-mentioned particulars for the purpose of philosophy, associating with brutes and with each other, and inquiring of every nature which had a perceptive power of its own, in what respect it differed from others as to the common possession of prudence; from all this it may be easily inferred, that the men of those times were incomparably more happy than those that exist at present. But if, being abundantly filled with meats and drinks, their discourses with each other, and with brutes, were such as at present they are related to have been, from this also, in my opinion, their superior felicity may be very easily inferred. At the same time, however, we shall dismiss these particulars till some sufficient judge of them shall arise, who will unfold to us whether the men of that period were inclined to sciences and discourse. But let us now relate on what account we introduced the fable, that we may after this bring to a conclusion what remains. For, after the time of all these was consummated, and it was requisite that a mutation should take place, and besides this, the whole terrestrial genus being consumed, as all the generations of every soul had received their completion, and as many seeds having fallen on the earth as were destined to each soul,—then the governor of the universe, laying aside as it were the handle of his rudder, departed to that place of survey whence he contemplates himself. But then fate and connate desire again convolved the world. All those Gods, therefore, who govern locally, in conjunction with the greatest dæmon, knowing what had now happened, again deprived the parts of the world of their providential care. But the world becoming inverted, conflicting with itself, and being agitated by an impulse contrary to its beginning and end, and likewise making an abundant concussion in itself, produced again another corruption of all-various animals. After these things, however, and the expiration of a sufficient length of time, the tumult, confusion, and concussions ceased, and the world, becoming tranquil and adorned, again proceeded in its usual course, possessing a providential care and dominion, both over itself and the natures which it contains; remembering, to the utmost of its power, the instructions of the demiurgus and father. At the beginning, therefore, it accomplished this more perfectly, but at the end more remissly. But the cause of this is the corporeal form of the temperature, and which was nursed together with an ancient nature. For it was a participant of much disorder before it arrived at the present ornament. For, from its composing artificer, indeed, it possesses every good; but, from its former habit, all that atrocity and injustice which subsist within the heavens. And these the world both possesses from that former habit, and inserts in animated natures. The world, therefore, when nourishing the animals which it contains, in conjunction with the governor, brings forth small evils, and mighty goods: but when it is separated from him, during the nearest time of its departure, it conducts all things beautifully. At a more distant period, however, and from oblivion being generated in it, the property of its former dissonance rules with greater force. And at the last period of time it becomes deflorescent; and producing small goods, but mingling much of the temperament of things contrary to good, it arrives at the danger of both itself, and the natures which it contains, being dissolved. Hence that God who adorned the world, then perceiving the difficulties under which it labors, and anxious lest, being thus tempestuously agitated, it should be dissolved by the tumult, and be plunged into the infinite sea of dissimilitude, again resumes the helm, and adorns and corrects whatever is diseased and dissolved through the inordinate motion of the former period, and renders the world immortal and unconscious of age. This, therefore, is the end of the whole narration. But this is sufficient to show the nature of a king to such as attend to what has been already said. For, the world being again converted to the present path of generation, the progression of its age again stopped, and it imparted novel things, the very contraries to what it then imparted. For animals proximate to death, on account of their smallness, are increased. But bodies recently born from the earth, hoary, again dying, descend into the earth; and all other things are transmuted, imitating and following the condition of the universe. The imitation, likewise, of motion, generation, and nutriment, follows all things from necessity. For it is no longer possible for an animal to be produced in the earth, through other things mutually composing it; but, as the world was destined to be the absolute ruler of its own progression, after the same manner its parts also were destined by a similar guidance to spring forth, generate, and nourish, as far as they are able. But we have now arrived at that for the sake of which the whole of our discourse was undertaken. For, with respect to other animals, many particulars, and of a prolix nature, might be discussed; such as, from what things they are severally composed, and through what causes they were changed: but the particulars respecting men are shorter, and more to our purpose. For, mankind being destitute of the guardian care of the dæmon whole possession we are, and who is the shepherd of our race, and as many animals who are naturally cruel became transported with rage, hence men, now imbecile, and without a guard, were torn in pieces by such animals. And besides this, men in those first times were unskillful, and had no knowledge of the arts, because the earth spontaneously afforded them nutriment: but they did not know how to procure it, because they were not compelled by any previous necessity. From all these causes they were involved in the greatest difficulties. Hence, those gifts which are said to have been formerly imparted to us by the Gods were imparted with necessary instruction and erudition: fire, indeed, from Prometheus, but the arts from Vulcan and Minerva. Again, seeds and plants were imparted by other divinities; and, in short, all such things as are the support of human life. For men, as we have said, were not left destitute of the guardian care of the Gods; and it became requisite that they also should pay attention to the concerns of life, in the same manner as the whole world; in the imitating and following which, through all the revolutions of time, we live and are born in a different manner at different periods. And let this be the end of the fable. But we shall make it useful to discover how far we have erred in the above definition of a royal and political character.

Socrates Younger:: In what respect, and how far, do you say we have erred?

Stranger:: Partly less, and in a more generous manner, and partly in a greater degree, and more abundantly.

Socrates Younger:: How?

Stranger:: Because, while we were asked respecting a king and politician belonging to the present circulation and generation, we adduced a shepherd of a herd of men belonging to the contrary period; and in consequence of this shepherd being a God, and not a man, we transgressed abundantly: but again, because we evinced that this shepherd was the governor of the whole city, but yet did not say after what manner, in this respect we asserted what is true, but were deficient as to the whole and the perspicuous; and on this account we erred less in this latter case than in the former.

Socrates Younger:: True.

Stranger:: We ought, therefore, as it seems, to think that we shall then have perfectly described a political character when we have defined the mode of governing a city.

Socrates Younger:: Beautifully said.

Stranger:: On this account we related that fable, not only that those might be pointed out who oppose the royal character we are now investigating with respect to the nurture of a herd, but that we might more clearly perceive him who alone ought to be called a pastor, since after the manner of a shepherd and herdsman he takes care of the nurture of the human race.

Socrates Younger:: Right.

Stranger:: But I think, Socrates, that this figure of a divine shepherd is still greater than that which belongs to a king; and that the politicians of the present day are naturally much more similar to subjects than governors, and in a manner more allied to these participate of discipline and nurture.

Socrates Younger:: Entirely so.

Stranger:: But we must not inquire whether they have been more or less so, and whether they are naturally so or not.

Socrates Younger:: Undoubtedly not.

Stranger:: Again, therefore, let us thus resume our inquiry. We said, then, that there was a self-commanding art respecting animals, which took care of them, not privately, but in common; and this art we then directly called the herd-nourishing art. Do you recollect?

Socrates Younger:: Yes.

Stranger:: In this, therefore, we erred. For we have not by any means comprehended in a definition the political character, nor given it a name; but its name as yet flies from us.

Socrates Younger:: How so?

Stranger:: To nourish the several herds of animals belongs to all other shepherds; but we have not given a fit name to the political character, which requires the application of something common.

Socrates Younger:: You speak the truth, if this common something can be obtained.

Stranger:: But is it not possible to apply healing, as that which is common to all things, without either defining nutriment, or any other thing? and to introduce another certain art, either pertaining to the nurture of herds, or therapeutic, or adapted to take care of something; and thus to comprehend the political character together with others, since reason signifies that this ought to be done?

Socrates Younger:: Right. But after this, in what manner must the division be made?

Stranger:: As before we divided the herd-nourishing art into the gradient and winged tribes, and into the horned and without horns, in the same manner we should divide the art pertaining to the care of herds, which will thus be similarly comprehended in our discourse, together with the kingdom of Saturn.

Socrates Younger:: It appears so. But go on with your inquiries.

Stranger:: If, then, the name of the art pertaining to the care of herds had been thus adopted, no one would have opposed us, as if there were no careful attention whatever; just as then it was justly contended, that there is no art in us which deserves the appellation of nutritive; and that, if there were any such art, it belongs to many things prior to, and preferable to, any thing pertaining to kings.

Socrates Younger:: Right.

Stranger:: But no other art endeavors to accomplish this more, and in a milder manner, as if it paid a careful attention to the whole of human communion, than the royal art.

Socrates Younger:: Right.

Stranger:: But after these things, Socrates, do you perceive how very much we have erred about the end?

Socrates Younger:: What kind of error have we committed?

Stranger:: We have erred in this, that though we have conceived that there is a certain nutritive art of a biped herd, yet we ought not immediately to have called it royal and politic, as if entirely complete.

Socrates Younger:: Why not?

Stranger:: In the first place, as we have said, the name ought to be accommodated more to attentive care than to nutriment: and in the next place, this attentive care ought to be divided. For it will receive no small sections.

Socrates Younger:: Of what kind?

Stranger:: The sections will be a divine shepherd, and a human curator.

Socrates Younger:: Right.

Stranger:: And again, it is necessary to give a two-fold distribution to human care.

Socrates Younger:: What are the two parts?

Stranger:: The violent and the voluntary.

Socrates Younger:: What then?

Stranger:: And erring in this, with greater ineptitude than is becoming, we considered a king and a tyrant as the same, though they are most dissimilar both in themselves and in their mode of government.

Socrates Younger:: True.

Stranger:: Now, therefore, again correcting ourselves (as I have already said), we shall divide human care into the violent and the voluntary.

Socrates Younger:: Entirely so.

Stranger:: And the violent we shall call tyrannic: but the voluntary, and the attention paid to the herds of voluntary biped animals, we shall denominate politic. We shall therefore evince, that he who possesses this art and care is truly a king and a politician.

Socrates Younger:: And thus the demonstration, O guest, respecting political affairs will, as it appears, be perfect.

Stranger:: It will be well for us, Socrates, if this is the case. But it is requisite that these things should not only be apparent to you, but likewise to me, in common with you. But at present a king appears to me not to possess as yet a perfect figure: but just as Statuaries, who by hastening their work sometimes unseasonably, and adding more and larger things than are fit, finish it more slowly; so we at present have not only rapidly and magnificently evinced that we erred in the former part of our discussion, in consequence of thinking that great paradigms should be employed about a king, but we reviled the wonderful bulk of the fable, and were compelled to use a greater part of it than was proper. On this account, we have made a more prolix demonstration, and have not entirely finished the fable. But, indeed, our discourse, like an animal, appears to have its exterior delineation sufficiently perfect, but is not yet perspicuous, through paint, and the mixture of colors. But it is more becoming to exhibit every animal by words and discourse, to such as are able to follow the disquisition, than by painting, and the whole of manual operation; but other things are to be exhibited through the operations of the hand.

Socrates Younger:: This, indeed, is rightly said: but show me why you say you have not yet spoken sufficiently.

Stranger:: It is difficult, O divine youth, to exhibit great things perspicuously, without examples. For each of us appears to know all things as in a dream, and again to be ignorant of all things according to a wakeful perception.

Socrates Younger:: How do you say this?

Stranger:: We appear at present to have moved very absurdly the passion respecting science which is in us.

Socrates Younger:: In what respect?

Stranger:: The example, O blessed youth, which I have adduced will again require an example.

Socrates Younger:: Why? Tell me, and do not in any respect be remiss on my account.

Stranger:: I will, since you are prepared to follow me. For we know what boys do as soon as they have acquired a knowledge of their letters.

Socrates Younger:: What is that?

Stranger:: They sufficiently perceive each of the elements in the shortest and easiest syllables, and are able to speak the truth concerning them.

Socrates Younger:: Undoubtedly.

Stranger:: But, being again dubious about these in other syllables, they are deceived in opinion and discourse.

Socrates Younger:: Entirely so.

Stranger:: May they not, therefore, thus be easily, and in the most beautiful manner, led to things which they do not yet know?

Socrates Younger:: How?

Stranger:: By leading them first to those syllables in which they have had right opinions respecting these very same things; but, when we have thus led them, to place before them things which they do not yet know; and, by comparing them together, to show them that there is the same similitude and nature in both the complications, till the things conceived by true opinion are presented to the view compared with all the unknown particulars. But these being presented to the view, and examples of them produced, it will cause them to denominate that which is different in all the elements of every syllable as different from other things; but that which is the same, as always the same, according to things the same with itself.

Socrates Younger:: Entirely so.

Stranger:: This, therefore, we sufficiently comprehend, viz. that the generation of a paradigm then takes place, when that which is the same in another divulged particular being rightly conceived by opinion, and accommodated to each, produces one true opinion of both.

Socrates Younger:: It appears so.

Stranger:: Shall we therefore wonder, if our soul, suffering the same thing naturally about the elements of all things, at one time is established in certain particulars by truth itself about each individual thing, and at another time fluctuates in other particulars, about all things? And that when, in certain commixtions, it thinks rightly, it should again be ignorant of these very same things, when it is transferred to long and difficult syllables of things?

Socrates Younger:: There is nothing wonderful in this.

Stranger:: For how, my friend, can any one, beginning from false opinion, arrive at any, even the smallest part of truth, and thus acquire wisdom?

Socrates Younger:: Nearly no one.

Stranger:: If, therefore, these things naturally subsist in this manner, you and I shall not in any respect err, if we first of all endeavor to perceive the nature of the whole paradigm in another small and partial paradigm; and after this, betaking ourselves to the paradigm of a king, which is the greatest of all paradigms, and deriving it from lesser things, endeavor again, through a paradigm, to know by art the remedy of political affairs, that we may be partakers of wakeful perceptions instead of a dream.

Socrates Younger:: Perfectly right.

Stranger:: Again, therefore, let us resume the former part of our discourse, viz. that since an innumerable multitude, together with the royal genus, doubt respecting the government of a city, it is requisite to separate all these from the royal genus, and to leave it by itself. And for this purpose we said it was requisite that we should have a certain paradigm.

Socrates Younger:: And very much so.

Stranger:: But what paradigm can any one adduce which both contains political concerns, and is the smallest possible, so that he may sufficiently find the object of his investigation? Are you willing, by Jupiter, unless we have something else at hand, that we choose the weaving art? Not the whole, indeed, if it is agreeable to you: for, perhaps, the weaving of wool will be sufficient. For it may happen that this part being chosen may testify that which we wish to evince.

Socrates Younger:: For why should it not?

Stranger:: Shall we therefore now, with respect to this part of the weaving art, act in the same manner as we did above, viz. divide every particular by cutting the parts of parts? and, passing over all things in the shortest manner possible, return to that which is useful to our present purpose?

Socrates Younger:: How do you say?

Stranger:: My answer to you shall be an explanation of the thing.

Socrates Younger:: You speak most excellently.

Stranger:: Of all the things which we fabricate and possess, some are for the sake of doing something, and others are auxiliaries against any inconvenience we may suffer. And of auxiliaries, some are alexipharmic, as well divine as human; but others are subservient to defense. And of things subservient to defense, some consist of warlike apparatus, and others are enclosures. And of enclosures, some are veils, and others are defenses against heat and cold. But of defenses, some are coverings, and others are apparel. And of apparel, one part is an under veil, and another a surrounding covering. And of surrounding coverings, some are simple, and others composite. But of the composite, some are perforated, but others are connected together without perforation. And of those that are without perforation, some are composed from the nerves of things growing out of the earth, but others are hairy. And of the hairy, some are conglutinated by water and earth, but others are themselves connected together with themselves. To these auxiliaries and coverings, which are wrought from the same things being bound together, we give the name of garments. But we call that art which is especially conversant with garments, vestific, from the thing itself, in the same manner as above we called the art respecting a city politic. We likewise say that the weaving art, so far as for the most part it weaves garments, differs in nothing but the name from the vestific art; just in the same manner as we formerly observed that a royal differed only nominally from a political character.

Socrates Younger:: Most right.

Stranger:: But after this we should thus reason: that some one may, perhaps, think it has been sufficiently shown that the weaving art is conversant with garments, but may not be able to perceive, that though it is not yet distinguished from things which cooperate near together, it is separated from many other things of a kindred nature.

Socrates Younger:: Tell me what things of a kindred nature.

Stranger:: You do not understand what has been said, as it seems. It appears, therefore, that we should return from the end to the beginning. For, if you understand propinquity, we have now separated this from the weaving art, by distributing the composition of coverings into things put under, and things surrounding us.

Socrates Younger:: I understand you.

Stranger:: We have likewise separated every kind of fabrication from thread and broom, and all such plantal productions as we just now called nerves. We also defined the compressive art, and the composition which employs perforation and sewing, which for the most part pertains to the currier's art.

Socrates Younger:: Entirely so.

Stranger:: We also separated the fabrication of simple coverings from skins, and of such coverings as are employed in building, and in the whole of the tectonic, and in all other arts which are employed in stopping the effluxions of water. Also such arts as procure restraints in joining, and violent actions, and which are employed about the construction of doors, and distribute the parts of the cementing art. We have likewise divided the armor-making art, which is a section of the great and all-various power effective of defense. We also defined, in the very beginning, the whole art of cooking, which is conversant with alexipharmics; and we left a certain art, which appears to be that we are in pursuit of, viz. which defends against cold, produces woolen vestments, and is called the art of weaving.

Socrates Younger:: It seems so.

Stranger:: But we have not yet, O boy, perfectly discussed this matter. For he who is first engaged in the making of garments appears to act in a manner directly contrary to the weaver.

Socrates Younger:: How so?

Stranger:: For the work of the weaver is a certain knitting together.

Socrates Younger:: It is.

Stranger:: But the work of him who first engages in the making of garments consists in dissolving things joined together.

Socrates Younger:: What kind of work is this?

Stranger:: The work of the art of carding wool. Or shall we dare to call the art of carding wool the weaving art, and a wool-carder a weaver?

Socrates Younger:: By no means.

Stranger:: But if any one should call the art effective of the thread and woof in a loom the weaving art, he would assert a paradox, and give it a false name.

Socrates Younger:: Undoubtedly.

Stranger:: But whether shall we say that the whole attention and care of the fuller and the mender contribute nothing to the making of garments? Or shall we also call these weaving arts?

Socrates Younger:: By no means.

Stranger:: But all these contend with the power of the weaving art, respecting the care and the making of garments; attributing, indeed, to it the greatest part, but likewise assigning to themselves great portions of the same art.

Socrates Younger:: Entirely so.

Stranger:: Besides these, it further appears requisite, that the arts effective of the instruments through which the weaver accomplishes his work, should be considered as concauses of every work accomplished by weaving.

Socrates Younger:: Most right.

Stranger:: Whether, therefore, will our discourse about the weaving art, a part of which we have chosen, be sufficiently defined, if we assert that it is the most beautiful and the greatest of all the arts which are employed about woolen garments? Or shall we thus, indeed, speak something of the truth, but yet neither clearly nor perfectly till we have separated all these arts from it?

Socrates Younger:: This will be the case.

Stranger:: Must we not, therefore, in the next place act in this manner, that our discourse may proceed in an orderly series?

Socrates Younger:: Undoubtedly.

Stranger:: In the first place, therefore, let us consider two arts which subsist about all things.

Socrates Younger:: What are they?

Stranger:: One is the concause of generation, and the other is the cause itself.

Socrates Younger:: How?

Stranger:: Such arts as do not fabricate the thing itself, but prepare instruments for the fabricators, without which instruments the proposed work cannot be effected,—these are concauses: but those which fabricate the thing itself are causes.

Socrates Younger:: This distinction is reasonable.

Stranger:: In the next place, those arts which produce the distaff, and the shuttle, and such other instruments as contribute to the making of garments,—all these I call concauses: but those which pay attention to and fabricate garments I call causes.

Socrates Younger:: Most right.

Stranger:: But, of causes, it will be proper especially to collect that which pertains to the washing of garments, and that which is skilled in mending, and all the therapeutic care about these, since the cosmetic art is abundant, and to denominate the whole the fuller’s art.

Socrates Younger:: It will so.

Stranger:: But there is one art comprehending that part which cards wool and spins, and likewise every thing pertaining to the making of garments, and which is called by all men the wool-working art.

Socrates Younger:: How so?

Stranger:: The art of carding wool, and the half of that art which uses the shuttle, and that art which separates from each other things joined together,—all these, in short, form a part of the wool-working art, of which there are two great parts, one collective, and the other separative.

Socrates Younger:: There are so.

Stranger:: The art of carding wool, therefore, and all those other arts which we just now mentioned, belong to the separative part. For that art which divides in wool and thread, after one manner with the shuttle, and after another with the hands, has all the names which we have just now mentioned.

Socrates Younger:: Entirely so.

Stranger:: Again, we must take a part of the collective part, and of the wool-working art contained in it; but we must pass by all such things of a separating nature as we happen to find there, and bisect the wool-working art, together with the collective and separative section.

Socrates Younger:: Let us divide them.

Stranger:: It will be proper for you, therefore, Socrates, to divide the collective, together with the wool-working part, if we wish to apprehend sufficiently the proposed weaving art.

Socrates Younger:: It will be requisite.

Stranger:: It will indeed: and we say, therefore, that one part of it is streptic, or conversant with rolling, and the other symplectic, or complicative.

Socrates Younger:: Do I then understand you? For you appear to me to say that the elaboration of the thread is streptic.

Stranger:: Not the elaboration of this only, but likewise of the woof. Or can we find any generation of it which is not streptic?

Socrates Younger:: By no means.

Stranger:: Desire also each of these: for perhaps you will find the definition seasonable.

Socrates Younger:: In what respect?

Stranger:: In this. We say that the work of the wool-carder, when it is drawn out into length and breadth, is a certain fracture.

Socrates Younger:: We do.

Stranger:: This, when it is turned by the distaff, and becomes a solid thread, is called stamen: but they say that the art which directs this is stemonic, or conversant with stuff to be woven.

Socrates Younger:: Right.

Stranger:: But such things as receive a loose contortion, and by the implication of the thread with the attraction of the polish acquire a measured softness,—of these we call what is spun the woof, but the art itself which presides over these, wool-spinning.

Socrates Younger:: Most right.

Stranger:: And now that part of the weaving art which we proposed is obvious to every one. For, with respect to a part of the collective art in the working of wool, when it accomplishes that which is woven by a fit knitting together of the woof and the thread, then the whole of the thing woven is called a woolen garment, but the art presiding over this, textorian.

Socrates Younger:: Most right.

Stranger:: Be it so. But why then did we not immediately answer, that the plectic art is that which weaves together the woof and the thread, instead of proceeding in a circle, and defining many things in vain?

Socrates Younger:: It does not appear to me, O guest, that we have said any thing in vain.

Stranger:: This is not at all wonderful. But perhaps, O blessed youth, it will be seen that you will often hereafter fall into this disease. Nor is it wonderful. But hear ascertain discourse, which is proper to be delivered respecting all such particulars as these.

Socrates Younger:: Only relate it.

Stranger:: Let us, therefore, in the first place, behold the whole of excess and deficiency, that we may praise and blame according to reason whatever is said with more prolixity or brevity than is becoming in disputations of this kind.

Socrates Younger:: It will be proper so to do.

Stranger:: But I think we shall do right by discoursing about these things.

Socrates Younger:: About what things?

Stranger:: About prolixity and brevity, and the whole of excess and deficiency. For the art of measuring is conversant with all these.

Socrates Younger:: It is.

Stranger:: We will divide it, therefore, into two parts. For it is requisite to that after which we are hastening.

Socrates Younger:: Inform me how this division is to be made.

Stranger:: Thus. One part according to the communion of magnitude and parvitude with each other; but the other part according to the necessary essence of generation.

Socrates Younger:: How do you say?

Stranger:: Does it not appear to you to be natural, that the greater ought to be called greater than nothing else than the lesser? and again, that the lesser should not be lesser than any thing than the greater?

Socrates Younger:: To me it does.

Stranger:: But what? Must we not say that what surpasses the nature of mediocrity, and is surpassed by it, whether in words or actions, is that by which especially good and bad men differ from each other?

Socrates Younger:: It appears so.

Stranger:: These two-fold essences, therefore, and judgments of the great and the small must be established; but not, as we just now said, with reference to each other only. But, as we now say, they are rather partly to be referred to each other, and partly to mediocrity. Are we however willing to learn on what account this is requisite?

Socrates Younger:: Undoubtedly.

Stranger:: If some one refers the nature of the greater to nothing else than the nature of the lesser, he will not refer it to mediocrity. Or will he?

Socrates Younger:: He will not.

Stranger:: May we not, therefore, divide the arts themselves, and all their works, according to this reasoning? And shall we not entirely take away the political science which we are now investigating, and that which is called the weaving art? For all such things as these guard against that which is more or less than mediocrity, not as if it had no subsistence, but as a thing of a difficult nature in actions. And after this manner preserving mediocrity, they effect every thing beautiful and good.

Socrates Younger:: Undoubtedly.

Stranger:: If, therefore, we take away the politic science, will not our investigation after this of the royal science be dubious?

Socrates Younger:: Very much so.

Stranger:: Whether, therefore, as in our investigation of a sophist, we compelled non-being to be, after discourse about it fled from us, so now shall we compel the more and the less to become measured, not only with reference to each other, but likewise to the generation of mediocrity? For no one can indubitably become a politician, or knowing in any thing else pertaining to actions, unless he assents to this.

Socrates Younger:: We ought, therefore, especially to do this now.

Stranger:: This, Socrates, is a still greater work than that; though, as we may remember, that was very prolix. But a thing of this kind may be supposed respecting them, and very justly.

Socrates Younger:: Of what kind?

Stranger:: That there is occasion for what we are now speaking of, in order to evince what is accurate respecting this thing. Further still, with respect to the present particulars, it appears to me to have been shown sufficiently, that this discourse will afford us magnificent assistance, as leading us to think that all arts are to be similarly measured according to the more and the less, not only among themselves, but likewise with reference to the generation of mediocrity. For, this having a subsistence, they also are: and, these subsisting, this also is And either of these being taken away, neither of them will subsist.

Socrates Younger:: This indeed is right. But what follows?

Stranger:: We should evidently divide the art of measuring (as we have said) into two parts; placing as one of its parts all those arts which measure number, length, breadth, depth, and velocity, with reference to the contrary; but placing as its other part, such arts as regard the moderate and the becoming, the seasonable and the fit, and all such as fly from the extremes to the middle.

Socrates Younger:: Each of these sections is great, and they differ much from each other.

Stranger:: That, Socrates, which is sometimes asserted by many of those elegant men, who think they assert something wise, when they say that the art of measuring is conversant with all generated natures, is now asserted by us. For all artificial things after a certain manner participate of measure; but, in consequence of not being accustomed to divide according to species, these men immediately collect into the same these things which so widely differ from each other, and consider them as similar. And, again, they do the very contrary to this: for things which are different they do not divide according to parts, though it is requisite that, when any one first perceives the communion of many things, he should not desist till he perceives all the differences in it which are placed in species: and again, when he perceives all-various dissimilitudes in multitudes, he cannot desist from this difficult perception, till, having enclosed all such things as are allied in one similitude, he comprehends them in the essence of a certain genus. And thus much may suffice respecting these particulars, and concerning defect: and excess. This only must be carefully observed, that two genera of measures about these particulars have been invented, and that we should remember what they are.

Socrates Younger:: We will remember.

Stranger:: But, after this discussion, let us assume another respecting the objects of our investigation, and the whole purport of this discourse.

Socrates Younger:: What is it?

Stranger:: If any one should ask us respecting the custom of those that learn their letters, when they are asked from what letters a word is composed, shall we say that the inquiry is then made for the sake of one word only, or that they may become more skilful in every thing pertaining to grammar?

Socrates Younger:: Evidently that they may become more skilful in the whole of grammar.

Stranger:: But what again? Is our inquiry respecting a politician undertaken by us more for the sake of the politician, than that we may become more skilful in every discussion?

Socrates Younger:: This also is evident, that it is undertaken on this latter account.

Stranger:: No one indeed endued with intellect would be willing to investigate the art of weaving, for its own sake alone: but I think most men are ignorant, that there are certain sensible similitudes of things which are naturally capable of being easily learnt, and that there is no difficulty in making these manifest, when any one wishes to point them out to some one inquiring a reason respecting them, not in conjunction with things, but with facility, without aligning a reason. But of things the greatest and the most honorable, there is not any image clearly fabricated for men, which being exhibited by him who wishes to fill the soul of the inquirer, can, by being harmonized to some one of the senses, sufficiently fill the soul. Hence it is requisite to meditate how we may be able to give and receive a reason for every thing. For incorporeal natures, as they are the most beautiful and the greatest of all things, can alone be clearly pointed out by reason, but by nothing else. And all we have said at present is asserted for the sake of these things. But the consideration of every particular is more easily effected in small things than in such as are great.

Socrates Younger:: You speak most beautifully.

Stranger:: Do we, therefore, remember on what account all these things have been said by us?

Socrates Younger:: On what account?

Stranger:: Principally on account of the difficulty in which we were involved, through the prolix discourse about the weaving art, and the revolution of the universe. We likewise considered the discourse of the sophist about the essence of non-being, as full of prolixity. And on all these accounts we terrified ourselves, fearing lest we should speak superfluously in conjunction with prolixity. Consider, therefore, all these things as said by us, in order that we may not suffer any thing of this kind again.

Socrates Younger:: Be it so. Only discuss what remains.

Stranger:: I say, therefore, it is requisite that both you and I should be mindful of what we have now said, as often as brevity or prolixity of discourse is blamed, not judging the prolixities by one another, but according to that part of the measuring art, which we said above ought to be remembered with a view to the becoming.

Socrates Younger:: Right.

Stranger:: But yet all things are not referred to this. For we do not require In order to obtain pleasure a prolixity which harmonizes with nothing, unless as a certain appendix. Nor is it proper to make the easy and rapid discovery of the object of our investigation our principal intention; but this ought to be considered by us as a secondary thing. But we should by far most especially, and in the first place, honor the method which is able to divide according to species. We should likewise by no means, be indignant with a discourse, however extended, which renders the hearer more inventive; and the same must be said of a discourse however short. Further still, it becomes him who blames long discourses in disquisitions such as these, and who does not admit circular periods, not to condemn them altogether rapidly, and immediately, but to show first that we shall be more fit for discussion, and more capable of discovering things by reason, by shorter discourses: but we should neither pay any attention to, nor even seem to hear any other praise or blame. And thus much may suffice for these things, if it also seems so to you. Let us, therefore, again return to the political character, introducing the before-mentioned paradigm of the weaving art.

Socrates Younger:: You speak well: and let us do as you say.

Stranger:: Is not, therefore, the office of a king to be separated from that of many shepherds, or rather from that of all those who have the charge of herds?

Socrates Younger:: Yes.

Stranger:: But we say that the consideration of causes and concauses respecting a city remains, which are first to be divided from each other.

Socrates Younger:: Right.

Stranger:: You know, therefore, that it is difficult to bisect these. But the cause of this will, I think, in the course of our inquiry be not less apparent.

Socrates Younger:: It will be proper, therefore, so to do.

Stranger:: Let us, then, divide them into parts, like victims, since we cannot bisect them: For it is always requisite to cut into the nearest number possible.

Socrates Younger:: How, therefore, shall we do at present?

Stranger:: Just as we did above: for we placed all such instruments as are subservient to weaving, as concauses.

Socrates Younger:: We did.

Stranger:: The same thing, therefore, must be done by us now, and it is still more necessary than it was then. For such things as fabricate in a city either a small or a large instrument are all of them to be considered as concauses; since without these a city could never subsist, nor yet the politic science. But yet again we do not establish any one of these as the business of the royal science.

Socrates Younger:: We do not.

Stranger:: We likewise attempt to accomplish a difficult thing, in separating this genus from others. For he who says that it is an instrument of some particular being, appears to speak probably: but at the same time we must say that this is different from the possessions belonging to a city.

Socrates Younger:: In what respect?

Stranger:: Because it has not this power. For causes do not adhere to generation as an instrument, but on account of the safety of that which is fabricated.

Socrates Younger:: What kind of thing do you mean?

Stranger:: An all-various species produced from things dry and moist, fiery and without fire, and which we call by one appellation, a vessel, though it is an abundant species: but I think this does not at all belong to the science we are investigating.

Socrates Younger:: Undoubtedly not.

Stranger:: But the third species, or that of possessions, appears to be multiform, consisting of the terrestrial and aquatic, the much wandering and the inerratic, the honorable and the ignoble; and it has one name, because the whole of it subsists for the sake of a certain fitting, as it always becomes a seat to something.

Socrates Younger:: What kind of thing is it?

Stranger:: It is that which is called a vehicle, a thing which is not entirely the work of the politic science, but rather of the tectonic, ceramic, and calcotypic.

Socrates Younger:: I understand you.

Stranger:: Must we then mention a fourth species of these, in which most of the things formerly spoken of by us are contained? viz. every kind of garment, many arms, walls, all enclosures, consisting either of earth or stone, and ten thousand other things. And since all these are constructed for the sake of defense, the whole may most justly be called a fortification; and, for the most part, may more properly be considered as much more the work of the architect and weaver than of the politician.

Socrates Younger:: Entirely so.

Stranger:: Are we, therefore, willing to rank in the fifth place the arts of adorning, painting, and music, together with such arts as use these; from which certain imitations are devised for the sake of procuring us pleasure, and which may be justly comprehended in one name?

Socrates Younger:: In what name?

Stranger:: They may be denominated sportive.

Socrates Younger:: Undoubtedly.

Stranger:: This one name, therefore, accords with all these: for no one of them does any thing seriously, but all their operations are for the sake of sport.

Socrates Younger:: This also I nearly understand.

Stranger:: But ought we not to place as a sixth all-various species, and, which is the offspring of many other arts, that art which, prepares bodies for all the above-mentioned particulars?

Socrates Younger:: Of what art are you speaking?

Stranger:: That art which digs gold and silver, and other metals, out of the bowels of the earth; likewise that which cuts down trees, that which constructs something by shaving off the hair, the knitting art, that which cuts off the barks of trees, and the skins of animals, and all such arts as are conversant with things of this kind. Also, such arts as procure cork, books, and bonds, fabricating composite species from genera which are not composite. The whole of this we call the first-born possession of mankind, simple, and by no means the work of the royal science.

Socrates Younger:: Right.

Stranger:: The possession of nutriment, and such things as when mingled with the body can, by their parts, administer to its wants, must be ranked in the seventh place. And the whole of this must be denominated by us nutriment, unless we have any thing better to adopt instead of it. However, we may place the whole of this under agriculture, hunting, gymnastic, medicine, and cooking, and attribute it to these more properly than to the politic science.

Socrates Younger:: Undoubtedly.

Stranger:: Nearly, therefore, all possessions, except those of tame animals, may I think be found in these seven genera. But consider: For it was most just that the species which we called first-born should be introduced first; and after this, instrument, vessel, vehicle, fortification, that which is sportive, and cattle. But if any thing of no great consequence is latent, which may be accommodated to some one of these, we omit it; such as the idea of coin, of seals, and of every thing impressed or carved. For these things are not very much allied to the genus; but some accord with it, for the purpose of ornament, others as subservient to instruments, violently, indeed, but at the same time they may be drawn to this end. But the nurture of herds which we before distributed, seems to comprehend the whole possession of tame animals, slaves being excepted.

Socrates Younger:: Entirely so.

Stranger:: The genus of slaves, and of all servants, remains, in which I prophesy, that those who contend with a king respecting the thing woven will become apparent, in the same manner as above, those that knit, and those that comb wool, and such others as were then mentioned by us, contended with the weavers. But all the others who were called by us concauses, together with the works just now mentioned, are set aside, and are separated from royal and political action.

Socrates Younger:: It appears so.

Stranger:: Let us then, approaching nearer, consider the rest, that we may more firmly perceive them.

Socrates Younger:: It is, therefore, requisite to do so.

Stranger:: We shall find, then, that the greatest servants, so far as we can see in this affair, are engaged in a pursuit, and possess a property the very contrary to what we have expected.

Socrates Younger:: What are these?

Stranger:: Men acquired by purchase; whom, beyond all controversy, we ought to call slaves, and of whom we should assert, that they by no means vindicate to themselves the royal art.

Socrates Younger:: Undoubtedly.

Stranger:: But what shall we say of those free-born men who voluntarily engage in the servile employments mentioned by us above, viz. who transmit the works of husbandry, and of the other arts, to each other, and who are engaged in mutual traffic, domestic or foreign, whether they change money for other things, or like for like, (whom we denominate moneychangers, pilots, and hucksters,) shall we say that these will contend for any part of the politic science?

Socrates Younger:: Perhaps merchants will.

Stranger:: But yet we never find that those mercenaries who readily offer their services to every one vindicate to themselves the royal science.

Socrates Younger:: For how can they?

Stranger:: What then shall we say of those that act in this servile capacity every where?

Socrates Younger:: Of whom are you speaking? and of what kind of servile offices?

Stranger:: I speak of the tribe of criers, and of those who become wise respecting letters, and often act in the capacity of servants, together with certain other persons who are very skilful in the labors pertaining to government. What again shall we say of these?

Socrates Younger:: That which you just now said, that they are servants, but no rulers in cities.

Stranger:: I do not think, therefore, I was looking at a dream, when I said that many on this account would be seen strenuously contending for the royal science, though it may appear to be very absurd to seek after these in any servile portion.

Socrates Younger:: Very much so, indeed.

Stranger:: Let us, besides, approach still nearer to those whom we have not yet examined. But these are such as possess a certain portion of ministrant science about divination. For they are considered as interpreting to men things proceeding from the Gods.

Socrates Younger:: They are.

Stranger:: The genus too of priests, as established by law, knows in what manner we should offer gifts, through sacrifices, to the Gods, so as to render the divinities propitious to us; and likewise, after what manner we should request of them, by prayer, the possession of good things. But both these are parts of the ministrant art.

Socrates Younger:: So it appears.

Stranger:: Now, therefore, we appear to me to touch, as it were, upon a certain vestige of the object of our search. For the figure of priests and prophets is very replete with prudence, and receives a venerable opinion through the magnitude of the undertakings. Hence, among the Egyptians, a king is not allowed to govern without the sacerdotal science; so that, if any one belonging to another genus of men usurps the kingdom, he is afterwards compelled to be initiated in their mysteries, that he may be skilled in the sacerdotal science. Further still, in many places belonging to the Greeks, we shall find that the greatest sacrifices of this kind are under the direction of the greatest magistrates; and the truth of what I assert is particularly evinced among you. For, when a king is elected, they say that the most venerable of all the ancient sacrifices, and such as are most peculiar to the country, are to be consigned to the care of the new king.

Socrates Younger:: Entirely so.

Stranger:: We should, therefore, consider these kings chosen by lot, together with the priests, their servants, and a certain other numerous crowd, which just now became manifest to us, apart from our former assertions.

Socrates Younger:: Of whom are you speaking?

Stranger:: Of certain very wonderful persons.

Socrates Younger:: Why so?

Stranger:: As I was just now speculating, the genus of them appeared to me to be all-various. For many men resemble lions and centaurs, and other things of this kind; and very many are similar to satyrs, and to imbecile and multiform wild beasts. They likewise rapidly change their ideas and their power into each other. And indeed, Socrates, I appear to myself to have just now perceived these men for the first time.

Socrates Younger:: Speak: for you seem to behold something unusual.

Stranger:: I do: for the unusual or wonderful happens to all men from ignorance. And I myself just now suffered the very same thing: for I was suddenly involved in doubt on perceiving the choir of civil concerns.

Socrates Younger:: What choir?

Stranger:: The greatest enchanter of all sophists, and the most skilled in this art, who must be separated from truly political and royal characters, though this is difficult in the extreme, if we intend to see clearly the object of our investigation.

Socrates Younger:: We must by no means omit to do this.

Stranger:: We must not, indeed, according to my opinion: but tell me this.

Socrates Younger:: What?

Stranger:: Is not a monarchy one of our political governments?

Socrates Younger:: It is.

Stranger:: And after a monarchy I think an oligarchy may be placed.

Socrates Younger:: Undoubtedly.

Stranger:: But is not the third scheme of a polity the government of the multitude, and which is called a democracy?

Socrates Younger:: Entirely so.

Stranger:: May not these three become after a manner five, since they produce two other names from themselves?

Socrates Younger:: What are these two?

Stranger:: Those who now look to the violent and the voluntary, to poverty and riches, law and the transgression of law, which take place in these governments, and who give a two-fold division to each of the two, and call monarchy by two names, as affording two species, viz. tyrannic and royal.

Socrates Younger:: Undoubtedly.

Stranger:: But they denominate a city which is governed by a few an aristocracy and an oligarchy.

Socrates Younger:: Entirely so.

Stranger:: But no one is ever accustomed to change the name of a democracy, whether the people govern the rich violently, or with their consent, and whether they accurately defend the laws or not.

Socrates Younger:: True.

Stranger:: What then? Shall we think that any one of these polities is right, thus bounded by these definitions, viz. by one, and a few, and a many, by riches and poverty, by the violent and the voluntary, by written laws, and the privation of laws?

Socrates Younger:: What should hinder?

Stranger:: Consider more attentively, following me hither.

Socrates Younger:: Whither?

Stranger:: Shall we abide by that which was asserted by us at first, or shall we dissent from it?

Socrates Younger:: Of what assertion are you speaking?

Stranger:: I think we said that a royal government was one of the sciences.

Socrates Younger:: We did.

Stranger:: Yet we did not consider it as any one science indiscriminately; but we selected it from the other sciences, as something judicial and presiding.

Socrates Younger:: We did.

Stranger:: And of the presiding science, dividing one part, as belonging to animate works, and the other as belonging to animals, we have proceeded thus far, not forgetting that we were scientifically employed; but we have not yet been able to determine with sufficient accuracy what this science is.

Socrates Younger:: Right.

Stranger:: Do we, therefore, understand this, that the definition must not be made by the few, nor by the many, nor yet by the voluntary or involuntary, nor by poverty or riches, but according to a certain science, if we follow what has been formerly delivered?

Socrates Younger:: But, indeed, it is impossible that this should not be done.

Stranger:: From necessity, therefore, we must now consider in which of these the science respecting the government of men happens to subsist; this government being nearly the greatest of all others, and the most difficult to obtain. For it is requisite to inspect: it, that we may perceive what are the things which must be taken away from a prudent king, and who those are that pretend to be, and persuade the multitude that they are, politicians, but who are by no means so.

Socrates Younger:: Our former reasoning evinces that it is requisite to act in this manner.

Stranger:: Does it then appear to you that the multitude in a city is able to acquire this science?

Socrates Younger:: How can they?

Stranger:: In a city, therefore, consisting of a thousand men, is it possible that a hundred or five hundred of the inhabitants can sufficiently acquire this science?

Socrates Younger:: If this were the case, it would be the most easy of all arts. For we know that among a thousand men there cannot be found so great a number of those that excel the other Greeks in the game of chess, much less can there be found as many kings. But, according to our former reasoning, it is requisite to call him royal who possesses the royal science, whether he governs or not.

Stranger:: You very properly remind me: but I think it follows from this, that a right government, when it subsists rightly, ought to be investigated about one person, or two, or altogether about a few.

Socrates Younger:: Undoubtedly.

Stranger:: And, as we now think, those that govern according to a certain art are to be considered as political and regal characters, whether they govern the willing or the refractory, whether according to or without written laws, and whether they are rich or poor. For we call those who heal the maladies of the body, no less physicians, whether they cure by cutting, or burning, or any other painful application, the voluntary or the refractory; and whether from writings or without writings; and whether they are poor or rich. In all these cases we say that they are no less physicians, so long as they proceed according to art, in purging or some other way attenuating the body, or in causing it to increase; and so long as, alone regarding the good of the body, they restore it from a worse to a better habit, and preserve it when thus restored. After this manner alone, as I think, we must say that the definition of the medicinal or any other government is rightly made.

Socrates Younger:: And very much so.

Stranger:: It is necessary, therefore, as it seems, that that polity alone must in the highest degree be rightly established, in which the governors are found to be truly, and not in appearance only, scientific; whether they govern according to laws, or without laws; whether they rule over the obedient, or the refractory; and whether they are rich or poor. For no one of these is of any consequence with respect to rectitude of government.

Socrates Younger:: Beautifully said.

Stranger:: Nor yet is it of any consequence, whether they purge the city with a view to its good, by putting to death or banishing certain persons; or whether they send out colonies, like a swarm of bees, and thus diminish the people; or whether, introducing certain foreigners, they make citizens of them, and thus increase the city. For, so long as, employing science and justice, they cause the city, to the utmost of their power, to pass from a worse to a better condition, and preserve it in this state,—so far, and according to such definitions, we say that a polity is alone rightly established; but that such others, as we have mentioned, are neither genuinely nor truly polities. We must likewise willingly say that such polities as imitate this are consonant to reason, and tend to things more beautiful, but that such as do not, tend to deformity by an imitation of things evil.

Socrates Younger:: Other things indeed, O guest, appear to have been discussed sufficiently: but it is not easy to admit your assertion, that it is requisite to govern without laws.

Stranger:: You have got before me a little, Socrates, by your question. For I was going to ask you, whether you admit all these things, or whether you find any difficulty in any thing that has been said. It is however evident, that we now wish to inquire concerning the rectitude of those that govern without laws.

Socrates Younger:: Undoubtedly.

Stranger:: After a certain manner it is evident that legislation pertains to the royal science: but it is best, not for the laws to prevail, but a man who is royal in conjunction with prudence. Do you know why?

Socrates Younger:: Inform me.

Stranger:: Because law cannot, by comprehending that which is most excellent, and at the same time most accurately just, for all men, always enjoin that which is best. For the dissimilitudes of men and actions, and the unceasing restlessness, as I may say, of human affairs, do not permit any art whatever to be exhibited respecting all things, and through every time. Shall we admit these assertions?

Socrates Younger:: Undoubtedly.

Stranger:: But we see that law nearly endeavors to accomplish this very thing, like a certain arrogant and ignorant man, who does not suffer any thing to be done contrary to his own orders, nor any one to ask whether it would not be better to make some new regulation, contrary to what he has ordained.

Socrates Younger:: True. For the law does as you say.

Stranger:: But it is impossible that a thing which is simple should prevail in things which are never at any time simple.

Socrates Younger:: It appears so.

Stranger:: The cause, therefore, must be found out why it is necessary to establish laws, since law does not possess the greatest rectitude.

Socrates Younger:: Undoubtedly.

Stranger:: Are there not, therefore, among us, as also in other cities, certain exercises of men collected together, whether belonging to the course, or to any thing else which is undertaken for the sake of contention?

Socrates Younger:: There are very many such exercises.

Stranger:: Come then, let us again recall to our memory the mandates of those who preside over gymnastic exercises according to art.

Socrates Younger:: What are their mandates?

Stranger:: They do not think that a subtle division should be made, according to each individual, so as to enjoin that which is adapted to the body of each; but that attention should be paid to what is more common, and which is advantageous for the most part, and to a many.

Socrates Younger:: Excellent.

Stranger:: Hence at present assigning equal labors to collected bodies of men, they at the same time impel them to begin the contest together, and to rest from the race, from wrestling, and from all the labors of the body, at one and the same time.

Socrates Younger:: They do so.

Stranger:: We, therefore, think that the legislator who presides over the herds of men, and enjoins them what is just respecting their compacts with each other, cannot, while he gives laws to them collectively, accurately assign what is fit to each individual.

Socrates Younger:: This is likely to be the case.

Stranger:: But I think that in a less subtle way he will establish laws for the multitude, and for the most part, both written and unwritten, and such as are agreeable to the manners of the country.

Socrates Younger:: Right.

Stranger:: Right indeed. For how, Socrates, can any one attend sufficiently to individuals through the whole of life, and accurately enjoin what is adapted to each? For, though he who possesses the royal science could, I think, do this, he would scarcely prescribe for himself those impediments which are called laws.

Socrates Younger:: It appears so, O guest, from what has been now said.

Stranger:: Rather, O most excellent youth, from what will be said.

Socrates Younger:: What is that?

Stranger:: This, For we thus say to ourselves: If a physician, or master of gymnastic, intending to travel, and to be absent from those under his care for a long time, should think that those who are exercised, or those who are sick, would not remember his precepts, he will wish to write commentaries for them. Or how shall we say?

Socrates Younger:: That he will wish to do so.

Stranger:: But what? If the physician should return sooner than he thought, will he venture to order them certain other things besides those contained in his writings, if any thing better should occur for the sick, through winds, or any thing else, which is wont to take place through Jupiter, contrary to expectation? Will he think that he ought strenuously to persevere in his former injunctions, neither himself ordering any thing else, nor the sick man daring to do any thing different from his written prescriptions; these being medicinal and salubrious, but things of a different nature, noxious, and contrary to art? Or rather, every thing of this kind happening about all things according to science and true art, will not his edicts become the most ridiculous of all others?

Socrates Younger:: Entirely so.

Stranger:: But shall not he who writes things just and unjust, beautiful and base, good and evil, and who establishes unwritten laws for the herds of mankind, who live in cities according to written laws,—shall not he, I say, who has written laws according to art, or any other who resembles him, be permitted on his return to enjoin things different from these? Or, rather, would not this interdiction appear in reality to be no less ridiculous than the former?

Socrates Younger:: Undoubtedly.

Stranger:: Do you know, therefore, what the multitude say respecting a thing of this kind?

Socrates Younger:: I do not at present remember.

Stranger:: But it is very specious. For they say, if anyone has found out laws better than those that are already established, and can persuade his citizens that they are better, he should establish them; otherwise not.

Socrates Younger:: Do they not, therefore, say rightly?

Stranger:: Perhaps so. But if some one should introduce that which is best, not by persuasion, but by force, what name must be given to this violence? Or, rather, first answer me respecting the former particulars.

Socrates Younger:: Of what particulars are you speaking?

Stranger:: If any one who is properly skilled in the medical art should not persuade but compel a boy, or a man, or a woman, to do that which is better, but at the same time contrary to written prescriptions, what will be the name of this violence? Ought it not to be called rather any thing than a transgression of art, or a noxious error? And should we not say that every thing will happen to the compelled person, rather than any thing noxious and contrary to art from the compelling physicians?

Socrates Younger:: You speak most true.

Stranger:: But what is that error to be called which is contrary to the political art? Must it not be denominated base, evil, and unjust?

Socrates Younger:: Entirely so.

Stranger:: But come, will not he be the most ridiculous of all men, who should blame the violence of those that force men to act more justly, better, and more beautifully than before, contrary to written precepts, and the laws of their country? And ought not every thing rather to be asserted of those that are thus compelled, than that they suffer things base, unjust, and evil?

Socrates Younger:: Your assertion is most true.

Stranger:: But if he who compels is rich, will his compulsions be just,—but, if he is poor, unjust? Or shall we not rather say, that he who effects what is advantageous, whether he persuades or does not persuade, whether he is rich or poor, and whether he acts according or contrary to written injunctions, will act conformably to the most true definition of the right government of a city? For a wise and good man will always govern in this manner, always attending to the advantage of his subjects, in the same manner as a pilot is watchful for the safety of the ship and the sailors. And as the pilot preserves the sailors, not by written mandates but by exhibiting to them laws according to art, after the same manner an upright polity will be produced by those who are thus able to govern, by exhibiting a strength of art better than the laws. And, in short, prudent governors never err in any part of their conduct, as long as they observe this one thing, viz. by always distributing that which is most just to the citizens, in conjunction with intellect and art, to preserve them, and, from being worse, render them better to the utmost of their power.

Socrates Younger:: These assertions cannot be contradicted.

Stranger:: Nor yet those.

Socrates Younger:: What assertions do you mean?

Stranger:: That no multitude whatever can receive that science, by which a city is governed according to intellect, but that an upright polity must be investigated about a small number, and a few, and one person; and that other polities are to be considered as imitations, as we observed a little before, some resembling this in a more beautiful, and others in a more deformed manner.

Socrates Younger:: How do you say this? For I do not understand what you just now said respecting imitations.

Stranger:: He would not act badly, who, after introducing a discourse of this kind, should desist before he had shown the error which is at present committed.

Socrates Younger:: What error do you mean?

Stranger:: It is requisite to investigate a thing of that kind, which is not altogether usual, nor yet easy to perceive; but at the same time we must endeavor to apprehend it. For, since an upright polity is that alone of which we have spoken, do you not know that other polities ought to be preserved, while they use the institutions of this, and do that which we just now praised, though it is not most right?

Socrates Younger:: What is that?

Stranger:: That no citizen shall dare to act in any respect contrary to the laws, and that he who dares to do so shall be punished with death, and shall suffer all extreme punishments. This is most right and beautiful in the second place; for that which was just now mentioned must be ranked in the first place. But we should unfold the manner in which that which we call secondary subsists. Or should we not?

Socrates Younger:: Undoubtedly.

Stranger:: But let us again return to images, to which it is always necessary to assimilate royal governors.

Socrates Younger:: What kind of images?

Stranger:: The generous pilot, and, as Homer says, the physician, who is of equal worth with many others. Let us consider the affair by devising a certain figure in these things.

Socrates Younger:: Of what kind?

Stranger:: Such a one, as if we all conceived that we suffered the most dire things from these persons. For such of us as they wish to save, they do save; and such as they wish to injure, they injure by cutting and burning; at the same time ordering money to be given them as a reward for this, not spending any thing themselves on the sick, but they and their familiars making use of others. And lastly, receiving money either from the kindred or from certain enemies of the sick man, they cause him to die. Pilots too effect ten thousand other things of this kind. For they designedly leave men by themselves in certain recesses, and, committing an error in navigation, hurl them into the sea, and injure them in other respects. In consequence of considering these things, let us suppose that we consult how we may deprive these arts of their independent authority, so that they may no longer possess absolute power, either over slaves or the free-born. Hence, we assemble together for this purpose, and convene either all the people, or the rich only. In this assembly, obscure individuals and mechanics give their opinion respecting the ship and diseases; viz. after what manner medicines, and medical instruments, should be employed about the diseased; and likewise ships and nautical instruments in navigation, in the dangers to which ships are subject, through the winds, the sea, and pirates, and when there is occasion to fight with long ships against others of the like kind. Let us likewise suppose that the opinions, either of certain physicians and pilots, or of other private persons, given in this assembly, are inscribed in triangular tables and pillars, and that certain unwritten customs of the country are established, according to which in all future times navigation is to be conducted, and remedies for the sick administered.

Socrates Younger:: You have spoken of very absurd things.

Stranger:: Let us likewise suppose that yearly governors of the multitude are established, whether chosen by lot from the rich, or from all the people; and let them govern both ships and the diseased, according to those written institutions.

Socrates Younger:: These things appear still more difficult.

Stranger:: Let us likewise see what is consequent to these things. For when the year of each governor is expired, it will be necessary that courts of justice should be established, which are composed either of chosen rich men, or from all the people, for the purpose of calling the governors to account, and reproving them when requisite. Let every one likewise who is willing be permitted to accuse the governors, as neither governing the ships, during the year, according to the written injunctions, nor according to the ancient manners of their ancestors. And let the same things be permitted to take place respecting those that cure the diseased. But let those that are convicted be punished in whatever manner the judges shall think fit.

Socrates Younger:: He, therefore, who voluntarily governs these men will most justly suffer from them, and receive whatever punishment they please.

Stranger:: Further still, it will be requisite that a law should be established for all these, that if any one introduces a mode of piloting different from the written institutions, or shall be found investigating the salubrious, and the truth of the medicinal art, contrary to the writings, about winds, heat and cold, or devising any thing whatever, about affairs of this kind;—in the first place, he shall neither be called a pilot nor a physician, but a certain boastful and garrulous sophist; and, in the next place, he shall be brought before a court of justice, by any person who is willing, as one who corrupts other young men, and persuades them that every one should be permitted to pilot ships, and cure the diseased, not according to the laws, but according to his own will. And if any one shall be found persuading either young or old men, contrary to the laws, and the written mandates, he shall be punished in the extreme. For nothing ought to be wiser than the laws. Besides, no one should be ignorant of the medicinal and the salubrious, nor of nautical affairs. For every one who is willing is permitted to learn the written mandates, and the customs of his country. If these particulars, Socrates, should take place about these sciences, viz. about military concerns, the whole of hunting, and painting, imitation, and architecture, the formation of instruments of every kind, agriculture, botany; or, again, about the care pertaining to horses, and herds of cattle of every kind, prophecy, the whole of servile offices, the game of chess, the whole of arithmetic in its simple state, whether it is conversant with planes or depths, or swiftness and slowness;—if these particulars, I say, should take place about these sciences, so as to cause them to be effected according to the written mandates, and not according to art, what shall we say?

Socrates Younger:: It is evident that all arts must be entirely subverted, without ever being restored, in consequence of the law which forbids investigation. So that life, which is at present difficult, would then be perfectly intolerable.

Stranger:: But what will you say to this? If we should compel each of the above-mentioned particulars to take place according to written injunctions, and should appoint as the guardian of these writings a man either chosen by suffrage, or chance, but who paying no attention to them, either for the sake of a certain gain, or private pleasure, should endeavor, though ignorant of every thing, to act contrary to these mandates; would not this be a greater evil than the former?

Socrates Younger:: It most truly would.

Stranger:: For he who should dare to act contrary to those laws which have been established from long experience by those who, consulting how to gratify the people, have persuaded them to adopt them, will commit an error of a very extended nature, and subvert every action in a much greater degree than written mandates are capable of effecting.

Socrates Younger:: How is it possible he should not?

Stranger:: Hence, as it is said, there is a second navigation for those that establish laws and written mandates respecting any thing whatever, viz. that neither one person, nor the multitude, should ever be suffered to do any thing at any time contrary to them.

Socrates Younger:: Right.

Stranger:: Will not these writings, therefore, be certain imitations of truths composed by intelligent men, in the greatest perfection of which they are capable?

Socrates Younger:: Undoubtedly.

Stranger:: But, if we remember, we have said, that a man truly knowing in political concerns will do many things from art, without paying any attention to written mandates, when any thing occurs to him better than what he has left behind him in writing.

Socrates Younger:: We did say so.

Stranger:: And if any thing better than what is established by law should occur either to an individual, or to the people at large, will they not in this case, to the utmost of their power, act in the same manner as the true politician?

Socrates Younger:: Entirely so.

Stranger:: If, therefore, they should act in this manner, without possessing science, they would attempt to imitate that which is true, but the whole of their imitation would be vicious; but if their conduct is the effect of art, this is no longer an imitation, but is a thing itself most true.

Socrates Younger:: It is so in every respect.

Stranger:: It was likewise acknowledged by us above, that the multitude is incapable of receiving any art whatever.

Socrates Younger:: It was.

Stranger:: If, therefore, there is a certain royal art, the multitude of the rich, and the whole of the people, can never receive this politic science.

Socrates Younger:: For how can they?

Stranger:: It is requisite then (as it seems) that such-like polities, if they intend to imitate as much as possible that true polity which is governed according to art by one man, must never do any thing contrary to their written laws, and the customs of their country.

Socrates Younger:: You speak most beautifully.

Stranger:: When, therefore, the rich imitate this polity, we then denominate such a polity an aristocracy: but when they pay no attention to the laws, an oligarchy.

Socrates Younger:: So it appears.

Stranger:: And again, when one man governs according to the laws, imitating him who is endued with science, then we call such a one a king, not distinguishing by name him who governs with science from the monarch who governs with opinion according to the laws.

Socrates Younger:: We appear to do so.

Stranger:: If, therefore, one man governs, who truly possesses a scientific knowledge of government, he is entirely called by this name a king, and by no other; for this alone, of the five names of the polities just now mentioned, belongs to him.

Socrates Younger:: So it appears.

Stranger:: But when one man governs neither according to the laws, nor according to the customs of the country, but at the same time pretends that he possesses a scientific knowledge, and that it is best to act in this manner, contrary to the written mandates, though a certain intemperate desire and ignorance are the leaders of this imitation, must not a man of this kind be called a tyrant?

Socrates Younger:: Undoubtedly.

Stranger:: Thus, then, we say, a tyrant, a king, an oligarchy, an aristocracy, and a democracy, will be produced; mankind indignantly bearing the authority of a monarch, and not believing that any man will ever be found worthy of such a government, so as to be both willing and able to govern with virtue and science, and properly distribute to all men things just and holy. They are likewise fearful, that one man endued with absolute power will injure, oppress, and slay whomsoever he pleases: though, if such a character should arise, as we have mentioned, he would be beloved, and his administration, on account of its accurate rectitude, would alone render a polity happy.

Socrates Younger:: Undoubtedly.

Stranger:: But now, since no such king is to be found in cities, who, as if produced in a swarm of bees, excels from the very beginning both in body and soul, it is requisite, as it seems, that men assembling together should compose written institutions, treading in the footsteps of the most true polity.

Socrates Younger:: It appears so.

Stranger:: And shall we wonder, Socrates, that in such-like polities those evils should take place which we behold at present, and which will subsist in future, when they rest on the foundation of written mandates and long established customs, and not on the firm basis of science? Or ought we not rather to admire how strong a thing a city naturally is? For, though cities have subsisted for an immense length of time in this condition, yet some of them have continued stable, and have not been subverted; at the same time many of them, like vessels merged in the sea, have perished, do perish, and will perish, through the depravity of the pilots and sailors, who are involved in the greatest ignorance respecting the greatest concerns; for though they know nothing about political affairs, yet they think their knowledge of the political science is the most clear of all scientific knowledge.

Socrates Younger:: Most true.

Stranger:: As, therefore, all these erroneous polities are full of difficulties, we should consider in which it is the least difficult and burthensome to live; for, though this is superfluous with respect to our present inquiry, yet, perhaps, universally we all of us do all things for the sake of this.

Socrates Younger:: It is impossible it should not be requisite to consider this.

Stranger:: Of three things, therefore, they say that one is remarkably difficult, and at the same time easy.

Socrates Younger:: How do you say?

Stranger:: No otherwise than as I said before, that there are three polities, a monarchy, the government of a few, and the government of a many, which three polities were at first mentioned by us in a confused manner.

Socrates Younger:: There were.

Stranger:: Bisecting, therefore, each of these, we shall produce six, separating from these the upright polity, as a seventh.

Socrates Younger:: How so?

Stranger:: We must distribute monarchy into the royal and the tyrannic; but the polity which is not composed from a multitude, into an aristocracy and oligarchy, which form an illustrious division. Again, we formerly considered the polity which is composed from a multitude as simple, and called it a democracy, but we must now establish this as two-fold.

Socrates Younger:: How so? And after what manner do we make this division?

Stranger:: Not at all different from the others, though the name of this is now two-fold. But to govern according to the laws, and to transgress the laws, is common both to this and the other polities.

Socrates Younger:: It is so.

Stranger:: Then, indeed, when we were investigating an upright polity, this section was of no use, as we have shown above: but since we have separated it from the others, and have considered the others as necessary, in these we divide each according to the legal, and the transgression of law.

Socrates Younger:: It appears so from what has now been said.

Stranger:: A monarchy, therefore, when conjoined with good written institutions, which we call laws, is the best of all the six polities; but when subsisting without law is grievous, and most burthensome to live under.

Socrates Younger:: It appears so.

Stranger:: But the polity which is composed of not many, ought to be considered by us as a medium, in the same manner as a few is a medium between one and many. But again, we should consider the polity which is composed of many as in all things imbecile, and as incapable, when compared with the others, of accomplishing either any great good or great evil; in consequence of authority in this polity being divided according to small parts among many. Hence, this is the worst of all these legal polities, but the best of all such as are illegal. And where all are intemperate, it is best to live in a democracy; but where all are temperate, this polity is the worst to live in. The first and best condition of life is in the first polity, the seventh being excepted. For this must be separated from all the other polities, in the same manner as divinity from men.

Socrates Younger:: These things appear thus to subsist and happen; and that must be done which you mention.

Stranger:: Ought not, therefore, the governors of all these polities (the governor of the scientific polity being excepted) to be withdrawn, as not being truly political but seditious characters; and as presiding over the greatest images, and being such themselves? And as they are the greatest imitators and enchanters, are they not the greatest sophists of sophists?

Socrates Younger:: This appellation seems to pertain, with the greatest rectitude, to those that are called politicians.

Stranger:: Be it so. This, indeed, is as a drama for us; just as we lately said that we saw a certain Centauric and Saryric Bacchic choir, which was to be separated from the politic art, and now this has scarcely been separated by us.

Socrates Younger:: So it appears.

Stranger:: But another thing still more difficult than this remains, which is more allied to the royal genus, and which at the same time it is more difficult to understand. And we appear to me to be affected in a manner similar to those that purify gold.

Socrates Younger:: How so?

Stranger:: Those workmen first of all separate earth, stones, and many other things; but, after this, such things as are allied to gold remain, which are honorable, and alone to be separated by fire,—I mean brass and silver and sometimes diamonds. These being with difficulty separated by fusion, scarcely suffer us to see that which is called perfectly pure gold.

Socrates Younger:: So it is said respecting these things.

Stranger:: After the same manner, we also appear now to have separated from the politic science things different, and such as are foreign and not friendly, and to have left such as are honorable and allied to it. But among the number of these, the military and judicial arts, and that rhetoric which communicates with the royal science, persuading men to act justly, and which, together with that science, governs the affairs of cities, may be ranked. These if some one should after a certain manner separate with facility, he will show naked and alone by himself that character which we are investigating.

Socrates Younger:: It is evident that we should endeavor to do this.

Stranger:: For the sake of an experiment, therefore, it will be evident: but we should endeavor to render it apparent through music. Inform me, therefore.

Socrates Younger:: What?

Stranger:: Have we any discipline of music, and universally of the sciences, concerning manual operations?

Socrates Younger:: We have.

Stranger:: But what? Shall we say that any one among these is a certain science which teaches us what we ought to learn respecting these things, and what we ought not? Or how shall we say?

Socrates Younger:: We must say that there is.

Stranger:: Shall we not, therefore, confess that this is different from the others?

Socrates Younger:: Yes.

Stranger:: But whether must we say that no one of them rules over the other? or that the others rule over this? or that this, as a guardian, ought to rule over all the others?

Socrates Younger:: That this science ought to rule over the others, which teaches us, whether it is requisite to learn any one of them, or not.

Stranger:: You assert, therefore, that it ought to rule over both the teacher and the learner.

Socrates Younger:: Very much so.

Stranger:: And do you likewise assert, that the science which judges whether it is requisite to persuade or not, should rule over him who is able to persuade?

Socrates Younger:: Undoubtedly.

Stranger:: To what science, therefore, shall we attribute that which persuades the multitude and the crowd, through mythology, but not through doctrine?

Socrates Younger:: I think it is evident that this is to be attributed to the rhetoric science.

Stranger:: But again, to what science shall we attribute the power of judging, whether we should act towards certain persons through persuasion, or through a certain violence; or, universally, whether we ought ever to employ either persuasion or violence?

Socrates Younger:: To that which rules over the arts of persuasion and discourse.

Stranger:: But this, as I think, will not be any other than the power of the politician.

Socrates Younger:: You speak most beautifully.

Stranger:: Thus, therefore, the rhetoric appears to have been very rapidly separated from the politic science, as being another species, but subservient to this science.

Socrates Younger:: Certainly.

Stranger:: But again, what must we conceive respecting this power?

Socrates Younger:: What power?

Stranger:: That by which we war upon those against whom we have declared war. Whether shall we say that this is endued with, or deprived of, art?

Socrates Younger:: How can we conceive that power to be deprived of art which the commanding art and all warlike actions employ?

Stranger:: But shall we consider that power which is able to consult scientifically, whether it is proper to engage in war, or make peace, as different from this, or the same with it?

Socrates Younger:: From what has been before established, it necessarily follows that it must be different.

Stranger:: Must not, therefore, the military science have dominion over the warrior, if we in a similar manner follow what has been before advanced?

Socrates Younger:: It must.

Stranger:: What science then shall we endeavor to evince as the despot of the whole of the military art, which is thus skilful and mighty, except the truly royal science?

Socrates Younger:: No other whatever.

Stranger:: We must not, therefore, consider the science of military commanders as the same with the political, to which it is subservient.

Socrates Younger:: It is not proper we should.

Stranger:: But come, let us contemplate the power of judges who judge rightly.

Socrates Younger:: By all means.

Stranger:: Is it not, therefore, capable of doing more than merely judging what is just or unjust, respecting such compacts as are legal, and which have been established by royal authority; employing for this purpose its own proper virtue, so as never to wish to dissolve mutual accusations, either through the influence of certain gifts, or fear, or pity, or hatred, or love, contrary to the order of the legislator?

Socrates Younger:: It will never wish to act in this manner; but that which you have mentioned is nearly the employment of this power.

Stranger:: We find, therefore, that the strength of judges is not royal, but is the guardian of the laws, and subservient to the royal science.

Socrates Younger:: It appears so.

Stranger:: This also must be observed, that no one of the above mentioned sciences will appear to be the politic science to him who perceives all of them. For the province of the truly royal science is not to act itself. but to rule over those that are able to act, since it knows the dominion and impulse of those that are the greatest in the city, respecting what is opportune and the contrary: but it is the province of the other sciences to do as they are ordered.

Socrates Younger:: Right.

Stranger:: Hence, since the sciences which we have just now discussed neither rule over each other nor themselves, but each is conversant with a certain proper employment of its own, they are justly denominated according, to the peculiarity of their actions.

Socrates Younger:: It appears so.

Stranger:: But rightly comprehending by a common appellation the power of that science which rules over all these, and takes care of the laws, and of every thing in the city, we may most justly, as it seems, call it the politic science.

Socrates Younger:: Entirely so.

Stranger:: Shall we not, therefore, discuss this science at present, according, to the paradigm of the weaving art, since all the genera pertaining to a city have become manifest to us?

Socrates Younger:: And very much so.

Stranger:: We must therefore, as it seems, relate what the royal connection is, after what manner it weaves together, and what kind of web it produces for us.

Socrates Younger:: It is evident.

Stranger:: It is, indeed, a thing difficult to be evinced; but, as it appears, it is necessary it should be unfolded.

Socrates Younger:: It must, by all means.

Stranger:: For, that a part of virtue differs from the species of virtue, may be easily proved from the opinion of the multitude, in opposition to the contentious.

Socrates Younger:: I do not understand you.

Stranger:: But again, thus consider. For I think that you consider fortitude as one part of virtue.

Socrates Younger:: Entirely so.

Stranger:: And likewise, that temperance is different from fortitude, but that the former is a part of the same thing as the latter.

Socrates Younger:: Yes.

Stranger:: We must dare to unfold a certain wonderful discourse respecting these things.

Socrates Younger:: Of what kind?

Stranger:: That after a certain manner they are in many things very adverse and contrary to each other.

Socrates Younger:: How do you say?

Stranger:: My assertion is by no means usual. For all the parts of virtue are said to be friendly to each other.

Socrates Younger:: It is so said.

Stranger:: Let us consider, therefore, with the greatest attention, whether this is so simple, or differs more than any thing from these, in things of a kindred nature.

Socrates Younger:: Inform me how we are to consider.

Stranger:: In all such things as we call beautiful it is proper to investigate, and refer them to two species contrary to each other.

Socrates Younger:: You speak most clearly.

Stranger:: Have you ever then either praised yourself, or heard some other person praising sharpness and swiftness, either in bodies or souls, or the motion of voice, or in such imitations of these as musical and graphical imitations exhibit?

Socrates Younger:: Undoubtedly I have.

Stranger:: Do you likewise remember after what manner praise is bestowed in each of these?

Socrates Younger:: By no means.

Stranger:: Shall we, therefore, be able to point out to you my conceptions of this in words?

Socrates Younger:: What should hinder?

Stranger:: You seem to think a thing of this kind easy. Let us consider it, therefore, in subcontrary genera. For often, and in many actions, when we admire the swiftness, vehemence, and acuteness of thought, body, or voice, we praise them, and at the same time employ one of the appellations of fortitude.

Socrates Younger:: How so?

Stranger:: In the first place, we say it is acute and strenuous, swift and virile, and in a similar manner vehement: and, universally, we praise all these natures, by applying this name to them in common.

Socrates Younger:: We do.

Stranger:: But what? Do we not often praise in many actions the species of quiet generation?

Socrates Younger:: And very much so.

Stranger:: Do we not, therefore, in praising these, assert things contrary to what we did in praising those?

Socrates Younger:: How so?

Stranger:: We say that each of these is quiet and temperate, and we admire these when they take place about cogitation; but about actions, we admire the slow and the soft, about voice, the smooth and the grave, all rhythmical motion, and the whole of the muse which employs slowness opportunely; and to all these we give the appellation of the moderate, and not of fortitude.

Socrates Younger:: Most true.

Stranger:: But when both these take place unseasonably, we then blame each of them, and call them by contrary names.

Socrates Younger:: How so?

Stranger:: When they appear to be unseasonably acute, swift, and hard, we then call them insolent and insane; but when they are unseasonably grave, slow, and soft, we call them timid and slothful. And we nearly find that these, and the nature of fortitude and temperance, are for the most part contrary to each other, as being hostile and seditious forms, and which are never mingled together in actions about things of this kind. We shall likewise find by investigation, that those who possess these in their souls, are discordant with each other.

Socrates Younger:: Where do you say?

Stranger:: In all those particulars which we have just now mentioned, and, it is probable, in many others. For, I think, praising some things as their own property, on account of their alliance to both, but blaming others as things foreign, they become very adverse to each other in many things.

Socrates Younger:: They appear to do so.

Stranger:: This difference, therefore, is the sport of these species. But a disease the most baneful of all others happens to cities about, things of the greatest consequence.

Socrates Younger:: About what things?

Stranger:: About the whole apparatus of living, as it is likely it should. For those who are remarkably modest are always prepared to live a quiet life, attending privately to their own concerns, and being after a certain manner disposed to associate peaceably both with their fellow citizens and foreigners. Through this love, however, which is more unseasonable than is fit, when they do that which they wish to accomplish, they become secretly enervated, and render young men similarly affected. Hence, they are always subject to injuries; and in a short time themselves, their children, and the whole city, often by slow degrees, from being free become slaves.

Socrates Younger:: You speak of a severe and dire passion.

Stranger:: But those that verge more to fortitude, do they not incite the cities to which they belong to war, through a more vehement desire of a life of this kind than is becoming, and thus rendering many nations and potentates hostile to their country, either entirely subvert it, or bring it in subjection to the enemy?

Socrates Younger:: They do.

Stranger:: How is it possible, therefore, we should not say, that in these things both genera are in the greatest degree adverse to each other?

Socrates Younger:: It is impossible we should say otherwise.

Stranger:: Have we not, therefore, found that which we were considering in the beginning, that certain parts of virtue, which are not small naturally, differ from each other, and that they likewise cause those that possess them to do the same?

Socrates Younger:: It appears we have.

Stranger:: Let us again too consider this.

Socrates Younger:: What?

Stranger:: Whether there is any thing belonging to synthetic sciences which has any one of its works, though it should be the vilest, composed from things evil and at the same time useful? Or shall we say, that every science always rejects things evil to the utmost of its power, and receives such as are apt and useful? and that from these, which are both similar and dissimilar, collected into one, it fabricates one certain power and idea?

Socrates Younger:: Undoubtedly.

Stranger:: The truly political science, therefore, according to nature, will never be willing that a city should be composed from good and bad men; but it is very evident that it will first of all examine every thing by discipline, and, after the examination, will commit this employment to such as are able to instruct others, and at the same time be subservient to others, itself commanding and presiding: just in the same manner as the weaving art presides over the wool-combers, and others that prepare the materials for weaving, and gives such orders to the preparatory workmen as it thinks will best contribute to the work it has in view.

Socrates Younger:: Entirely so.

Stranger:: The royal science appears to me to do the very same, permitting those that instruct and educate others according to law, alone to exercise and teach that which being effected according to its temperature will produce worthy manners. But it punishes with death, exile, and the greatest disgrace, those that are unable to participate of fortitude, temperance, and such other things as tend to virtue, but through a depraved nature are violently impelled to impiety, insolence and injustice.

Socrates Younger:: This is said to be the case.

Stranger:: But those that are rolled like cylinders in ignorance and an abject spirit, it subjugates to servile employments.

Socrates Younger:: Most right.

Stranger:: It preserves and defends, therefore, such as are naturally qualified for acquiring the generous and the noble, when properly disciplined, and who through art can be mingled with each other. And such among these as verge more to fortitude, it considers as resembling strong thread in the loom on account of their solid manners; but such as verge more to modesty, as similar to fat and soft matter; and, that we may use an image from the weaving art, as resembling saffron-colored thread. And such as tend contrary to these, it endeavors to bind together and connect after the following manner.

Socrates Younger:: After what manner?

Stranger:: In the first place, according to the allied, it harmonizes together the eternal part of their soul with a divine bond. But after that which is divine it harmonizes together their vivisic part with human bonds.

Socrates Younger:: How again is this?

Stranger:: When true opinion becomes stably inherent in the soul respecting things beautiful, just and good, and the contraries to these, we say that the divine in the dæmoniacal genus is produced.

Socrates Younger:: It is proper it should.

Stranger:: Do we, therefore, know that a politician and a good legislator ought alone to be able, with the Muse of the royal science, to effect this in those that are properly disciplined, and whom we have just now mentioned?

Socrates Younger:: It is fit this should be the case.

Stranger:: But he, Socrates, who cannot accomplish a thing of this kind, must by no means be called by the names which we are now investigating.

Socrates Younger:: Most right.

Stranger:: What then? Must not a brave soul, when it receives truth of this kind, become mild, and thus be willing in the highest degree to partake of things just? But when it does not receive it, must it not be considered as verging more to a certain savage nature?

Socrates Younger:: Undoubtedly.

Stranger:: But what? Will not a soul of a modest nature, when receiving these opinions, become truly temperate and moderate in a polity? But when it does not partake of the things we are speaking of, will it not be most disgracefully branded with stupidity?

Socrates Younger:: Entirely so.

Stranger:: Must we not say, that this connection and binding together of the evil with each other, and of the good with the evil, can never become stable, and that no science will ever seriously attempt to accomplish this with such as these?

Socrates Younger:: For how can it?

Stranger:: But in those alone who are endued with worthy manners from the first, and who are educated according to nature, this bond is naturally implanted through the laws. In these, too, this art is a remedy; and, as we said before, the natural virtue of the parts is the more divine bond of things dissimilar, and tending to contraries.

Socrates Younger:: Most true.

Stranger:: Since this divine bond exists, there is scarcely any difficulty in either understanding the other bonds which are human, or in bringing them to perfection when understood.

Socrates Younger:: How so? And what are these bonds?

Stranger:: The communions of alliances and children, and those respecting private locations and marriages. For many respecting these things are not properly bound together for the purpose of begetting children.

Socrates Younger:: Why?

Stranger:: Is it worth while to relate how anxiously they pursue riches and power in these things?

Socrates Younger:: It is not.

Stranger:: But it will be more just to speak of those who make the human race the object of their care, and to consider if they do any thing improperly.

Socrates Younger:: It will.

Stranger:: They do not indeed at all act from right reason, but pursue present pleasure; and in consequence of being delighted with those similar to themselves, and of not loving those that are dissimilar, they attribute the greatest part to molestation.

Socrates Younger:: How so?

Stranger:: Those that are modest seek after their own manners, and as much as possible marry those that are endued with them, and likewise marry their own offspring to such as resemble themselves. The genus about fortitude acts in the same manner, pursuing its own nature; when at the same time it is requisite that both genera should act in a manner entirely contrary.

Socrates Younger:: How, and on what account?

Stranger:: Because this is the natural condition of fortitude, that when it has been unmingled for many generations with a temperate nature, it is florid with strength in the beginning, but in the end becomes entirely efflorescent with insanity.

Socrates Younger:: It is likely.

Stranger:: Again, a soul very full of shame, and void of audacious fortitude, when it has subsisted in this manner for many generations, naturally becomes unseasonably sluggish, and at last perfectly mutilated.

Socrates Younger:: And this also is likely to happen.

Stranger:: We have said that there is no difficulty in binding men with these bonds, if both genera have one opinion respecting things beautiful and good. For this is the one and entire work of royal weaving, viz. never to suffer temperate manners to subsist apart from such as are valiant, but, weaving together both these, from according opinions, honor, dishonor, and glory, to collect from these a web smooth, and, as it is said, well woven, and always to commit in common the authority of governors in cities to these.

Socrates Younger:: How?

Stranger:: Where it happens that one governor is sufficient, a president should be chosen who possesses both these; but where more than one is necessary, parts of these must be mingled together. For the manners of temperate governors are very cautious, just, and salutary; but they require acrimony, and a certain acute and practical temerity.

Socrates Younger:: These things also appear so to me.

Stranger:: Again, fortitude with respect to justice and caution is more indigent than those other virtues; but it excels them in actions. But it is impossible that all things pertaining to cities, both of a private and public nature, should subsist beautifully, unless both these are present.

Socrates Younger:: Undoubtedly.

Stranger:: We must say then that this end of the web of politic action is then rightly woven, when the royal art, connecting the manners of brave and temperate men by concord and friendship, collects together their life in common, producing the most magnificent and excellent of all webs;—and besides this, when, embracing in common all others in the city, both, slaves and free-born, it holds them together by this texture, and governs and presides over the city in such a manner that nothing may in any respect be wanting which is requisite to its felicity.

Socrates Younger:: You have finished, O guest, your description of the royal and political character most beautifully.

THE END OF THE POLITICUS.

# **Crito.**

or

### The Duty Of A Citizen.

Translated by Henry Cary.

Socrates, Crito.

---

Socrates:: Why have you come at this hour, Crito? Is it not very early?

Crito:: It is.

Socrates:: About what time?

Crito:: Scarce day-break.

Socrates:: I wonder how the keeper of the prison came to admit you.

Crito:: He is familiar with me, Socrates, from my having frequently come hither; and he is under some obligations to me.

Socrates:: Have you just now come, or some time since?

Crito:: A considerable time since.

Socrates:: Why then did you not wake me at once, instead of sitting down by me in silence:

Crito:: By Jupiter, Socrates, I should not myself like to be so long awake and in such affliction. But I have been for some time wondering at you, perceiving how sweetly you slept; and I purposely did not awake you, that you might pass your time as pleasantly as possible. And indeed I have often before throughout your whole life considered you happy in your disposition, but far more so in the present calamity, seeing how easily and meekly you bear it.

Socrates:: However, Crito, it would be disconsonant for a man at my time of life to repine because he must needs die.

Crito:: But others, Socrates, at your age have been involved in similar calamities, yet their age has not hindered their repining at their present fortune.

Socrates:: So it is. But why did you come so early?

Crito:: Bringing sad tidings, Socrates; not sad to you, as it appears, but to me and all your friends sad and heavy; and which I, I think, shall bear worst of all.

Socrates:: What tidings? Has the ship arrived from Delos, on the arrival of which I must die?

Crito:: It has not yet arrived; but it appears to me that it will come to-day, from what certain persons report who have come from Sunium, and left it there. It is clear, therefore, from these messengers, that it will come to-day, and consequently it will be necessary, Socrates, for you to die to-morrow.

Socrates:: But with good fortune, Crito: and if so it please the gods, so be it. I do not think, however, that it will come to-day.

Crito:: Whence do you form this conjecture?

Socrates:: I will tell you. I must die on the day after that on which the ship arrives.

Crito:: So they say who have the control of these things.

Socrates:: I do not think, then, that it will come to-day, but tomorrow. I conjecture this from a dream which I had this very night, not long ago; and you seem very opportunely to have refrained from waking me.

Crito:: But what was this dream?

Socrates:: A beautiful and majestic woman, clad in white garments, seemed to approach me, and to call to me and say, “Socrates, three days hence you will reach fertile Phthia.”

Crito:: What a strange dream, Socrates!

Socrates:: Very clear, however, as it appears to me, Crito.

Crito:: Very much so, as it seems. But, my dear Socrates, even now be persuaded by me, and save yourself. For, if you die, not only a single calamity will befal me, but besides being deprived of such a friend as I shall never meet with again, I shall also appear to many who do not know you and me well, when I might have saved you, had I been willing to spend my money, to have neglected to do so. And what character can be more disgraceful than this to appear to value one's riches more than one's friends? For the generality of men will not be persuaded that you were unwilling to depart hence, when we urged you to it.

Socrates:: But why, my dear Crito, should we care so much for the opinion of the many? For the most worthy men, whom we ought rather to regard, will think that matters have transpired as they really have.

Crito:: Yet you see, Socrates, that it is necessary to attend to the opinion of the many. For the very circumstances of the present case show that the multitude are able to effect not only the smallest evils, but even the greatest, if any one is calumniated to them.

Socrates:: Would, O Crito, that the multitude could effect the greatest evils, that they might also effect the greatest good, for then it would be well. But now they can do neither; for they can neither make a man wise, nor foolish; but they do whatever chances.

Crito:: So let it be then. But answer me this, Socrates; are you not anxious for me and other friends, lest, if you should escape from hence, informers should give us trouble, as having secretly carried you off, and so we should be compelled either to lose all our property, or a very large sum, or to suffer something else beside this? For, if you fear any thing of the kind, dismiss your fears. For we are justified in running this risk to save you, and, if need be, even a greater than this. But be persuaded by me, and do not refuse.

Socrates:: I am anxious about this, Crito, and about many other things.

Crito:: Do not fear this, however; for the sum is not large on receipt of which certain persons are willing to save you, and take you hence. In the next place, do you not see how cheap these informers are, so that there would be no need of a large sum for them? My fortune is at your service, sufficient, I think, for the purpose: then if, out of regard to me, you do not think right to spend my money, these strangers here are ready to spend theirs. One of them, Simmias the Theban, has brought with him a sufficient sum for the very purpose. Cebes, too, is ready, and very many others. So that, as I said, do not through fears of this kind hesitate to save yourself, nor let what you said in court give you any trouble, that if you went from hence you would not know what to do with yourself. For in many places, and wherever you go, men will love you: and if you are disposed to go to Thessaly, I have friends there who will esteem you very highly, and will ensure your safety, so that no one in Thessaly will molest you.

Moreover, Socrates, you do not appear to me to pursue a just course in giving yourself up when you might be saved; and you press on the very results with respect to yourself which your enemies would press and have pressed in their anxiety to destroy you. Besides this, too, you appear to me to betray your own sons, whom, when it is in your power to rear and educate them, you will abandon, and, as far as you are concerned, they will meet with such a fate as chance brings them, and, as is probable, they will meet with such things as orphans are wont to experience in a state of orphanage. Surely one ought not to have children, or one should go through the toil of rearing and instructing them. But you appear to me to have chosen the most indolent course; though you ought to have chosen such a course as a good and brave man would have done, since you profess to have made virtue your study through the whole of your life; so that I am ashamed both for you and for us who are your friends, lest this whole affair of yours should seem to be the effect of cowardice on our part; your appearing to stand your trial in the court, since you appeared when it was in your power not to have done so, the very manner in which the trial was conducted, and this last circumstance, as it were a ridiculous consummation of the whole business, your appearing to have escaped from us through our indolence and cowardice, who did not save you, nor did you save yourself, when it was practicable and possible, had we but exerted ourselves a little. Think of these things, therefore, Socrates, and beware, lest, besides the evil that will result, they be disgraceful both to you and to us; advise then with yourself, though indeed there is no longer time for advising, your resolve should be already made. And there is but one plan; for in the following night the whole must be accomplished. If we delay, it will be impossible and no longer practicable. By all means, therefore, Socrates, be persuaded by me, and on no account refuse.

Socrates:: My dear Crito, your zeal would he very commendable were it united with right principle; otherwise, by how much the more earnest it is, by so much is it the more sad. We must consider, therefore, whether this plan should be adopted or not. For I not now only, but always, am a person who will obey nothing within me but reason, according as it appears to me on mature deliberation to be best. And the reasons, which I formerly professed, I cannot now reject, because this misfortune has befallen me; but they appear to me in much the same light, and I respect and honour them as before; so that if we are unable to adduce any better at the present time, be assured that I shall not give in to you, even though the power of the multitude should endeavor to terrify us like children, by threatening more than it does now, bonds and death, and confiscation of property. How, therefore, may we consider the matter most conveniently? First of all, if we recur to the argument which you used about opinions, whether on former occasions it was rightly resolved or not, that we ought to pay attention to some opinions, and to others not; or whether, before it was necessary that I should die, it was rightly resolved, but now it has become clear that it was said idly for argument's sake, though in reality it was merely jest and trifling. I desire then, Crito, to consider, in common with you, whether it will appear to me in a different light now that I am in this condition, or the same, and whether we shall give it up or yield to it. It was said, I think, on former occasions, by those who were thought to speak seriously, as I just now observed, that of the opinions which men entertain some should be very highly esteemed and others not. By the gods, Crito, does not this appear to you to be well said? For you, in all human probability, are out of all danger of dying to-morrow, and the present calamity will not lead your judgment astray. Consider then: does it not appear to you to have been rightly settled, that we ought not to respect all the opinions of men, but some we should and others not? Nor yet the opinions of all men, but of some we should and of others not? What say you? Is not this rightly resolved?

Crito:: It is.

Socrates:: Therefore, we should respect the good but not the bad?

Crito:: Yes.

Socrates:: And are not the good those of the wise, and the bad those of the foolish?

Crito:: How can it be otherwise?

Socrates:: Come then, how again were the following points settled? Does a man who practises gymnastic exercises, and applies himself to them, pay attention to the praise and censure and opinion of every one, or of that one man only who happens to be a physician or teacher of the exercises?

Crito:: Of that one only.

Socrates:: He ought, therefore, to fear the censures and covet the praises of that one, but not those of the multitude.

Crito:: Clearly.

Socrates:: He ought, therefore, so to practise and exercise himself, and to eat and drink, as seems fitting to the one who presides and knows, rather than to all others together.

Crito:: It is so.

Socrates:: Well, then, if he disobeys the one, and disregards his opinion and praise, but respects that of the multitude and of those who know nothing, will he not suffer some evil?

Crito:: How should he not?

Socrates:: But what is this evil? whither does it tend, and on what part of him that disobeys will it fall?

Crito:: Clearly on his body, for this it ruins.

Socrates:: You say well. The case is the same too, Crito, with all other things, not to go through them all. With respect, then, to things just and unjust, base and honourable, good and evil, about which we are now consulting, ought we to follow the opinion of the multitude, and to respect it, or that of one, if there is any one who understands, whom we ought to reverence and respect rather than all others together? and if we do not obey him, shall we not corrupt and injure that part of ourselves which becomes better by justice, but is ruined by injustice? Or is this nothing?

Crito:: I agree with you, Socrates.

Socrates:: Come then, if we destroy that which becomes better by what is wholesome, but is impaired by what is unwholesome, through being persuaded by those who do not understand, can we enjoy life when that is impaired? And this is the body we are speaking of, is it not?

Crito:: Yes.

Socrates:: Can we then enjoy life with a diseased and impaired body?

Crito:: By no means.

Socrates:: But can we enjoy life when that is impaired which injustice ruins, but justice benefits? Or do we think that to be of less value than the body, whatever part of us it may be, about which injustice and justice are concerned?

Crito:: By no means.

Socrates:: But of more value?

Crito:: Much more.

Socrates:: We must not, then, my excellent friend, so much regard what the multitude will say of us, but what he will say who understands the just and unjust; the one, even truth itself. So that at first you did not set out with a right principle, when you laid it down that we ought to regard the opinion of the multitude with respect to things just and honourable and good, and their contraries.

However, some one may say, are not the multitude able to put us to death?

Crito:: This, too, is clear, Socrates; any one might say so.

Socrates:: You say truly. But, my admirable friend, this principle which we have just discussed appears to me to be the same as it was before. And consider this moreover, whether it still holds good with us or not, that we are not to be anxious about living, but about living well.

Crito:: It does hold good.

Socrates:: And does this hold good or not, that to live well and honourably and justly, are the same thing?

Crito:: It does.

Socrates:: From what has been admitted, then, this consideration arises, whether it is just or not, that I should endeavor to leave this place without the permission of the Athenians. And should it appear to be just, we will make the attempt; but if not, we will give it up; but as to the considerations which you mention, of an outlay of money, reputation, and the education of children, beware, Crito, lest such considerations as these in reality belong to these multitudes, who rashly put one to death, and would restore one to life, if they could do so, without any reason at all. But we, since reason so requires, must consider nothing else than what we just now mentioned, whether we shall act justly in paying money and contracting obligations to those who will lead me hence, as well they who lead me as we who are led hence, or whether in truth we shall not act unjustly in doing all these things. And if we should appear in so doing to be acting unjustly, observe that we must not consider whether from remaining here and continuing quiet we must needs die, or suffer any thing else, rather than whether we shall be acting unjustly.

Crito:: You appear to me to speak wisely, Socrates; but see what we are to do.

Socrates:: Let us consider the matter together, my friend; and if you have any thing to object to what I say make good your objection, and I will yield to you; but if not, cease, my excellent friend, to urge upon me the same thing so often, that I ought to depart hence, against the will of the Athenians. For I highly esteem your endeavors to persuade me thus to act, so long as it is not against my will. Consider, then, the beginning of our enquiry, whether it is stated to your entire satisfaction, and endeavor to answer the question put to you exactly as you think right.

Crito:: I will endeavor to do so.

Socrates:: Say we, then, that we should on no account deliberately commit injustice, or may we commit injustice under certain circumstances, under others not? Or is it on no account either good or honourable to commit injustice, as we have often agreed on former occasions, and as we just now said? Or have all those our former admissions been dissipated in these few days; and have we, Crito, old men as we are, been for a long time seriously conversing with each other, without knowing that we in no respect differ from children? Or does the case, beyond all question, stand as we then determined? whether the multitude allow it or not, and whether we must suffer a more severe or a milder punishment than this, still is injustice on every account both evil and disgraceful to him who commits it? Do we admit this, or not?

Crito:: We do admit it.

Socrates:: On no account, therefore, ought we to act unjustly.

Crito:: Surely not.

Socrates:: Neither ought one who is injured to return the injury, as the multitude think, since it is on no account right to act unjustly.

Crito:: It appears not.

Socrates:: What then? Is it right to do evil, Crito, or not?

Crito:: Surely it is not right, Socrates.

Socrates:: But what? To do evil in return when one has been evil-entreated, is that right or not?

Crito:: By no means.

Socrates:: For to do evil to men, differs in no respect from committing injustice.

Crito:: You say truly.

Socrates:: It is not right, therefore, to return an injury, or to do evil to any man, however one may have suffered from him. But take care Crito, that in allowing these things, you do not allow them contrary to your opinion. For I know that to some few only these things both do appear and will appear to be true. They then to whom these things appear true, and they to whom they do not, have no sentiment in common, and must needs despise each other, while they look to each other's opinions. Consider well then, whether you coincide and think with me; and whether we can begin our deliberations from this point, that it is never right either to do an injury, or to return an injury, or when one has been evil-entreated to revenge oneself by doing evil in return; or, do you dissent from and not coincide in this principle? For so it appears to me both long since and now; but if you in any respect think otherwise, say so and inform me. But if you persist in your former opinions, hear what follows.

Crito:: I do persist in them and think with you. Speak on then.

Socrates:: I say next then, or rather I ask; whether when a man has promised to do things that are just, he ought to do them, or evade his promise?

Crito:: He ought to do them.

Socrates:: Observe then what follows. By departing hence without the leave of the city, are we not doing evil to some, and that to those to whom we ought least of all to do it, or not? And do we abide by what we agreed on as being just, or do we not?

Crito:: I am unable to answer your question, Socrates: for I do not understand it.

Socrates:: Then consider it thus. If while we were preparing to run away, or by whatever name we should call it, the laws and commonwealth should come and, presenting themselves before us, should say: “Tell me, Socrates, what do you purpose doing? Do you design any thing else by this proceeding in which you are engaged, than to destroy us, the laws, and the whole city as far as you are able? Or do you think it possible for that city any longer to subsist and not be subverted, in which judgments that are passed have no force, but are set aside and destroyed by private persons?” What should we say, Crito, to these and similar remonstrances? For any one, especially an orator, would have much to say on the violation of the law, which enjoins that judgments passed shall be enforced. Shall we say to them that the city has done us an injustice and not passed a right sentence? Shall we say this, or what else?

Crito:: This, by Jupiter, Socrates.

Socrates:: What then if the laws should say: “Socrates, was it not agreed between us that you should abide by the judgments which the city should pronounce?” And if we should wonder at their speaking thus, perhaps they would say, “Wonder not, Socrates, at what we say, but answer, since you are accustomed to make use of questions and answers. For come, what charge have you against us and the city, that you attempt to destroy us? Did we not first give you being? and did not your father through us take your mother to wife and beget you? Say then, do you find fault with those laws amongst us that relate to marriage as being bad?” I should say, “I do not find fault with them.” “Do you with those that relate to your nurture when born, and the education with which you were instructed? Or did not the laws, ordained on this point, enjoin rightly, in requiring your father to instruct you in music and gymnastic exercises?” I should say, rightly. Well then: since you were born, nurtured, and educated through our means, can you say, first of all, that you are not both our offspring and our slave, as well you as your ancestors? And if this be so, do you think that there are equal rights between us, and whatever we attempt to do to you, do you think you may justly do to us in turn? Or had you not equal rights with your father, or master, if you happened to have one, so as to return what you suffered, neither to retort when found fault with, nor when stricken to strike again, nor many other things of the kind; but that with your country and the laws you may do so; so that if we attempt to destroy you, thinking it to be just, you also should endeavor as far as you are able, in return to destroy us, the laws, and your country, and in doing this will you say that you act justly, you who, in reality, make virtue your chief object? Or are you so wise as not to know that one’s country is more honourable, venerable and sacred, and more highly prized both by gods and men possessed of understanding, than mother and father, and all other progenitors and that one ought to reverence, submit to, and appease one’s country, when angry, rather than one’s father, and either persuade it or do what it orders, and to suffer quietly if it bids one suffer, whether to be beaten, or put in bonds; or if it sends one out to battle there to be wounded or slain, this must be done, for justice so requires, and one must not give way, or retreat, or leave one's post; but that both in war, and in a court of justice, and every where, one must do what one's city and country enjoins, or persuade it in such manner as justice allows: but that to offer violence either to one's mother or father is not holy, much less to one's country? What shall we say to these things, Crito? That the laws speak the truth or not?

Crito:: It seems so to me.

Socrates:: "Consider, then, Socrates," the laws perhaps might say, "whether we say truly that in what you are now attempting you are attempting to do what is not just towards us. For we, having given you birth, nurtured, instructed you, and having imparted to you and all other citizens all the good in our power, still proclaim, by giving the power to every Athenian who pleases, when he has arrived at years of discretion and become acquainted with the business of the state, and us, the laws, that any one, who is not satisfied with us, may take his property and go wherever he pleases. And if any one of you wishes to go to a colony, if he is not satisfied with us and the city, or to migrate and settle in another country, none of us, the laws, hinder or forbid him going whithersoever he pleases, taking with him all his property. But whoever continues with us after he has seen the manner in which we administer justice, and in other respects govern the city, we now say, that he has in fact entered into a compact with us, to do what we order, and we affirm that he who does not obey is in three respects guilty of injustice, because he does not obey us who gave him being, and because he does not obey us who nurtured him, and because, having made a compact that he would obey us, he neither does so nor does he persuade us if we do any thing wrongly, though we propose for his consideration, and do not rigidly command him to do what we order, but leave him the choice of one of two things, either to persuade us, or to do what we require, and yet he does neither of these.

"And we say that you, O Socrates, will be subject to these charges if you accomplish your design, and that not least of the Athenians, but most so of all." And if I should ask, for what reason? They would probably justly retort on me by saying, that among all the Athenians I especially made this compact with them. For they would say, "Socrates, we have strong proof of this, that you were satisfied both with us and the city; for of all the Athenians you especially would never have dwelt in it, if it had not been especially agreeable to you. For you never went out of the city to any of the public spectacles, except once to the Isthmian games, nor any where else, except on military service, nor have you ever gone abroad as other men do, nor had you ever had any desire to become acquainted with any other city or other laws, but we and our city were sufficient for you; so strongly were you attached to us, and so far did you consent to submit to our government, both in other respects and in begetting children in this city, in consequence of your being satisfied with it. Moreover in your very trial, it was in your power to have imposed on yourself a sentence of exile, if you pleased, and might then have done, with the consent of the city, what you now attempt against its consent. Then indeed you boasted yourself as not being grieved if you must needs die; but you preferred, as you said, death to exile. Now, however, you are neither ashamed of those professions, nor do you revere us, the laws, since you endeavor to destroy us; and you act as the vilest slave would act, by endeavoring to make your escape contrary to the conventions and the compacts by which you engaged to submit to our government. First then, therefore, answer us this, whether we speak the truth or not in affirming that you agreed to be governed by us in deed though not in word?” What shall we say to this, Crito? Can we do otherwise than assent?

Crito:: We must needs do so, Socrates?

Socrates:: “What else, then,” they will say, “Are you doing but violating the conventions and compacts which you made with us, though you did not enter into them from compulsion or through deception, or from being compelled to determine in a short time, but during the space of seventy years, in which you might have departed if you had been dissatisfied with us, and the compacts had not appeared to you to be just? You, however, neither preferred Lacedaemon nor Crete, which you several times said are governed by good laws, nor any other of the Grecian or barbarian cities; but you have been less out of Athens than the lame and the blind, and other maimed persons. So much, it is evident, were you satisfied with the city and us, the laws, beyond the rest of the Athenians: for who can be satisfied with a city without laws? But now will you not abide by your compacts? You will, if you are persuaded by us, Socrates, and will not make yourself ridiculous by leaving the city.

“For consider, by violating these compacts and offending against any of them, what good you will do to yourself or your friends. For that your friends will run the risk of being themselves banished, and deprived of the rights of citizenship, or of forfeiting their property, is pretty clear. And as for yourself, if you should go to one of the neighbouring cities, either Thebes or Megara, for both are governed by good laws, you will go there, Socrates, as an enemy to their polity, and such as have any regard for their country will look upon you with suspicion, regarding you as a corrupter of the laws, and you will confirm the opinion of the judges, so that they will appear to have condemned you rightly, for whoso is a corrupter of the laws will appear in all likelihood to be a corrupter of youths and weak-minded men. Will you then avoid these well-governed cities, and the best-ordered men? And should you do so, will it be worth your while to live? Or will you approach them, and have the effrontery to converse with them, Socrates, on subjects the same as you did here, that virtue and justice, legal institutions and laws, should be most highly valued by men? And do you not think that this conduct of Socrates would be very indecorous? You must think so. But you will keep clear of these places, and go to Thessaly, to Crito's friends, for there is the greatest disorder and licentiousness, and perhaps they will gladly hear you relating how drolly you escaped from prison, clad in some dress or covered with a skin, or in some other disguise such as fugitives are wont to dress themselves in, having so changed your usual appearance. And will no one say that you, though an old man, with but a short time to live, in all probability, have dared to have such a base desire of life as to violate the most sacred laws? Perhaps not, should you not offend any one. But if you should, you will hear, Socrates, many things utterly unworthy of you. You will live, too, in a state of abject dependence on all men, and as their slave. But what will you do in Thessaly besides feasting, as if you had gone to Thessaly to a banquet? And what will become of those discourses about justice and all other virtues?—But do you wish to live for the sake of your children, that you may rear and educate them? What then? Will you take them to Thessaly, and there rear and educate them, making them aliens to their country, that they may owe you this obligation too? Or if not so, being reared here, will they be better reared and educated while you are living, though not with them? for your friends will take care of them. Whether, if you go to Thessaly, will they take care of them, but if you go to Hades will they not take care of them? If, however, any advantage is to be derived from those that say they are your friends, we must think they will.

"Then, O Socrates, be persuaded by us who have nurtured you, and do not set a higher value on your children, or on life, or on any thing else than justice, that, when you arrive in Hades, you may have all this to say in your defence before those who have dominion there. For neither here in this life, if you do what is proposed, does it appear to be better, or more just, or more holy to yourself, or any of your friends; nor will it be better for you when you arrive there. But now you depart, if you do depart, unjustly treated, not by us, the laws, but by men; but should you escape, having thus disgracefully returned injury for injury, and evil for evil, having violated your own compacts and conventions which you made with us, and having done evil to those to whom you least of all should have done it, namely, yourself, your friends, your country, and us, both we shall be indignant with you as long as you live, and there our brothers, the laws in Hades, will not receive you favourably, knowing that you attempted, as far as you were able, to destroy us. Let not Crito, then, persuade you to do what he advises, rather than we."

These things, my dear friend Crito, be assured I seem to hear, as the votaries of Cybele seem to hear the flutes. And the sound of these words booms in my ear, and makes me incapable of hearing any thing else. Be sure, then, so long as I retain my present opinions, if you should say any thing contrary to these, you will speak in vain. If, however, you think that you can prevail at all, say on.

Crito:: But, Socrates, I have nothing to say.

Socrates:: Desist, then, Crito, and let us pursue this course, since this way the deity leads us.

# Crito

Translated by Church.

CHARACTERS OF THE DIALOGUE.

Socrates. Crito.

---

SCENE. The prison of Socrates.

Socrates:: Why have you come at this hour, Crito? Is it not still early?

Crito:: Yes, very early.

Socrates:: About what time is it?

Crito:: It is just day-break.

Socrates:: I wonder that the jailor was willing to let you in.

Crito:: He knows me now, Socrates, I come here so often; and besides, I have done him a service.

Socrates:: Have you been here long?

Crito:: Yes; some time.

Socrates:: Then why did you sit down without speaking? why did you not wake me at once?

Crito:: Indeed, Socrates, I wish that I myself were not so sleepless and sorrowful. But I have been wondering to see how sweetly you sleep. And I purposely did not wake you, for I was anxious not to disturb your repose. Often before, all through your life, I have thought that your temper was a happy one; and I think so more than ever now, when I see how easily and calmly you bear the calamity that has come to you.

Socrates:: Nay, Crito, it would be absurd if at my age I were angry at having to die.

Crito:: Other men as old are overtaken by similar calamities, Socrates; but their age does not save them from being angry with their fate.

Socrates:: That is so, but tell me, why are you here so early?

Crito:: I am the bearer of bitter news, Socrates, not bitter, it seems, to you; but to me, and to all your friends, both bitter and grievous, and to none of them, I think, is it more grievous than to me.

Socrates:: What is it? Has the ship come from Delos, at the arrival of which I am to die?

Crito:: No, it has not actually arrived, but I think that it will be here to-day, from the news which certain persons have brought from Sunium, who left it there. It is clear from their news that it will be here to-day; and then, Socrates, to-morrow your life will have to end.

Socrates:: Well, Crito, may it end fortunately. Be it so, if so the gods will. But I do not think that the ship will be here to-day.

Crito:: Why do you suppose not?

Socrates:: I will tell you. I am to die on the day after the ship arrives, am I not?

Crito:: That is what the authorities say.

Socrates:: Then I do not think that it will come to-day, but to-morrow. I judge from a certain dream which I saw a little while ago in the night, so it seems to be fortunate that you did not wake me.

Crito:: And what was this dream?

Socrates:: A fair and comely woman, clad in white garments, seemed to come to me, and call me and say, “O Socrates—

> ‘The third day hence shall thou fair Phthia
> reach.’”

Crito:: What a strange dream, Socrates!

Socrates:: But its meaning is clear; at least to me, Crito.

Crito:: Yes, too clear, it seems. But, O my ill. good Socrates, I beseech you for the last time to listen to me and save yourself. For to me your death will be more than a single disaster, not only shall I lose a friend the like of whom I shall never find again, but many persons, who do not know you and me well, will think that I might have saved you if I had been willing to spend money, but that I neglected to do so. And what character could be more disgraceful than the character of caring more for money than for ones friends? The world will never believe that we were anxious to save you, but that you yourself refused to escape.

Socrates:: But, my excellent Crito, why should we care so much about the opinion of the world? The best men, of whose opinion it is worth our while to think, will believe that we acted as we really did.

Crito:: But you see, Socrates, that it is necessary to care about the opinion of the world too. This very thing that has happened to you proves that the multitude can do a man not the least, but almost the greatest harm, if he be falsely accused to them.

Socrates:: I wish that the multitude were able to do a man the greatest harm, Crito, for then they would be able to do him the greatest good too. That would have been well. But, as it is, they can do neither. They cannot make a man either wise or foolish, they act wholly at random.

Crito:: Well, be it so. But tell me this, Socrates. You surely are not anxious about me and your other friends, and afraid lest, if you escape, the informers should say that we stole you away, and get us into trouble, and involve us in a great deal of expense, or perhaps in the loss of all our property, and, it may be, bring some other punishment upon us besides? If you have any fear of that kind, dismiss it. For of course we are bound to run those risks, and still greater risks than those if necessary, in saving you. So do not, I beseech you, refuse to listen to me.

Socrates:: I am anxious about that, Crito, and about much besides.

Crito:: Then have no fear on that score. There are men who, for no very large sum, are ready to bring you out of prison into safety. And then, you know, these informers are cheaply bought, and there would be no need to spend much upon them. My fortune is at your service, and I think that it is sufficient, and if you have any feeling about making use of my money, there are strangers in Athens, whom you know, ready to use theirs; and one of them, Simmias of Thebes, has actually brought enough for this very purpose. And Cebes and many others are ready too. And therefore, I repeat, do not shrink from saving yourself on that ground. And do not let what you said in the Court, that if you went into exile you would not know what to do with yourself, stand in your way; for there are many places for you to go to, where you will be welcomed. If you choose to go to Thessaly, I have friends there who will make much of you, and shelter you from any annoyance from the people of Thessaly.

And besides, Socrates, I think that you will be doing what is wrong, if you abandon your life when you might preserve it. You are simply playing the game of your enemies; it is exactly the game of those who wanted to destroy you. And what is more, to me you seem to be abandoning your children too, you will leave them to take their chance in life, as far as you are concerned, when you might bring them up and educate them. Most likely their fate will be the usual fate of children who are left orphans. But you ought not to beget children unless you mean to take the trouble of bringing them up and educating them. It seems to me that you are choosing the easy way, and not the way of a good and brave man, as you ought, when you have been talking all your life long of the value that you set upon virtue. For my part, I feel ashamed both for you, and for us who are your friends. Men will think that the whole of this thing which has happened to you—your appearance in court to take your trial, when you need not have appeared at all; the very way in which the trial was conducted; and then lastly this, for the crowning absurdity of the whole affair, is due to our cowardice. It will look as if we had shirked the danger out of miserable cowardice; for we did not save you, and you did not save yourself, when it was quite possible to do so, if we had been good for anything at all. Take care, Socrates, lest these things be not evil only, but also dishonourable to you and to us. Consider then; or rather the time for consideration is past; we must resolve; and there is only one plan possible. Everything must be done to-night. If we delay any longer, we are lost. O Socrates, I implore you not to refuse to listen to me.

Socrates:: My dear Crito, if your anxiety to save me be right, it is most valuable, but if it be not right, its greatness makes it all the more dangerous. We must consider then whether we are to do as you say, or not; for I am still what I always have been, a man who will listen to no voice but the voice of the reasoning which on consideration I find to be truest. I cannot cast aside my former arguments because this misfortune has come to me. They seem to me to be as true as ever they were, and I hold exactly the same ones in honour and esteem as I used to, and if we have no better reasoning to substitute for them, I certainly shall not agree to your proposal, not even though the power of the multitude should scare us with fresh terrors, as children are scared with hobgoblins, and inflict upon us new fines, and imprisonments, and deaths. How then shall we most fitly examine the question? Shall we go back first to what you say about the opinions of men, and ask if we used to be right in thinking that we ought to pay attention to some opinions, and not to others?, Used we to be right in saying so before I was condemned to die, and has it now become apparent that we were talking at random, and arguing for the sake of argument, and that it was really nothing but play and nonsense? I am anxious, Crito, to examine our former reasoning with your help, and to see whether my present position will appear to me to have affected its truth in any way, or not; and whether we are to set it aside, or to yield assent to it. Those of us who thought at all seriously, used always to say, I think, exactly what I said just now, namely, that we ought to esteem some of the opinions which men form highly, and not others. Tell me, Crito, if you please, do you not think that they were right? For you, humanly speaking, will not have to die tomorrow, and your judgment will not be biassed by that circumstance. Consider then, do you not think it reasonable to say that we should not esteem all the opinions of men, but only some, nor the opinions of all men, but only of some men? What do you think? Is not this true?

Crito:: It is.

Socrates:: And we should esteem the good opinions, and not the worthless ones?

Crito:: Yes.

Socrates:: But the good opinions are those of the wise, and the worthless ones those of the foolish?

Crito:: Of course.

Socrates:: And what used we to say about this? Does a man who is in training, and who is in earnest about it, attend to the praise and blame and opinion of all men, or of the one man only who is a doctor or a trainer?

Crito:: He attends only to the opinion of the one man.

Socrates:: Then he ought to fear the blame and welcome the praise of this one man, not of the many?

Crito:: Clearly.

Socrates:: Then he must act and exercise, and eat and drink in whatever way the one man who is his master, and who understands the matter, bids him; not as others bid him?

Crito:: That is so.

Socrates:: Good. But if he disobeys this one man, and disregards his opinion and his praise, and esteems instead what the many, who understand nothing of the matter, say, will he not suffer for it?

Crito:: Of course he will.

Socrates:: And how will he suffer? In what direction, and in what part of himself?

Crito:: Of course in his body. That is disabled.

Socrates:: You are right. And, Crito, to be brief, is it not the same, in everything? And, therefore, in questions of right and wrong, and of the base and the honourable, and of good and evil, which we are now considering, ought we to follow the opinion of the many and fear that, or the opinion of the one man who under stands these matters (if we can find him), and feel more shame and fear before him than before all other men? For if we do not follow him, we shall cripple and maim that part of us which, we used to say, is improved by right and disabled by wrong. Or is this not so?

Crito:: No, Socrates, I agree with you.

Socrates:: Now, if, by listening to the opinions of those who do not understand, we disable that part of us which is improved by health and crippled by disease, is our life worth living, when it is crippled? It is the body, is it not?

Crito:: Yes.

Socrates:: Is life worth living with the body crippled and in a bad state?

Crito:: No, certainly not.

Socrates:: Then is life worth living when that part of us which is maimed by wrong and benefited by right is crippled? Or do we consider that part of us, whatever it is, which has to do with right and wrong to be of less consequence than our body?

Crito:: No, certainly not.

Socrates:: But more valuable?

Crito:: Yes, much more so.

Socrates:: Then, my excellent friend, we must not think so much of what the many will say of us; we must think of what the one man, who understands right and wrong, and of what Truth herself will say of us. And so you are mistaken to begin with, when you invite us to regard the opinion of the multitude concerning the right and the honourable and the good, and their opposites. But, it may be said, the multitude can put us to death?

Crito:: Yes, that is evident. That may be said, Socrates.

Socrates:: True. But, my excellent friend, to me it appears that the conclusion which we have just reached, is the same as our conclusion of former times. Now consider whether we still hold to the belief, that we should set the highest value, not on living, but on living well?

Crito:: Yes, we do.

Socrates:: And living well and honourably and rightly mean the same thing, do we hold to that or not?

Crito:: We do.

Socrates:: Then, starting from these premises, we have to consider whether it is right or not right for me to try to escape from prison, without the consent of the Athenians. If we find that it is right, we will try, if not, we will let it alone. I am afraid that considerations of expense, and of reputation, and of bringing up my children, of which you talk, Crito, are only the reflections of our friends, the many, who lightly put men to death, and who would, if they could, as lightly bring them to life again, without a thought. But reason, which is our guide, shows us that we can have nothing to consider but the question which I asked just now, namely, shall we be doing right if we give money and thanks to the men who are to aid me in escaping, and if we ourselves take our respective parts in my escape? Or shall we in truth be doing wrong, if we do all this? And if we find that we should be doing wrong, then we must not take any account either of death, or of any other evil that may be the consequence of remaining quietly here, but only of doing wrong.

Crito:: I think that you are right, Socrates. But what are we to do?

Socrates:: Let us consider that together, my good sir, and if you can contradict anything that I say, do so, and I will be convinced, but if you cannot, do not go on repeating to me any longer, my dear friend, that I should escape without the consent of the Athenians. I am very anxious to act with your approval, I do not want you to think me mistaken. But now tell me if you agree with the doctrine from which I start, and try to answer my questions as you think best.

Crito:: I will try.

Socrates:: Ought we never to do wrong intentionally at all; or may we do wrong in some ways, and not in others? Or, as we have often agreed in former times, is it never either good or honourable to do wrong? Have all our former conclusions been forgotten in these few days? Old men as we were, Crito, did we not see, in days gone by, when we were gravely conversing with each other, that we were no better than children? Or is not what we used to say most assuredly the truth, whether the world agrees with us or not? Is not wrongdoing an evil and a shame to the wrong-doer in every case, whether we incur a heavier or a lighter punishment than death as the consequence of doing right? Do we believe that?

Crito:: We do.

Socrates:: Then we ought never to do wrong at all?

Crito:: Certainly not.

Socrates:: Neither, if we ought never to do wrong at all, ought we to repay wrong with wrong, as the world thinks we may?

Crito:: Clearly not.

Socrates:: Well then, Crito, ought we to do evil to any one?

Crito:: Certainly I think not, Socrates.

Socrates:: And is it right to repay evil with evil, as the world thinks, or not right?

Crito:: Certainly it is not right.

Socrates:: For there is no difference, is there, between doing evil to a man, and wronging him?

Crito:: True.

Socrates:: Then we ought not to repay wrong with wrong or do harm to any man, no matter what we may have suffered from him. And in conceding this, Crito, be careful that you do not concede more than you mean. For I know that only a few men hold, or ever will hold this opinion. And so those who hold it, and those who do not, have no common ground of argument; they can of necessity only look with contempt on each others belief. Do you therefore consider very carefully whether you agree with me and share my opinion. Are we to start in our inquiry from the doctrine that it is never right either to do wrong, or to repay wrong with wrong, or to avenge ourselves on any man who harms us, by harming him in return? Or do you disagree with me and dissent from my principle? I myself have believed in it for a long time, and I believe in it still. But if you differ in any way, explain to me how. If you still hold to our former opinion, listen to my next point.

Crito:: Yes, I hold to it, and I agree with you. Go on.

Socrates:: Then, my next point, or rather my next question, is this, Ought a man to perform his just agreements, or may he shuffle out of them?

Crito:: He ought to perform them.

Socrates:: Then consider. If I escape without the states consent, shall I be injuring those whom I ought least to injure, or not? Shall I be abiding by my just agreements or not?

Crito:: I cannot answer your question, Socrates. I do not understand it.

Socrates:: Consider it in this way. Suppose the laws and the commonwealth were to come and appear to me as I was preparing to run away (if that is the right phrase to describe my escape) and were to ask, 'Tell us, Socrates, what have you in your mind to do? What do you mean by trying to escape, but to destroy us the laws, and the whole city, so far as in you lies? Do you think that a state can exist and not be overthrown, in which the decisions of law are of no force, and are disregarded and set at nought by private individuals?' How shall we answer questions like that, Crito? Much might be said, especially by an orator, in defence of the law which makes judicial decisions supreme. Shall I reply, 'But the state has injured me, it has decided my cause wrongly.' Shall we say that?

Crito:: Certainly we will, Socrates.

Socrates:: And suppose the laws were to reply, 'Was that our agreement? or was it that you would submit to whatever judgments the state should pronounce?' And if we were to wonder at their words, perhaps they would say, 'Socrates, wonder not at our words, but answer us; you yourself are accustomed to ask questions and to answer them. What complaint have you against us and the city, that you are trying to destroy us? Are we not, first, your parents? Through us your father took your mother and begat you. Tell us, have you any fault to find with those of us that are the laws of marriage?' 'I have none,' I should reply. 'Or have you any fault to find with those of us that regulate the nurture and education of the child, which you, like others, received? Did not we do well in bidding your father educate you in music and gymnastic?' 'You did,' I should say. 'Well then, since you were brought into the world and nurtured and educated by us, how, in the first place, can you deny that you are our child and our slave, as your fathers were before you? And if this be so, do you think that your rights are on a level with ours? Do you think that you have a right to retaliate upon us if we should try to do anything to you. You had not the same rights that your father had, or that your master would have had, if you had been a slave. You had no right to retaliate upon them if they ill-treated you, or to answer them if they reviled you, or to strike them back if they struck you, or to repay them evil with evil in any way. And do you think that you may retaliate on your country and its laws? If we try to destroy you, because we think it right, will you in return do all that you can to destroy us, the laws, and your country, and say that in so doing you are doing right, you, the man, who in truth thinks so much of virtue? Or are you too wise to see that your country is worthier, and more august, and more sacred, and holier, and held in higher honour both by the gods and by all men of understanding, than your father and your mother and all your other ancestors; and that it is your bounden duty to reverence it, and to submit to it, and to approach it more humbly than you would approach your father, when it is angry with you; and either to do whatever it bids you to do or to persuade it to excuse you; and to obey in silence if it orders you to endure stripes or imprisonment, or if it send you to battle to be wounded or to die? That is what is your duty. You. must not give way, nor retreat, nor desert your post. In war, and in the court of justice, and everywhere, you must do whatever your city and your country bid you do, or you must convince them that their commands are unjust. But it is against the law of God to use violence to your father or to your mother; and much more so is it against the law of God to use violence to your country.' What answer shall we make, Crito? Shall we say that the laws speak truly, or not?

Crito:: I think that they do.

Socrates:: 'Then consider, Socrates,' perhaps they would say, 'if we are right in saying that by attempting to escape you are attempting to injure us. We brought you into the world, we nurtured you, we educated you, we gave you and every other citizen a share of all the good things we could. Yet we proclaim that if any man of the Athenians is dissatisfied with us, he may take his goods and go away whithersoever he pleases, we give that permission to every man who chooses to avail himself of it, so soon as he has reached mans estate, and sees us, the laws, and the administration of our city. No one of us stands in his way or forbids him to take his goods and go wherever he likes, whether it be to an Athenian colony, or to any foreign country, if he is dissatisfied with us and with the city. But we say that every man of you who remains here, seeing how we administer justice, and how we govern the city in other matters, has agreed, by the very fact of remaining here, to do whatsoever we bid him. And, we say, he who disobeys us, does a threefold wrong, he disobeys us who are his parents, and he disobeys us who fostered him, and he disobeys us after he has agreed to obey us, without persuading us that we are wrong. Yet we did not bid him sternly to do whatever we told him. We offered him an alternative; we gave him his choice, either to obey us, or to convince us that we were wrong, but he does neither.

'These are the charges, Socrates, to which we say that you will expose yourself, if you do what you intend; and that not less, but more than other Athenians.' And if I were to ask, 'And why?' they might retort with justice that I have bound myself by the agreement with them more than other Athenians. They would say, 'Socrates, we have very strong evidence that you were satisfied with us and with the city. You would not have been content to stay at home in it more than other Athenians, unless you had been satisfied with it more than they. You never went away from Athens to the festivals, save once to the Isthmian games, nor elsewhere except on military service; you never made other journeys like other men; you had no desire to see other cities or other laws; you were contented with us and our city. So strongly did you prefer us, and agree to be governed by us, and what is more, you begat children in this city, you found it so pleasant. And besides, if you had wished, you might at your trial have offered to go into exile. At that time you could have done with the states consent, what you are trying now to do without it. But then you gloried in being willing to die. You said that you preferred death to exile. And now you are not ashamed of those words, you do not respect us the laws, for you are trying to destroy us, and you are acting just as a miserable slave would act, trying to run away, and breaking the covenant and agreement which you made to submit to our government. First, therefore, answer this question. Are we right, or are we wrong, in saying that you have agreed not in mere words, but in reality, to live under our government?' What are we to say, Crito? Must we not admit that it is true?

Crito:: We must, Socrates.

Socrates:: Then they would say, 'Are you not breaking your covenants and agreements with us? And you were not led to make them by force or by fraud, you had not to make up your mind in a hurry. You had seventy years in which you might have gone away, if you had been dissatisfied with us, or if the agreement had seemed to you unjust. But you preferred neither Lacednemon nor Crete, though you are fond of saying that they are well governed, nor any other state, either of the Hellenes, or the Barbarians. You went away from Athens less than the lame and the blind and the cripple. Clearly you, far more than other Athenians, were satisfied with the city, and also with us who are its laws, for who would be satisfied with a city which had no laws? And now will you not abide by your agreement? If you take our advice, you will, Socrates, then you will not make yourself ridiculous by going away from Athens.

‘For consider, what good will you do yourself or your friends by thus transgressing, and breaking your agreement? It is tolerably certain that they, on their part, will at least run the risk of exile, and of losing their civil rights, or of forfeiting their property. For yourself, you might go to one of the neighbouring cities, to Thebes or to Megara for instance for both of them are well governed but, Socrates, you will come as an enemy to these commonwealths; and all who care for their city will look askance at you, and think that you are a subverter of law. And you will confirm the judges in their opinion, and make it seem that their verdict was a just one. For a man who is a subverter of law, may well be supposed to be a corrupter of the young and thoughtless. Then will you avoid well-governed states and civilised men? Will life be worth having, if you do? Or will you consort with such men, and converse without shame about what, Socrates? About the things which you talk of here? Will you tell them that virtue, and justice, and institutions. and law are the most precious things that men can have? And do you not think that that will be a shameful thing in Socrates? You ought to think so. But you will leave these places; you will go to the friends of Crito in Thessaly, for there, there is most disorder and licence, and very likely they will be delighted to hear of the ludicrous way in which you escaped from prison, dressed up in peasants clothes, or in some other disguise which people put on when they are running away, and with your appearance altered. But will no one say how you, an old man, with probably only a few more years to live, clung so greedily to life that you dared to transgress the highest laws? Perhaps not, if you do not displease them. But if you do, Socrates, you will hear much that will make you blush. You will pass your life as the flatterer and the slave of all men; and what will you be doing but feasting in Thessaly? It will be as if you had made a journey to Thessaly for an entertainment. And where will be all our old sayings about justice and virtue then? But you wish to live for the sake of your children? You want to bring them up and educate them? What? will you take them with you to Thessaly, and bring them up and educate them there? Will you make them strangers to their own country, that- you may bestow this benefit on them too? Or supposing that you leave them in Athens, will they be brought up and educated better if you are alive, though you are not with them? Yes; your friends will take care of them. Will your friends take care of them if you make a journey to Thessaly, and not if you make a journey to Hades? You ought not to think that, at least if those who call themselves your friends are good for anything at all.

‘No, Socrates, be advised by us who have fostered you. Think neither of children, nor of life, nor of any other thing before justice, that when you come to the other world you may be able to make your defence before the rulers who sit in judgment there. It is clear that neither you nor any of your friends will be happier, or juster, or holier in this life, if you do this thing, nor will you be happier after you are dead. Now you will go away wronged, not by us, the laws, but by men. But if you repay evil with evil, and wrong with wrong in this shameful way, and break your agreements and covenants with us, and injure those whom you should least injure, yourself, and your friends, and your country, and us, and so escape, then we shall be angry with you while you live, and when you die our brethren, the laws in Hades, will not receive you kindly; for they will know that on earth you did all that you could to destroy us. Listen then to us, and let not Crito persuade you to do as he says.'

Know well, my dear friend Crito, that this is what I seem to hear, as the worshippers of Cybele seem, in their frenzy, to hear the music of flutes, and the sound of these words rings loudly in my ears, and drowns all other words.

And I feel sure, that if you try to change my mind you will speak in vain; nevertheless, if you think that you will succeed, say on.

Crito:: I can say no more, Socrates.

Socrates:: Then let it be, Crito, and let us do as I say, seeing that God so directs us.

# Crito

[OR ON DUTY; ETHICAL]

Translated by Fowler, Harold North.

CHARACTERS

Socrates, Crito

---

Socrates:: Why have you come at this time, Crito? Or isn’t it still early?

Crito:: Yes, very early.

Socrates:: About what time?

Crito:: Just before dawn.

Socrates:: I am surprised that the watchman of the prison was willing to let you in.

Crito:: He is used to me by this time, Socrates, because I come here so often, and besides I have done something for him.

Socrates:: Have you just come, or some time ago?

Crito:: Some little time ago.

Socrates:: Then why did you not wake me at once, instead of sitting by me in silence?

Crito:: No, no, by Zeus, Socrates, I only wish I myself were not so sleepless and sorrowful. But I have been wondering at you for some time, seeing how sweetly you sleep; and I purposely refrained from waking you, that you might pass the time as pleasantly as possible. I have often thought through out your life hitherto that you were of a happy disposition, and I think so more than ever in this present misfortune, since you bear it so easily and calmly.

Socrates:: Well, Crito, it would be absurd if at my age I were disturbed because I must die now.

Crito:: Other men as old, Socrates, become involved in similar misfortunes, but their age does not in the least prevent them from being disturbed by their fate.

Socrates:: That is true. But why have you come so early?

Crito:: To bring news, Socrates, sad news, though apparently not sad to you, but sad and grievous to me and all your friends, and to few of them, I think, so grievous as to me.

Socrates:: What is this news? Has the ship come from Delos, at the arrival of which I am to die?

Crito:: It has not exactly come, but I think it will come to-day from the reports of some men who have come from Sunium and left it there. Now it is clear from what they say that it will come to-day, and so to-morrow, Socrates, your life must end.

Socrates:: Well, Crito, good luck be with us! If this is the will of the gods, so be it. However, I do not think it will come to-day.

Crito:: What is your reason for not thinking so?

Socrates:: I will tell you. I must die on the day after the ship comes in, must I not?

Crito:: So those say who have charge of these matters.

Socrates:: Well, I think it will not come in to-day, but to-morrow. And my reason for this is a dream which I had a little while ago in the course of this night. And perhaps you let me sleep just at the right time.

Crito:: What was the dream?

Socrates:: I dreamed that a beautiful, fair woman, clothed in white raiment, came to me and called me and said, “Socrates, on the third day thou wouldst come to fertile Phthia.”

Crito:: A strange dream, Socrates.

Socrates:: No, a clear one, at any rate, I think, Crito.

Crito:: Too clear, apparently. But, my dear Socrates, even now listen to me and save yourself. Since, if you die, it will be no mere single misfortune to me, but I shall lose a friend such as I can never find again, and besides, many persons who do not know you and me well will think I could have saved you if I had been willing to spend money, but that I would not take the trouble. And yet what reputation could be more disgraceful than that of considering ones money of more importance than ones friends? For most people will not believe that we were eager to help you to go away from here, but you refused.

Socrates:: But, my dear Crito, why do we care so much for what most people think? For the most reasonable men, whose opinion is more worth considering, will think that things were done as they really will be done.

Crito:: But you see it is necessary, Socrates, to care for the opinion of the public, for this very trouble we are in now shows that the public is able to accomplish not by any means the least, but almost the greatest of evils, if one has a bad reputation with it.

Socrates:: I only wish, Crito, the people could accomplish the greatest evils, that they might be able to accomplish also the greatest good things. Then all would be well. But now they can do neither of the two;

for they are not able to make a man wise or foolish, but they do whatever occurs to them.

Crito:: That may well be. But, Socrates, tell me this; you are not considering me and your other friends, are you, fearing that, if you escape, the informers will make trouble for us by saying that we stole you away, and we shall be forced to lose either all our property or a good deal of money, or be punished in some other way besides? For if you are afraid of anything of that kind, let it go; since it is right for us to run this risk, and even greater risk than this, if necessary, provided we save you. Now please do as I ask.

Socrates:: I am considering this, Crito, and many other things.

Crito:: Well, do not fear this! for it is not even a large sum of money which we should pay to some men who are willing to save you and get you away from here. Besides, don't you see how cheap these informers are, and that not much money would be needed to silence them? And you have my money at your command, which is enough, I fancy; and moreover, if because you care for me you think you ought not to spend my money, there are foreigners here willing to spend theirs; and one of them, Simmias of Thebes, has brought for this especial purpose sufficient funds; and Cebes also and very many others are ready. So, as I say, do not give up saving yourself through fear of this. And do not be troubled by what you said in the court, that if you went away you would not know what to do with yourself. For in many other places, wherever you go, they will welcome you; and if you wish to go to Thessaly, I have friends there who will make much of you and will protect you, so that no one in Thessaly shall annoy you.

And besides, Socrates, it seems to me the thing you are undertaking to do is not even right betraying yourself when you might save yourself. And you are eager to bring upon yourself just what your enemies would wish and just what those were eager for who wished to destroy you. And moreover, I think you are abandoning your children, too, for when you might bring them up and educate them, you are going to desert them and go away, and, so far as you are concerned, their fortunes in life will be whatever they happen to meet with, and they will probably meet with such treatment as generally comes to orphans in their destitution. No. Either one ought not to beget children, or one ought to stay by them and bring them up and educate them. But you seem to me to be choosing the laziest way; and you ought to choose as a good and brave man would choose, you who have been saying all your life, that you cared for virtue. So I am ashamed both for you and for us, your friends, and I am afraid people will think that this whole affair of yours has been conducted will) a sort of cowardice on our part—both the fact that the case came before the court, when it might have been avoided, and the way in which the trial itself was carried on, and finally they will think, as the crowning absurdity of the whole affair, that this opportunity has escaped us through some base cowardice on our part, since we did not save you, and you did not save yourself, though it was quite possible if we had been of any use whatever. Take care, Socrates, that these things be not disgraceful, as well as evil, both to you and to us. Just consider, or rather it is time not to consider any longer, but to have finished considering. And there is just one possible plan; for all this must be done in the coming night. And if we delay it can no longer be done. But I beg you, Socrates, do as I say and don't refuse.

Socrates:: My dear Crito, your eagerness is worth a great deal, if it should prove to be rightly directed; but otherwise, the greater-it is, the more hard to bear. So we must examine the question whether we ought to do this or not; for I am not only now but always a man who follows nothing but the reasoning which on consideration seems to me best. And I cannot, now that this has happened to us, discard the arguments I used to advance, but they seem to me much the same as ever, and I revere and honour the same ones as before. And unless we can bring forward better ones in our present situation, be assured that I shall not give way to you, not even if the power of the multitude frighten us with even more terrors than at present, as children are frightened with goblins, threatening us with imprisonments and deaths and confiscations of property. Now how could we examine the matter most reasonably? By taking up first what you say about opinions and asking whether we were right when we always used to say that we ought to pay attention to some opinions and not to others? Or were we right before I was condemned to death, whereas it has now been made clear that we were talking merely for the sake of argument and it was really mere play and nonsense? And I wish to investigate, Crito, in common with you, and see whether our former argument seems different to me under our present conditions, or the same, and whether we shall give it up or be guided by it. But it used to be said, I think, by those who thought they were speaking sensibly, just as I was saying now, that of the opinions held by men some ought to be highly esteemed and others not. In Gods name, Crito, do you not think this is correct? For you, humanly speaking, are not involved in the necessity of dying to-morrow, and therefore present conditions would not lead your judgment astray. Now say, do you not think we were correct in saying that we ought not to esteem all the opinions of men, but some and not others, and not those of all men, but only of some? What do you think? Is not this true?

Crito:: It is.

Socrates:: Then we ought to esteem the good opinions and not the bad ones?

Crito:: Yes.

Socrates:: And the good ones are those of the wise and the bad ones those of the foolish?

Crito:: Of course.

Socrates:: Come then, what used we to say about this? If a man is an athlete and makes that his business, does he pay attention to every mans praise and blame and opinion or to those of one man only who is a physician or a trainer?

Crito:: To those of one man only.

Socrates:: Then he ought to fear the blame and welcome the praise of that one man and not of the multitude.

Crito:: Obviously.

Socrates:: And he must act and exercise and eat and drink as the one man who is his director and who knows the business thinks best rather than as all the others think.

Crito:: That is true.

Socrates:: Well then; if he disobeys the one man and disregards his opinion and his praise, but regards the words of the many who have no special knowledge, will he not come to harm?

Crito:: Of course he will.

Socrates:: And what is this harm? In what direction and upon what part of the one who disobeys does it act?

Crito:: Evidently upon his body; for that is what it ruins.

Socrates:: Right. Then in other matters, not to enumerate them all, in questions of right and wrong and disgraceful and noble and good and bad, which we are now considering, ought we to follow and fear the opinion of the many or that of the one, if there is anyone who knows about them, whom we ought to revere and fear more than all the others? And if we do not follow him, we shall injure and cripple that which we used to say is benefited by the right and is ruined by the wrong. Or is there nothing in this?

Crito:: I think it is true, Socrates.

Socrates:: Well then, if through yielding to the opinion of the ignorant we ruin that which is benefited by health and injured by disease, is life worth living for us when that is ruined? And that is the body, is it not?

Crito:: Yes.

Socrates:: Then is life worth living when the body is worthless and ruined?

Crito:: Certainly not.

Socrates:: But is it worth living when that is ruined which is injured by the wrong and improved by the right? Or do we think that part of us, whatever it is, which is concerned with right and wrong, is less important than the body?

Crito:: By no means.

Socrates:: But more important?

Crito:: Much more.

Socrates:: Then, most excellent friend, we must not consider at all what the many will say of us, but what he who knows about right and wrong, the one man, and truth herself will say. And so you introduced the discussion wrongly in the first place, when you began by saying we ought to consider the opinion of the multitude about the right and the noble and the good and their opposites. But it might, of course, be said that the multitude can put us to death.

Crito:: That is clear, too. It would be said, Socrates.

Socrates:: That is true. But, my friend, the argument we have just finished seems to me still much the same as before; and now see whether we still hold to this, or not, that it is not living, but living well which we ought to consider most important.

Crito:: We do hold to it.

Socrates:: And that living well and living rightly are the same thing, do we hold to that, or not?

Crito:: We do.

Socrates:: Then we agree that the question is whether it is right for me to try to escape from here without the permission of the Athenians, or not right. And if it appears to be right, let us try it, and if not, let us give it up. But the considerations you suggest, about spending money, and reputation, and bringing up my children, these are really, Crito, the reflections of those who lightly put men to death, and would bring them to life again, if they could, without any sense, I mean the multitude. But we, since our argument so constrains us, must consider only the question we just broached, whether we shall be doing right in giving money and thanks to these men who will help me to escape, and in escaping or aiding the escape ourselves, or shall in truth be doing wrong, if we do all these things. And if it appears that it is wrong for us to do them, it may be that we ought not to consider either whether we must die if we stay here and keep quiet or whether we must endure anything else whatsoever, but only the question of doing wrong.

Crito:: I think what you say is right, Socrates; but think what we should do.

Socrates:: Let us, my good friend, investigate in common, and if you can contradict anything I say, do so, and I will yield to your arguments; but if you cannot, my dear friend, stop at once saying the same thing to me over and over, that I ought to go away from here without the consent of the Athenians; for I am anxious to act in this matter with your approval, and not contrary to your wishes. Now see if the beginning of the investigation satisfies you, and try to reply to my questions to the best of your belief.

Crito:: I will try.

Socrates:: Ought we in no way to do wrong intentionally, or should we do wrong in some ways but not in others? Or, as we often agreed in former times, is it never right or honourable to do wrong? Or have all those former conclusions of ours been overturned in these few days, and have we old men, seriously conversing with each other, failed all along to see that we were no better than children? Or is not what we used to say most certainly true, whether the world agree or not? And whether we must endure still more grievous sufferings than these, or lighter ones, is not wrongdoing inevitably an evil and a disgrace to the wrongdoer? Do we believe this or not?

Crito:: We do.

Socrates:: Then we ought not to do wrong at all.

Crito:: Why, no.

Socrates:: And we ought not even to requite wrong with wrong, as the world thinks, since we must not do wrong at all.

Crito:: Apparently not.

Socrates:: Well, Crito, ought one to do evil or not?

Crito:: Certainly not, Socrates.

Socrates:: Well, then, is it right to requite evil with evil, as the world says it is, or not right?

Crito:: Not right, certainly.

Socrates:: For doing evil to people is the same thing as wronging them.

Crito:: That is true.

Socrates:: Then we ought neither to requite wrong with wrong nor to do evil to anyone, no matter what he may have done to us. And be careful, Crito, that you do not, in agreeing to this, agree to something you do not believe; for I know that there are few who believe or ever will believe this. Now those who believe this, and those who do not, have no common ground of discussion, but they must necessarily, in view of their opinions, despise one another. Do you therefore consider very carefully whether you agree and share in this opinion, and let us take as the starting point of our discussion the assumption that it is never right to do wrong or to requite wrong with wrong, or when we suffer evil to defend ourselves by doing evil in return. Or do you disagree and refuse your assent to this starting point? For I have long held this belief and I hold it yet, but if you have reached any other conclusion, speak and explain it to me. If you still hold to our former opinion, hear the next point.

Crito:: I do hold to it and I agree with you; so go on.

Socrates:: Now the next thing I say, or rather ask, is this; “ought a man to do what he has agreed to do, provided it is right, or may he violate his agreements?”

Crito:: He ought to do it.

Socrates:: Then consider whether, if we go away from here without the consent of the state, we are doing harm to the very ones to whom we least ought to do harm, or not, and whether we are abiding by what we agreed was right, or not.

Crito:: I cannot answer your question, Socrates, for I do not understand.

Socrates:: Consider it in this way. If, as I was en the point of running away (or whatever it should be called), the laws and the commonwealth should come to me and ask, “Tell me, Socrates, what have you in mind to do? Are you not intending by this thing you are trying to do, to destroy us, the laws, and the entire state, so far as in you lies? Or do you think that state can exist and not be overturned, in which the decisions reached by the courts have no force but are made invalid and annulled by private persons?” What shall we say, Crito, in reply to this question and others of the same kind? For one might say many things, especially if one were an orator, about the destruction of that law which provides that the decisions reached by the courts shall be valid. Or shall we say to them, “The state wronged me and did not judge the case rightly?” Shall we say that, or what?

Crito:: That is what we shall say, by Zeus, Socrates.

Socrates:: What then if the laws should say, “Socrates, is this the agreement you made with us, or did you agree to abide by the verdicts pronounced by the state?” Now if I were surprised by what they said, perhaps they would continue, “Don’t be surprised at what we say, Socrates, but answer, since you are in the habit of employing the method of question and answer. Come, what fault do you find with us and the state, that you are trying to destroy us? In the first place, did we not bring you forth? Is it not through us that your father married your mother and begat you? Now tell us, have you any fault to find with those of us who are the laws of marriage?”

“I find no fault,” I should say. “Or with those that have to do with the nurture of the child after he is born and with his education which you, like others, received? Did those of us who are assigned to these matters not give good directions when we told your father to educate you in music and gymnastics?” “You did, I should say. “Well then, when you were born and nurtured and educated, could you say to begin with that you were not our offspring and our slave, you yourself and your ancestors? And if this is so, do you think right as between you and us rests on a basis of equality, so that whatever we undertake to do to you it is right for you to retaliate? There was no such equality of right between you and your father or your master, if you had one, so that whatever treatment you received you might return it, answering them if you were reviled, or striking back if you were struck, and the like; and do you think that it will be proper for you to act so toward your country and the laws, so that if we undertake to destroy you, thinking it is right, you will undertake in return to destroy us laws and your country, so far as you are able, and will say that in doing this you are doing right, you who really care for virtue? Or is your wisdom such that you do not see that your country is more precious and more to be revered and is holier and in higher esteem among the gods and among men of understanding than your mother and your father and all your ancestors, and that you ought to show to her more reverence and obedience and humility when she is angry than to your father, and ought either to convince her by persuasion or to do whatever she commands, and to suffer, if she commands you to suffer, in silence, and if she orders you to be scourged or imprisoned or if she leads you to war to be wounded or slain, her will is to be done, and this is right, and you must not give way or draw back or leave your post, but in war and in court and everywhere, you must do whatever the state, your country, commands, or must show her by persuasion what is really right, but that it is impious to use violence against either your father or your mother, and much more impious to use it against your country?" What shall we reply to this, Crito, that the laws speak the truth, or not?

Crito:: I think they do.

Socrates:: "Observe then, Socrates," perhaps the laws would say, "that if what we say is true, what you are now undertaking to do to us is not right. For we brought you into the world, nurtured you, and gave a share of all the good things we could to you and all the citizens. Yet we proclaim, by having offered the opportunity to any of the Athenians who wishes to avail himself of it, that anyone who is not pleased with us when he has become a man and has seen the administration of the city and us, the laws, may take his goods and go away wherever he likes. And none of us stands in the way or forbids any of you to take his goods and go away wherever he pleases, if we and the state do not please him, whether it be to an Athenian colony or to a foreign country where he will live as an alien. But we say that whoever of you stays here, seeing how we administer justice and how we govern the state in other respects, has thereby entered into an agreement with us to do what we command; and we say that he who does not obey does threefold wrong, because he disobeys us who are his parents, because he disobeys us who nurtured him, and because after agreeing to obey us he neither obeys us nor convinces us that we are wrong, though we give him the opportunity and do not roughly order him to do what we command, but when we allow him a choice of two things, either to convince us of error or to do our bidding, he does neither of these things."

"We say that you, Socrates, will be exposed to these reproaches, if you do what you have in mind, and you not least of the Athenians but more than most others." If then I should say, "How so?" perhaps they might retort with justice that I had made this agreement with them more emphatically than most other Athenians. For they would say, "Socrates, we have strong evidence that we and the city pleased you; for you would never have stayed in it more than all other Athenians if you had not been better pleased with it than they; you never went out from the city to a festival, or anywhere else, except on military service, and you never made any other journey, as other people do, and you had no wish to know any other city or other laws, but you were contented with us and our city. So strongly did you prefer us and agree to live in accordance with us; and besides, you begat children in the city, showing that it pleased you. And moreover even at your trial you might have offered exile as your penalty, if you wished, and might have done with the states consent what you are now undertaking to do without it. But you then put on airs and said you were not disturbed if you must die, and you preferred, as you said, death to exile. And now you are not ashamed to think of those words and you do not respect us, the laws, since you are trying to bring us to naught; and you are doing what the meanest slave would do, since you are trying to run away contrary to the compacts and agreements you made with us that you would live in accordance with us. First then, answer this question, whether we speak the truth or not when we say that you agreed, not in word, but by your acts, to live in accordance with us." What shall we say to this, Crito? Must we not agree that it is true?

Crito:: We must, Socrates.

Socrates:: "Are you then," they would say, "not breaking your compacts and agreements with us, though you were not led into them by compulsion or fraud, and were not forced to make up your mind in a short time, but had seventy years, in which you could have gone away, if we did not please you and if you thought the agreements were unfair? But you preferred neither Lacedaemon nor Crete, which you are always saying are well governed, nor any other of the Greek states, or of the foreign ones, but you went away from this city less than the lame and the blind and the other cripples. So much more than the other Athenians were you satisfied with the city and evidently therefore with us, its laws; for who would be pleased with a city apart from its laws? And now will you not abide by your agreement? You will if you take our advice, Socrates; and you will not make yourself ridiculous by going away from the city.

“For consider. By transgressing in this way and committing these errors, what good will you do to yourself or any of your friends? For it is pretty clear that your friends also will be exposed to the risk of banishment and the loss of their homes in the city or of their property. And you yourself, it you go to one of the nearest cities, to Thebes or Megara for both are well governed will go as an enemy, Socrates, to their government, and all who care for their own cities will look askance at you, and will consider you a destroyer of the laws, and you will confirm the judges in their opinion, so that they will think their verdict was just. For he who is destroyer of the laws might certainly be regarded as a destroyer of young and thoughtless men. Will you then avoid the well-governed cities and the most civilised men? And if you do this will your life be worth living? Or will you go to them and have the face to carry on what kind of conversation, Socrates? The same kind you carried on here, saying that virtue and justice and lawful things and the laws are the most precious things to men? And do you not think that the conduct of Socrates would seem most disgraceful? You cannot help thinking so. Or you will keep away from these places and go to Crito’s friends in Thessaly; for there great disorder and lawlessness prevail, and perhaps they would be amused to hear of the ludicrous way in which you ran away from prison by putting on a disguise, a peasants leathern cloak or some of the other things in which runaways dress themselves up, and changing your appearance. But will no one say that you, an old man, who had probably but a short time yet to live, clung to life with such shameless greed that you transgressed the highest laws? Perhaps not, if you do not offend anyone; but if you do, Socrates, you will have to listen to many things that would be a disgrace to you. So you will live as an inferior and a slave to everyone. And what will you do except feast in Thessaly, as if you had gone to Thessaly to attend a banquet? What will become of our conversations about justice and virtue? But perhaps you wish to live for the sake of your children, that you may bring them up and educate them? How so? Will you take them to Thessaly to be brought up and educated, making exiles of them, that you may give them that blessing also? Or perhaps you will not do that, but if they are brought up here while you are living, will they be better brought up and educated if you are not with them than if you were dead? Oh yes! your friends will care for them. Will they care for them if you go away to Thessaly and not if you go away to the dwellings of the dead? If those who say they are your friends are of any use, we must believe they will care for them in both cases alike.

"Ah, Socrates, be guided by us who tended your infancy. Care neither for your children nor for life nor for anything else more than for the right, that when you come to the home of the dead, you may have all these things to say in your own defence. For clearly if you do this thing it will not be better for you here, or more just or holier, no, nor for any of your friends, and neither will it be better when you reach that other abode. Now, however, you will go away wronged, if you do go away, not by us, the laws, but by men; but if you escape after so disgracefully requiting wrong with wrong and evil with evil, breaking your compacts and agreements with us, and injuring those whom you least ought to injure—yourself, your friends, your country and us—we shall be angry with you while you live, and there our brothers, the laws in Hades realm, will not receive you graciously; for they will know that you tried, so far as in you lay, to destroy us. Do not let Crito persuade you to do what he says, but take our advice."

Be well assured, my dear friend, Crito, that this is what I seem to hear, as the frenzied dervishes of Cybele seem to hear the flutes, and this sound of these words re-echoes within me and prevents my hearing any other words. And be assured that, so far as I now believe, if you argue against these words you will speak in vain. Nevertheless, if you think you can accomplish anything, speak.

Crito:: No, Socrates, I have nothing to say.

Socrates:: Then, Crito, let it be, and let us act in this way, since it is in this way that God leads us.

# Crito

Translated by G.M.A. Grube.

CHARACTERS OF THE DIALOGUE.

Socrates. Crito.

---

Socrates:: Why have you come so early, Crito? Or is it not still early?

Crito:: It certainly is.

Socrates:: How early?

Crito:: Early dawn.

Socrates:: I am surprised that the warder was willing to listen to you.

Crito:: He is quite friendly to me by now, Socrates. I have been here often and I have given him something.

Socrates:: Have you just come, or have you been here for some time?

Crito:: A fair time.

Socrates:: Then why did you not wake me right away but sit there in silence?

Crito:: By Zeus no, Socrates. I would not myself want to be in distress and awake so long. I have been surprised to see you so peacefully asleep. It was on purpose that I did not wake you, so that you should spend your time most agreeably. Often in the past throughout my life, I have considered the way you live happy, and especially so now that you bear your present misfortune so easily and lightly.

Socrates:: It would not be fitting at my age to resent the fact that I must die now.

Crito:: Other men of your age are caught in such misfortunes, but their age does not prevent them resenting their fate.

Socrates:: That is so. Why have you come so early?

Crito:: I bring bad news, Socrates, not for you, apparently, but for me and all your friends the news is bad and hard to bear. Indeed, I would count it among the hardest.

Socrates:: What is it? Or has the ship arrived from Delos, at the arrival of which I must die?

Crito:: It has not arrived yet, but it will, I believe, arrive today, according to a message some men brought from Sunium, where they left it. This makes it obvious that it will come today, and that your life must end tomorrow.

Socrates:: May it be for the best. If it so please the gods, so be it. However, I do not think it will arrive today.

Crito:: What indication have you of this?

Socrates:: I will tell you. I must die the day after the ship arrives.

Crito:: That is what those in authority say.

Socrates:: Then I do not think it will arrive on this coming day, but on the next. I take to witness of this a dream I had a little earlier during this night. It looks as if it was the right time for you not to wake me.

Crito:: What was your dream?

Socrates:: I thought that a beautiful and comely woman dressed in white approached me. She called me and said: “Socrates, may you arrive at fertile Phthia on the third day.”

Crito:: A strange dream, Socrates.

Socrates:: But it seems clear enough to me, Crito.

Crito:: Too clear it seems, my dear Socrates, but listen to me even now and be saved. If you die, it will not be a single misfortune for me. Not only will I be deprived of a friend, the like of whom I shall never find again, but many people who do not know you or me very well will think that I could have saved you if I were willing to spend money, but that I did not care to do so. Surely there can be no worse reputation than to be thought to value money more highly than one's friends, for the majority will not believe that you yourself were not willing to leave prison while we were eager for you to do so.

Socrates:: My good Crito, why should we care so much for what the majority think? The most reasonable people, to whom one should pay more attention, will believe that things were done as they were done.

Crito:: You see, Socrates, that one must also pay attention to the opinion of the majority. Your present situation makes clear that the majority can inflict not the least but pretty well the greatest evils if one is slandered among them.

Socrates:: Would that the majority could inflict the greatest evils, for they would then be capable of the greatest good, and that would be fine, but now they cannot do either. They cannot make a man either wise or foolish, but they inflict things haphazardly.

Crito:: That may be so. But tell me this, Socrates, are you anticipating that I and your other friends would have trouble with the informers if you escape from here, as having stolen you away, and that we should be compelled to lose all our property or pay heavy fines and suffer other punishment besides? If you have any such fear, forget it. We would be justified in running this risk to save you, and worse, if necessary. Do follow my advice, and do not act differently.

Socrates:: I do have these things in mind, Crito, and also many others.

Crito:: Have no such fear. It is not much money that some people require to save you and get you out of here. Further, do you not see that those informers are cheap, and that not much money would be needed to deal with them? My money is available and is, I think, sufficient. If, because of your affection for me, you feel you should not spend any of mine, there are those strangers here ready to spend money. One of them, Simmias the Theban, has brought enough for this very purpose. Cebes, too, and a good many others. So, as I say, do not let this fear make you hesitate to save yourself, nor let what you said in court trouble you, that you would not know what to do with yourself if you left Athens, for you would be welcomed in many places to which you might go. If you want to go to Thessaly, I have friends there who will greatly appreciate you and keep you safe, so that no one in Thessaly will harm you.

Besides, Socrates, I do not think that what you are doing is just, to give up your life when you can save it, and to hasten your fate as your enemies would hasten it, and indeed have hastened it in their wish to destroy you. Moreover, I think you are betraying your sons by going away and leaving them, when you could bring them up and educate them. You thus show no concern for what their fate may be. They will probably have the usual fate of orphans. Either one should not have children, or one should share with them to the end the toil of upbringing and education. You seem to me to choose the easiest path, whereas one should choose the path a good and courageous man would choose, particularly when one claims throughout one's life to care for virtue.

I feel ashamed on your behalf and on behalf of us, your friends, lest all that has happened to you be thought due to cowardice on our part: the fact that your trial came to court when it need not have done so, the handling of the trial itself, and now this absurd ending which will be thought to have got beyond our control through some cowardice and unmanliness on our part, since we did not save you, or you save yourself, when it was possible and could be done if we had been of the slightest use. Consider, Socrates, whether this is not only evil, but shameful, both for you and for us.

Take counsel with yourself, or rather the time for counsel is past and the decision should have been taken, and there is no further opportunity, for this whole business must be ended tonight. If we delay now, then it will no longer be possible, it will be too late. Let me persuade you on every count, Socrates, and do not act otherwise.

Socrates:: My dear Crito, your eagerness is worth much if it should have some right aim; if not, then the greater your keenness the more difficult it is to deal with. We must therefore examine whether we should act in this way or not, as not only now but at all times I am the kind of man who listens only to the argument that on reflection seems best to me. I cannot, now that this fate has come upon me, discard the arguments I used; they seem to me much the same. I value and respect the same principles as before, and if we have no better arguments to bring up at this moment, be sure that I shall not agree with you, not even if the power of the majority were to frighten us with more bogeys, as if we were children, with threats of incarcerations and executions and confiscation of property. How should we examine this matter most reasonably? Would it be by taking up first your argument about the opinions of men, whether it is sound in every case that one should pay attention to some opinions, but not to others? Or was that well-spoken before the necessity to die came upon me, but now it is clear that this was said in vain for the sake of argument, that it was in truth play and nonsense? I am eager to examine together with you, Crito, whether this argument will appear in any way different to me in my present circumstances, or whether it remains the same, whether we are to abandon it or believe it. It was said on every occasion by those who thought they were speaking sensibly, as I have just now been speaking, that one should greatly value some people’s opinions, but not others. Does that seem to you a sound statement?

You, as far as a human being can tell, are exempt from the likelihood of dying tomorrow, so the present misfortune is not likely to lead you astray. Consider then, do you not think it a sound statement that one must not value all the opinions of men, but some and not others, nor the opinions of all men, but those of some and not of others? What do you say? Is this not well said?

Crito:: It is.

Socrates:: One should value the good opinions, and not the bad ones?

Crito:: Yes.

Socrates:: The good opinions are those of wise men, the bad ones those of foolish men?

Crito:: Of course.

Socrates:: Come then, what of statements such as this: Should a man professionally engaged in physical training pay attention to the praise and blame and opinion of any man, or to those of one man only, namely a doctor or trainer?

Crito:: To those of one only.

Socrates:: He should therefore fear the blame and welcome the praise of that one man, and not those of the many?

Crito:: Obviously.

Socrates:: He must then act and exercise, eat and drink in the way the one, the trainer and the one who knows, thinks right, not all the others?

Crito:: That is so.

Socrates:: Very well. And if he disobeys the one, disregards his opinion and his praises while valuing those of the many who have no knowledge, will he not suffer harm?

Crito:: Of course.

Socrates:: What is that harm, where does it tend, and what part of the man who disobeys does it affect?

Crito:: Obviously the harm is to his body, which it ruins.

Socrates:: Well said. So with other matters, not to enumerate them all, and certainly with actions just and unjust, shameful and beautiful, good and bad, about which we are now deliberating, should we follow the opinion of the many and fear it, or that of the one, if there is one who has knowledge of these things and before whom we feel fear and shame more than before all the others. If we do not follow his directions, we shall harm and corrupt that part of ourselves that is improved by just actions and destroyed by unjust actions. Or is there nothing in this?

Crito:: I think there certainly is, Socrates.

Socrates:: Come now, if we ruin that which is improved by health and corrupted by disease by not following the opinions of those who know, is life worth living for us when that is ruined? And that is the body, is it not?

Crito:: Yes.

Socrates:: And is life worth living with a body that is corrupted and in bad condition?

Crito:: In no way.

Socrates:: And is life worth living for us with that part of us corrupted that unjust action harms and just action benefits? Or do we think that part of us, whatever it is, that is concerned with justice and injustice, is inferior to the body?

Crito:: Not at all.

Socrates:: It is more valuable?

Crito:: Much more.

Socrates:: We should not then think so much of what the majority will say about us, but what he will say who understands justice and injustice, the one, that is, and the truth itself. So that, in the first place, you were wrong to believe that we should care for the opinion of the many about what is just, beautiful, good, and their opposites. “But,” someone might say “the many are able to put us to death.”

Crito:: That too is obvious, Socrates, and someone might well say so.

Socrates:: And, my admirable friend, that argument that we have gone through remains, I think, as before. Examine the following statement in turn as to whether it stays the same or not, that the most important thing is not life, but the good life.

Crito:: It stays the same.

Socrates:: And that the good life, the beautiful life, and the just life are the same; does that still hold, or not?

Crito:: It does hold.

Socrates:: As we have agreed so far, we must examine next whether it is just for me to try to get out of here when the Athenians have not acquitted me. If it is seen to be just, we will try to do so; if it is not, we will abandon the idea. As for those questions you raise about money, reputation, the upbringing of children, Crito, those considerations in truth belong to those people who easily put men to death and would bring them to life again if they could, without thinking; I mean the majority of men. For us, however, since our argument leads to this, the only valid consideration, as we were saying just now, is whether we should be acting rightly in giving money and gratitude to those who will lead me out of here, and ourselves helping with the escape, or whether in truth we shall do wrong in doing all this. If it appears that we shall be acting unjustly, then we have no need at all to take into account whether we shall have to die if we stay here and keep quiet, or suffer in another way, rather than do wrong.

Crito:: I think you put that beautifully, Socrates, but see what we should do.

Socrates:: Let us examine the question together, my dear friend, and if you can make any objection while I am speaking, make it and I will listen to you, but if you have no objection to make, my dear Crito, then stop now from saying the same thing so often, that I must leave here against the will of the Athenians. I think it important to persuade you before I act, and not to act against your wishes. See whether the start of our inquiry is adequately stated, and try to answer what I ask you in the way you think best.

Crito:: I shall try.

Socrates:: Do we say that one must never in any way do wrong willingly, or must one do wrong in one way and not in another? Is to do wrong never good or admirable, as we have agreed in the past, or have all these former agreements been washed out during the last few days? Have we at our age failed to notice for some time that in our serious discussions we were no different from children? Above all, is the truth such as we used to say it was, whether the majority agree or not, and whether we must still suffer worse things than we do now, or will be treated more gently, that nonetheless, wrongdoing or injustice is in every way harmful and shameful to the wrongdoer? Do we say so or not?

Crito:: We do.

Socrates:: So one must never do wrong.

Crito:: Certainly not.

Socrates:: Nor must one, when wronged, inflict wrong in return, as the majority believe, since one must never do wrong.

Crito:: That seems to be the case.

Socrates:: Come now, should one mistreat anyone or not, Crito?

Crito:: One must never do so.

Socrates:: Well then, if one is oneself mistreated, is it right, as the majority say, to mistreat in return, or is it not?

Crito:: It is never right.

Socrates:: Mistreating people is no different from wrongdoing.

Crito:: That is true.

Socrates:: One should never do wrong in return, nor mistreat any man, no matter how one has been mistreated by him. And Crito, see that you do not agree to this, contrary to your belief. For I know that only a few people hold this view or will hold it, and there is no common ground between those who hold this view and those who do not, but they inevitably despise each other's views. So then consider very carefully whether we have this view in common, and whether you agree, and let this be the basis of our deliberation, that neither to do wrong nor to return a wrong is ever right, nor is bad treatment in return for bad treatment. Or do you disagree and do not share this view as a basis for discussion? I have held it for a long time and still hold it now, but if you think otherwise, tell me now. If, however, you stick to our former opinion, then listen to the next point.

Crito:: I stick to it and agree with you. So say on.

Socrates:: Then I state the next point, or rather I ask you: when one has come to an agreement that is just with someone, should one fulfill it or cheat on it?

Crito:: One should fulfill it.

Socrates:: See what follows from this: if we leave here without the city's permission, are we mistreating people whom we should least mistreat? And are we sticking to a just agreement, or not?

Crito:: I cannot answer your question, Socrates. I do not know.

Socrates:: Look at it this way. If, as we were planning to run away from here, or whatever one should call it, the laws and the state came and confronted us and asked:

The State::: "Tell me, Socrates, what are you intending to do? Do you not by this action you are attempting intend to destroy us, the laws, and indeed the whole city, as far as you are concerned? Or do you think it possible for a city not to be destroyed if the verdicts of its courts have no force but are nullified and set at naught by private individuals?"

Socrates:: What shall we answer to this and other such arguments? For many things could be said, especially by an orator on behalf of this law we are destroying, which orders that the judgments of the courts shall be carried out. Shall we say in answer, "The city wronged me, and its decision was not right." Shall we say that, or what?

Crito:: Yes, by Zeus, Socrates, that is our answer.

Socrates:: Then what if the laws said:

The State::: "Was that the agreement between us, Socrates, or was it to respect the judgments that the city came to?"

Socrates:: And if we wondered at their words, they would perhaps add:

The State::: "Socrates, do not wonder at what we say but answer, since you are accustomed to proceed by question and answer. Come now, what accusation do you bring against us and the city, that you should try to destroy us? Did we not, first, bring you to birth, and was it not through us that your father married your mother and begat you? Tell you, do you find anything to criticize in those of us who are concerned with marriage?”

Socrates:: And I would say that I do not criticize them.

The State::: “Or in those of us concerned with the nurture of babies and the education that you too received? Were those assigned to that subject not right to instruct your father to educate you in the arts and in physical culture?”

Socrates:: And I would say that they were right.

The State::: “Very well,”

Socrates:: they would continue;

The State::: “and after you were born and nurtured and educated, could you, in the first place, deny that you are our offspring and servant, both you and your forefathers? If that is so, do you think that we are on an equal footing as regards the right, and that whatever we do to you it is right for you to do to us? You were not on an equal footing with your father as regards the right, nor with your master if you had one, so as to retaliate for anything they did to you, to revile them if they reviled you, to beat them if they beat you, and so with many other things. Do you think you have this right to retaliation against your country and its laws? That if we undertake to destroy you and think it right to do so, you can undertake to destroy us, as far as you can, in return? And will you say that you are right to do so, you who truly care for virtue? Is your wisdom such as not to realize that your country is to be honored more than your mother, your father and all your ancestors, that it is more to be revered and more sacred, and that it counts for more among the gods and sensible men, that you must worship it, yield to it and placate its anger more than your father’s? You must either persuade it or obey its orders, and endure in silence whatever it instructs you to endure, whether blows or bonds, and if it leads you into war to be wounded or killed, you must obey. To do so is right, and one must not give way or retreat or leave one's post, but both in war and in courts and everywhere else, one must obey the commands of one's city and country, or persuade it as to the nature of justice. It is impious to bring violence to bear against your mother or father, it is much more so to use it against your country."

Socrates:: What shall we say in reply, Crito, that the laws speak the truth, or not?

Crito:: I think they do.

The State::: "Reflect now, Socrates,"

Socrates:: the laws might say

The State::: "that if what we say is true, you are not treating us rightly by planning to do what you are planning. We have given you birth, nurtured you, educated you, we have given you and all other citizens a share of all the good things we could. Even so, by giving every Athenian the opportunity, once arrived at voting age and having observed the affairs of the city and us the laws, we proclaim that if we do not please him, he can take his possessions and go wherever he pleases. Not one of our laws raises any obstacle or forbids him, if he is not satisfied with us or the city, if one of you wants to go and live in a colony or wants to go anywhere else, and keep his property. We say, however, that whoever of you remains, when he sees how we conduct our trials and manage the city in other ways, has in fact come to an agreement with us to obey our instructions. We say that the one who disobeys does wrong in three ways, first because in us he disobeys his parents, also those who brought him up, and because, in spite of his agreement, he neither obeys us nor, if we do something wrong, does he try to persuade us to do better. Yet we only propose things, we do not issue savage commands to do whatever we order; we give two alternatives, either to persuade us or to do what we say. He does neither. We do say that you too, Socrates, are open to those charges if you do what you have in mind; you would be among, not the least, but the most guilty of the Athenians.”

Socrates:: And if I should say “Why so?” they might well be right to upbraid me and say that I am among the Athenians who most definitely came to that agreement with them. They might well say:

The State::: “Socrates, we have convincing proofs that we and the city were congenial to you. You would not have dwelt here most consistently of all the Athenians if the city had not been exceedingly pleasing to you. You have never left the city, even to see a festival, nor for any other reason except military service; you have never gone to stay in any other city, as people do; you have had no desire to know another city or other laws; we and our city satisfied you.

“So decisively did you choose us and agree to be a citizen under us. Also, you have had children in this city, thus showing that it was congenial to you. Then at your trial you could have assessed your penalty at exile if you wished, and you are now attempting to do against the city’s wishes what you could then have done with her consent. Then you prided yourself that you did not resent death, but you chose, as you said, death in preference to exile. Now, however, those words do not make you ashamed, and you pay no heed to us, the laws, as you plan to destroy us, and you act like the meanest type of slave by trying to run away, contrary to your commitments and your agreement to live as a citizen under us. First then, answer us on this very point, whether we speak the truth when we say that you agreed, not only in words but by your deeds, to live in accordance with us.”

Socrates:: What are we to say to that, Crito? Must we not agree?

Crito:: We must, Socrates.

The State::: “Surely,”

Socrates:: they might say;

The State::: “you are breaking the commitments and agreements that you made with us without compulsion or deceit, and under no pressure of time for deliberation. You have had seventy years during which you could have gone away if you did not like us, and if you thought our agreements unjust. You did not choose to go to Sparta or to Crete, which you are always saying are well governed, nor to any other city, Greek or foreign. You have been away from Athens less than the lame or the blind or other handicapped people. It is clear that the city has been outstandingly more congenial to you than to other Athenians, and so have we, the laws, for what city can please without laws? Will you then not now stick to our agreements? You will, Socrates, if we can persuade you, and not make yourself a laughingstock by leaving the city.

“For consider what good you will do yourself or your friends by breaking our agreements and committing such a wrong? It is pretty obvious that your friends will themselves be in danger of exile, disfranchisement and loss of property. As for yourself, if you go to one of the nearby cities—Thebes or Megara, both are well governed—you will arrive as an enemy to their government; all who care for their city will look on you with suspicion, as a destroyer of the laws. You will also strengthen the conviction of the jury that they passed the right sentence on you, for anyone who destroys the laws could easily be thought to corrupt the young and the ignorant. Or will you avoid cities that are well governed and men who are civilized? If you do this, will your life be worth living? Will you have social intercourse with them and not be ashamed to talk to them? And what will you say? The same as you did here, that virtue and justice are man's most precious possession, along with lawful behavior and the laws? Do you not think that Socrates would appear to be an unseemly kind of person? One must think so. Or will you leave those places and go to Crito's friends in Thessaly? There you will find the greatest license and disorder, and they may enjoy hearing from you how absurdly you escaped from prison in some disguise, in a leather jerkin or some other things in which escapees wrap themselves, thus altering your appearance. Will there be no one to say that you, likely to live but a short time more, were so greedy for life that you transgressed the most important laws? Possibly, Socrates, if you do not annoy anyone, but if you do, many disgraceful things will be said about you.

"You will spend your time ingratiating yourself with all men, and be at their beck and call. What will you do in Thessaly but feast, as if you had gone to a banquet in Thessaly? As for those conversations of yours about justice and the rest of virtue, where will they be? You say you want to live for the sake of your children, that you may bring them up and educate them. How so? Will you bring them up and educate them by taking them to Thessaly and making strangers of them, that they may enjoy that too? Or not so, but they will be better brought up and educated here, while you are alive, though absent? Yes, your friends will look after them. Will they look after them if you go and live in Thessaly, but not if you go away to the underworld? If those who profess themselves your friends are any good at all, one must assume that they will.

"Be persuaded by us who have brought you up, Socrates. Do not value either your children or your life or anything else more than goodness, in order that when you arrive in Hades you may have all this as your defense before the rulers there. If you do this deed, you will not think it better or more just or more pious here, nor will any one of your friends, nor will it be better for you when you arrive yonder. As it is, you depart, if you depart, after being wronged not by us, the laws, but by men; but if you depart after shamefully returning wrong for wrong and mistreatment for mistreatment, after breaking your agreements and commitments with us, after mistreating those you should mistreat least—yourself, your friends, your country and us—we shall be angry with you while you are still alive, and our brothers, the laws of the underworld, will not receive you kindly, knowing that you tried to destroy us as far as you could. Do not let Crito persuade you, rather than us, to do what he says."

Socrates:: Crito, my dear friend, be assured that these are the words I seem to hear, as the Corybants seem to hear the music of their flutes, and the echo of these words resounds in me, and makes it impossible for me to hear anything else. As far as my present beliefs go, if you speak in opposition to them, you will speak in vain. However, if you think you can accomplish anything, speak.

Crito:: I have nothing to say, Socrates.

Socrates:: Let it be then, Crito, and let us act in this way, since this is the way the god is leading us.

# Crito.

Translated by Jowett 3rd ed.

*PERSONS OF THE DIALOGUE.*

Socrates. Crito.

Scene:—The Prison of Socrates.

Socrates:: Why have you come at this hour, Crito? it must be quite early?

Crito:: Yes, certainly.

Socrates:: What is the exact time?

Crito:: The dawn is breaking.

Socrates:: I wonder that the keeper of the prison would let you in.

Crito:: He knows me, because I often come, Socrates; moreover, I have done him a kindness.

Socrates:: And are you only just arrived?

Crito:: No, I came some time ago.

Socrates:: Then why did you sit and say nothing, instead of at once awakening me?

Crito:: I should not have liked myself, Socrates, to be in such great trouble and unrest as you are—indeed I should not: I have been watching with amazement your peaceful slumbers; and for that reason I did not awake you, because I wished to minimize the pain. I have always thought you to be of a happy disposition; but never did I see anything like the easy, tranquil manner in which you bear this calamity.

Socrates:: Why, Crito, when a man has reached my age he ought not to be repining at the approach of death.

Crito:: And yet other old men find themselves in similar misfortunes, and age does not prevent them from repining.

Socrates:: That is true. But you have not told me why you come at this early hour.

Crito:: I come to bring you a message which is sad and painful; not, as I believe, to yourself, but to all of us who are your friends, and saddest of all to me.

Socrates:: What? Has the ship come from Delos, on the arrival of which I am to die?

Crito:: No, the ship has not actually arrived, but she will probably be here to-day, as persons who have come from Sunium tell me that they left her there; and therefore to-morrow, Socrates, will be the last day of your life.

Socrates:: Very well, Crito; if such is the will of God, I am willing; but my belief is that there will be a delay of a day.

Crito:: Why do you think so?

Socrates:: I will tell you. I am to die on the day after the arrival of the ship.

Crito:: Yes; that is what the authorities say.

Socrates:: But I do not think that the ship will be here until tomorrow; this I infer from a vision which I had last night, or rather only just now, when you fortunately allowed me to sleep.

Crito:: And what was the nature of the vision?

Socrates:: There appeared to me the likeness of a woman, fair and comely, clothed in bright raiment, who called to me and said: O Socrates,.

> 'The third day hence to fertile Phthia shalt thou go.'

Crito:: What a singular dream, Socrates!

Socrates:: There can be no doubt about the meaning, Crito, I think.

Crito:: Yes; the meaning is only too clear. But, oh! my beloved Socrates, let me entreat you once more to take my advice and escape. For if you die I shall not only lose a friend who can never be replaced, but there is another evil: people who do not know you and me will believe that I might have saved you if I had been willing to give money, but that I did not care. Now, can there be a worse disgrace than this—that I should be thought to value money more than the life of a friend? For the many will not be persuaded that I wanted you to escape, and that you refused.

Socrates:: But why, my dear Crito, should we care about the opinion of the many? Good men, and they are the only persons who are worth considering, will think of these things truly as they occurred.

Crito:: But you see, Socrates, that the opinion of the many must be regarded, for what is now happening shows that they can do the greatest evil to any one who has lost their good opinion.

Socrates:: I only wish it were so, Crito; and that the many could do the greatest evil; for then they would also be able to do the greatest good—and what a fine thing this would be! But in reality they can do neither; for they cannot make a man either wise or foolish; and whatever they do is the result of chance.

Crito:: Well, I will not dispute with you; but please to tell me, Socrates, whether you are not acting out of regard to me and your other friends: are you not afraid that if you escape from prison we may get into trouble with the informers for having stolen you away, and lose either the whole or a great part of our property; or that even a worse evil may happen to us? Now, if you fear on our account, be at ease; for in order to save you, we ought surely to run this, or even a greater risk; be persuaded, then, and do as I say.

Socrates:: Yes, Crito, that is one fear which you mention, but by no means the only one.

Crito:: Fear not—there are persons who are willing to get you out of prison at no great cost; and as for the informers, they are far from being exorbitant in their demands—a little money will satisfy them. My means, which are certainly ample, are at your service, and if you have a scruple about spending all mine, here are strangers who will give you the use of theirs; and one of them, Simmias the Theban, has brought a large sum of money for this very purpose; and Cebes and many others are prepared to spend their money in helping you to escape. I say, therefore, do not hesitate on our account, and do not say, as you did in the court, that you will have a difficulty in knowing what to do with yourself anywhere else. For men will love you in other places to which you may go, and not in Athens only; there are friends of mine in Thessaly, if you like to go to them, who will value and protect you, and no Thessalian will give you any trouble. Nor can I think that you are at all justified, Socrates, in betraying your own life when you might be saved; in acting thus you are playing into the hands of your enemies, who are hurrying on your destruction. And further I should say that you are deserting your own children; for you might bring them up and educate them; instead of which you go away and leave them, and they will have to take their chance; and if they do not meet with the usual fate of orphans, there will be small thanks to you. No man should bring children into the world who is unwilling to persevere to the end in their nurture and education. But you appear to be choosing the easier part, not the better and manlier, which would have been more becoming in one who professes to care for virtue in all his actions, like yourself. And indeed, I am ashamed not only of you, but of us who are your friends, when I reflect that the whole business will be attributed entirely to our want of courage. The trial need never have come on, or might have been managed differently; and this last act, or crowning folly, will seem to have occurred through our negligence and cowardice, who might have saved you, if we had been good for anything; and you might have saved yourself, for there was no difficulty at all. See now, Socrates, how sad and discreditable are the consequences, both to us and you. Make up your mind then, or rather have your mind already made up, for the time of deliberation is over, and there is only one thing to be done, which must be done this very night, and if we delay at all will be no longer practicable or possible; I beseech you therefore, Socrates, be persuaded by me, and do as I say.

Socrates:: Dear Crito, your zeal is invaluable, if a right one; but if wrong, the greater the zeal the greater the danger; and therefore we ought to consider whether I shall or shall not do as you say. For I am and always have been one of those natures who must be guided by reason, whatever the reason may be which upon reflection appears to me to be the best; and now that this chance has befallen me, I cannot repudiate my own words: the principles which I have hitherto honoured and revered I still honour, and unless we can at once find other and better principles, I am certain not to agree with you; no, not even if the power of the multitude could inflict many more imprisonments, confiscations, deaths, frightening us like children with hobgoblin terrors. What will be the fairest way of considering the question? Shall I return to your old argument about the opinions of men?—we were saying that some of them are to be regarded, and others not. Now were we right in maintaining this before I was condemned? And has the argument which was once good now proved to be talk for the sake of talking—mere childish nonsense? That is what I want to consider with your help, Crito:—whether, under my present circumstances, the argument appears to be in any way different or not; and is to be allowed by me or disallowed. That argument, which, as I believe, is maintained by many persons of authority, was to the effect, as I was saying, that the opinions of some men are to be regarded, and of other men not to be regarded. Now you, Crito, are not going to die to-morrow—at least, there is no human probability of this—and therefore you are disinterested and not liable to be deceived by the circumstances in which you are placed. Tell me then, whether I am right in saying that some opinions, and the opinions of some men only, are to be valued, and that other opinions, and the opinions of other men, are not to be valued. I ask you whether I was right in maintaining this?

Crito:: Certainly.

Socrates:: The good are to be regarded, and not the bad?

Crito:: Yes.

Socrates:: And the opinions of the wise are good, and the opinions of the unwise are evil?

Crito:: Certainly.

Socrates:: And what was said about another matter? Is the pupil who devotes himself to the practice of gymnastics supposed to attend to the praise and blame and opinion of every man, or of one man only—his physician or trained, whoever he may be?

Crito:: Of one man only.

Socrates:: And he ought to fear the censure and welcome the praise of that one only, and not of the many?

Crito:: Clearly so.

Socrates:: And he ought to act and train, and eat and drink in the way which seems good to his single master who has understanding, rather than according to the opinion of all other men put together?

Crito:: True.

Socrates:: And if he disobeys and disregards the opinion and approval of the one, and regards the opinion of the many who have no understanding, will he not suffer evil?

Crito:: Certainly he will.

Socrates:: And what will the evil be, whither tending and what affecting, in the disobedient person?

Crito:: Clearly, affecting the body; that is what is destroyed by the evil.

Socrates:: Very good; and is not this true, Crito, of other things which we need not separately enumerate? In questions of just and unjust, fair and foul, good and evil, which are the subjects of our present consultation, ought we to follow the opinion of the many and to fear them; or the opinion of the one man who has understanding? ought we not to fear and reverence him more than all the rest of the world: and if we desert him shall we not destroy and injure that principle in us which may be assumed to be improved by justice and deteriorated by injustice;—there is such a principle?

Crito:: Certainly there is, Socrates.

Socrates:: Take a parallel instance:—if, acting under the advice of those who have no understanding, we destroy that which is improved by health and is deteriorated by disease, would life be worth having? And that which has been destroyed is—the body?

Crito:: Yes.

Socrates:: Could we live, having an evil and corrupted body?

Crito:: Certainly not.

Socrates:: And will life be worth having, if that higher part of man be destroyed, which is improved by justice and depraved by injustice? Do we suppose that principle, whatever it may be in man, which has to do with justice and injustice, to be inferior to the body?

Crito:: Certainly not.

Socrates:: More honorable than the body?

Crito:: Far more.

Socrates:: Then, my friend, we must not regard what the many say of us: but what he, the one man who has understanding of just and unjust, will say, and what the truth will say. And therefore you begin in error when you advise that we should regard the opinion of the many about just and unjust, good and evil, honourable and dishonourable.—'Well,' some one will say, 'but the many can kill us.'

Crito:: Yes, Socrates; that will clearly be the answer.

Socrates:: And it is true: but still I find with surprise that the old argument is unshaken as ever. And I should like to know whether I may say the same of another proposition—that not life, but a good life, is to be chiefly valued?

Crito:: Yes, that also remains unshaken.

Socrates:: And a good life is equivalent to a just and honourable one—that holds also?

Crito:: Yes, it does.

Socrates:: From these premisses I proceed to argue the question whether I ought or ought not to try and escape without the consent of the Athenians: and if I am clearly right in escaping, then I will make the attempt; but if not, I will abstain. The other considerations which you mention, of money and loss of character and the duty of educating one's children, are, I fear, only the doctrines of the multitude, who would be as ready to restore people to life, if they were able, as they are to put them to death—and with as little reason. But now, since the argument has thus far prevailed, the only question which remains to be considered is, whether we shall do rightly either in escaping or in suffering others to aid in our escape and paying them in money and thanks, or whether in reality we shall not do rightly; and if the latter, then death or any other calamity which may ensue on my remaining here must not be allowed to enter into the calculation.

Crito:: I think that you are right, Socrates; how then shall we proceed?

Socrates:: Let us consider the matter together, and do you either refute me if you can, and I will be convinced; or else cease, my dear friend, from repeating to me that I ought to escape against the wishes of the Athenians: for I highly value your attempts to persuade me to do so, but I may not be persuaded against my own better judgment. And now please to consider my first position, and try how you can best answer me.

Crito:: I will.

Socrates:: Are we to say that we are never intentionally to do wrong, or that in one way we ought and in another way we ought not to do wrong, or is doing wrong always evil and dishonourable, as I was just now saying, and as has been already acknowledged by us? Are all our former admissions which were made within a few days to be thrown away? And have we, at our age, been earnestly discoursing with one another all our life long only to discover that we are no better than children? Or, in spite of the opinion of the many, and in spite of consequences whether better or worse, shall we insist on the truth of what was then said, that injustice is always an evil and dishonour to him who acts unjustly? Shall we say so or not?

Crito:: Yes.

Socrates:: Then we must do no wrong?

Crito:: Certainly not. ‘

Socrates:: Nor when injured injure in return, as the many imagine; for we must injure no one at all?

Crito:: Clearly not.

Socrates:: Again, Crito, may we do evil?

Crito:: Surely not, Socrates.

Socrates:: And what of doing evil in return for evil, which is the morality of the many—is that just or not?

Crito:: Not just.

Socrates:: For doing evil to another is the same as injuring him?

Crito:: Very true.

Socrates:: Then we ought not to retaliate or render evil for evil to any one, whatever evil we may have suffered from him. But I would have you consider, Crito, whether you really mean what you are saying. For this opinion has never been held, and never will be held, by any considerable number of persons; and those who are agreed and those who are not agreed upon this point have no common ground, and can only despise one another when they see how widely they differ. Tell me, then, whether you agree with and assent to my first principle, that neither injury nor retaliation nor warding off evil by evil is ever right. And shall that be the premiss of our argument? Or do you decline and dissent from this? For so I have ever thought, and continue to think; but, if you are of another opinion, let me hear what you have to say. If, however, you remain of the same mind as formerly, I will proceed to the next step.

Crito:: You may proceed, for I have not changed my mind.

Socrates:: Then I will go on to the next point, which may be put in the form of a question:—Ought a man to do what he admits to be right, or ought he to betray the right?

Crito:: He ought to do what he thinks right.

Socrates:: But if this is true, what is the application? In leaving the prison against the will of the Athenians, do I wrong any? or rather do I not wrong those whom I ought least to wrong? Do I not desert the principles which were acknowledged by us to be just—what do you say?

Crito:: I cannot tell, Socrates; for I do not know.

Socrates:: Then consider the matter in this way:—Imagine that I am about to play truant (you may call the proceeding by any name which you like), and the laws and the government come and interrogate me: 'Tell us, Socrates,' they say; 'what are you about? are you not going by an act of yours to overturn us—the laws, and the whole state, as far as in you lies? Do you imagine that a state can subsist and not be overthrown, in which the decisions of law have no power, but are set aside and trampled upon by individuals?' What will be our answer, Crito, to these and the like words? Any one, and especially a rhetorician, will have a good deal to say on behalf of the law which requires a sentence to be carried out. He will argue that this law should not be set aside; and shall we reply, 'Yes; but the state has injured us and given an unjust sentence.' Suppose I say that?

Crito:: Very good, Socrates.

Socrates:: 'And was that our agreement with you?' the law would answer; 'or were you to abide by the sentence of the state?' And if I were to express my astonishment at their words, the law would probably add: 'Answer, Socrates, instead of opening your eyes—you are in the habit of asking and answering questions. Tell us,—What complaint have you to make against us which justifies you in attempting to destroy us and the state? In the first place did we not bring you into existence? Your father married your mother by our aid and begat you. Say whether you have any objection to urge against those of us who regulate marriage?' None, I should reply. 'Or against those of us who after birth regulate the nurture and education of children, in which you also were trained? Were not the laws, which have the charge of education, right in commanding your father to train you in music and gymnastic?' Right, I should reply. 'Well then, since you were brought into the world and nurtured and educated by us, can you deny in the first place that you are our child and slave, as your fathers were before you? And if this is true you are not on equal terms with us; nor can you think that you have a right to do to us what we are doing to you. Would you have any right to strike or revile or do any other evil to your father or your master, if you had one, because you have been struck or reviled by him, or received some other evil at his hands?—you would not say this? And because we think right to destroy you, do you think that you have any right to destroy us in return, and your country as far as in you lies? Will you, O professor of true virtue, pretend that you are justified in this? Has a philosopher like you failed to discover that our country is more to be valued and higher and holier far than mother or father or any ancestor, and more to be regarded in the eyes of the gods and of men of understanding? also to be soothed, and gently and reverently entreated when angry, even more than a father, and either to be persuaded, or if not persuaded, to be obeyed? And when we are punished by her, whether with imprisonment or stripes, the punishment is to be endured in silence; and if she lead us to wounds or death in battle, thither we follow as is right; neither may any one yield or retreat or leave his rank, but whether in battle or in a court of law, or in any other place, he must do what his city and his country order him; or he must change their view of what is just: and if he may do no violence to his father or mother, much less may he do violence to his country.' What answer shall we make to this, Crito? Do the laws speak truly, or do they not?

Crito:: I think that they do.

Socrates:: Then the laws will say: 'Consider, Socrates, if we are speaking truly that in your present attempt you are going to do us an injury. For, having brought you into the world, and nurtured and educated you, and given you and every other citizen a share in every good which we had to give, we further proclaim to any Athenian by the liberty which we allow him, that if he does not like us when he has become of age and has seen the ways of the city, and made our acquaintance, he may go where he pleases and take his goods with him. None of us laws will forbid him or interfere with him. Any one who does not like us and the city, and who wants to emigrate to a colony or to any other city, may go where he likes, retaining his property. But he who has experience of the manner in which we order justice and administer the state, and still remains, has entered into an implied contract that he will do as we command him. And he who disobeys us is, as we maintain, thrice wrong; first, because in disobeying us he is disobeying his parents; secondly, because we are the authors of his education; thirdly, because he has made an agreement with us that he will duly obey our commands; and he neither obeys them nor convinces us that our commands are unjust; and we do not rudely impose them, but give him the alternative of obeying or convincing us;—that is what we offer, and he does neither.

'These are the sort of accusations to which, as we were saying, you, Socrates, will be exposed if you accomplish your intentions; you, above all other Athenians.' Suppose now I ask, why I rather than anybody else? they will justly retort upon me that I above all other men have acknowledged the agreement. 'There is clear proof,' they will say, 'Socrates, that we and the city were not displeasing to you. Of all Athenians you have been the most constant resident in the city, which, as you never leave, you may be supposed to love. For you never went out of the city either to see the games, except once when you went to the Isthmus, or to any other place unless when you were on military service; nor did you travel as other men do. Nor had you any curiosity to know other states or their laws: your affections did not go beyond us and our state; we were your special favourites, and you acquiesced in our government of you; and here in this city you begat your children, which is a proof of your satisfaction. Moreover, you might in the course of the trial, if you had liked, have fixed the penalty at banishment; the state which refuses to let you go now would have let you go then. But you pretended that you preferred death to exile, and that you were not unwilling to die. And now you have forgotten these fine sentiments, and pay no respect to us the laws, of whom you are the destroyer; and are doing what only a miserable slave would do, running away and turning your back upon the compacts and agreements which you made as a citizen. And first of all answer this very question: Are we right in saying that you agreed to be governed according to us in deed, and not in word only? Is that true or not?' How shall we answer, Crito? Must we not assent?

Crito:: We cannot help it, Socrates.

Socrates:: Then will they not say: ‘You, Socrates, are breaking the covenants and agreements which you made with us at your leisure, not in any haste or under any compulsion or deception, but after you have had seventy years to think of them, during which time you were at liberty to leave the city, if we were not to your mind, or if our covenants appeared to you to be unfair. You had your choice, and might have gone either to Lacedaemon or Crete, both which states are often praised by you for their good government, or to some other Hellenic or foreign state. Whereas you, above all other Athenians, seemed to be so fond of the state, or, in other words, of us her laws (and who would care about a state which has no laws?), that you never stirred out of her; the halt, the blind, the maimed were not more stationary in her than you were. And now you run away and forsake your agreements. Not so, Socrates, if you will take our advice; do not make yourself ridiculous by escaping out of the city.

‘For just consider, if you transgress and err in this sort of way, what good will you do either to yourself or to your friends? That your friends will be driven into exile and deprived of citizenship, or will lose their property, is tolerably certain; and you yourself, if you fly to one of the neighbouring cities, as, for example, Thebes or Megara, both of which are well governed, will come to them as an enemy, Socrates, and their government will be against you, and all patriotic citizens will cast an evil eye upon you as a subverter of the laws, and you will confirm in the minds of the judges the justice of their own condemnation of you. For he who is a corrupter of the laws is more than likely to be a corrupter of the young and foolish portion of mankind. Will you then flee from well-ordered cities and virtuous men? and is existence worth having on these terms? Or will you go to them without shame, and talk to them, Socrates? And what will you say to them? What you say here about virtue and justice and institutions and laws being the best things among men? Would that be decent of you? Surely not. But if you go away from well-governed states to Crito's friends in Thessaly, where there is great disorder and licence, they will be charmed to hear the tale of your escape from prison, set off with ludicrous particulars of the manner in which you were wrapped in a goatskin or some other disguise, and metamorphosed as the manner is of runaways; but will there be no one to remind you that in your old age you were not ashamed to violate the most sacred laws from a miserable desire of a little more life? Perhaps not, if you keep them in a good temper; but if they are out of temper you will hear many degrading things; you will live, but how?—as the flatterer of all men, and the servant of all men; and doing what?—eating and drinking in Thessaly, having gone abroad in order that you may get a dinner. And where will be your fine sentiments about justice and virtue? Say that you wish to live for the sake of your children—you want to bring them up and educate them—will you take them into Thessaly and deprive them of Athenian citizenship? Is this the benefit which you will confer upon them? Or are you under the impression that they will be better cared for and educated here if you are still alive, although absent from them; for your friends will take care of them? Do you fancy that if you are an inhabitant of Thessaly they will take care of them, and if you are an inhabitant of the other world that they will not take care of them? Nay; but if they who call themselves friends are good for anything, they will—to be sure they will.

'Listen, then, Socrates, to us who have brought you up. Think not of life and children first, and of justice afterwards, but of justice first, that you may be justified before the princes of the world below. For neither will you nor any that belong to you be happier or holier or juster in this life, or happier in another, if you do as Crito bids. Now you depart in innocence, a sufferer and not a doer of evil; a victim, not of the laws but of men. But if you go forth, returning evil for evil, and injury for injury, breaking the covenants and agreements which you have made with us, and wronging those whom you ought least of all to wrong, that is to say, yourself, your friends, your country, and us, we shall be angry with you while you live, and our brethren, the laws in the world below, will receive you as an enemy; for they will know that you have done your best to destroy us. Listen, then, to us and not to Crito'

This, dear Crito, is the voice which I seem to hear murmuring in my ears, like the sound of the flute in the ears of the mystic; that voice, I say, is humming in my ears, and prevents me from hearing any other. And I know that anything more which you may say will be vain. Yet speak, if you have anything to say.

Crito:: I have nothing to say, Socrates.

Socrates:: Leave me then, Crito, to fulfil the will of God, and to follow whither he leads.

# Crito.

Translated by More.

CHARACTERS OF THE DIALOGUE.

Socrates. Crito.

---

Socrates:: Why have you come at this hour, Crito? It must be quite early yet.

Crito:: Quite early.

Socrates:: What is the hour?

Crito:: The day is just breaking.

Socrates:: I wonder that the jailer would let you in.

Crito:: I have come so often that he has grown used to me, Socrates; and besides he owes me a certain favor.

Socrates:: Have you been waiting long?

Crito:: Not very.

Socrates:: Why didn't you wake me at once, instead of sitting there in silence?

Crito:: God forbid, Socrates. I, too, should wish to sleep and forget my anxiety. I have been wondering this long while to see how quietly you slept; and I did not disturb you purposely, that you might pass the time in peace. All through life I have praised the serenity of your temper, but more than ever now, to see how lightly and calmly you bear this present calamity.

Socrates:: Why, Crito, it would be folly at my age to fret because death is at hand.

Crito:: Other men, Socrates, as old as you, have fallen into calamities like this, but I never saw that their age saved them from fretting.

Socrates:: Very true; but why have you come so early?

Crito:: I am the bearer of news, Socrates, not painful to you, it may be, but to me and to all your friends, painful and sad,—most sad and painful to me of all.

Socrates:: What is it? Has the ship arrived from Delos, at whose coming I am to die?

Crito:: Not yet; but from the report of persons coming from Sunium, where they left her, I am expecting her to-day. It is clear from their reports she will be here to-day, and on the morrow, Socrates, you must end your life.

Socrates:: Heaven prosper us, Crito. If it so please the gods, who can gainsay it? Yet I hardly think she will come to-day.

Crito:: What reason have you for saying that?

Socrates:: I will tell you. I am to die on the day after the ship arrives.

Crito:: So the magistrates declare.

Socrates:: Then I think she will not come on the present day, but on the morrow. I draw my conclusion from a dream which I had in the night, just a little while ago; and it is well you didn't wake me.

Crito:: Tell me the dream.

Socrates:: I seemed to see a woman, fair and good to look upon, clad in white robes, who approached me, and called and said: "O Socrates—

> 'Two days and thou to deep-soiled Phthia comest.'"

Crito:: A strange dream, Socrates.

Socrates:: But its meaning, I think, is clear, Crito.

Crito:: Only too clear. But, my dear Socrates, there is still time; listen to me even now and save yourself. You must know that your death will be a twofold disaster to me. I shall lose such a friend as no time or chance may replace; and besides that, many persons who know us but slightly will blame me, supposing I might have rescued you with my money. And what opinion of me could be more hideous than that I valued my money above my friends? Very few will ever believe that you yourself refused to escape when we were eager to help you.

Socrates:: But, my dear Crito, why do we care so much for the opinion of the world? Good men, all who are worthy of considering, will understand just what has happened.

Crito:: But you see, Socrates, we must care for the opinion of the world. Our present embarrassment shows that if the people take a prejudice against any one, they are capable of inflicting the very worst evils.

Socrates:: Would to heaven, Crito, the people were capable of doing us the greatest evil, if they might equally do us the greatest good. But as it is, they can do neither: they cannot make a man wise or unwise; they do but the bidding of their whims.

Crito:: That may be all very well; but tell me, Socrates: are you refusing out of consideration for me and your friends? Are you afraid if you escape that the informers will pounce down on us for stealing you away, and that we shall be forced to pay large sums of money, or perhaps our whole fortune, not to mention other risks? If that is your anxiety, put it quite out of mind; there is no reason why we shouldn't run such risks, or even greater ones, if necessary, to save you. Take me at my word, and don't refuse.

Socrates:: Yes, Crito, I am anxious about that and much else besides.

Crito:: Have no fear on that account. There are men ready to get you away and save you for a small sum. And then, you know, it doesn't cost much to buy off these informers. My fortune is at your service, and is quite sufficient, I think. But if you scruple to accept so much from me, there are strangers in town ready to pay. One of them, Simmias of Thebes, has brought a sufficient sum of money for this very purpose. Cebes is also willing, and a host of others. I beg of you, then, do not from any fear of that sort hesitate to escape; and do not, as you said in court, hang back because you would not know what to do with yourself in exile.

You will be made welcome in many places; and if you choose to go to Thessaly, I have friends in that country who will make much of you and see that no one there annoys you.

And besides, Socrates, are you quite justified in throwing away your life when you might save it? Are you not doing by yourself what your enemies would desire, what in fact they actually did desire when they sought to destroy you? And more than that, you are, I fear, betraying your own sons. You are abandoning them when you might rear and educate them; you are leaving them to the mercy of chance, and their fortune will be the usual lot of orphans. Either a man ought not to have children, or else he should go through the hardship of rearing and educating them. But you apparently are choosing the easier part, rather than the part of a brave and good man.—you who profess to make virtue the aim of your whole life. Indeed, I am ashamed for you and for us, your friends. This whole affair will be attributed to our sloth and lack of courage,—the permission of the trial when it might have been blocked, the way it was conducted, and last of all this miserable fiasco of letting you die in prison when, if we were men of any spirit, you might easily be rescued. Do you not see, Socrates, that all this is discreditable to you and to us, as well as painful? Consider, then—or rather the time for that is past: our plans are made and we must act.

There is but one plan, and everything must be done this coming night. If we delay longer, all is lost and we are helpless. With all my heart, Socrates, I beg you to yield and not refuse.

Socrates:: My dear Crito, your kind zeal in my behalf is very precious; but is it well directed? Otherwise, the greater the zeal, the more the danger. Let us reflect whether we should do as you bid; for I am now and always the same man, and I can hearken to no other claim or desire except only to that voice of reason which seems to me best on consideration. I cannot now in this time of trial reject the reasons that I have given before. These sound to me now as they did then, and I still reverence and honor them. Unless, therefore, we can think of better reasons in the present, be assured I will not yield, no, not even if the all-powerful multitude terrify us tenfold worse with bonds and executions and confiscations, and all their hobgoblins made to frighten children. How shall we consider the case most fairly? Shall we take up this matter of opinions which you appeal to, and go back to our old discussions of them? We used to agree; but were we right in concluding that certain opinions of men ought to be heeded and others neglected? Or were our arguments very well before this necessity of death came upon me, whereas now it is clear that we were only bandying words, indulging in jest and nonsense? Help me, Crito, to look into the argument and see whether it will appear to me, as I stand now, in quite a new and different form, and whether ire shall dismiss it with a god-speed or heed its admonition. Those of us who talked seriously used in the jest to say, as I said just now, that certain opinions of men ought to be highly esteemed, and others not it all. Tell me, I adjure you, Crito, was not this well said? You, in all human calculation, are not going to die to-morrow, and no such thoughts will disturb your judgment. Consider, then, was it not well said hat not all opinions are worthy of respect, nor the opinions of all men? What do you think? Is it not well said?

Crito:: It is well said.

Socrates:: And we are to respect good opinions and not bad?

Crito:: Yes.

Socrates:: And the opinions of the wise are good, and those of the unwise bad?

Crito:: It couldn't be otherwise.

Socrates:: And what did we say about training? If a man is in hard training, will he heed every critic who chooses to praise and blame and give an opinion, or only his physician or trainer?

Crito:: Only the latter.

Socrates:: And so he will fear the blame and rejoice at the praise of this one man, and disregard the crowd?

Crito:: Evidently.

Socrates:: And he must live and exercise and eat and drink so as to satisfy this one man, his manager and trainer, rather than all the rest of the world?

Crito:: As you say.

Socrates:: Very well. And if he disobeys this one man and disregards his opinion and commendation, out of respect for the ignorant crowd, will he not come to grief?

Crito:: He certainly will.

Socrates:: How and with what result? What part of him will suffer for his disobedience?

Crito:: His body, of course; he will ruin it.

Socrates:: Exactly. And in brief, Crito, is it not just so with everything else? And in what we are discussing now, right and wrong, foul and fair, good and evil, ought we to follow the opinion of all the world and stand in awe of it? Rather, if there be any one man who has knowledge of these things, ought we not to feel shame and fear before him more than before all the world? For if we do not follow him we shall injure and ruin that part of ourselves which grows better with right-doing and perishes with wrong. Or am I quite mistaken?

Crito:: You are right, Socrates.

Socrates:: There is, then, a part of us that is made better by health and injured by disease, and you will agree that life is hardly worth living if we ruin this part by following the opinion of the ignorant. And this part of ourselves we call the body, do we not?

Crito:: Yes.

Socrates:: And is life worth living with a corrupt and vitiated body?

Crito:: By no means.

Socrates:: But is life any more worth living with that organ vitiated which is deteriorated by wrongdoing and improved by right? Is the body more precious than that part of us, whatever it be, which has to do with evil and righteousness?

Crito:: By no means.

Socrates:: This is rather of more honor, is it not?

Crito:: Much more.

Socrates:: I think, then, my dear friend, we need trouble ourselves very little about what the world says of us. Let us look to the opinion of the one man who knows what is right and wrong,—and to truth herself. And so your first proposition was wrong, that we should listen to the voice of the multitude in what is right and fair and good and the contrary.—But still, some one may retort, the multitude has power over your life.

Crito:: Very likely, Socrates, and with truth, too.

Socrates:: No doubt. And yet, my friend, this present discussion resembles strangely one of a former occasion. We agreed then that not life but living well was to be prized; does our conclusion still hold?

Crito:: It still holds.

Socrates:: We agreed that living well is the same as living honorably and uprightly; and does this still hold?

Crito:: Yes.

Socrates:: So far agreed. It only remains to determine whether my attempt to escape hence, without the permission of the Athenians, would be upright or wrong. If it appears upright, let us make the attempt; if wrong, let us forego it. As for your considerations of expense and reputation and children, I fear they are like the considerations of the thoughtless multitude who put us to death and would as lightly bring us to life again, if they could. Our argument has at least made one point clear: we have only to consider, as I was saying, whether we shall be acting uprightly in paying money and gratitude to those who are to get me away, and in planning and sharing this escape, or whether we shall be acting quite wrongly. And if it should appear wrong to act thus, then I fear we must not take thought of the peril of death we incur by remaining quietly here; we must suffer anything rather than do wrong.

Crito:: I think you are right, Socrates; but what is to be done?

Socrates:: Let us examine the matter together, my friend; if you are able to find flaws in what I say, do so and I will surrender. But if not, then, pray, as you love me, no longer din this old story into my ears, insisting that I ought to escape against the will of the Athenians. Indeed, I want very much to act with your approval and not contrarily. Look well to the beginning of the argument, and try to answer my questions as seems best.

Crito:: I will try.

Socrates:: Are we never of our free will to do wrong, or under certain circumstances is the rule relaxed? Is it quite true, as we used constantly to admit, that wrong-doing is never in any way good or honorable? Have the events of these few days played havoc with all our fine arguments of former times? and have we, Crito, talking gravely together all these years, like old men as we thought, been no nearer the truth than children? Or is it uncompromisingly true, as we used to think, that all wrong-doing under all circumstances is an evil and a disgrace to the wrong-doer, no matter what the world says, and no matter what we may suffer for refusing? Is this true?

Crito:: Quite true.

Socrates:: And we ought in no wise to do wrong?

Crito:: In no wise.

Socrates:: Neither if we are wronged should we return the wrong, as the world commends; for wrong-doing is never right.

Crito:: So it seems.

Socrates:: And what follows? Ought we to do any man evil?

Crito:: We ought not, Socrates.

Socrates:: Is it right or wrong to return evil for evil, as the world bids?

Crito:: It is never right.

Socrates:: For to do evil to men is no different from wrong-doing.

Crito:: True.

Socrates:: So we must not wrong any man or do him evil, no matter what we have suffered at his hands. But look, Crito, that you do not make this concession against your real belief; for I know that very few men believe this or ever will believe. And I fear, too, that between those who hold this opinion and those who do not there can never be any genuine sympathy, for they must mutually despise each other's views. I would start in my argument from this belief, that it is never right to do wrong or return wrong, or to avenge ourselves by rendering evil for evil: tell me, do you yield this point and fully agree with me, or do you object at the very outset? This has long been and still is my belief. If you think differently, let me hear what you have to say; or if you abide by your former opinion, I will proceed.

Crito:: I abide by it and agree with you; do you go on.

Socrates:: I will proceed, then; or rather let me question you. If a man enters into an agreement right in itself, must he perform his part, or may he slink out by deceit?

Crito:: He must do his part.

Socrates:: Go a step further. If we escape hence without the consent of the city, are we not doing an injury, and that to those whom we ought least to wrong? and are we abiding by our just agreement?

Crito:: I can't answer your question, Socrates; I don't quite understand.

Socrates:: Look at it in this way. Suppose I am about to run away—or whatever you call my escape—and the laws and commonwealth should come to me and say: Tell us, Socrates, what do you propose to do? Is it your purpose by acting in this way to destroy us, the laws, and the whole city, so far as your influence extends? Do you think it possible for a city to exist and avoid utter ruin in which the decisions of law do not stand valid, but are set aside and nullified by individual citizens?—What should we reply, Crito, to questions like that? One of our orators might say a good deal in favor of the law, now threatened, which commands that judicial decisions stand valid. Perhaps you would have me retort on the laws that the city has wronged me and given a false decision?

Crito:: A fair retort, Socrates.

Socrates:: But suppose, then, the laws should say: Was this our agreement, Socrates, or were you to abide by the decisions of the city?—And if we hesitated in surprise at this speech, perhaps they would add: Do not stand dumb at our words, Socrates, but answer; for question and answer is an old trick of your own. Go to, now; what is your complaint against us and the city that you seek to destroy us? Do you not owe to us your life? Did not your father wed your mother by our aid and beget you? Speak out; have you any fault to find with those laws among us that regulate marriage?—I have none, I should reply.—Or with the laws that regulate the kind of nurture and education in which you were reared? Were not we wise, we who had charge of this, in directing your father to educate you in music and gymnastics?—Yes, you were, I should reply.—Good! And now since you were begotten and nurtured and educated under us, dare you once say you are not our offspring and servant, you and your fathers before you? And this being granted, dare you say that the right stands equal between us, and that you may presume to pay back in kind our treatment of you? Would you have any right to retaliate on your father or your master, had you a master, returning word for word and blow for blow? We think not. And now will you retaliate on your country and its laws? Because we propose to take your life, deeming it right so to do, are you, the boasted searcher after virtue, ready to destroy us, your country, and your country's laws, and will you justify such an act? Are you grown so wise as to have forgotten that a man's country is more honorable and august and holy than mother or father or the pride of family, and is more reverenced by gods and enlightened men? Have you forgotten that a man ought to revere his native land in her wrath and yield subservience to her more than to his own father, obeying her commands, and suffering her chastisements, whether she punish us with blows or bonds? if she leads us into battle, there to endure wounds or death, that here, too, a man must follow, for so righteousness demands? and that he must not yield nor give way nor leave the ranks, but in war and in court and wherever he may be, he must do as his city and country command? Have you forgotten all this? You may use persuasion with her, as nature permits; but if it is impious to offer violence to mother or father, how much more impious so to treat your country?—Have we any reply to such words, Crito? Do not the laws utter truth?

Crito:: I admit they do.

Socrates:: See, then, O Socrates, perhaps the laws might continue, see, then, if we speak the truth, how great a wrong to us is your present undertaking. We bestowed upon you life and nurture and education; we gave you and the other citizens a share in all the good things we possess; and still more we announce and give authority to every Athenian, when he has come of age and has seen the laws and administration of the city, to take his property, if we do not please him, and depart whithersoever he wishes to any colony or foreign state: there is no law to hinder or impede. If after this any man remains, having seen in what way we administer justice and the other affairs of the city, then we affirm that such a man has by his very act ratified an agreement with us to do whatever we command; and we affirm that he who disobeys us does a threefold wrong: he disobeys those who gave him life, he disobeys those who nurtured him, and he breaks a solemn compact. We have given him his choice: either to follow our commands, which are indeed not severe, or to alter us by persuasion if we are wrong; yet neither of these things will he do.

Of such blame we say that you will be guilty, O Socrates, if you do as you now intend,—and you above all other Athenians.—If I should ask them, Why me especially? no doubt they would reply justly, that I in a peculiar manner have entered into this compact with the city.

And they would say, Is there not great and sufficient proof, O Socrates, that we and the city satisfied you? Certainly, unless it satisfied you in some particular manner, you would not have clung to the city more persistently than all other Athenians. You have never left it even to go to the festivals, except once to the Isthmus, nor to journey anywhere else unless on some military expedition. Other men travel about, but you never; nor have you shown any curiosity to learn the laws and customs of other states, but have always been content with us and our city. You have loved us with a great love; you have agreed to pass your life under us; and you have even begotten children here, as being fully satisfied with the city. At the time of the trial yon might have proposed exile as your penalty, and so have done legally what now you are undertaking against the will of the city. But at that time you put on a bold face as not grudging to die if needs be, and preferred, to use your own words, death to exile. And now you do not honor your own covenant, and have no respect for us whom you propose to destroy. You are acting like a wretched slave, undertaking to run away contrary to your compact and agreement to live under us. Come now, tell us first of all: Are we not right in saying you agreed to live under us, and that not by word but by deed?—What shall we reply, Crito? Must we not admit this?

Crito:: I fear we must, Socrates.

Socrates:: Thereupon they would ask: Are you not then violating your compact and agreement with us, which you made under no compulsion and under no deception? Neither can you claim any lack of time for counsel, for any day these seventy years now you might have departed, if we did not satisfy you and the covenant seemed unjust. You have shown no preference for Lacedaemon or Crete, both of which you admit to be well governed, nor for any other city of the Greeks or Barbarians, but have journeyed hence less than the very lame and blind and crippled. Evidently the city pleased you above all other Athenians,—and we, the laws, too, for who would be content with a city devoid of laws? And now will you abide by our covenant? We think so, Socrates, if there is any persuasion in us. We would not have you bring ridicule on yourself by running away.

For ask yourself: What good will come to you or your friends by such a transgression and breach of honor? It is pretty clear that your friends will themselves incur the risk of exile and banishment from the city. And you, if you go to one of the neighboring cities (Thebes or Megara, for example, which are both well governed), will come as an enemy of their government, and all who have any regard for their own city will look askance upon you as a subverter of the laws. And you will confirm the opinion of the judges and justify their sentence, for the man who subverts the laws may well be regarded as a perverter of the young and unformed. Or perhaps you will avoid well-governed cities and law-abiding men? But will life seem to you quite worth while if you do? Or will you appear before such men with effrontery and talk—talk of what, Socrates? Of virtue forsooth, as you lo here, and of justice and institutions and laws, calling them the most precious of human possessions? Would that be quite becoming in Socrates? Hardly, we think. But such places you will leave, and will go to Crito's friends in Thessaly, for there the greatest disorder and license prevail, and no doubt they will be delighted to hear of your absurd escape,— how you ran away from jail, begirt in some queer attire, a shepherd's hide or the like, after the style of runaway slaves, and with your face disguised. And will there be no one to say: Look at this old man; in all likelihood he had but a few years to live, yet he has transgressed the most sacred laws in his mad and greedy desire of life? You may be spared such reproaches if you take care to offend nobody, Socrates; but otherwise you will hear much to your shame. You will live the cringing slave of all the world,—and doing what? feasting and revelling in Thessaly, as if you had gone a journey to Thessaly for a dinner. All your fine sayings about justice and the other virtues, where will they be then? But perhaps you desire to live for your children's sake, that you may rear and educate them? So! Will you carry them into Thessaly, and as a great kindness rear and educate them there to be foreigners? Or if they are brought up here far away from you, will they be any the better that you are alive? Your friends, you think, will take charge of them. But will your friends care for them if you go a journey to Thessaly, yet neglect them if you go that other journey to the world below? Hardly, if there be any profit in these so-called friends of yours.

Hearken to us, Socrates, who raised you up. Do not think first of children or life or any such thing, but rather of justice; and so, when you come to the world below, you shall make a good defence before the rulers of that realm. It does not appear that either you or any of yours will be happier or juster or holier in this world if you follow out your design, nor will it be better for you when you come yonder. Now if you depart, you go as one having suffered wrong, not from us, the laws, but from men; but if you depart hence, having returned wrong for wrong and evil for evil, having violated your compact and agreement with us, having wrought harm to those who least deserve it, to yourself, your friends, the city, and us,—if you depart with this guilt upon you, we shall be angered against you in this life, and in death our brothers, the laws of the world below, will receive you anything but graciously, for they will know of your attempt to subvert us. Beware, and hearken not to Crito's words rather than to ours.—Crito, my dearest comrade, such words I seem to hear, as the mystic worshippers seem to hear the piping of flutes; and the sound of this voice so murmurs in my ears that I can hear no other. I warn you, so far as I can now judge, whatever you plead against it, will be in vain. Yet if you still hope, speak.

Crito:: There is nothing I can say, Socrates.

Socrates:: Enough, then, Crito. Let me proceed thus, for God leadeth the way.

# Crito.

OR, OF WHAT WE OUGHT TO DO.

Translated and edited by Henry Morley. 1783

Socrates and Crito.

Socrates:: What's the occasion of your coming here so soon, Crito? As I take it, 'tis very early.

Crito:: Indeed it is.

Socrates:: What o clock may it be then?

Crito:: A little before the break of day.

Socrates:: I wonder that the gaoler permitted you to come in.

Crito:: He is one I know very well. I have been with him here frequently; and he is in some measure obliged to me.

Socrates:: Are you but just come? Or is it long since you came?

Crito:: I have been here a good while.

Socrates:: Why did you not awaken me then when you came in?

Crito:: Pray God forbid, Socrates. For my own part, I would gladly shake off the cares and anxiety that keep my eyes from shutting. But when I entered this room, I wondered to find you so sound asleep, and was loth to awaken you, that I might not deprive you of those happy minutes. Indeed, Socrates, ever since I became acquainted with you, I have been always delighted with your patience and calm temper; but in a distinguishing manner in this juncture, since, in the circumstances you are in, your eye looks so easy and unconcerned.

Socrates:: Indeed, Crito, it would be very unbecoming in one of my age to be fearful of death.

Crito:: Ay! And how many do we see every day, under the like misfortunes, whom age does not free from those dreads?

Socrates:: That is true. But after all what made you come hither so early?

Crito:: I came to tell you a perplexing piece of news, which, though it may not seem to affect you, yet it overwhelms both me and your relations and friends with insupportable grief. In short, I bring the most terrible news that ever could be brought.

Socrates:: What news? Is the ship arrived from Delos, upon whose return I am to die?

Crito:: It is not yet arrived; but doubtless it will be here this day, according to the intelligence we have from some persons that came from Sunium, and left it there. For at that rate it cannot fail of being here to-day; and to-morrow you must unavoidably die.

Socrates:: Why not, Crito? Be it so, since ’tis the will of God. However, I do not think that the vessel will arrive this day.

Crito:: What do you ground that conjecture upon?

Socrates:: I’ll tell you; I am not to die till the day after the arrival of the vessel.

Crito:: At least, those who are to execute the sentence say so.

Socrates:: That vessel will not arrive till to-morrow, as I conjecture from a certain dream I had this night about a minute ago. And it seems to me a pleasure that you did not awaken me.

Crito:: Well, what is this dream?

Socrates:: I thought I saw a very gentle comely woman, dressed in white, come up to me, who calling me by name, said, “In three days thou shalt be in the fertile Phthia.”

Crito:: That is a very remarkable dream, Socrates.

Socrates:: ’tis a very significant one, Crito.

Crito:: Yes, without doubt. But for this time, prithee, Socrates, take my advice, and make your escape. For my part, if you die, besides the irreparable loss of a friend, which I shall ever bewail, I am afraid that numbers of people, who are not well acquainted either with you or me, will believe that I have forsaken you, in not employing my interest for promoting your escape, now that it is in my power. Is there anything more base than to lie under the disrepute of being wedded to my money more than to my friend? For, in fine, the people will never believe that ’twas you who refused to go from hence, when we urged you to be gone.

Socrates:: My dear Crito, why should we be so much concerned for the opinion of the people? Is it not enough that the more sensible part, who are the only men we ought to regard, know how the case stands?

Crito:: But you see, Socrates, there’s a necessity of being concerned for the noise of the mob; for your example is sufficient instance that they are capable of doing, not only small, but the greatest of injuries, and display their passion in an outrageous manner against those who are once run down by the vulgar opinion.

Socrates:: I wish, Crito, that the people were able to do the greatest of injuries. Were it so, they would likewise be capable of doing the greatest good. That would be a great happiness. But neither the one nor the other is possible. For they cannot make men either wise men or fools.

Crito:: I grant it. But pray answer me; Is it out of tenderness to me and your other friends that you will not stir from hence? Is it fear lest upon your escape we should be troubled, and charged with carrying you off, and by that means be obliged to quit our possession, or pay a large sum of money, or else suffer something more fatal than either? If that be your fear, shake it off Socrates, in the name of the gods. Is not it highly reasonable that we should purchase your escape at the rate of exposing ourselves to these dangers, and greater ones, if there be occasion? Once more, my dear Socrates, believe me, and go along with me.

Socrates:: I own, Crito, that I have such thoughts, and several others besides in my view.

Crito:: Fear nothing, I entreat you; for, in the first place, they require no great sum to let you out. And on the other hand, you see what a pitiful condition those are in who probably might arraign us. A small sum of money will stop their mouths; my estate alone will serve for that. If you scruple to accept of my offer, here are a great many strangers who desire nothing more than to furnish you with what money you want. Simmias the Theban himself has brought up very considerable sums. Cebes is capable of doing as much, and so are several others. Let not your fears then stifle the desire of making your escape. And as for what you told me the other day, in court, that if you made your escape, you should not know how to live—pray let not that trouble you. Whithersoever you go, you’ll be beloved in all parts of the world. If you’ll go to Thessaly, I have friends there, who will honour you according to your merit, and think themselves happy in supplying you with what you want, and covering you from all occasions of fear in their country. Besides, Socrates, without doubt you are guilty of a very unjust thing in delivering up yourself, while ’tis in your power to make your escape, and promoting what your enemies so passionately wish for. For you not only betray yourself, but like wise your children by abandoning them, when you might make a shift to maintain and educate them. You are not at all concerned at what may befall them, though at the same time they are like to be in as dismal a condition as ever poor orphans were. A man ought either to have no children, or else to expose himself to the care and trouble of breeding them. You seem to me to act the softest and most insensible part in the world; whereas you ought to take up a resolution worthy of a generous soul; above all, you who boast that you pursued nothing but virtue all the days of your life. I tell you, Socrates, I am ashamed upon the account of you and your relations, since the world will believe ’twas owing to our cowardliness that you did not get off. In the first place, they will charge you with standing a trial that you might have avoided; then they will censure your conduct in making your defences; and at last, which is the most shameful of all, they will upbraid us with forsaking you through fear or cowardice, since we did not accomplish your escape. Pray consider of it, my dear Socrates; if you do not prevent the approaching evil, you’ll bear a part in the shame that will cover us all. Pray advise with yourself quickly. But now I think on it, there is not time for advising, there's no choice left, all must be put in execution.

Socrates:: My dear Crito, your good-will is very commendable, provided it agree with right reason; but if it swerve from that, the stronger it is, the more is it blameworthy. The first thing to be considered is, whether we ought to do as you say, or not? For you know, 'tis not of yesterday that I've accustomed myself only to follow the reasons that appear most just after a mature examination. Though fortune frowns upon me, yet I'll never part with the principles I have all along professed. These principles appear always the same, and I esteem them equally at all times. So, if your advice be not backed by the strongest reasons, assure yourself I will never comply, not if all the power of the people should arm itself against me, or offer to frighten me like a child, by laying on fresh chains, and threatening to deprive me of the greatest good, and oblige me to suffer the cruellest death.

Crito:: Now, how shall we manage this inquiry justly?.

Socrates:: To be sure, the fairest way is to resume what you have been saying of the vulgar opinions; that is, to inquire whether there are some reports that we ought to regard, and others that are to be slighted; or, whether the saying so is only a groundless and childish proposition. I have a strong desire, upon this occasion, to try, in your presence, whether this principle will appear to me in different colours from what it did while I was in other circumstances, or whether I shall always find it the same, in order to determine me to compliance or refusal.

If I mistake not, ’tis certain that several persons, who thought themselves men of sense, have often maintained in this place, that of all the opinions of men, some are to be regarded and others to be slighted. In the name of the gods, Crito, do not you think that was well said? In all human appearance you are in no danger of dying to-morrow; and therefore ’tis presumed that the fear of the present danger cannot work any change upon you. Wherefore, pray consider it well; do not you think they spoke justly who said that all the opinions of men are not always to be regarded, but only some of them; and those not of all men, but only of some? What do you say? Do not you think ’tis very true?

Crito:: Very true.

Socrates:: At any rate, then, ought not we to esteem the good opinions and slight the bad ones?

Crito:: Ay, doubtless.

Socrates:: Are not the good opinions then those of wise men, and the bad ones those of fools?

Crito:: It cannot be otherwise.

Socrates:: Let us see, then, how you will answer this. A man who makes his exercises, when he comes to have his lesson, whether shall he regard the commendation or censure of whoever comes first, or only of him that is either a physician or a master?

Crito:: Of the last, to be sure.

Socrates:: Then he ought to fear the censure and value the commendation of that man alone, and slight what comes from others.

Crito:: Without doubt.

Socrates:: For that reason this young man must neither eat nor drink, nor do anything, without the orders of that master, that man of sense, and he is not at all to govern himself by the caprices of others.

Crito:: That is true.

Socrates:: Let us fix upon that, then. But suppose he disobeys this master, and disregards his applause or censure, and suffers himself to be blinded by the caresses and applauses of the ignorant mob, will not he come to some harm by this means?

Crito:: How is it possible it should be other wise?

Socrates:: But what will be the nature of this harm that will accrue to him thereupon? where will it terminate? and what part of him will it affect?

Crito:: His body, without doubt; for by that means he'll ruin himself.

Socrates:: Very well, but is not the case the same all over? Upon the point of justice or injustice, honesty or dishonesty, good or evil, which at present are the subject of our dispute, shall we rather refer ourselves to the opinion of the people than to that of an experienced wise man, who justly challenges more respect and deference from us than all the world besides? And if we do not act conformably to the opinion of this one man, is it not certain that we shall ruin ourselves, and entirely lose that which only lives and gains new strength by justice, and perishes only through injustice? Or must we take all that for a thing of no account?

Crito:: I am of your opinion.

Socrates:: Take heed, I entreat you; if, by following the opinions of the ignorant, we destroy that which is only preserved by health and wasted by sickness, can we survive the corruption of that, whether it be our body or somewhat else?

Crito:: That’s certain.

Socrates:: Can one live then after the corruption and destruction of the body?

Crito:: No, to be sure.

Socrates:: But can one survive the corruption of that which lives only by justice, and dies only through injustice? Or is this thing (whatever it be) that has justice or injustice for its object, to be less valued than the body?

Crito:: Not at all.

Socrates:: What, is it much more valuable then?

Crito:: A great deal more.

Socrates:: Then, my dear Crito, we ought not to be concerned at what the people say, but what he says, who knows what is just and unjust; and that alone is nothing else but the truth. Thus you see you established false principles at first, in saying that we ought to pay a deference to the opinions of the people upon what is just, good, honest, and its contraries. Some, perhaps, will object that the people are able to put us to death.

Crito:: To be sure they will start that objection.

Socrates:: ’tis also true. But that does not alter the nature of what we were saying; that is still the same. For you must still remember that ’tis not life, but a good life, that we ought to court.

Crito:: That is a certain truth.

Socrates:: But is it not likewise certain that this good life consists in nothing else but honesty and justice?

Crito:: Yes.

Socrates:: Now, before we go farther, let us examine, upon the principles you have agreed to, whether my departure from hence, without the permission of the Athenians, is just or unjust. If it be found just, we must do our utmost to bring it about; but if it be unjust, we must lay aside the design. For as to the considerations you alleged just now of money, reputation, and family, these are only the thoughts of the baser mob, who put innocent persons to death, and would afterwards bring them to life if 'twere possible. But as for us who bend our thoughts another way, all that we are to mind is whether we do a just thing in giving money, and lying under an obligation to those who promote our escape; or whether both we and they do not commit a piece of injustice in so doing? If this be an unjust thing, we need not reason much upon the point, since 'tis better to abide here and die than to undergo somewhat more terrible than death.

Crito:: You are in the right, Socrates; let us see then how it will fall.

Socrates:: We shall go hand in hand in the inquiry. If you have anything of weight to answer, pray do it when I have spoken, that so I may comply; if not, pray forbear any farther to press me to go hence without the consent of the Athenians. I shall be infinitely glad if you can persuade me to do it; but I cannot do it without being first convinced. Take notice then whether my way of pursuing this inquiry satisfies you, and do your utmost to make answer to my questions.

Crito:: I will.

Socrates:: Is it true that we ought not to do an unjust thing to any man? Or is it lawful in any measure to do it to one when we are forbidden to do it to another? Or is it not absolutely true that all manner of injustice is neither good nor honest, as we were saying but now? Or, in fine, are all these sentiments which we formerly entertained, vanished in a few days? And is it possible, Crito, that those of years, our most serious conferences, should resemble those of children, and we at the same time not be sensible that ’tis so? Ought not we rather to stand to what we have said, as being a certain truth, that all injustice is scandalous and fatal to the person that commits it, let men say what they will, and let our fortune be never so good or bad?

Crito:: That’s certain.

Socrates:: Then must we avoid the least measure of injustice?

Crito:: Most certainly.

Socrates:: Since we are to avoid the least degree of it, then we ought not to do it to those who are unjust to us, notwithstanding that this people think it lawful?

Crito:: So I think.

Socrates:: But what! Ought we to do evil or not?

Crito:: Without doubt we ought not.

Socrates:: But is it justice to repay evil with evil, pursuant to the opinion of the people, or is it unjust?

Crito:: ’tis highly unjust.

Socrates:: Then there’s no difference between doing evil and being unjust?

Crito:: I own it.

Socrates:: Then we ought not to do the least evil or injustice to any man, let him do by us as he will. But take heed, Crito, that by this concession you do not speak against your own sentiments. For I know very well there are few that will go this length; and ’tis impossible for those who vary in their sentiments upon this point to agree well together. Nay, on the contrary, the contempt of one another’s opinions leads them to a reciprocal contempt of one another’s persons. Consider well then if you are of the same opinion with me; and let us ground our reasonings upon this principle, that we ought not to do evil for evil, or treat those unjustly who are unjust to us.

For my part, I never did, nor ever will, entertain any other principle. Tell me then if you have changed your mind; if not, give ear to what follows.

Crito:: I give ear.

Socrates:: Well; a man that has made a just promise, ought he to keep it, or to break it?

Crito:: He ought to keep it.

Socrates:: If I go hence without the consent of the Athenians, shall not I injure some people, and especially those who do not deserve it? Or shall we in this follow what we think equally just to everybody?

Crito:: I cannot answer you, for I do not under stand you.

Socrates:: Pray take notice; when we put our selves in a way of making our escape, or going hence, or how you please to call it, suppose the law and the republic should present themselves in a body before us, and accost us in this manner: “Socrates, what are you going to do? To put in execution what you now design, were wholly to ruin the laws and the state. Do you think a city can subsist when justice has not only lost its force, but is likewise perverted, overturned, and trampled under foot by private persons?” What answer could we make to such and many other questions? For what is it that an orator cannot say upon the overturning of that law which provides that sentences once pronounced shall not be infringed? Shall we answer, that the republic has judged amiss, and passed an unjust sentence upon us? Shall that be our answer?

Crito:: Ah, without any scruple, Socrates.

Socrates:: What will the laws say then? “Socrates, is it not true that you agreed with us to submit yourself to a public trial?” And if we should seem to be surprised at such language, they’ll continue, perhaps, “Be not surprised, Socrates, but make an answer, for you yourself used to insist upon question and answer. Tell then what occasion you have to complain of the republic and of us, that you are so eager upon destroying it? Are not we the authors of your birth? Is it not by our means that your father married her who brought you forth? What fault can you find with the laws we have established as to marriage?” “Nothing at all,” should I answer. “As to the nourishing and bringing up of children, and the manner of your education, are not the laws just that we enacted upon that head, by which. we obliged your father to bring you up to music and the exercises?” “Very just,” I d say. “Since you were born, brought up, and educated under our influence, durst you maintain that you are not our nursed child and subject as well as your father? And if you are, do you think to have equal power with us, as if it were lawful for you to inflict upon us all we enjoin you to undergo? But since you cannot lay claim to any such right against your father or your master, so as to repay evil for evil, injury for injury, how can you think to obtain that privilege against your country and the laws, insomuch that if we endeavor to put you to death, you'll counteract us, by endeavoring to prevent us and to ruin your country and its law? Can you call such an action just, you that are an inseparable follower of true virtue? Are you ignorant that your country is more considerable, and more worthy of respect and veneration before God and man than your father, mother, and all your relations together? That you ought to honour your country, yield to it, and humour it more than an angry father? That you must either reclaim it by your counsel, or obey its injunctions, and suffer without grumbling all that it imposes upon you? If it orders you to be whipped, or laid in irons, if it sends you to the wars, there to spend your blood, you ought to do it without demurring; you must not shake off the yoke, or flinch or quit your post; but in the army, in prison, and everywhere else, ought equally to obey the orders of your country, or else assist it with wholesome counsel. For if offering violence to a father or mother be a piece of grand impiety, to put force upon ones country is a much greater." What shall we answer to all this, Crito? Shall we acknowledge the truth of what the laws advance?

Crito:: How can we avoid it?

Socrates:: "Do you see, then, Socrates," continue they, "what reason we have to brand your enterprise against us as unjust? Of us you hold your birth, your maintenance, your education; in fine, we have done you all the good we are capable of, as well as the other citizens. Indeed, we do not fail to make public proclamation, that ’tis lawful for every private man, if he does not find his account in the laws and customs of our republic, after a mature examination, to retire with all his effects whither he pleases. And if any of you cannot comply with our customs, and desires to remove and live elsewhere, not one of us shall hinder him, he may go where he pleases. But on the other hand, if any one of you continues to live here, after he has considered our way of administering justice, and the policy observed in the state, then, we say, he is in effect obliged to obey all our commands, and we maintain that his disobedience is unjust on a threefold account; for not obeying those to whom he owes his birth; for trampling under foot those that educated him; and for violating his faith after he engaged to obey us, and not taking the pains to make remonstrances to us, if we happen to do any unjust thing. For notwithstanding that we only propose things without using any violence to procure obedience, and give every man his choice whether to obey us, or reclaim us by his counsel or remonstrances, yet he does neither the one nor the other. And we maintain, Socrates, that if you execute what you are now about, you will stand charged with all these crimes, and that in a much higher degree than if another private man had committed the same injustice.” If I asked them the reason, without doubt they would stop my mouth by telling me that I submitted myself in a distinguishing manner to all these conditions. “And we,” continue they, “have great evidence that you were always pleased with us and the republic; for if this city had not been more agreeable to you than any other, you had never continued in it, no more than the other Athenians. None of the shows could ever tempt you to go out of the city, except once, that you went to see the games at the Isthmus; you never went anywhere else, excepting your military expeditions, and never undertook a voyage, as others are wont to do.

You never had the curiosity to visit other cities, or inquire after other laws, as being contented with us and our republic. You always made a distinguishing choice of us, and on all occasions testified that you submitted with all your heart to live according to our maxims. Besides, your having had children in this city is an infallible evidence that you like it. In fine, in this very last juncture you might have been sentenced to banishment if you would, and might then have done, with the consent of the republic, what you now attempt without their permission. But you were so stately, so unconcerned at death, that in your own terms you preferred death to banishment. But now you have no regard to these fine words, you are no further concerned for the laws, since you are going to overturn them. You do just what a pitiful slave would offer to do, by endeavoring to make your escape contrary to the laws of the treaty you have signed, by which you obliged yourself to live according to our rules. Pray answer us; Did not we say right in affirming that you agreed to this treaty, and submitted yourself to these terms, not only in words but in deeds?” What shall we say to all this, Crito? And what can we do else but acknowledge that ’tis so?

Crito:: How can we avoid it, Socrates?

Socrates:: “What else then,” continue they, “is this action of yours but a violation of that treaty, and all its terms? That treaty that you were not made to sign either by force or surprise, not without time to think on it; for you had the whole course of seventy years to have removed in, if you had been dissatisfied with us, or unconvinced of the justice of our proposals. You neither pitched upon Lacedaemon nor Crete, notwithstanding that you always cried up their laws; nor any of the other Grecian cities, or strange countries. You have been less out of Athens than the lame and the blind which is an invincible proof that the city pleased you in a distinguishing manner, and consequently that we did, since a city never can be agreeable if its laws are not such. And yet at this time you counteract the treaty. But, if you will take our advice, Socrates, we would have you to stand to your treaty, and not expose yourself to be ridiculed by the citizens, by stealing out from hence. Pray consider what advantage can redound either to you or your friends by persisting in that goodly design. Your friends will infallibly be either exposed to danger or banished their country, or have their estates forfeited. And as for yourself, if you retire to any neighbouring city, such as Thebes or Megara, which are admirably well governed, you'll there be looked upon as an enemy. All that have any love for their country will look upon you as a corrupter of the laws. Besides, you'll fortify in them the good opinion they have of your judges, and move them to approve the sentence given against you; for a corrupter of the law will at any time pass for a debaucher of the youth, and of the vulgar people. What, will you keep out of these well-governed cities, and these assemblies of just men? But pray will you have enough to live upon in that condition? Or will you have the face to go and live with them? And pray what will you say to them, Socrates? Will you preach to them, as you did here, that virtue, justice, the laws and ordinances ought to be reverenced by men? Do you not think that this will sound very ridiculous in their ears? You ought to think so. But perhaps you'll quickly leave those well-governed cities, and go to Thessaly, to Crito's friends, where there is less order, and more licentiousness; and doubtless in that country they'll take a singular pleasure in hearing you relate in what equipage you made your escape from this prison, that is, covered with some old rags, or a beasts skin, or disguised some other way, as fugitives are wont to be. Everybody will say, 'This old fellow, that has scarce any time to live, had such a strong passion for living, that he did not stand to purchase his life by trampling under foot the most sacred laws.' Such stories will be bandied about of you at a time when you offend no man; but upon the least occasion of complaint, they'll tease you with a thousand other reproaches unworthy of you. You'll spend your time in sneaking and insinuating yourself into the favour of all men, one after another, and owning an equal subjection to them all. For what can you do? Will you feast perpetually in Thessaly, as if the good cheer had drawn you thither? But what will become then of all your fine discourses upon justice and virtue? Besides, if you design to preserve your life for the sake of your children, that cannot be in order to bring them up in Thessaly, as if you could do them no other service but make them strangers. Or if you design to leave them here, do you imagine that during your life they'll be better brought up here, in your absence, under the care of your friends? But will not your friends take the same care of them after your death that they would do in your absence? You ought to be persuaded that all those who call themselves your friends, will at all times do them all the service they can. To conclude, Socrates, submit yourself to our reasons, follow the advice of those who brought you up, and do not put your children, your life, or anything whatsoever, in the balance with justice; to the end that when you come before the tribunal of Pluto, you may be able to clear yourself before your judges. For do not deceive yourself; if you perform what you now design, you will neither better your own cause, nor that of your party; you will neither enlarge its justice nor sanctity either here or in the regions below. But if you die bravely, you owe your death to the injustice, not of the laws, but of men; whereas if you make your escape by repulsing so shamefully the injustice of your enemies, by violating at once both your own faith and our treaty, and injuring so many innocent persons as yourself, your friends, and your country, together with us, we will still be your enemies as long as you live; and when you are dead, our sisters, the laws in the other world, will certainly afford you no joyful reception, as knowing that you endeavored to ruin us. Where fore do not prefer Crito's counsel to ours."

I think, my dear Crito, I hear what I have now spoken, just as the priests of Cybele imagine they hear the cornets and flutes; and the sound of these words makes so strong an impression in my ears, that it stops me from hearing anything else. These are the sentiments I like; and all you can say to take me off them will be in vain. However, if you think to succeed, I do not prevent you from speaking.

Crito:: I have nothing to say, Socrates.

Socrates:: Then be quiet, and let us courageously run this course, since God calls and guides us to it.

# The Crito.

Translated by Taylor, Thomas.

PERSONS OF THE DIALOGUE.

SOCRATES and CRITO.

SCENE:—The Prison of SOCRATES.

Socrates:: Why came you at this early hour, Crito? Or is it not yet morning?

Crito:: It is.

Socrates:: But what time of the morning is it?

Crito:: It is now the break of day.

Socrates:: I wonder how the keeper of the prison came to admit you.

Crito:: He is accustomed to me, Socrates, in consequence of my frequently coming hither; and he is also in a certain respect under obligations to me.

Socrates:: Did you come just now, or some time ago?

Crito:: It is a considerable time since I came.

Socrates:: But why did you not immediately call me, and not sit down in silence?

Crito:: Not so, by Jupiter, Socrates; nor should I myself be willing to be for so long a time awake and in sorrow. But I have for some time admired you, on perceiving how sweetly you slept. And I designedly did not call you, that you might continue in that pleasant condition. Indeed I have often and formerly through the whole of your life considered you as happy on account of your manners, but far more so in the present calamity, because you bear it so easily and mildly.

Socrates:: But it would be absurd, Crito, if a man of my age were to be indignant when it is necessary for him to die.

Crito:: And yet others, Socrates, equally old, when they have been involved in such-like calamities, have notwithstanding their age been indignant with their present fortune.

Socrates:: It is so. But why did you come to me so early?

Crito:: I come, Socrates, bearing a message not unpleasant to you, as it appears to me, but bitter and weighty to me and to all your associates; and which I indeed shall bear most heavily.

Socrates:: What is it? Is the ship come from Delos, on the arrival of which it is necessary I should die?

Crito:: Not yet; but it appears to me, from what certain persons coming from Sunium have announced, and who left it there, that it will arrive today. From these messengers, therefore, it is evident that it will be here today; and consequently it will be necessary for you, Socrates, to die tomorrow.

Socrates:: But with good fortune, Crito: and if it please the Gods, be it so. Yet I do not think that it will arrive here today.

Crito:: Whence do you infer this?

Socrates:: I will tell you. For on the day after, or on the very day in which the ship arrives, it is necessary that I should die.

Crito:: Those that have power over these things say so.

Socrates:: I do not, therefore, think it will come this, but the next day. But I infer this from a certain dream which I saw this night a little before you came; and you appear very opportunely not to have disturbed me.

Crito:: But what was this dream?

Socrates:: A certain woman, beautiful, of a pleasing aspect and in white raiment, seemed to approach, and calling me to say, The third day hence, O Socrates, you will arrive at the fertile Phthia.

Crito:: What a strange dream, Socrates!

Socrates:: Manifest however, as it appears to me, O Crito.

Crito:: Very much so, as it seems. But, O blessed Socrates, be now persuaded by me, and save yourself. For, if you die, not one calamity only will befall me; but, exclusively of being deprived of you, an associate so necessary as I never have found any other to be, those who do not well know me and you, will think that I might have saved you if I had been willing to spend my money, but that I neglected to do so. Though what can be more base than such an opinion, by which I should appear to value riches more than my friends? For the multitude will not be persuaded that you were unwilling to depart hence, though we endeavored to effect your escape.

Socrates:: But why, O blessed Crito, should we so much respect the opinion of the multitude? For the most worthy men, whose opinion ought rather to be regarded, will think these things to have been so transacted as they were.

Crito:: Nevertheless you see, Socrates, that it is necessary to pay attention to the opinion of the multitude. For the present circumstances now evince that the multitude can effect not the smallest of evils, but nearly the greatest. if any one is calumniated by them.

Socrates:: I wish, O Crito, the multitude could effect the greatest evils, that they might also accomplish the greatest good: for then it would be well. But now they can do neither of these. For they can neither make a man wise, nor destitute of wisdom; but they do whatever casually takes place.

Crito:: Let these things be so. But answer me, Socrates, whether your concern for me and the rest of your associates prevents you from escaping hence, lest we should be molested by calumniators, as having fraudulently taken you from hence, and be forced either to lose all our property, or a great sum of money, or to suffer something else besides this? For, if you fear any such thing, bid farewell to it. For we shall be just in saving you from this danger, and, if it were requisite, from one even greater than this. But be persuaded by me, and do not act otherwise.

Socrates:: I pay attention to these things, Crito, and also to many others.

Crito:: Do not, therefore, dread these things. For those who have agreed to save you, and to take you from hence, demand no great sum for this purpose. And, in the next place, do you not see how poor your calumniators are, and that on this account your liberty may be purchased at a small expense? My property too, which I think is sufficient, is at your service. And if, out of regard to me, you do not think fit, to accept my offer, these guests here are readily disposed to pay what may be necessary. One also among them, Simmias the Theban, has brought with him a sum of money sufficient for this purpose. Cebes, too, and very many others are ready to do the same: so that, as I said, neither fearing these things, should you hesitate to save yourself, nor should you be troubled on leaving the city (as in court you said you should) from not knowing how to conduct yourself. For in many other places, wherever you may go, you will be beloved. And if you are disposed to go to Thessaly, you will there find my guests, who will pay you every attention, and will render your abode there so secure, that no one in Thessaly will molest you. Besides this, Socrates, neither do you appear to me to attempt a just thing, in betraying when you might save yourself; and in endeavoring to promote the earnest wishes of your enemies, who strive to destroy you. To this I may also add, that you appear to me to betray your own children, whom it is incumbent on you to maintain and educate; and, as far as pertains to you, leave them to the guidance of chance; though it is likely that such things will happen to them as orphans are wont to experience. However, either it is not proper to beget children, or it is requisite to labour in rearing and instructing them when begotten. But you appear to me to have chosen the most indolent mode of conduct; though it is proper that you should choose such things as a good and brave man would adopt, especially as you profess to have made virtue the object of your attention through the whole of life. I am, therefore, ashamed both for you, and those familiars who are our associates as well as yours, lest the whole affair concerning you should appear to have been accomplished through a certain cowardice on our part. And in the first place, your standing a trial which might have been prevented; in the next place, your defence; and, in the last place, the extremity to which you are now brought, will be placed to the account of our viciousness and cowardice, and will be considered as so many ridiculous circumstances which might have been avoided, if we had exerted ourselves even in a trifling degree. See, therefore, O Socrates, whether these things, besides being evil, will not also be disgraceful both to you and us. Advise then with yourself quickly, though indeed there is no time for consultation; for on the following night all this must be done. But, if we delay, it will be impossible to effect your escape. By all means, therefore, be persuaded by me, Socrates, and do not in any respect otherwise.

Socrates:: My dear Crito, your alacrity is very commendable, if it is attended with a certain rectitude; but if not, by how much the greater it is, by so much is it the more blameable. It is necessary, therefore, to consider whether these things ought to be done or not. For I am a man of that kind, not only now but always, who acts in obedience to that reason which appears to me on mature deliberation to be the best. And the reasons which I have formerly adopted, I am not able now to reject in my present fortune, but they nearly appear to me to be similar: and I venerate and honour the same principles as formerly; so that, unless we have any thing better to adduce at present than these, be well assured that I shall not comply with your request, not though the power of the multitude should endeavor to terrify us like children, by threatening more bonds and deaths, and ablations of property.

Crito:: How, therefore, may we consider these things in the best manner?

Socrates:: If, in the first place, we resume that which you said concerning opinions, considering whether it was well said by us or not, that to some opinions we ought to pay attention, and to others not; or rather indeed, before it was necessary that I should die, it was well said, but now it becomes evident that it was asserted for the sake of discussion, though in reality it was merely a jest and a trifle. I desire, however, O Crito, to consider, in common with you, whether that assertion appears to me in my present condition to be different, or the same, and whether we shall bid farewell to or be persuaded by it. But thus I think it is every where said by those who appear to say any thing pertinently, that, as I just now asserted of the opinions which men opine, some ought to be very much attended to, and others not. By the Gods, Crito, does not this appear to you to be well said? For you, so far as relates to human power, are out of danger of dying tomorrow, and such a calamity as the present will not seduce you into a false decision. Consider then: does it not appear to you to have been asserted with sufficient rectitude, that it is not fit to reverence all the opinions of men, but that some should be honoured and others not? Nor yet the opinions of all men, but those of some and not those of others? What do you say? Are not these things well said?

Crito:: Well.

Socrates:: Are not worthy opinions, therefore, to be honoured, but base opinions not?

Crito:: They are.

Socrates:: And are not worthy opinions those of wise men; but base opinions those of the unwise?

Crito:: Undoubtedly.

Socrates:: Come then, let us again consider how things of this kind were asserted. Whether does he who is conversant in gymnastic exercises pay attention to the praise and blame and opinion of every man, or of that one man alone who is a physician, or the preceptor of boys in their bodily exercises?

Crito:: Of that one alone.

Socrates:: Is it not, therefore, proper that he should fear the blame and embrace the praise of that one, but not the praise and blame of the multitude?

Crito:: Evidently.

Socrates:: In this manner, therefore, he ought to act and exercise himself, and also to eat and drink, which appears fit to the one who presides and knows, rather than in that which may appear to be proper to all others.

Crito:: Certainly.

Socrates:: Be it so. But if he is disobedient to that one, and disregards his opinion and his praise, but honours the opinion and praise of the multitude, who know nothing, will he not suffer some evil?

Crito:: How is it possible he should not?

Socrates:: But what is this evil, whither does it tend, and to which of the things pertaining to him who is disobedient?

Crito:: Evidently to his body, for this it corrupts.

Socrates:: You speak well. We must form the same conclusion, therefore, Crito, in other things, that we may not run through all of them. With respect, therefore, to things just and unjust, base and beautiful, good and evil, and which are now the subjects of our consultation, whether ought we to follow the opinion of the multitude, and to dread it, or that of one man if there is any one knowing in these things, whom we ought to reverence and fear rather than all others; to whom if we are not obedient, we shall corrupt and injure that which becomes better by the just, but is destroyed by the unjust? Or is this nothing?

Crito:: I think, Socrates, we ought to follow the opinion of that one.

Socrates:: Come then, if not being persuaded by the opinion of those that are judges, we destroy that which becomes better by the salubrious, but is corrupted by the insalubrious, can we live after this destruction? But is not this very thing of which we are speaking the body?

Crito:: Yes.

Socrates:: Can we, therefore, live after the body is depraved and corrupted?

Crito:: By no means.

Socrates:: But can we live when that is corrupted which is injured by the unjust, but benefited by the just? Or shall we think that to be viler than the body, whatever it may be, pertaining to us, about which justice and injustice subsist?

Crito:: By no means.

Socrates:: It is, therefore, more honorable.

Crito:: By far.

Socrates:: We should not, therefore, O best of men, be so very much concerned about what the multitude say of us, but what that one man who knows what is just and unjust, and what truth itself is, asserts respecting us. So that you did not act rightly at first, in introducing the opinion of the multitude concerning things just, beautiful and good, and the contraries of these, as that to which we ought to pay attention. Though some one may say that the multitude are able to destroy us.

Crito:: Some one, Socrates, may indeed say so.

Socrates:: True, But, O wonderful man, the assertion which we have discussed appears to me to be dissimilar and prior to this: and again consider whether this is still granted by us, that we are not to admit the merely living, but living well, to be a thing of the greatest consequence.

Crito:: It is granted.

Socrates:: And is this also granted, or not, that it is the same thing to live well, beautifully, and justly?

Crito:: It is.

Socrates:: From what has been assented to, therefore, this must be considered, whether it is just for me to endeavor to depart hence, the Athenians not dismissing me, or whether it is not just. And if it should appear to be just indeed, we should endeavor to accomplish it; but if not, we must bid farewell to the attempt. For as to the considerations which you adduce concerning money, opinion, and the education of children, see, Crito, whether these are not in reality the reflections of the vulgar, who rashly put men to death, and if it were in their power would recall them to life, and this without being at all guided by intellect. But by us, since reason requires it, nothing else is to be considered than as we just now said, whether we shall act justly in giving money and thanks to those who may lead me hence; or whether in reality, both we that are led from hence and those that lead us, shall not in all these things act unjustly. And if it should appear that we in so doing shall act unjustly, We must by no means pay attention to these things, rather than to the consideration whether we shall do any thing unjustly, not even if it should be necessary for us to die, staying here and being quiet, or to suffer any thing else whatever.

Crito:: You appear to me, Socrates, to speak well; but see what is to be done.

Socrates:: Let us consider, O good man, in common; and if you can in any respect contradict what I say, contradict me, and I will assent to you; but if you cannot, cease, O blessed man, to repeat often to me the same thing, that I ought to depart hence, though the Athenians are unwilling. For I shall think it a great thing if you can persuade me thus to act, but not if you attempt this contrary to my will. See then, whether the beginning of this consideration satisfies you, and endeavor to answer the interrogation in such a way as you especially think it is proper.

Crito:: I will endeavor.

Socrates:: Shall we say then, that we should by no means willingly act unjustly? Or may we in a certain respect act unjustly, and in a certain respect not? Or is to act unjustly by no means neither good nor beautiful, as we have often confessed before, and as we just now said? Or are all those things which we formerly assented to dissipated in these few days; and has it for some time been concealed from us, that though we are so old, yet in seriously discoursing with each other, we have in no respect differed from children? Or does it not thus subsist more than any thing, as we then said, whether the multitude admit it or not? And whether it be necessary that we should suffer things still more grievous, or such as are milder than these, at the same time shall we say or not that to act unjustly is evil and base to him who thus acts?

Crito:: We shall say so.

Socrates:: By no means, therefore, ought we to act unjustly.

Crito:: We ought not.

Socrates:: Neither, therefore, ought he who is injured to return the injury, as the multitude think, since it is by no means proper to act unjustly.

Crito:: So it appears.

Socrates:: But what then? Is it proper to do evil to any one, O Crito, or not?

Crito:: It is not proper, Socrates.

Socrates:: But what? Is it just to repay evil with evil, as the multitude say, or is it not just?

Crito:: By no means.

Socrates:: For he who does evil to men, differs in no respect from him who acts unjustly.

Crito:: Your assertion is true.

Socrates:: Neither, therefore, is it proper to return an injury, nor to do evil to any man, however you may be injured by him. But see, Crito, while you acknowledge these things, that you do not assent to them contrary to your opinion. For I know that these things appear to and are opined by very few. But those to whom these things appear, and those to whom they do not, disagree with each other in their decisions; and it is necessary that these should despise each other, while they look to each other's deliberations. Do you therefore consider, and very diligently, whether it thus appears to you in common with me, and whether deliberating we should begin from hence, that it is never right either to do an injury, or to return an injury, or when suffering evil to revenge it by doing evil in return; or, whether you will depart and not agree with us in this principle. For it thus appears to me both formerly and now; but if it in any respect appears otherwise to you, speak and inform me. And if you acquiesce in what has been said above, hear what follows.

Crito:: But I do acquiesce and accord with you. Speak, therefore.

Socrates:: I will say then that which is consequent to this, or rather I will ask you, whether when a man has promised to do things that are just, he ought to do them or to break his promise.

Crito:: He ought to do them.

Socrates:: From these things then thus consider. If we should depart hence without the consent of the city, shall we do evil to certain persons, and those such as we ought not in the smallest degree to injure, or shall we not? And shall we acquiesce in those things which we assented to as being just; or shall we not?

Crito:: I cannot reply to your question, Socrates: for I do not understand it.

Socrates:: But thus consider. If to us, intending to escape from hence, or in whatever manner it may be requisite to denominate it, the Laws and the Republic should present themselves in a body, and thus address us,—Tell us, O Socrates, what is it you intend to do? Do you conceive that by this thing which you attempt, you will destroy any thing else than, as far as you are able, us the Laws, and the whole city? Or does it appear to you to be possible for that city to subsist and not be subverted, in which Justice is not only without strength, but is likewise diverted of its authority and corrupted by private persons?—What should we say, Crito, to these things, and to others of a similar kind? For much might be said, and particularly by rhetoricians, on the subversion of that law which provides that sentences once passed shall not be infringed. Shall we say to them that the city has not passed an equitable sentence upon us? Shall we say this, or something else?

Crito:: This, by Jupiter, Socrates.
